Cisco Kinetic Data Center Offer Description

Cisco Kinetic Data Center service consists of six major components, defined as:

Gateway management service

This service enables provisioning, configuration, management, and monitoring of IoT Gateways (Cisco Industrial Routers 8x9 series used within the Data Connect platform)

Application management service

This service is responsible for deployment, lifecycle and performance management of Cisco IOx Fog applications deployed within within the Data Connect platform.

Device connectivity and cloud data delivery Service

This service is responsible for the secure data routing capabilities and rules based complex event processing data originating from devices connected to the IoTDC platform. This include device connectivity to subtended devices to IoT gateways.

Remote Access to subtended device

This service provides access IoT devices located in a remote location.

Secure File Transfer

This service also provides the integration features necessary to delivery data or files via secure file transfer to an IoT device.
