Open Source Used In 12.6(1) VOS assets for CCBU Projects (CentOS) 12.6(1) 5821
The number of IPv4 addresses in the subnet that are available.

The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use `cidrBlock` or `cidr-block` as the filter names.

Indicates whether this is the default subnet for the Availability Zone. You can also use `default-for-az` as the filter name.

An IPv6 CIDR block associated with the subnet.

The state of the subnet (pending | available).

The ID of the subnet.

The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `tag:Purpose` for the filter name and `X` for the filter value.

The key of a tag assigned to the resource. This filter is independent of the `tag-value` filter. For example, if you use both the filter `tag-key=Purpose` and the filter `tag-value=X`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `tag:Purpose` filter.

The value of a tag assigned to the resource. This filter is independent of the `tag-key` filter.

The ID of the VPC for the subnet.

Returns a reference to this object so that method calls can be chained together.
Availability Zone for the subnet. You can also use `<code>availability-zone</code>` as the filter name.</p> 

- The number of IPv4 addresses in the subnet that are available.</p> 

- The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use `<code>cidr</code>` or `<code>cidr-block</code>` as the filter names.</p>

the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.

- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `\tag-key=Purpose\` and the filter `\tag-value=X\`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter.

- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. For example, if you use both the filter `\tag-key=Purpose\` and the filter `\tag-value=X\`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter.

- `<code>vpc-id</code>` - The ID of the VPC for the subnet.

- `<code>availabilityZone</code>` - The Availability Zone for the subnet.

You can also use `<code>availability-zone</code>` as the filter name.

- `<code>available-ip-address-count</code>` - The number of IPv4 addresses in the subnet that are available.

- `<code>vpc-id</code>` - The ID of the VPC for the subnet.

The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use `<code>cidr</code>` or `<code>cidr-block</code>` as the filter names.

- `<code>availability-zone</code>` as the filter name.

- `<code>default-for-az</code>` as the filter name.

- `<code>ipv6-cidr-block-association.ipv6-cidr-block</code>` - An IPv6 CIDR block associated with the subnet.

- `<code>ipv6-cidr-block-association.association-id</code>` - An association ID for an IPv6 CIDR block associated with the subnet.

- `<code>ipv6-cidr-block-association.state</code>` - The state of an IPv6 CIDR block associated with the subnet.

- `<code>subnet-id</code>` - The ID of the subnet.

- `<code>tag:key=value</code>` - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.

- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `\tag-key=Purpose\` and the filter `\tag-value=X\`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag:tag-key</code>` filter.

- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. For example, if you use both the filter `\tag-key=Purpose\` and the filter `\tag-value=X\`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter.

- `<code>vpc-id</code>` - The ID of the VPC for the subnet.

The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use `<code>cidr</code>` or `<code>cidr-block</code>` as the filter names. `<p>` `<li>` `<p>` `<code>defaultForAz</code>` - Indicates whether this is the default subnet for the Availability Zone. You can also use `<code>default-for-az</code>` as the filter name. `<p>` `<li>` `<p>` `<code>ipv6-cidr-block-association.ipv6-cidr-block</code>` - An IPv6 CIDR block associated with the subnet. `<p>` `<li>` `<p>` `<code>ipv6-cidr-block-association.association-id</code>` - An association ID for an IPv6 CIDR block associated with the subnet. `<p>` `<li>` `<p>` `<code>ipv6-cidr-block-association.state</code>` - The state of an IPv6 CIDR block associated with the subnet. `<p>` `<li>` `<p>` `<code>state</code>` - The state of the subnet. `<p>` `<li>` `<p>` `<code>tag</code>`:`<i>key</i>=<i>value</i>` - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value. `<p>` `<li>` `<p>` `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `"tag-key=Purpose"` and the filter `"tag-value=X"`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>`:`<i>key</i>=<i>value</i>` filter. `<p>` `<li>` `<p>` `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. For example, if you use both the filter `"tag-key=Purpose"` and the filter `"tag-value=X"`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>`:`<i>key</i>=<i>value</i>` filter.
available. </li> <li> <p> <code>cidrBlock</code> - The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use </p> </li> <li> <p> <code>defaultForAz</code> - Indicates whether this is the default subnet for the Availability Zone. You can also use </p> </li> <li> <p> <code>cidr-block</code> as the filter name. </p> </li> <li> <p> <code>cidr</code> or <code>cidr-block</code> as the filter name. </p> </li> <li> <p> <code>ipv6-cidr-block-association.ipv6-cidr-block</code> - An IPv6 CIDR block associated with the subnet. </p> </li> <li> <p> <code>ipv6-cidr-block-association.association-id</code> - An association ID for an IPv6 CIDR block associated with the subnet. </p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet. </p> </li> <li> <p> <code>defaultForAz</code> - Indicates whether this is the default subnet for the Availability Zone. You can also use </p> </li> <li> <p> <code>default-for-az</code> as the filter name. </p> </li> <li> <p> <code>key</code> and <code>value</code> of a tag assigned to the resource. Specifying the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> for the filter name and </p> </li> <li> <p> <code>X</code> for the filter value. </p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the </p> </li> <li> <p> <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> filter. </p> </li> <li> <p> <code>tag-value</code> filter. </p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the subnet. </p> </li> <p>

