

Service Description: Advanced Services – Fixed Price

Cisco ACI Advise and Implement Service - Medium (ASF-DCV1-ACI-PDV-M)

This document describes Advanced Services Fixed Price: Cisco ACI Advise and Implement Service - Medium.

Related Documents: This document should be read in conjunction with the following documents also posted at www.cisco.com/go/servicedescriptions/: (1) Glossary of Terms; (2) List of Services Not Covered. All capitalized terms in this description have the meaning ascribed to them in the Glossary of Terms.

Direct Sale from Cisco. If you have purchased these Services directly from Cisco for your own internal use, this document is incorporated into your Master Services Agreement, Advanced Services Agreement, or other services agreement covering the purchase of Advanced Services-based services with Cisco ("Master Agreement"). If no such Master Agreement exists, then this Service Description will be governed by the terms and conditions set forth in the Terms & Conditions Agreement posted at http://www.cisco.com/web/about/doing_business/legal/terms_conditions.html. If you have purchased these Services directly from Cisco for resale purposes, this document is incorporated into your System Integrator Agreement or other services agreement covering the resale of Advanced Services ("Master Resale Agreement"). If the Master Resale Agreement does not contain the terms for the Purchase and Resale of Cisco Advanced Services or equivalent terms and conditions, then this Service Description will be governed by the terms and conditions of the Master Resale Agreement and those terms and conditions set forth in the SOW Resale Terms & Conditions Agreement posted at: http://www.cisco.com/web/about/doing_business/legal/terms_conditions.html. For purposes of the SOW Resale Terms and Conditions this Service Description shall be deemed as a Statement of Work ("SOW"). In the event of a conflict between this Service Description and the Master Agreement or equivalent services exhibit or agreement, this Service Description shall govern.

Sale via Cisco Authorized Reseller. If you have purchased these Services through a Cisco Authorized Reseller, this document is for description purposes only; is not a contract between you and Cisco. The contract, if any, governing the provision of this Service will be the one between you and your Cisco Authorized Reseller. Your Cisco Authorized Reseller should provide this document to you, or you can obtain a copy of this and other Cisco service descriptions at www.cisco.com/go/servicedescriptions/.

Cisco ACI Advise and Implement Service - Medium

Service Summary

The Cisco ACI Advise and Implement Service - Medium covers the following areas of Application Centric Infrastructure ("ACI"):

- Project Management
- Data Center Assessment Services for ACI
 - ACI Adoption Assessment
 - ACI Adoption Strategy Development
- Design Services for ACI
 - Infrastructure Design
 - Application Policy Template Design
- Data Center ACI Deployment Service (Port count not to exceed 4000 ports)
- ACI Infrastructure Migration Implementation:
 - Plan Development
 - Setup and Configuration
 - Testing Support
- Data Center Solution Ecosystem Integration Services
 - Virtualized Integration: Customer Environment Review
 - Layer 4-7 Integration
- Data Center Solution Validation & Testing Service for ACI
 - Test Plan Development Support
- Data Center Operations Enablement Services for ACI

- ACI Operations Support Service

The scope of this service is limited to:

- Network Centric deployment only
- 2 user created Tenants within the ACI fabric. Each tenant will be limited to up to:
 - Six (6) bridge domains (BD's) (total deployment will not exceed six (6) BD's),
 - Two (2) contexts per tenant,
 - Ten (10) EPG's per tenant with simple complexity
 - Thirty (30) contracts,
 - Ten (10) service graphs instances, within one (1) service graph template.
- Plan and Build Testing is limited to
 - 2 spines and 6 leafs
 - Only Policy validation with layer 3 out
 - 2 rack server (medium spec for CPU & Memory)
 - 6 x 10G Spirent/Ixia ports
 - Two service graphs instance per tenant within one (1) service graph template.
 - Max. 1 Vcenter with one ESX server each with one VM
 - Cisco provided Test Plan Template
 - Device specific package validation testing is not included

Deliverables

- 1) Project Management Plan ("PMP")
- 2) Integration Pre-Requisite Checklist
- 3) ACI Requirements Document ("ARD") including ACI Adoption Strategy
- 4) ACI Design Document including
 - (a) ACI Policy Proposal Report
 - (b) ACI Deployment – AS-BUILT Document
 - (c) Ecosystem Integration Test Plan
- 5) ACI Solution Testing Report
- 6) Standard process based ACI Operations run books for
 - (a) Availability Management
 - (b) Change Management
 - (c) Incident Management
 - (d) Configuration Management
 - (e) Release Management
 - (f) Event Management

Location of Services

Services shall be performed as a combination of remote from Cisco Site(s) and onsite at Customer premises.

