  <li> <p> <code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>). </p> </li> 
  <li> <p> <code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>). </p> </li> 
  <li> <p> <code>state-reason-code</code> - The reason code for the state change. </p> </li> 
  <li> <p> <code>state-reason-message</code> - The message for the state change. </p> </li> 
  <li> <p> <code>tag</code>:<i>key</i>='<i>value</i>' - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. </p> </li> 
</ul>
For example, if you use both the filter `"tag:tag-value=Purpose"` and the filter `"tag:tag-value=X"`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag's value is), and the tag value `X` (regardless of what the tag's key is). If you want to list only resources where `Purpose` is `X`, see the

```xml
tag-value=Purpose</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag `Purpose=X`, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.</p> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the `<code>tag:tag-key</code>` filter. For example, if you use both the filter `"tag-key=tag-kev=Y"` and the filter `"tag:tag-value=tag-value"`, you get any resources assigned both the tag key `tag-key` (regardless of what the tag's value is), and the tag value `tag-value` (regardless of what the tag's key is). If you want to list only resources where `tag-key` is `Y`, see the
```xml
tag-key=tag-value</code> - The key of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag `tag-key=tag-key=X`, specify `<code>tag:tag-key</code>` for the filter name and `<code>X</code>` for the filter value. For example, if you use both the filter `"tag-key=tag-key=Y"` and the filter `"tag:tag-value=tag-value"`, you get any resources assigned both the tag key `tag-key` (regardless of what the tag's value is), and the tag value `tag-value` (regardless of what the tag's key is). If you want to list only resources where `tag-key` is `Y`, see the
```xml
tag-key=tag-value</code> - The key of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag `tag-key=tag-key=X`, specify `<code>tag:tag-key</code>` for the filter name and `<code>X</code>` for the filter value. For example, if you use both the filter `"tag-key=tag-key=Y"` and the filter `"tag:tag-value=tag-value"`, you get any resources assigned both the tag key `tag-key` (regardless of what the tag's value is), and the tag value `tag-value` (regardless of what the tag's key is). If you want to list only resources where `tag-key` is `Y`, see the

<li> <p> <code>architecture</code> - The image architecture (<code>i386</code> | <code>x86_64</code>). </p> </li> <li> <p> <code>block-device-mapping.delete-on-termination</code> - A Boolean value that indicates whether the Amazon EBS volume is deleted on instance termination. </p> </li> <li> <p> <code>block-device-mapping.device-name</code> - The device name for the EBS volume (for example, <code>/dev/sdh</code>). </p> </li> <li> <p> <code>block-device-mapping.volume-size</code> - The volume size of the EBS volume, in GiB. </p> </li> <li> <p> <code>block-device-mapping.volume-type</code> - The volume type of the EBS volume (<code>gp2</code> | <code>io1</code> | <code>sc1</code> | <code>standard</code>). </p> </li> <li> <p> <code>description</code> - The description of the image (provided during image creation). </p> </li> <li> <p> <code>ena-support</code> - A Boolean that indicates whether enhanced networking with ENA is enabled. </p> </li> <li> <p> <code>hypervisor</code> - The hypervisor type (<code>ovm</code> | <code>xen</code>). </p> </li> <li> <p> <code>image-id</code> - The ID of the image. </p> </li> <li> <p> <code>image-type</code> - The image type (<code>machine</code> | <code>kernel</code> | <code>ramdisk</code>). </p> </li> <li> <p> <code>is-public</code> - A Boolean that indicates whether the image is public. </p> </li> <li> <p> <code>kernel-id</code> - The kernel ID. </p> </li> <li> <p> <code>manifest-location</code> - The location of the image manifest. </p> </li> <li> <p> <code>name</code> - The name of the AMI (provided during image creation). </p> </li> <li> <p> <code>owner-alias</code> - String value from an Amazon-maintained list (<code>amazon</code> | <code>microsoft</code>) of snapshot owners. Not to be confused with the user-configured AWS account alias, which is set from the IAM console. </p> </li> <li> <p> <code>platform</code> - The platform. To only list Windows-based AMIs, use <code>windows</code>. </p> </li> <li> <p> <code>product-code</code> - The product code. </p> </li> <li> <p> <code>product-code.type</code> - The type of the product code (<code>devpay</code> | <code>marketplace</code>). </p> </li> <li> <p> <code>ramdisk-id</code> - The RAM disk ID. </p> </li> <li> <p> <code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>). </p> </li> <li> <p> <code>root-device-type</code> - The type of the root device volume (<code>ebs</code> | <code>instance-store</code>). </p> </li> <li> <p> <code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>). </p> </li> <li> <p> <code>tag:key</code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:evaluates</code> filter. </p> </li> <li> <p> <code>tag:prefix</code> - The key prefix of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-prefix=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:prefix</code> filter. </p> </li> <li> <p> <code>tag:</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tags:X</code> for the filter value. </p> </li> <li> <p> <code>tag:evaluates</code> - The evaluation function for the tag filter. This function determines whether the tag is present in the filter name. For example, if you want to list resources that have the