The maximum number of volume results returned by <code>DescribeVolumeStatus</code> in paginated output. When this parameter is used, the request only returns <code>MaxResults</code> results in a single page along with a <code>NextToken</code> response element. The remaining results of the initial request can be seen by sending another request with the returned <code>NextToken</code> value. This value can be between 5 and 1000; if <code>MaxResults</code> is given a value larger than 1000, only 1000 results are returned. If this parameter is not used, then <code>DescribeVolumeStatus</code> returns all results. You cannot specify this parameter and the volume IDs parameter in the same request. Returns a reference to this object so that method calls can be chained together.

```

The maximum number of volume results returned by <code>DescribeVolumeStatus</code> in paginated output. When this parameter is used, the request only returns <code>MaxResults</code> results in a single page along with a <code>NextToken</code> response element. The remaining results of the initial request can be seen by sending another request with the returned <code>NextToken</code> value. This value can be between 5 and 1000; if <code>MaxResults</code> is given a value larger than 1000, only 1000 results are returned. If this parameter is not used, then <code>DescribeVolumeStatus</code> returns all results. You cannot specify this parameter and the volume IDs parameter in the same request. Returns a reference to this object so that method calls can be chained together.

```java

One or more volume IDs.

```java
public void setVolumeIds(List<String> volumeIds)
```

### Filters

- `attachment.attach-time` - The time stamp when the attachment initiated.
- `attachment.delete-on-termination` - Whether the volume is deleted on instance termination.
- `attachment.device` - The device name that is exposed to the instance (for example, `/dev/sdal`).
- `attachment.instance-id` - The ID of the instance the volume is attached to.
- `attachment.status` - The attachment state (attaching | attached | detaching | detached).
- `availability-zone` - The Availability Zone in which the volume was created.
- `create-time` - The time stamp when the volume was created.
- `encrypted` - The encryption status of the volume.
- `size` - The size of the volume, in GiB.
- `snapshot-id` - The snapshot from which the volume was created.
- `status` - The status of the volume (creating | available | in-use | deleting | deleted | error).
- `tag` - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X,
specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> 
<li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> 
<li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. 
</li> 
<li> <p> <code>attachment</code>:<code>attach-time</code> - The time stamp when the attachment initiated.</p> 
<li> <p> <code>attachment</code>:<code>delete-on-termination</code> - Whether the volume is deleted on instance termination.</p> 
<li> <p> <code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).</p> 
<li> <p> <code>attachment.instance-id</code> - The ID of the instance the volume is attached to.</p> 
<li> <p> <code>attachment.status</code> - The attachment state (attaching | attached | detaching | detached).</p> 
<li> <p> <code>create-time</code> - The time stamp when the volume was created.</p> 
<li> <p> <code>encrypted</code> - The encryption status of the volume.</p> 
<li> <p> <code>size</code> - The size of the volume, in GiB.</p> 
<li> <p> <code>snapshot-id</code> - The snapshot from which the volume was created.</p> 
<li> <p> <code>status</code> - The status of the volume (creating | available | in-use | deleting | deleted | error).</p> 
<li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> 
<li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> 
<li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

            "documentation" : "The next page token for paginated results.
This marker is present only when the results include a subset of all
available results. The value is a URL that can be used to retrieve
the next page of results. When the value is an empty string, there
are no additional pages.
<p>
By default, each response contains only one "NextToken".
When you start the pagination process, the first response
contains a "NextToken". Use this token to retrieve the next page.
If the response was received from a previous call, then the
value of the "NextToken" represents the token that was returned
on the initial response. When there are no more results available,
the "NextToken" is an empty string.
<p>
You can specify this parameter only when the request includes
a "MaxResults" parameter. If you do not specify the "NextToken", you
will receive only one "NextToken" response, even if you could fit
more results in the response body. When there is no more
results available, the "NextToken" becomes an empty string.
<p>
To receive more than one page, you can use the "MaxResults" and "NextToken" parameters to
"paginate" the results. The response to the initial request includes a "NextToken" with a valid
value. Use this value as the "NextToken" in a subsequent request to receive the next page of
results. Each subsequent request must specify the "MaxResults" parameter to receive the
appropriate number of results.
<p>
You can specify this parameter only when the request includes
a "MaxResults" parameter.
<p>
For more information, see "<a href="#pagination">Paginated Output</a>" in the
<code>DescribeVolumes</code> page of the CloudFormation API Reference.