Project Management

Project management will be provided in conjunction with and is limited to the management of the Services and Deliverables as described herein.

Cisco Responsibilities

- Provide Customer with a list of designated Cisco personnel roles and responsibilities under this Service.
- Provide a Project Management Plan ("PMP"). PMP is a baseline document from which the Cisco PM can manage deliverables, assess progress, and manage change management issues and any on-going questions.
- Work with Customer to identify and document dependencies, risks and issues associated with the successful completion of the project.
- Participate in scheduled project review meetings or conference calls, if required.
- Provide Customer with the identity of personnel requiring access to Customer premises, at least five (5) Business Days prior to the scheduled date such personnel requires access.
- Deliver a weekly project status report to the Customer.

Customer Responsibilities

- Provide the Cisco PM with a list of designated Customer personnel roles and responsibilities under this Service.
- Ensure that key Customer personnel (such as architecture design and planning, network engineering, network operations personnel) are available to provide information and to participate in review sessions, workshops and other information gathering activities. The Customer PM will also ensure that Cisco is provided with all information, data and documentation as Cisco reasonably requires to provide services and comply with Cisco's responsibilities in this Service. This information includes, but is not limited to: (i) information relating to Customer's network, design, business and other applicable requirements; (ii) functional and/or technical documentation relating to such requirements; and (iii) topology maps, configuration information and existing and proposed network infrastructure.
- Identify primary and backup Customer authorized site contacts that shall provide necessary information, obtain access clearances and coordinate with other organizations/third parties with respect to Services at that site.
- Participate in scheduled project review meetings or conference calls, if required.
- Coordinate with any external third parties, such as in country Carrier/Telco activities, deliverables and schedules.
- Ensure that Cisco's request for information or documentation needed for the project is provided within five (5) Business Days of Cisco's request, unless the parties agree to another time period for response.

Data Center Assessment Services for ACI

ACI Adoption Assessment

Cisco Responsibilities:

- Conduct interviews and/or meetings with Customer in order to gather Customer's existing Data Center Infrastructure design information, such as:
 - Existing DC Network and wide area network (WAN) topology diagrams;
 - Functional requirements
 - Feature recommendations
 - Scalability design considerations
- Gather Customer's detailed service description, network design and engineering plan, and service test plan.
- Conduct one (1) Knowledge Transfer Session ("ACI Adoption Strategy Workshop") on site for a maximum of ten (10) Customer stakeholders to review business and technical requirements, over a period of up to two (2) Business Days
- Review the Customer's proposed adoption strategy in order to better understand their adoption requirements and assist them with identifying potential limitations.
- Adoption assessment will be limited to 6 VLAN's within the Customer network. Each VLAN will be a /24 subnet or smaller to be considered as qualified.
- Work with Customer to understand their application, server and network environment and to qualify the Customer's requirements for adoption.
- Create and document all the requirements information collected during this assessment in the ACI Requirements Document ("ARD").
- Provide the ARD to the Customer for their review and approval.

Customer Responsibilities:

- Provide all information and documentation on Customer's current design or design plans for the ACI infrastructure, as requested by Cisco.
- Provide the current change management and incident management practices for the applicable data center.
- Review with Cisco the ARD providing comments and approval.

ACI Adoption Strategy Development

Cisco Responsibilities:

- Develop a high level ACI adoption strategy and document it in the ACI Adoption Strategy Report section within the ARD.
- Analyze the adoption requirements using the information gathered from the ACI Adoption Strategy Workshop.

- The analysis includes, but is not limited to, the following areas:
 - Hardware, Software and Feature analysis
 - Analyze information provided in ARD to discover any Hardware and Software features that are not supported in the ACI, such as MPLS, 10baseT ports etc.
- Evaluate the benefit and risks associated with integrating current infrastructure with the new ACI infrastructure that will be implemented. Analyze and recommended ACI integration options that include the following:
 - Current infrastructure
 - Intranet, Extranet, DMZ
 - Load balancer, Firewall
 - ACI policy modeling and adoption strategy:
 - Analyze the information gathered during the ARD phase and propose the available options as well as how those ACI policy model(s) could be adopted to meet Customer needs.
 - Determine the necessity for swing kits (temporary infrastructure) to facilitate adoption within the constraints listed in the ARD
 - Analysis of risks that would impede in executing adoption strategy (e.g. ability to meet deadline, ability to migrate within available downtime, timely readiness of target ACI, etc.);
- Document the findings of the analysis in the adoption strategy within the ARD.