tag Purpose=X, you can use the filter <code>tag:evaluates</code> with the value "Present". If you want to list resources that do not have the tag Purpose, you can use the filter <code>tag:evaluates</code> with the value "Missing". </p> </li> <li> <p> <code>tag:prefix</code> - The key prefix of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-prefix=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:prefix</code> filter. </p> </li> <li> <p> <code>tag:<i>key</i>=<i>value</i></code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tags:X</code> for the filter value. </p> </li> <li> <p> <code>tag:<i>key</i></code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>key</i></code> filter. </p> </li> <li> <p> <code>tag:<i>value</i></code> - The value of a tag assigned to the resource. This filter is independent of the tag-key filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>value</i></code> filter. </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i></code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tags:X</code> for the filter value. </p> </li> <li> <p> <code>tag:<i>key</i></code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>key</i></code> filter. </p> </li> <li> <p> <code>tag:<i>value</i></code> - The value of a tag assigned to the resource. This filter is independent of the tag-key filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>value</i></code> filter. </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i></code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tags:X</code> for the filter value. </p> </li> <li> <p> <code>tag:<i>key</i></code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>key</i></code> filter. </p> </li> <li> <p> <code>tag:<i>value</i></code> - The value of a tag assigned to the resource. This filter is independent of the tag-key filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>value</i></code> filter. </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i></code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tags:X</code> for the filter value. </p> </li> <li> <p> <code>tag:<i>key</i></code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>key</i></code> filter. </p> </li> <li> <p> <code>tag:<i>value</i></code> - The value of a tag assigned to the resource. This filter is independent of the tag-key filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>value</i></code> filter. </p> </li>
<code>block-device-mapping.volume-size</code> - The volume size of the EBS volume, in GiB.

<code>block-device-mapping.volume-type</code> - The volume type of the EBS volume (<code>gp2</code> | <code>io1</code> | <code>st1</code> | <code>sc1</code> | <code>standard</code>). 

<code>description</code> - The description of the image (provided during image creation).

<code>ena-support</code> - A Boolean that indicates whether enhanced networking with ENA is enabled.

<code>hypervisor</code> - The hypervisor type (<code>ovm</code> | <code>xen</code>).

<code>image-id</code> - The ID of the image.

<code>image-type</code> - The image type (<code>machine</code> | <code>kernel</code> | <code>ramdisk</code>).

<code>is-public</code> - A Boolean that indicates whether the image is public.

<code>kernel-id</code> - The kernel ID.

<code>manifest-location</code> - The location of the image manifest.

<code>name</code> - The name of the AMI (provided during image creation).

<code>owner-alias</code> - String value from an Amazon-maintained list (<code>amazon</code> | <code>microsoft</code>). 

<code>platform</code> - The platform. To only list Windows-based AMIs, use <code>platform</code>.

<code>product-code</code> - The product code.

<code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>). 

<code>root-device-type</code> - The type of the root device volume (<code>ebs</code> | <code>instance-store</code>). 

<code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>). 

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tagPurpose=X, specify <code>tag:Purpose</code> for the filter name and <code> Purpose=X</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the
is-public - A Boolean that indicates whether the image is public.

kernel-id - The kernel ID.

manifest-location - The location of the image manifest.

name - The name of the AMI (provided during image creation).

owner-alias - String value from an Amazon-maintained list (amazon | aws-marketplace | microsoft) of snapshot owners. Not to be confused with the user-configured AWS account alias, which is set from the IAM console.

owner-id - The AWS account ID of the image owner.

platform - The platform. To only list Windows-based AMIs, use windows.

product-code - The product code.

product-code.type - The type of the product code (devpay | marketplace).

ramdisk-id - The RAM disk ID.

root-device-name - The name of the root device volume (for example, /dev/sda1).

root-device-type - The type of the root device volume (ebs | instance-store).

state - The state of the image (available | pending | failed).

state-reason-code - The reason code for the state change.

state-reason-message - The message for the state change.

tag: <key>=<value> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose= Noel, specify tag:Purpose for the filter name and Purpose=X for the filter value. If you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag-value filter.

tag-key - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag-value filter.

tag-value - The value of a tag assigned to the resource. This filter is independent of the tag-key filter. If you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag-value filter.