### Setter Documentation

@code

```
public void setNextToken(String nextToken) {
    this.nextToken = nextToken;
}
```

@returns Returns a reference to this object so that method calls can be chained together.

### Simple Type

```
String
```

### Variable Documentation

The <code>NextToken</code> value to include in a future <code>DescribeVolumes</code> request. When the results of a <code>DescribeVolumes</code> request exceed <code>MaxResults</code>, this value can be used to retrieve the next page of results. This value is <code>null</code> when there are no more results to return.

### XML NameSpace Uri

```
null
```

returns a token that you can specify in a subsequent call to get the next set of results. The maximum number of items to return for this request. The request returns a token that you can specify in a subsequent call to get the next set of results. Returns a reference to this object so that method calls can be chained together.

```java
public class NextToken {
    private String nextToken;

    public String getNextToken() {
        return nextToken;
    }

    public void setNextToken(String nextToken) {
        this.nextToken = nextToken;
    }

    public String withNextToken(String nextToken) {
        setNextToken(nextToken);
        return this;
    }
}
```

The token for the next set of items to return. (You received this token from a prior call.)

```java
public class NEXT_TOKEN {
    private String nextToken;

    public String getNextToken() {
        return nextToken;
    }

    public void setNextToken(String nextToken) {
        this.nextToken = nextToken;
    }

    public NEXT_TOKEN withNextToken(String nextToken) {
        setNextToken(nextToken);
        return this;
    }
}

One or more filters.

- Whether the VPC is enabled for ClassicLink
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "\tag-key=Purpose\" and the filter "\tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the
- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
tag-key - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag-key filter.

tag-value - The value of a tag assigned to the resource. This filter is independent of the tag-key filter. Example:

```java
TimelineOptions timelineOptions = new TimelineOptions()
        .setFilters(
            new ArrayList<Filter>()
                .add(new Filter()
                    .setKey("tag-key")
                    .setValue("Purpose")
                )
        );
```

**NOTE:** This method appends the values to the existing list (if any). Use `{@link #setFilters(java.util.Collection)} or `{@link #withFilters(java.util.Collection)}` if you want to override the existing values.

```
@link #setFilters(java.util.Collection) or @link #withFilters(java.util.Collection)) if you want to override the existing values.
```
the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.  

- **<code>tag-key</code>** - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.  

- **<code>tag-value</code>** - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

&lt;p&gt; &lt;code&gt;requester-vpc-info.owner-id&lt;/code&gt; - The AWS account ID of the owner of the requester VPC.&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;requester-vpc-info.vpc-id&lt;/code&gt; - The ID of the requester VPC.&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;status-code&lt;/code&gt; - The status of the VPC peering connection (&lt;code&gt;pending-acceptance&lt;/code&gt; | &lt;code&gt;failed&lt;/code&gt; | &lt;code&gt;expired&lt;/code&gt; | &lt;code&gt;provisioning&lt;/code&gt; | &lt;code&gt;active&lt;/code&gt; | &lt;code&gt;deleted&lt;/code&gt; | &lt;code&gt;rejected&lt;/code&gt;).&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;status-message&lt;/code&gt; - A message that provides more information about the status of the VPC peering connection, if applicable.&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;tag&lt;/code&gt;: &lt;i&gt;key&lt;/i&gt;=&lt;i&gt;value&lt;/i&gt; - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify &lt;code&gt;tag:Purpose&lt;/code&gt; for the filter name and &lt;code&gt;X&lt;/code&gt; for the filter value.&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;tag-key&lt;/code&gt; - The key of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-value&lt;/code&gt; filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the &lt;code&gt;tag&lt;/code&gt;: &lt;i&gt;key&lt;/i&gt;=&lt;i&gt;value&lt;/i&gt; filter.&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;tag-value&lt;/code&gt; - The value of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-key&lt;/code&gt; filter.&lt;/p&gt;  
&lt;/li&gt;  
&lt;li&gt;  
&lt;p&gt; &lt;code&gt;vpc-peering-connection-id&lt;/code&gt; - The ID of the VPC peering connection.&lt;/p&gt;  
&lt;/li&gt;
A message that provides more information about the status of the VPC peering connection, if applicable.

The key/value combination of a tag assigned to the resource. Specify
the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.

The key of a tag assigned to the resource. This filter is independent of the `tag-value` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `tag-value` filter.

The value of a tag assigned to the resource. This filter is independent of the `tag-key` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `tag-value` filter.