Customer Responsibilities:

- Ensure key Customer stakeholders including data center operations manager, application architects, and Customer L4 SME's, to participate to provide all information necessary for Cisco to create the adoption strategy within the ARD.
- Provide a single point of contact for requirements coordination with the Cisco team.
- Participate in the ACI Adoption Strategy Workshop, providing business and technical requirements for the Network.
- Provide current high-level design information, including: existing DC Network LAN/WAN topology diagrams, functional and feature requirements, and scalability design considerations.

Data Center Design Services for ACI

Infrastructure Design

Cisco Responsibilities:

- Work with the Customer to understand their current state of Data Center environment, including current network topology, intra-data-center connectivity, network sizing, virtualization, IT services, applications and systems hosted in the data center, including firewall, load balancing, clustering, availability etc.
- Gather and review the Customer information and requirements through both of the following: a) interviews (with a maximum of five (5) Customer key stakeholders; and b) a review of the completed Infrastructure Design Questionnaire Template(s).
- Work with Customer to define a list of Data Center(s) networks, and specific set of subnets, applications, systems and services that are in the scope of the service and document this information in the ARD.
- Create the ACI Design Document ("ADD"), which may include the following:
 - Design recommendations based on Cisco best practices
 - Network logical and physical topology; documented IP addressing and VLAN scheme
 - Other ACI configurations L2/L3 configurations, WAN/DCI integration. DCI Integration is limited to a single L3 out on a border leaf connecting to a Customer's DCI connectivity device
 - Design recommendations and details such as Services, L2 and L3 connectivity to rest of the data center infrastructure
 - Any Hardware and software recommendations, for the design
 - Operational recommendations based on Cisco best practices for logging, SNMP and other device alarms and traps for critical events such as redundancy and failover.
 - Determine requirements within the fabric for management. Options will be In-band or out of band management
- Determine any risks in the design and provide options for and against making changes to the detailed design to mitigate risks.
- Create and provide the Customer with the "ADD" for their review and approval.

Customer Responsibilities:

- Participate in the requirements workshop and/or interviews, as applicable.
- Complete and return the Infrastructure Design Questionnaire Template(s).
- Provide necessary information to Cisco such as design requirements, including the current IT services, applications and systems hosted in the data center, network sizing, intra-data center connectivity, virtualization, key application requirements and services including firewall, load balancing, clustering, availability etc.
- Provide information to Cisco including: existing LAN/WAN topology diagrams, functional and feature requirements, and scalability design considerations.
- Review the ADD with Cisco providing comments and approval.

Application Policy Template Design**Cisco Responsibilities:**

- Work with the Customer to understand the current state of their data center environment, including business applications and corresponding infrastructure dependencies.
- Gather and review Customer information and requirements through both of the following: a) interviews (no more than five (5)) with Integrator key stakeholders; and b) review of completed Application Policy Questionnaire
- Work with Customer to identify application components, and corresponding data center(s) networks, and specific set of subnets that were defined in the ARD
- Review the application architecture and network topology details with the Customer to confirm known application and corresponding network components.
- Create the Application Policy requirements within the ARD and ensure that the overall scope is clearly documented.
- Review and approve the Application Policy requirements within the ARD for comments and approval.

Customer Responsibilities:

- Provide necessary information to Cisco such as current state of data center network environment, including business applications and corresponding infrastructure dependencies.
- Participate in the requirements workshop and/or interviews, as applicable.
- Work with Cisco to identify application components, and corresponding data center(s) networks, and specific set of subnets for this engagement.
- Work with Cisco to review network and server topology and strategy to identify touch points to efficiently collect network and server data.
- Work with Cisco to prioritize and define a list of critical applications for the new ACI fabric Proof of Delivery (POD) module.
- Provide network and physical access to the Data Center as needed for Cisco to gather information pertinent to accomplish the scope of this service.
- Provide documented requirements (business and technical) and high-level Application, network architecture and Security specifications.
- Work with Cisco to identify network and server components for Cisco by providing the appropriate level of access to the network and server components to Cisco.
- Work with Cisco to identify standard or custom application characteristics in order to facilitate the grouping of application component interdependencies.