virtualization-type - The virtualization type (paravirtual | hvm).

Not to be confused with the user-configured AWS account alias, which is set from the IAM console.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the image owner.</p> </li> <li> <p> <code>platform</code> - The platform. To only list Windows-based AMIs, use <code>platform=windows</code>.</p> </li> <li> <p> <code>product-code</code> - The product code.</p> </li> <li> <p> <code>product-code.type</code> - The type of the product code (<code>devpay</code>)</p> </li> <li> <p> <code>product-configuration</code> - The product configuration.</p> </li> <li> <p> <code>ramdisk-id</code> - The RAM disk ID.</p> </li> <li> <p> <code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>)</p> </li> <li> <p> <code>root-device-type</code> - The type of the root device volume (<code>ebs</code>)</p> </li> <li> <p> <code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>)</p> </li> <li> <p> <code>state-reason-code</code> - The reason code for the state change.</p> </li>
specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value. For example, if you use both the filter `"tag-key=Purpose"` and the filter `"tag-value=X"`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag’s value is), and the tag value `X` (regardless of what the tag’s key is). If you want to list only resources where `Purpose` is `X`, see the `<code>tag</code>:<i>key</i>=<i>value</i> filter.

- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter `"tag-key=Purpose"` and the filter `"tag-value=X"`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag’s value is), and the tag value `X` (regardless of what the tag’s key is).

- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter.

- `<code>virtualization-type</code>` - The virtualization type (`<code>paravirtual</code>` | `<code>hvm</code>`).

<code>description</code> - The description of the image (provided during image creation).

<code>ena-support</code> - A Boolean that indicates whether enhanced networking with ENA is enabled.

<code>hypervisor</code> - The hypervisor type (<code>ovm</code> | <code>xen</code>).  

<code>image-id</code> - The ID of the image.

<code>image-type</code> - The image type (<code>machine</code> | <code>kernel</code> | <code>ramdisk</code>).  

<code>is-public</code> - A Boolean that indicates whether the image is public.

<code>kernel-id</code> - The kernel ID.

<code>manifest-location</code> - The location of the image manifest.

<code>name</code> - The name of the AMI (provided during image creation).

<code>owner-alias</code> - String value from an Amazon-maintained list (<code>amazon</code> | <code>aws-marketplace</code> | <code>microsoft</code>) of snapshot owners. Not to be confused with the user-configured AWS account alias, which is set from the IAM console.

<code>platform</code> - The platform. To only list Windows-based AMIs, use <code>code</code>:<code>code</code>:<code>windows</code>.

<code>product-code</code> - The product code.

<code>ramdisk-id</code> - The RAM disk ID.

<code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>).  

<code>root-device-type</code> - The type of the root device volume (<code>ebs</code> | <code>instance-store</code>).  

<code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>).  

<code>state-reason-code</code> - The reason code for the state change.

<code>state-reason-message</code> - The message for the state change.

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter ""tag-key=Purpose"" and the filter ""tag-value=X"", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the

<code>tag</code>:<i>key</i>=<i>value</i> filter.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<code>virtualization-type</code> - The virtualization type (<code>paravirtual</code> | <code>hvm</code>).  

<code>block-device-mapping.delete-on-termination</code> - A Boolean value that indicates whether the Amazon EBS volume is deleted on instance termination.

<code>block-device-mapping.device-name</code> - The device name for the EBS volume (for example, <code>/dev/sdh</code>).  

<code>block-device-mapping.size</code> - The size of the EBS volume, in GiB.

<code>block-device-mapping.snapshot-id</code> - The ID of the snapshot used for the EBS volume.

<code>block-device-mapping.size</code> - The size of the EBS volume, in GiB.

<code>description</code> - The description of the image (provided during image creation).

<code>ena-support</code> - A Boolean that indicates whether enhanced networking with ENA is enabled.

<code>hypervisor</code> - The hypervisor type (<code>ovm</code> | <code>xen</code>).  

<code>image-id</code> - The ID of the image.

<code>image-type</code> - The image type (<code>machine</code> | <code>kernel</code> | <code>ramdisk</code>).  

<code>is-public</code> - A Boolean that indicates whether the image is public.

<code>kernel-id</code> - The kernel ID.

<code>manifest-location</code> - The location of the image manifest.

<code>name</code> - The name of the AMI (provided during image creation).