```xml
<code>accepter-vpc-info.owner-id</code> - The AWS account ID of the owner of the peer VPC.
<code>requester-vpc-info.cidr-block</code> - The IPv4 CIDR block of the requester's VPC.
<code>requester-vpc-info.owner-id</code> - The AWS account ID of the owner of the requester VPC.
```

```xml
<code>vpc-info.vpc-id</code> - The ID of the peer VPC.
<code>vpc-info.owner-id</code> - The AWS account ID of the owner of the requester VPC.
<code>vpc-info.vpc-id</code> - The ID of the requester VPC.
<code>status-code</code> - The status of the VPC peering connection (<code>pending-acceptance</code> | <code>failed</code> | <code>expired</code> | <code>provisioning</code> | <code>active</code> | <code>deleted</code> | <code>rejected</code>). A message that provides more information about the status of the VPC peering connection, if applicable.
<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code> Purpose=X</code> for the filter value.
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. If you want to list resources with the tag key Purpose and any value, you can use the tag-key filter.
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
```

"c2jName": "Filters",
"c2jShape": "FilterList",
"deprecated": false,

"documentation": "One or more filters." <ul> <li> <p> <code>customer-gateway-configuration</code> - The configuration information for the customer gateway.</p> 
</li> <li> <p> <code>customer-gateway-id</code> - The ID of a customer gateway associated with the VPN connection.</p> 
</li> <li> <p> <code>state</code> - The state of the VPN connection (pending | available | deleting | deleted). The destination CIDR block for the destination CIDR block. This corresponds to the subnet used in a customer data center. <p> <li> <p> <code>bgp-asn</code> - The BGP Autonomous System Number (ASN) associated with a BGP device.</p> 
</li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The
key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag:Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter <code>tag:Purpose=X</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag:Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.

- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <code>tag:Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.

- The type of VPN connection. Currently the only supported type is <code>ipsec.1</code> - The ID of the VPN connection. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter <code>tag:Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.
value='X1', you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>/<i>value</i> filter. If you want to list only resources where Purpose is X and the tag value is X, see the <code>tag</code>:<i>key</i>/X filter.

- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

- The type of VPN connection. Currently the only supported type is <code>ipsec.1</code>.

- The ID of the VPN connection.

- The ID of a virtual private gateway associated with the VPN connection.

- The ID of a customer gateway associated with the VPN connection.

- Indicates whether the connection has static routes only. Used for devices that do not support Border Gateway Protocol (BGP).

- The destination CIDR block. This corresponds to the subnet used in a customer data center.

- The BGP Autonomous System Number (ASN) associated with a BGP device.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

- The state of the VPN connection (<code>pending</code> | <code>available</code> | <code>deleting</code> | <code>deleted</code>). Indicates whether the connection has static routes only. Used for devices that do not support Border Gateway Protocol (BGP).

- Indicates whether the connection is terminated. This corresponds to the subnet used in a customer data center.

- The BGP Autonomous System Number (ASN) associated with a BGP device.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

- The type of VPN connection. Currently the only supported type is <code>ipsec.1</code>.

- The ID of the VPN connection.

- The ID of a virtual private gateway associated with the VPN connection.

- The configuration information for the customer gateway.

- The state of the VPN connection (<code>pending</code> | <code>available</code> | <code>deleting</code> | <code>deleted</code>). Indicates whether the connection has static routes only. Used for devices that do not support Border Gateway Protocol (BGP).

- The destination CIDR block. This corresponds to the subnet used in a customer data center.

- The BGP Autonomous System Number (ASN) associated with a BGP device.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X" you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>/<i>value</i> filter.

- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
<code>type</code> - The type of VPN connection. Currently the only supported type is <code>ipsec.1</code>.</li> <li> <p> <code>vpn-connection-id</code> - The ID of the VPN connection.</p> <li> <p> <code>vpn-gateway-id</code> - The ID of a virtual private gateway associated with the VPN connection.</p> */

@param filters One or more filters.*/

The current state of the attachment between the gateway and the VPC ("attaching","detaching","attached","detached"). The ID of an attached VPC. The Availability Zone for the virtual private gateway (if applicable). The state of the virtual private gateway ("pending","available","deleting","deleted"). The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=Name, specify <code>tag:Name</code> for the filter name and <code>Name</code> for the filter value. The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Name" and the filter "tag-value=Value", you get any resources assigned both the tag value Name (regardless of what the tag's key is), and the tag key X (regardless of what the tag's value is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
tag assigned to the resource. This filter is independent of the tag-key filter.

- The type of virtual private gateway. Currently the only supported type is ipsec.1.
- The ID of the virtual private gateway.

This filter is independent of the tag-key filter.

The current state of the attachment between the gateway and the VPC (attaching | detaching | detached).
- The ID of an attached VPC.
- The Availability Zone for the virtual private gateway (if applicable).
- The state of the virtual private gateway (pending | available | deleting | deleted).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the filter "tag:Purpose=X".

The value of a tag assigned to the resource. This filter is independent of the tag-key filter.

The type of virtual private gateway. Currently the only supported type is ipsec.1.
- The ID of the virtual private gateway.

This method appends the values to the existing list (if any). Use { @link #setFilters(java.util.Collection) } or { @link #withFilters(java.util.Collection) } if you want to override the existing values.

The current state of the attachment between the gateway and the VPC (attaching | attaching | detaching | detached).
- The ID of an attached VPC.
- The Availability Zone for the virtual private gateway (if applicable).
- The state of the virtual private gateway (pending | available | deleting | deleted).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

The value of a tag assigned to the resource. This filter is independent of the tag-key filter.

The type of virtual private gateway. Currently the only supported type is ipsec.1.
- The ID of the virtual private gateway.

This method appends the values to the existing list (if any). Use { @link #setFilters(java.util.Collection) } or { @link #withFilters(java.util.Collection) } if you want to override the existing values.

One or more filters.

The current state of the attachment between the gateway and the VPC (attaching | attaching | detaching | detached).
- The ID of an attached VPC.
- The Availability Zone for the virtual private gateway (if applicable).
- The state of the virtual private gateway (pending | available | deleting | deleted).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

The value of a tag assigned to the resource. This filter is independent of the tag-key filter.

The type of virtual private gateway. Currently the only supported type is ipsec.1.
- The ID of the virtual private gateway.

Forces detachment if the previous detachment attempt did not occur cleanly (for example, logging into an instance, unmounting the volume, and detach normally). This option can lead to data loss or a corrupted file system. Use this option only as a last resort to detach a volume from a failed instance. The instance won't have an opportunity to flush file system caches or file system metadata. If you use this option, you must perform file system check and repair procedures.

@returns Returns a reference to this object so that method calls can be chained together.

Forces detachment if the previous detachment attempt did not occur cleanly (for example, logging into an instance, unmounting the volume, and detach normally). This option can lead to data loss or a corrupted file system. Use this option only as a last resort to detach a volume from a failed instance. larger than the snapshot size. Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.

Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.

- **Constraints:** 1-16384 for General Purpose SSD (<code>gp2</code>), 4-16384 for Provisioned IOPS SSD (<code>io1</code>), 500-16384 for Throughput Optimized HDD (<code>st1</code>), 500-16384 for Cold HDD (<code>sc1</code>), and 1-1024 for Magnetic (<code>standard</code>) volumes. If you specify a snapshot, the volume size must be equal to or larger than the snapshot size.

Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.

- **Return:** Returns a reference to this object