Application Policy Creation**Cisco Responsibilities:**

- Conduct an analysis of the state of the Customer's existing business applications and their corresponding infrastructure dependencies.
- Review the IT Infrastructure Components and all other Customer supplied documentation in order to map the servers included within the Customer's network to which the servers are connected, or those that are to be moved to the new ACI Fabric.
- Review the IT Infrastructure Components Report and network topology information with Customer to validate known network components.

- Create and document the application profiles for applicable applications for the ACI Application Policy Proposal. This proposal will be documented in the ADD.

Customer Responsibilities:

- Provide Cisco will all Customer owned documentation as it applies to the infrastructure, servers, storage, and application environment.
- Make the necessary key personnel available to Cisco as needed to provide background information on components within the network.
- Identify standard or custom application characteristics in order to facilitate the grouping of application component interdependencies.

Data Center Deployment Services for ACI

Cisco Responsibilities:

- Provide Integrator with the Integration Pre-Requisite Checklist. The Integration Pre-Requisite Checklist is a Cisco provided document that provides a detailed specification of the physical, electrical and environmental requirements that have to be met at the installation Site(s) to enable the Cisco Products to be installed.
- Install and configure the three (3) Application Policy Infrastructure Controllers (“APIC”).
- Draft an AS Built Diagram for the ACI Design Document (ADD) The AS Built Diagram defines and records the specific set of procedures and/or tests developed by Cisco and agreed to by the Integrator that are necessary to test the ACI fabric connectivity and to declare that the Product is ready for use. Successful test execution will signify completion of the implementation of the product.
- Test connectivity in accordance with the AS-Built Diagram from the ACI Design Document
- Test all fabric devices and ensure all devices are up and functional in accordance with the Infrastructure section of the ACI Design Document

Customer Responsibilities:

- Complete the Integration Pre-Requisites Checklist, including any pre-requisite activities and provide to Cisco.
- Validate that all facilities, racking, cabling requirements are complete before Cisco personnel come on-site to start deployment activities
- Ensure key Customer stakeholders including data center operations manager, and application architects are available to participate to provide all information necessary, as required.

Data Center Migration Service for ACI

Infrastructure Migration Implementation: Plan Development

Cisco Responsibilities:

- Conduct one (1) Business Day session(s) to discuss with Customer the high level implementation strategy including any mutually agreed Customer specific requirements related to Fabric hardware and Software strategy on Switch and APIC Software recommendations.
- Working with Customer stakeholders, Cisco will analyze the current architecture design, Cisco created ACI Design Document, and develop an implementation plan. The draft Implementation Plan shall contain:
 - Detailed step-by-step procedures for implementation.
 - Basic fabric configuration and connectivity readiness for workload migration.
- Review with Customer the Implementation Plan for comment and approval before it is formally completed and released.

Customer Responsibilities:

- Discuss High-level implementation strategy and provide any specific integration requirements for review with Cisco.
- Review the Implementation Plan with Cisco providing comment and approval before they are formally completed and released.

Infrastructure Migration Implementation: Setup and Configuration

Cisco Responsibilities:

- Verify physical connections and cable connections between fabric switches.
- Verify basic Fabric configuration and connectivity by registering fabric switches to APIC and validating fabric setup
- Verify fabric connectivity to the existing Customer infrastructure, L4-7 devices, etc., as applicable.

Customer Responsibilities:

- Schedule access for Cisco staff to the server and related equipment
- Provide relevant passwords and authentication credentials to Cisco for provision of Services.
- Coordinate and manage internal resources across Customer network and application groups to support the installation of Fabric switches and APIC in the lab as well as for integration with current DC infrastructure and L4-7 devices
- Provide at least one (1) suitably skilled and trained resource to assist Cisco during the verification phases.

Infrastructure Migration Implementation: Testing Support

Cisco Responsibilities:

- Cisco to provide an appropriate test plan for use in the Customers ACI Solution in accordance with the integration activities performed under this service.
- Provide up to a maximum of eight (8) hours of onsite support services
- Provide up to a maximum of eight (8) hours remote support services (“Testing Support Services”) spread over three (3) consecutive Business Days. The Testing Support Services will commence on the next Business Day following completion by Cisco of the software configuration.
- The Onsite / Remote Testing Support Services will be provided by a Cisco resource as consultative support, to resolve testing issues and provide troubleshooting assistance, which shall be limited to supporting test activities defined in the Cisco-supplied Test Plan in the Customer’s lab environment.
- The Testing Support Services will only cover the standard product features as set out in the Test Plan

Customer Responsibilities:

- Customer is responsible for the overall execution of the Test Plan, including scheduling, staffing, and coordination across all Customer network and application groups.
- Ensure an appropriate and timely testing window is available for provision of Testing Support Services.
- Provide remote access to the Customer’s network as requested by Cisco
- Customer understands and agrees that it is responsible for the selected server installation and any server issues that arise during testing
- Customer must provide the following in order for Cisco to provide support services:
 - Access to the server and related third party software;
 - Relevant user accounts, passwords and authentication credentials;
 - Access to user account Active Directory data as required by the application.