<li> <p> <code>owner-alias</code> - String value from an Amazon-maintained list (<code>amazon</code> | <code>aws-marketplace</code> | <code>microsoft</code>) of snapshot owners. Not to be confused with the user-configured AWS account alias, which is set from the IAM console.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the image owner.</p> </li> <li> <p> <code>platform</code> - The platform. To only list Windows-based AMIs, use <code>platform=xen</code>.</p> </li> <li> <p> <code>product-code</code> - The type of the product code (<code>devpay</code> | <code>marketplace</code>). The RAM disk ID.</p> </li> <li> <p> <code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>).</p> </li> <li> <p> <code>root-device-type</code> - The type of the root device volume (<code>ebs</code> | <code>instance-store</code>).</p> </li> <li> <p> <code>state-reason-code</code> - The reason code for the state change.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>的目的</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose=X</code> filter.</p> </li> <li> <p> <code>virtualization-type</code> - The virtualization type (<code>paravirtual</code> | <code>hvm</code>). The image architecture (<code>i386</code> | <code>x86_64</code>). The image type (<code>machine</code> | <code>kernel</code> | <code>ramdisk</code>). The product code.</p> </li>
<code>is-public</code> - A Boolean that indicates whether the image is public.

<code>kernel-id</code> - The kernel ID.

<code>manifest-location</code> - The location of the image manifest.

<code>name</code> - The name of the AMI (provided during image creation).

<code>owner-alias</code> - String value from an Amazon-maintained list (<code>amazon</code> | <code>aws-marketplace</code> | <code>microsoft</code> | <code>devpay</code> | <code>marketplace</code>). Not to be confused with the user-configured AWS account alias, which is set from the IAM console.

<code>owner-id</code> - The AWS account ID of the image owner.

<code>platform</code> - The platform. To only list Windows-based AMIs, use <code>windows</code>.

<code>product-code</code> - The product code.

<code>product-code.type</code> - The type of the product code (<code>devpay</code> | <code>amazon</code> | <code>aws-marketplace</code> | <code>microsoft</code> | <code>marketplace</code>). Not to be confused with the user-configured AWS account alias, which is set from the IAM console.

<code>ramdisk-id</code> - The RAM disk ID.

<code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>).

<code>root-device-type</code> - The type of the root device volume (<code>ebs</code> | <code>instance-store</code>). Not to be confused with the user-configured AWS account alias, which is set from the IAM console.

<code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>). Not to be confused with the user-configured AWS account alias, which is set from the IAM console.

<code>tag:Purpose</code> - The tag key for the purpose of the image. The tag value is Boolean. For example, if you use only the tag \"Purpose\" to mark the image as a Windows image, the tag value is \"Windows\".

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter \"tag-key\"=\"Purpose\" and the filter \"tag-value\"=\"Windows\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value Windows (regardless of what the tag's key is).

If you want to list only resources where Purpose is Windows, use the filter \"tag:Purpose\"=\"Windows\".

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<code>virtualization-type</code> - The virtualization type (<code>paravirtual</code> | <code>hvm</code>). The virtualization type is specified as a Boolean. For example, if you use both the filter \"virtualization-type\"=\"paravirtual\" and the filter \"virtualization-type\"=\"hvm\", you get any resources that support either paravirtual or hvm virtualization.

<code>ena-support</code> - A Boolean that indicates whether enhanced networking with ENA is enabled.

<code>hypervisor</code> - The hypervisor type (<code>ovm</code> | <code>xen</code>). The hypervisor type is specified as a Boolean. For example, if you use both the filter \"hypervisor\"=\"ovm\" and the filter \"hypervisor\"=\"xen\", you get any resources that support either ovm or xen hypervisor.

<code>image-id</code> - The ID of the image.

<code>image-type</code> - The type of the image (<code>machine</code> | <code>kernel</code> | <code>ramdisk</code>). The image type is specified as a Boolean. For example, if you use both the filter \"image-type\"=\"machine\" and the filter \"image-type\"=\"kernel\", you get any resources that support either machine or kernel type.

<code>is-public</code> - A Boolean that indicates whether the image is public.

<code>kernel-id</code> - The kernel ID.

<code>manifest-location</code> - The location of the image manifest.

<code>name</code> - The name of the AMI (provided during image creation).

<code>owner-alias</code> - String value from an Amazon-maintained list (<code>amazon</code> | <code>aws-marketplace</code> | <code>microsoft</code> | <code>devpay</code> | <code>marketplace</code>). Not to be confused with the user-configured AWS account alias, which is set from the IAM console.
<code>marketplace</code>.)</p> <li> <p> <code>ramdisk-id</code> - The RAM disk ID.</p> </li> <li> <p> <code>root-device-name</code> - The name of the root device volume (for example, <code>/dev/sda1</code>).</p> </li> <li> <p> <code>root-device-type</code> - The type of the root device volume (for example, <code>ebs</code> | <code>instance-store</code>). </p> </li> <li> <p> <code>state</code> - The state of the image (<code>available</code> | <code>pending</code> | <code>failed</code>). </p> </li> <li> <p> <code>state-reason-code</code> - The reason code for the state change.</p> </li> <li> <p> <code>state-reason-message</code> - The message for the state change.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (Regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> </li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>virtualization-type</code> - The virtualization type (<code>paravirtual</code> | <code>hvm</code>). </p> </li> </ul>

nextToken A token that indicates the next page of results.

@returns Returns a reference to this object so that method calls can be chained together.