```java
@GET
@Path("volumeSize")
@DefaultValue("500")
@PathParam("default")
public String volumeSize()
```

**Method Reference:**
- **Getter:**
  ```java
  public Integer getVolumeSize()
  ```
  Constraints: 1-16384 for General Purpose SSD (<code>gp2</code>), 4-16384 for Provisioned IOPS SSD (<code>io1</code>), 500-16384 for Throughput Optimized HDD (<code>st1</code>), 500-16384 for Cold HDD (<code>sc1</code>), and 1-1024 for Magnetic (<code>standard</code>) volumes. If you specify a snapshot, the volume size must be equal to or larger than the snapshot size.

Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.

- **Setter:**
  ```java
  public void setVolumeSize(Integer volumeSize)
  ```

**Http References:**
- **Path:**
  ```java
  @Path("volumeSize")
  ```
- **QueryParam:**
  ```java
  @QueryParam("default")
  ```

**Additional Marshalling/Unmarshalling:**
- **Marshalling:**
  ```java
  @DefaultValue("500")
  ```
- **Unmarshalling:**
  ```java
  ```

**Idempotency Token:**
- **false**

**Is Payload:**
- **false**

**Is Streaming:**
- **false**

**Location:**
- **null**

**MarshallLocationName:**
- **"volumeSize"**

**UnmarshallLocationName:**
- **"volumeSize"**

**Uri:**
- **false**
Throughput Optimized HDD (<code>st1</code>), 500-16384 for Cold HDD (<code>sc1</code>), and 1-1024 for Magnetic (<code>standard</code>) volumes. If you specify a snapshot, the volume size must be equal to or larger than the snapshot size.<p>Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.</p>

<i>@param volumeSize The size of the volume, in GiB.</i></p>

supports. For `<code>io1</code>`, this represents the number of IOPS that are provisioned for the volume. For `<code>gp2</code>`, this represents the baseline performance of the volume and the rate at which the volume accumulates I/O credits for bursting. For more information about General Purpose SSD baseline performance, I/O credits, and bursting, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/EBSVolumeTypes.html">Amazon EBS Volume Types</a> in the Amazon Elastic Compute Cloud User Guide. 

**<code>iops</code>**

The number of I/O operations per second (IOPS) that the volume supports. For `<code>io1</code>`, this represents the number of IOPS that are provisioned for the volume. For `<code>gp2</code>`, this represents the baseline performance of the volume and the rate at which the volume accumulates I/O credits for bursting. For more information about General Purpose SSD baseline performance, I/O credits, and bursting, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/EBSVolumeTypes.html">Amazon EBS Volume Types</a> in the Amazon Elastic Compute Cloud User Guide. 

**Constraint:** Range is 100-20000 IOPS for `<code>io1</code>` volumes and 100-10000 IOPS for `<code>gp2</code>` volumes. 

**Condition:** This parameter is required for requests to create `<code>io1</code>` volumes; it is not used in requests to create `<code>gp2</code>`, `<code>st1</code>`, `<code>sc1</code>`, or `<code>standard</code>` volumes. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**Constraint:** 

**Condition:** This parameter is required for requests to create `<code>io1</code>` volumes; it is not used in requests to create `<code>gp2</code>`, `<code>st1</code>`, `<code>sc1</code>`, or `<code>standard</code>` volumes. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption. 

**<code>encrypted</code>**

Indicates whether the EBS volume is encrypted. Encrypted Amazon EBS volumes may only be attached to instances that support Amazon EBS encryption.

Magnetic (<code>standard</code>) volumes. If you specify a snapshot, the volume size must be equal to or larger than the snapshot size.

Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.

Constraints: 1-16384 for General Purpose SSD (<code>gp2</code>), 4-16384 for Provisioned IOPS SSD (<code>io1</code>), 500-16384 for Throughput Optimized HDD (<code>st1</code>), 500-16384 for Cold HDD (<code>sc1</code>), and 1-1024 for Magnetic (<code>standard</code>) volumes. If you specify a snapshot, the volume size must be equal to or larger than the snapshot size.

Default: If you're creating the volume from a snapshot and don't specify a volume size, the default is the snapshot size.

The size of the volume, in GiB.

Constraints: 1-16384 for General Purpose SSD (<code>gp2</code>), 4-16384 for Provisioned IOPS SSD (<code>io1</code>), 500-16384 for Throughput Optimized HDD (<code>st1</code>), 500-16384 for Cold HDD (<code>sc1</code>), and 1-1024 for Magnetic (<code>standard</code>) volumes.  /**<p>The volume type: <code>gp2</code>, <code>io1</code>,

---

Open Source Used In 12.6(1) VOS assets for CCBU Projects (CentOS) 12.6(1) 6390
The volume type: <code>gp2</code>, <code>io1</code>, <code>st1</code>, <code>sc1</code>, or <code>standard</code>.

**Default:** <code>standard</code>

**getVolumeType**