Data Center Solution Ecosystem Integration Service for ACI

Virtualized Integration: Customer Environment Review

Cisco Responsibilities:

- As part of the workshop, Cisco will gather application requirements including any mutually agreed Customer specific requirements related to APIC Integration within the Customer’s existing Layer 4-7 environment
- As part of the workshop, Cisco will review the features of the target equipment, which require integration.
- Cisco will add their findings to the ARD, that shall contain:
 - Any mutually agreed Customer specific requirements.
 - Requirements for configuration and/or development.

- Identify connection methods the APIC will utilize in order to communicate with the Hypervisor management platform

Customer Responsibilities:

- Ensure appropriate Subject Matter Experts attend the ACI Adoption Strategy workshop and provide input to the ARD
- Customer to advise Cisco of VLAN Pool numbers to be used by APIC for configuration
- Provide to Cisco the requested documentation prior to or during the discovery workshop which may include, but is not limited to:
 - Business & IT strategy and vision
 - Network Architecture
 - Systems management design documentation
 - Application services requirements.
 - Hypervisor Design (existing VMware design if any)
- Provide Customer's final requirements to Cisco five (5) Business Days prior to or during the discovery workshop. Customer and Cisco shall mutually agree on these requirements that shall be documented in the ARD.

Integration Activities

Cisco Responsibilities:

- Ensure that all required End Point Groups "EPG's" are configured for the required Virtual Machine Manager (VMM) domain in order to be assigned appropriately
- Configure APIC VMM environment to be able to communicate with the VMware ESX vServer in the desired manner, and associate vCenter with the APIC in order to receive the appropriate configurations from regarding the virtual environment set up.
- Work with the Customer Server Administrators to request an appropriate change window in order to make necessary changes to the VMware ESX host environments (such as adding ESX hosts to the created Distributed Virtual Switch / Application Virtual Switch)

Customer Responsibilities:

- Provide Cisco with all required passwords and administrator level access to hypervisor platforms to allow for integration to the APIC

Layer 4-7 Integration

Integration Activities

Cisco Responsibilities:

- Responsible for Cisco supported and validated ecosystem connectivity based solutions only with eco-system vendors that have created a device package for integration into the APIC.
- Responsible for classical design option that entails connecting non-managed L4 devices to the fabric and is limited to 1 physical device pair for load-balancing or Security.
- Cisco will not be responsible for any programmability & scripting requirements (no SW development & customization effort)
- Provide requirements for the device/solution integration
- Based on gathered requirements, provide required configuration to deploy services in a fashion consistent with the gathered requirements and application needs
- Configuration of appropriate third party device related to the identified requirements
- Configuration specifications for related features
- Verify that traffic flows between application tiers flows according to defined requirements / application needs
- Testing scope will be only applicable to the direct integration components – Example: Cisco will only test the scope of integration.
- ACI Design Document will include the following:

- Requirements for the device integration
- How to configure the integration
- Configuration specification for related features
- Validation of a working model

Customer Responsibilities:

- Define any application specific configuration required on the third party device.
- Ensure that appropriate licensing on the third party device is acquired and the third party device is capable of receiving configuration from APIC. This will include the following information
- Third party device reachability information
- Necessary credentials for configuring the third party device
- Identify a third party device will be configured according to the requirements defined by APIC service integration guidelines, including, the device configuration that will be managed by APIC
- ACI Fabric must be ready and already deployed with APIC cluster configured in a steady state
- Appropriate Application Network Profiles (ANP) configured and deployed for applications
- Customer ACI solution is in a functioning state to support Ecosystem solution
- All associated facilities requirements for 3rd party solution integration are completed
- Cisco will only be responsible for the 3rd party solution that has been pre-validated by Cisco – any other dependencies with the 3rd party product will be Customer responsibility
- Customer will be responsible for any dependencies outside of the solution in scope – example: staging compute, patching, etc.