```java
public MaxResults withMaxResults(String maxResults) {
    return this.withMaxResults(maxResults);
}
```

The maximum number of results to return in a single call. To retrieve the remaining results, make another call with the returned `NextToken` value.

The maximum number of results to return in a single call. To retrieve the remaining results, make another call with the returned `NextToken` value.

```java
public Integer getMaxResults() {
    return getMaxResults();
}
```

The maximum number of results to return in a single call. To retrieve the remaining results, make another call with the returned `NextToken` value.

The maximum number of results to return in a single call. To retrieve the remaining results, make another call with the returned `NextToken` value.

```java
public String getNextToken() {
    return getNextToken();
}
```

A token that indicates the next page of results.
The maximum number of results to return in a single call. To retrieve the remaining results, make another call with the returned nextToken value.

```
@Param maxResults

>Returns a reference to this object so that method calls can be chained together.
```

Filter tasks using the task-state filter and one of the following values: active, completed, deleting, deleted.:

```
Filter tasks using the task-state filter and one of the following values: active, completed, deleting, deleted.
```

```
following values: active, completed, deleting, deleted.

```java
public List<Filter> getFilters(Param filters)
```

*Param filters*

Filter tasks using the \texttt{task-state} filter and one of the following values: active, completed, deleting, deleted.

*Return*

Returns a reference to this object so that method calls can be chained together.*/*

```java
public List<Filter> withFilters(Param filters)
```

*Param filters*

Filter tasks using the \texttt{task-state} filter and one of the following values: active, completed, deleting, deleted.

*Return*

Returns a reference to this object so that method calls can be chained together.*/*

<code>network-interface.addresses.private-ip-address</code> - The private IPv4 address associated with the network interface. 

- <code>network-interface.addresses.association.public-ip</code> - The ID of the association of an Elastic IP address (IPv4) with a network interface.
- <code>network-interface.addresses.association.ip-owner-id</code> - The owner ID of the private IPv4 address associated with the network interface.
- <code>network-interface.association.attachment-id</code> - The ID of the interface attachment.
- <code>network-interface.association.instance-id</code> - The ID of the instance to which the network interface is attached.
- <code>network-interface.association.device-index</code> - The device index to which the network interface is attached.
- <code>network-interface.association.public-ip</code> - Specifies whether the IPv4 address of the network interface is the primary private IPv4 address.
- <code>network-interface.association.public-ip-owner-id</code> - The owner ID of the instance to which the network interface is attached.

- <code>network-interface.attachment.attachment-id</code> - The ID of the interface attachment.
- <code>network-interface.attachment.attach-time</code> - The time that the network interface was attached to an instance.
- <code>network-interface.attachment.delete-on-termination</code> - Specifies whether the attachment is deleted when an instance is terminated.
- <code>network-interface.availability-zone</code> - The Availability Zone for the network interface.
- <code>network-interface.description</code> - The description of the network interface.
- <code>network-interface.device-index</code> - The device index to which the network interface is attached.
- <code>network-interface.owner-id</code> - The ID of the owner of the network interface.
- <code>network-interface.private-dns-name</code> - The private DNS name of the network interface.
- <code>network-interface.query-tag</code> - The private DNS name of the network interface.
- <code>network-interface.requester-id</code> - The requester ID for the network interface.
- <code>network-interface.requester-managed</code> - Indicates whether the network interface is being managed by AWS.
- <code>network-interface.status</code> - The status of the network interface.
- <code>network-interface.source-dest-check</code> - Whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.
- <code>network-interface.subnet-id</code> - The ID of the subnet for the network interface.
- <code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.
- <code>owner-id</code> - The AWS account ID of the instance owner.
- <code>placement-group-name</code> - The name of the placement group for the instance.
- <code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.
- <code>private-dns-name</code> - The private IPv4 DNS name of the instance.
- <code>ramdisk-id</code> - The RAM disk ID.
- <code>reason</code> - The reason for the current state of the instance (for example, shows "User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter.
- <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).
- <code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch
multiple instances using the same launch request. For example, if you launch one instance, you’ll get one reservation ID. If you launch ten instances using the same launch request, you’ll also get one reservation ID.