```java
public String getVolumeType()
```

**Documentation**

The volume type: <code>gp2</code>, <code>io1</code>, <code>st1</code>, <code>sc1</code>, or <code>standard</code>.

**Default:** <code>standard</code>

**setVolumeType**

```java
public void setVolumeType(String volumeType)
```

**Documentation**

The volume type: <code>gp2</code>, <code>io1</code>, <code>st1</code>, <code>sc1</code>, or <code>standard</code>.

**Default:** <code>standard</code>

**simple Setter Documentation**

```java
public void setVolumeType(String volumeType)
```

**Documentation**

The volume type: <code>gp2</code>, <code>io1</code>, <code>st1</code>, <code>sc1</code>, or <code>standard</code>.

**Default:** <code>standard</code>

**vararg Setter Documentation**

```java
public void setVolumeType(String... volumeTypes)
```

**Documentation**

The volume type: <code>gp2</code>, <code>io1</code>, <code>st1</code>, <code>sc1</code>, or <code>standard</code>.

**Default:** <code>standard</code>

**Return**

Returns a reference to this object so that method calls can be chained together.

The event.

The following are the `<code>error</code>` events.

- `<code>iamFleetRoleInvalid</code>` - The Spot fleet did not have the required permissions either to launch or terminate an instance.
- `<code>launchSpecTemporarilyBlacklisted</code>` - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.
- `<code>spotFleetRequestConfigurationInvalid</code>` - The configuration is not valid. For more information, see the description of the event.
- `<code>spotInstanceCountLimitExceeded</code>` - You've reached the limit on the number of Spot instances that you can launch.
- `<code>modify_in_progress</code>` - A request to modify the Spot fleet request was accepted and is in progress.
- `<code>modify_successful</code>` - The Spot fleet request was modified.
- `<code>price_update</code>` - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- `<code>subscribed</code>` - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- `<code>instanceChange</code>` - A bid was fulfilled and a new instance was launched.

The following are the `<code>fleetRequestChange</code>` events.

- `<code>active</code>` - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.
- `<code>cancelled</code>` - The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.
- `<code>cancelled_running</code>` - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.
- `<code>cancelled_terminating</code>` - The Spot fleet is canceled and its Spot instances are terminating.
- `<code>expired</code>` - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `<code>TerminateInstancesWithExpiration</code>` set.
- `<code>modify_in_progress</code>` - A request to modify the Spot fleet request was accepted and is in progress.
- `<code>modify_successful</code>` - The Spot fleet request was modified.
- `<code>price_update</code>` - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- `<code>subscribed</code>` - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- `<code>instanceChange</code>` - A bid was fulfilled and a new instance was launched.

The following are the `<code>instanceChange</code>` events.

- `<code>launched</code>` - A bid was fulfilled and a new instance was launched.
- `<code>terminated</code>` - An instance was terminated by the user.
canceled and its Spot instances are terminating.\p</li>

</ul>
The event document includes the following details:

- **EventSubType**: The event.
- **error**: The following are the <code>error</code> events:
  - <code>iamFleetRoleInvalid</code> - The Spot fleet did not have the required permissions either to launch or terminate an instance.
  - <code>launchSpecTemporarilyBlacklisted</code> - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.
  - <code>spotFleetRequestConfigurationInvalid</code> - The configuration is not valid.
  - <code>spotInstanceCountLimitExceeded</code> - You've reached the limit on the number of Spot instances that you can launch.
- **fleetRequestChange**: The following are the <code>fleetRequestChange</code> events:
  - <code>active</code> - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.
  - <code>cancelled</code> - The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.
  - <code>cancelled_running</code> - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.
  - <code>cancelled_terminating</code> - The Spot fleet is canceled and its Spot instances are terminating.
  - <code>expired</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.
  - <code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.
  - <code>modify_successful</code> - The Spot fleet request was modified.
  - <code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
  - <code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
  - <code>terminating</code> - An instance was terminated by the user.
  - <code>launched</code> - A bid was fulfilled and a new instance was launched.
- **instanceChange**: The following are the <code>instanceChange</code> events:
  - <code>launched</code> - An instance was launched.
  - <code>terminated</code> - An instance was terminated.

The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.
deleted two days after its instances were terminated. </li> <li> <p> <code>cancelled_running</code> - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated. </li> <li> <p> <code>cancelled_terminating</code> - The Spot fleet is canceled and its Spot instances are terminating. </li> <li> <p> <code>expired</code> - The Spot fleet request has expired. This change is permanent. </li> <li> <p> <code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances. </li> <li> <p> <code>launched</code> - A bid was fulfilled and a new instance was launched. </li> <li> <p> <code>terminated</code> - An instance was terminated by the user.
The following are the `<code>error</code>` events.

- `<code>iamFleetRoleInvalid</code>` - The Spot fleet did not have the required permissions either to launch or terminate an instance.