Cisco Data Center Solution Validation & Testing Services for ACI

Test Plan Development Support

Customer Responsibilities:

- Create a test plan document from the ACI Design Document and a Cisco provided Test Plan Template to define criteria to assess the environment. The testing will be performed in a Cisco lab and will be focused only on first customer ship (FCS) and supported solutions from Cisco approved third party vendors included in the Test Plan Template. Test cases will be focused on Solution validation rather than any specific feature testing (Negative testing and policy triggers)
- Cisco will conduct a testing kick-off meeting via conference call and work with the Customer to understand the Customer ACI Testing objectives for the test, define the scope of the testing from the fixed topology, hardware and test plan.
- Schedule the test setup and execution, taking into account the desired timelines and the availability of equipment, tools, software, personnel and other resources that may be required.
- Provide a weekly update via email on the status of the testing.
- Provide the final ACI Solution Testing Report and communicate the issues found during the testing.

Customer Responsibilities:

- Provide the relevant test data and test cases to Cisco that are necessary for the execution of the Test Plan. All information (such as but not limited to: designs, topologies, requirements) provided by Customer is assumed to be up-to-date and valid for the Customer's current environment. The testing is based upon information provided to Cisco by Customer at the time of the Services.
- Identify any issues that may affect the setup and execution of the test plan.
- Provide any third party hardware or software (and requisite licenses) needed to perform the testing in the Cisco lab.
- Customer to ensure that all requests for information related to testing is provided within two (2) business days to prevent any delays during testing.
- Review the final ACI Solution Testing Report with Cisco providing comment and approval.

Cisco Operations Enablement Services for ACI

Cisco Responsibilities:

- Identify and schedule Cisco personnel responsible for conducting the kick-off meeting and workshop, included in the scope of this service description.
- Conduct one (1) day workshop per process with Customer in order to demonstrate use cases and conduct operational review of the process runbooks.
- Deliver the runbooks to Customer for review.

Customer Responsibilities:

- Ensure all resources necessary for information gathering thru interviews are available according to scheduling agreed upon by Customer and Cisco project management.
- Provide all information and documentation on Customer's existing technical and operational capabilities specific to integrating ACI into Data Center Operations.
- Review documentation and provide comments within three (3) Business Days of immediately reviewing it with Cisco personnel.
- Designate the appropriate Customer operational and technical stakeholders (Dev/Ops, Architecture, Engineering, Operations) to participate in sessions and other information gathering activities.
- Ensure participation of key stakeholders in meeting(s) to discuss process architecture and related items.
- Provide any necessary technical or operational documentation to help Cisco understand and assess Customer environment

General Customer Responsibilities

- All information (such as but not limited to: designs, topologies, requirements) provided by Customer is assumed to be up-to-date and valid for the Customer's current environment. Cisco Services are based upon information provided to Cisco by Customer at the time of the Services.
- Customer acknowledges that the completion of Services is dependent upon Customer meeting its responsibilities as indicated herein.
- Identify Customer's personnel and define their roles in the participation of the Services. Such personnel may include but is not limited to: architecture design and planning engineers, and network engineers.
- Ensure Customer's personnel are available to participate during the course of the Services to provide information and to participate in scheduled information gathering sessions, interviews, meetings and conference calls.
- Customer shall review the draft Document Deliverable with Cisco, providing written comment or approval of the Document Deliverable within two (2) business days immediately after completion of such review.
- Support services provided by Cisco comprise technical advice, assistance and guidance only.
- Customer expressly understands and agrees that the Services shall take place and complete within ninety (90) calendar days from issuing a Purchase Order to Cisco for the Services herein.
- Customer understands and acknowledges that use of Pre-Packaged Software Scripts provided under this Service is governed by the software license terms in the Master Agreement between the parties.
- Customer understands and acknowledges that support of Pre-Packaged Software Scripts is out of scope of this effort. Customer will need to purchase such support separately, either directly from the third party or resold by Cisco.

Invoicing and Completion**Invoicing**

Services will be invoiced upon completion of the Services.

Completion of Services

Cisco will provide written notification upon completion of the Services to Customer. The Customer shall within five (5) Business Days of receipt of such notification provide written acknowledgement of Cisco's completion of the Services. Customer's failure to acknowledge completion of the Services or to provide reasons for rejection of the Services within the five (5) Business Day period signifies Customer's acceptance of completion of the Services in accordance with this Service Description.