- The name of the root device for the instance (for example, /dev/sda1 or /dev/xvda).</li>
- The type of root device that the instance uses (ebs | instance-store).

- Indicates whether the instance performs source/destination checking. A value of true means that checking is enabled, and false means checking is disabled. The value must be false for the instance to perform network address translation (NAT) in your VPC.

- The ID of the Spot instance request.

- The reason code for the state change.

- A message that describes the state change.

- The ID of the subnet for the instance.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose filter.

- The value of a tag assigned to the resource. This filter is independent of the tag-key filter. This filter is independent of the tag:Value filter.

- The ID of the VPC that the instance is running in.

- The virtualization type of the instance (paravirtual | hvm).

- The status for the EBS volume (attaching | attached | detaching | detached).

- The volume ID of the EBS volume.

- The idempotency token you provided when you launched the instance.

- The Public DNS name of the instance.

- The ID of the security group for the instance. EC2-Classic only.

- The name of the security group for the instance. EC2-Classic only.

- The ID of the Dedicated Host on which the instance is running, if applicable.

- The hypervisor type of the instance (ovm | xen).

- The instance profile associated with the instance. Specified as an ARN.
The ID of the image used to launch the instance.

- The ID of the state of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).

- The ID of the instance launched by the instance.

- The ID of the security group for the instance.

- The name of the security group for the instance.

- The public IPv4 address of the instance.

- The kernel ID.

- The name of the key pair used when the instance was launched.

- When launching multiple instances, this is the index for the instance in the launch group (for example, 0, 1, 2, and so on).

- The time when the instance was launched.

- Indicates whether detailed monitoring is enabled.

- The ID of the association of an Elastic IP address (IPv4) with a network interface.

- The owner ID of the private IPv4 address associated with the network interface.

- The ID of the interface attachment.

- The ID of the instance to which the network interface is attached.

- The owner ID of the instance to which the network interface is attached.

- The status of the attachment.

- Specifies whether the IPv4 address of the network interface is the primary private IPv4 address.

- The ID of the association of an Elastic IP address (IPv4) with a network interface.

- The owner ID of the private IPv4 address associated with the network interface.

- The status of the network interface.

- Whether the network interface performs source/destination checking. A value of true means checking is enabled, and false means checking is disabled.
disabled. The value must be \texttt{false} for the network interface to perform network address translation (NAT) in your VPC.

- \texttt{network-interface.subnet-id} - The ID of the subnet for the network interface.
- \texttt{network-interface.vpc-id} - The ID of the VPC for the network interface.
- \texttt{owner-id} - The AWS account ID of the instance owner.
- \texttt{placement-group-name} - The name of the placement group for the instance.
- \texttt{platform} - The platform. Use \texttt{windows} if you have Windows instances; otherwise, leave blank.
- \texttt{private-dns-name} - The private IPv4 DNS name of the instance.
- \texttt{private-ip-address} - The private IPv4 address of the instance.
- \texttt{product-code} - The product code associated with the AMI used to launch the instance.
- \texttt{product-code.type} - The type of product code (\texttt{devpay} | \texttt{marketplace}).
- \texttt{ramdisk-id} - The RAM disk ID.
- \texttt{reason} - The reason for the current state of the instance (for example, \texttt{"User Initiated [date]\" when you stop or terminate the instance}). Similar to the state-reason-code filter.
- \texttt{reservation-id} - The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get ten reservation IDs.
- \texttt{root-device-name} - The name of the root device for the instance (for example, \texttt{dev/sda1} or \texttt{dev/xvda}).
- \texttt{source-dest-check} - Indicates whether the instance performs source/destination checking. A value of \texttt{true} means that checking is enabled, and \texttt{false} means checking is disabled. The value must be \texttt{false} for the instance to perform network address translation (NAT) in your VPC.
- \texttt{spot-instance-request-id} - The ID of the Spot instance request.
- \texttt{state-reason-code} - The reason code for the state change.
- \texttt{state-reason-message} - A message that describes the state change.
- \texttt{subnet-id} - The ID of the subnet for the instance.
- \texttt{tag}:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag \texttt{Purpose=X}, specify \texttt{tag:Purpose} for the filter name and \texttt{X} for the filter value.
- \texttt{tag-key} - The key of a tag assigned to the resource. This filter is independent of the \texttt{tag-value} filter. For example, if you use both the filter \texttt{"tag-key=Purpose"} and the filter \texttt{"tag-value=X"}, you get any resources assigned both the tag key \texttt{Purpose} (regardless of what the tag's value is), and the tag value \texttt{X} (regardless of what the tag's key is). If you want to list only resources where \texttt{Purpose} is \texttt{X}, see the \texttt{tag} filter.
- \texttt{tenancy} - The tenancy of an instance (\texttt{dedicated} | \texttt{default} | \texttt{host}).
- \texttt{virtualization-type} - The virtualization type of the instance (\texttt{paravirtual} | \texttt{hvm}).
- \texttt{vpc-id} - The ID of the VPC that the instance is running in.