- `<code>launchSpecTemporarilyBlacklisted</code>` - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.
- `<code>spotFleetRequestConfigurationInvalid</code>` - The configuration is not valid. For more information, see the description of the event.
- `<code>spotInstanceCountLimitExceeded</code>` - You've reached the limit on the number of Spot instances that you can launch.
- `<code>fleetRequestChange</code>` events.
- `<code>active</code>` - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.
- `<code>cancelled</code>` - The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.
- `<code>cancelled_running</code>` - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.
- `<code>cancelled_terminating</code>` - The Spot fleet is canceled and its Spot instances are terminating.
- `<code>expired</code>` - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `<code>TerminateInstancesWithExpiration</code>` set.
- `<code>modify_in_progress</code>` - A request to modify the Spot fleet request was accepted and is in progress.
- `<code>modify_successful</code>` - The Spot fleet request was modified.
- `<code>price_update</code>` - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- `<code>submitted</code>` - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- `<code>launched</code>` - A bid was fulfilled and a new instance was launched.
- `<code>terminated</code>` - An instance was terminated by the user.

The following are the `fleetRequestChange` events.

- **`active`** - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.
- **`cancelled`** - The Spot fleet has been canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.
- **`cancelled_running`** - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.
- **`cancelled_terminating`** - The Spot fleet is canceled and its Spot instances are terminating.
- **`expired`** - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.
- **`modify_in_progress`** - A request to modify the Spot fleet request was accepted and is in progress.
- **`modify_successful`** - The Spot fleet request was modified.
- **`price_update`** - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- **`submitted`** - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- **`expired`** - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.
- **`modify_in_progress`** - A request to modify the Spot fleet request was accepted and is in progress.
- **`modify_successful`** - The Spot fleet request was modified.
- **`price_update`** - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

The following are the `instanceChange` events.

- **`launched`** - A bid was fulfilled and a new instance was launched.
- **`terminated`** - An instance was terminated by the user.

The following are the `error` events.

- **`iamFleetRoleInvalid`** - The Spot fleet did not have the required permissions either to launch or terminate an instance.
- **`launchSpecTemporarilyBlacklisted`** - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.
- **`spotFleetRequestConfigurationInvalid`** - The configuration is not valid. For more information, see the description of the event.
- **`spotInstanceCountLimitExceeded`** - You've reached the limit on the number of Spot instances that you can launch.
- **`launchSpecTemporarilyBlacklisted`** - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.
- **`spotFleetRequestConfigurationInvalid`** - The configuration is not valid. For more information, see the description of the event.
- **`spotInstanceCountLimitExceeded`** - You've reached the limit on the number of Spot instances that you can launch.

The Spot fleet did not have the required permissions either to launch or terminate an instance. The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.

You've reached the limit on the number of Spot instances that you can launch. The following are the events.

- The Spot fleet was canceled and its Spot instances are terminating. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.
- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- An instance was terminated by the user. A bid was fulfilled and a new instance was launched. The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- The Spot fleet request was modified. The following are the events.

A bid was fulfilled and a new instance was launched. The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.

- The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances. The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.
- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- The Spot fleet is canceled and its Spot instances continue to run until they are interrupted or terminated. The Spot fleet request was modified. The following are the events.

- The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.

- The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances. The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated. The following are the events.

- The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances. The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated. The following are the events.

- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- The Spot fleet request was being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances. The following are the events.

- A bid was fulfilled and a new instance was launched. A bid was fulfilled and a new instance was launched. The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.

- The Spot fleet request was modified. The following are the events.

- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances. The following are the events.

- A bid was fulfilled and a new instance was launched. The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with `TerminateInstancesWithExpiration` set.

- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

The configuration requirements of the Convertible Reserved Instances to exchange for your current Convertible Reserved Instances.

