

Offer Description

Cisco WAN Automation Engine (WAE)

This Offer Description is part of the [General Terms](#) or similar terms existing between You and Cisco (e.g., the End User License Agreement) (the “**Agreement**”). Capitalized terms, unless defined in this document, have the meaning in the Agreement. Any references to the Supplemental End User License Agreement or SEULA mean Offer Description.

1. Summary

This Offer Description applies to Cisco WAN Automation Engine (WAE) (Software) and any Cisco Offers that reference this Offer Description (the “**Cisco Offer**”).

2. Support and Other Services

2.1 **Support.** Your purchase of the Cisco Offer includes [Cisco Solution Support for Services Providers](#) for Software or other support as described in Your Order.

2.2 **Pre-requisite licenses.** You must have each of the following licenses for each network Managed to use the Cisco Offer in a production environment:

- (A) A valid Active Server license for each copy of the Cisco Offer loaded into the memory of an Active Server; and
- (B) A valid RTM license for each Network Element (whether physical or virtual) that is Managed by the Software running on an Active Server. RTM licenses for Managed Network Elements are categorized by specific device type, as identified in the Your Order.

A single Active Server license and its corresponding RTM licenses can only Manage a single network. If You wish to Manage additional networks, You must purchase separate Active Server licenses and corresponding RTM licenses.

2.3 To use the Cisco Offer on a non-production server used only for fail-over purposes (a “**Standby Server**”), You must have a valid Standby Server license for each copy of the Cisco Offer loaded into the memory of the Standby Server. You are permitted to use a single Standby Server solely to back up a single Active Server and must have valid licenses for each.

2.4 You have the option to purchase a license to a lab version of the Cisco Offer, which Cisco Offer is strictly limited to use in a non-production environment (a “**Lab Server**”). You must have a valid Lab Server license for each copy of the Cisco Offer loaded into the memory of the Lab Server. You are permitted to use the Lab Server solely in a non-production testing or development environment to Manage up to an aggregate total of one hundred (100) non-production physical Network Elements. The term of a Lab Server license is limited to a term of three months, unless otherwise stated by Cisco in writing.

3. Data Handling

The [Disclosure Documents](#) for Cisco WAN Automation Engine provide information about data handling practices, security controls, and other features specific to this Cisco Offer.

4. Special Terms

4.1 Network interface modules (also known as NIMOs) (versions 7.x and beyond) provide the connectivity between the Cisco Offer and differing types of Network Elements. Network Elements and their associated functionality are constantly evolving and therefore, NIMOs will not support all possible devices, capabilities, or use cases.

4.2 Cisco may currently provide You with API software at no charge. However, nothing restricts Cisco’s right, now or in the future, to monetize the API software, at which point You may be required to pay a license fee for use of the API software.

4.3 Definitions

Term	Meaning
Active Server	A server used in a production environment.
Manage	To use the Software to monitor or exchange information with certain Network Elements.
Network Element	As applicable, a virtual or physical router, switch, server, or network function in Your network.
RTM	The right to Manage a Network Element.