\begin{verbatim}
/**<p>One or more filters.</p>

- \texttt{affinity} - The affinity setting for an instance running on a Dedicated Host (\texttt{default} | \texttt{host}).
- \texttt{architecture} - The instance architecture (\texttt{i386} | \texttt{x86_64}).
- \texttt{association.public-ip} - The address of the Elastic IP address (IPv4) bound to the network interface.
- \texttt{association.ip-owner-id} - The owner of the Elastic IP address

\end{verbatim}
combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value. `<p>` `<li>` `<p>` `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>` filter. `<p>` `<li>` `<p>` `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. `<p>` `<li>` `<p>` `<code>tag:tenancy</code>` - The tenancy of an instance (`<code>dedicated</code>` | `<code>default</code>` | `<code>host</code>`). `<p>` `<li>` `<p>` `<code>tag:virtualization-type</code>` - The virtualization type of the instance (`<code>paravirtual</code>` | `<code>hvm</code>`). `<p>` `<li>` `<p>` `<code>vpc-id</code>` - The ID of the VPC that the instance is running in. `<p>` `<li>` `<p>` `<code>tag:ip-address</code>` - The public IPv4 address of the instance. `<p>` `<li>` `<p>` `<code>tag:kernel-id</code>` -

</tbody>
</table>
| reason                                    | - The reason for the current state of the instance (for example, shows "User Initiated..."
when you stop or terminate the instance). Similar to the state-reason-code filter. 

- The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).
- The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID.

- The name of the root device for the instance (for example, 

- The type of root device that the instance uses (ebs | instance-store).

- Indicates whether the instance performs source/destination checking. A value of true means that checking is enabled, and false means checking is disabled. The value must be false for the instance to perform network address translation (NAT) in your VPC.

- The ID of the Spot instance request.

- The reason code for the state change.

- A message that describes the state change.

- The ID of the subnet for the instance.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

- The tenancy of an instance (dedicated | default | host).

- The virtualization type of the instance (paravirtual | hvm).

- The ID of the VPC that the instance is running in.

id</code> - The volume ID of the EBS volume.</p>  

<li> <code>client-token</code> - The idempotency token you provided when you launched the instance.</li>  

<li> <code>dns-name</code> - The public DNS name of the instance.</li>  

<li> <code>group-id</code> - The ID of the security group for the instance. EC2-Classic only.</li>  

<li> <code>group-name</code> - The name of the security group for the instance. EC2-Classic only.</li>  

<li> <code>host-id</code> - The ID of the Dedicated Host on which the instance is running, if applicable.</li>  

<li> <code>hypervisor</code> - The hypervisor type of the instance.</li>  

<li> <code>image-id</code> - The ID of the image used to launch the instance. Specified as an ARN.</li>  

<li> <code>image-state</code> - The state of the image, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).</li>  

<li> <code>instance-state-name</code> - The state of the instance (for example, <code>pending</code>, <code>running</code>, <code>terminated</code>, <code>stopping</code>, and <code>stopped</code>).</li>  

<li> <code>instance-type</code> - The type of instance (for example, <code>t2.micro</code>).</li>  

<li> <code>ip-address</code> - The public IPv4 address of the instance.</li>  

<li> <code>kernel-id</code> - The kernel ID.</li>  

<li> <code>key-name</code> - The name of the key pair used when the instance was launched.</li>  

<li> <code>launch-index</code> - When launching multiple instances, this is the index for the instance in the launch group (for example, 0, 1, 2, and so on).</li>  

<li> <code>launch-time</code> - The time when the instance was launched.</li>  

<li> <code>monitoring-state</code> - Indicates whether detailed monitoring is enabled (<code>disabled</code> | <code>enabled</code>). The device index to which the network interface is attached. The device index to which the network interface is attached.</li>  

<li> <code>network-interface.addresses.private-ip-address</code> - The private IPv4 address associated with the network interface.</li>  

<li> <code>network-interface.addresses.primary</code> - Specifies whether the IPv4 address of the network interface is the primary private IPv4 address.</li>  