```java
public class GetReservedInstancesExchangeQuoteRequest {
    private List<TargetConfigurationRequest> targetConfigurations;
    //...
}
```

The configuration requirements of the Convertible Reserved Instances to exchange for your current Convertible Reserved Instances.

```java
public void setTargetConfigurations(List<TargetConfigurationRequest> targetConfigurations) {
    this.targetConfigurations = targetConfigurations;
}
```

This method appends the values to the existing list (if any). Use `setTargetConfigurations(java.util.Collection)` or `withTargetConfigurations(java.util.Collection)` if you want to override the existing values.

```java
public List<TargetConfigurationRequest> getTargetConfigurations() {
    return this.targetConfigurations;
}
```

The configuration requirements of the Convertible Reserved Instances to exchange for your current Convertible Reserved Instances.

```java
public void varargSetTargetConfigurations(List<TargetConfigurationRequest>... targetConfigurations) {
    this.targetConfigurations.addAll(Arrays.asList(targetConfigurations));
}
```

This method appends the values to the existing list (if any). Use `varargSetTargetConfigurations(List<TargetConfigurationRequest>...)` if you want to override the existing values.

```java
public List<TargetConfigurationRequest> varargGetTargetConfigurations() {
    return new ArrayList<>(this.targetConfigurations);
}
```

The currency in which the <code>upfrontPrice</code> and <code>hourlyPrice</code> amounts are specified. At this time, the only supported currency is <code>USD</code>.

```java
public enum CurrencyCode {
    USD,
    EUR,
    JPY,
    GBP,
    AUD,
    CAD,
    CHF,
    SGD,
    HKD,
    INR
}
```

**Usage**

```java
public void createResource() {
    CurrencyCode currencyCode = CurrencyCode.USD;
    // Use currencyCode for calculations
}
```

**Additional Information**

- **Documentation**
  - The currency in which the <code>upfrontPrice</code> and <code>hourlyPrice</code> amounts are specified. At this time, the only supported currency is <code>USD</code>.

- **Setter Method**
  - `withCurrencyCode` method to set the currency code.

- **Getter Method**
  - `getCurrencyCode` method to get the currency code.

- **HTTP**
  - Marshalling and unmarshalling paths are not defined.

- **Idempotency Token**
  - Not defined.

- **List and Map**
  - Not defined.
<code>hourlyPrice</code> amounts are specified. At this time, the only supported currency is <code>USD</code>. 

```java
/**
 * The currency in which the <code>upfrontPrice</code> and <code>hourlyPrice</code> amounts are specified. At this time, the only supported currency is <code>USD</code>.
 * @param currencyCode The currency in which the <code>upfrontPrice</code> and <code>hourlyPrice</code> amounts are specified. At this time, the only supported currency is <code>USD</code>.
 * @return Returns a reference to this object so that method calls can be chained together.
 * @see CurrencyCodeValues */