<li> <code>network-interface.addresses.association.public-ip</code> - The ID of the association of an Elastic IP address (IPv4) with a network interface.</li>  

<li> <code>network-interface.attachment.attachment-id</code> - The ID of the attachment.</li>  

<li> <code>network-interface.attachment.device-index</code> - The device index to which the network interface is attached.</li>  

<li> <code>network-interface.attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</li>  

<li> <code>network-interface.attachment.status</code> - The status of the attachment.</li>  

<li> <code>network-interface.attachment.delete-on-termination</code> - Specifies whether the attachment is deleted when an instance is terminated.</li>  

<li> <code>network-interface.availability-zone</code> - The Availability Zone for the network interface.</li>  

<li> <code>network-interface.description</code> - The description of the network interface.</li>  

<li> <code>network-interface.group-id</code> - The ID of a security group associated with the network interface.</li>  

<li> <code>network-interface.ipv6-addresses.ipv6-address</code> - The IPv6 address associated with the network interface.</li>  

<li> <code>network-interface.mac-address</code> - The MAC address of the network interface.</li>  

The ID of the VPC that the instance is running in.

The affinity setting for an instance running on a Dedicated Host.

The instance architecture.

The address of the Elastic IP address (IPv4) bound to the network interface.

The owner of the Elastic IP address (IPv4) associated with the network interface.

The association ID returned when you allocated the Elastic IP address (IPv4) for your network interface.

The association ID returned when the network interface was associated with an IPv4 address.

The Availability Zone of the instance.

The attach time for an EBS volume mapped to the instance, for example, 2010-09-15T17:15:20.000Z.

Whether the EBS volume is deleted on instance termination.

The device name for the EBS volume.

The status for the EBS volume.

The volume ID of the EBS volume.

The idempotency token you provided when you launched the instance.

The public DNS name of the instance.

The ID of the security group for the instance.

The ID of the image used to launch the instance.

The launch index for the instance in the launch group.

The time when the instance was launched.

Indicates whether detailed monitoring is enabled.

The private IPv4 address associated with the network interface.

Specifies whether the IPv4 address of the network interface is the primary private IPv4 address.

The ID of the association of an Elastic IP address (IPv4) with a network interface.

The owner ID of the private IPv4 address associated with the network interface.
interface.attachment.attachment-id</code> - The ID of the interface attachment. 
</p> <li> <code>interface.attachment.instance-id</code> - The ID of the instance to which the network interface is attached. 
</li> <li> <code>interface.attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached. 
</li> <li> <code>interface.attachment.device-index</code> - The device index to which the network interface is attached. 
</li> <li> <code>interface.attachment.attach-time</code> - The time that the network interface was attached to an instance. 
</li> <li> <code>interface.attachment.delete-on-termination</code> - Specifies whether the attachment is deleted when an instance is terminated. 
</li> <li> <code>interface.attachment.availability-zone</code> - The Availability Zone for the network interface. 
</li> <li> <code>interface.attachment.group-id</code> - The ID of a security group associated with the network interface. 
</li> <li> <code>interface.attachment.group-name</code> - The name of a security group associated with the network interface. 
</li> <li> <code>interface.attachment.ipv6-addresses.ipv6-address</code> - The IPv6 address associated with the network interface. 
</li> <li> <code>interface.attachment.mac-address</code> - The MAC address of the network interface. 
</li> <li> <code>interface.attachment.owner-id</code> - The ID of the owner of the network interface. 
</li> <li> <code>interface.attachment.private-dns-name</code> - The private DNS name of the network interface. 
</li> <li> <code>interface.attachment.requester-id</code> - The requester ID for the network interface. 
</li> <li> <code>interface.attachment.requester-managed</code> - Indicates whether the network interface is being managed by AWS. 
</li> <li> <code>interface.attachment.source-dest-check</code> - Whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>true</code> for the network interface to perform network address translation (NAT) in your VPC. 
</li> <li> <code>interface.attachmentsubnet-id</code> - The ID of the subnet for the network interface. 
</li> <li> <code>interface.attachment.vpc-id</code> - The ID of the VPC for the network interface. 
</li> <li> <code>owner-id</code> - The AWS account ID of the instance owner. 
</li> <li> <code>placement-group-name</code> - The name of the placement group for the instance. 
</li> <li> <code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank. 
</li> <li> <code>private-dns-name</code> - The private IPv4 DNS name of the instance. 
</li> <li> <code>private-ip-address</code> - The private IPv4 address of the instance. 
</li> <li> <code>product-code</code> - The product code associated with the AMI used to launch the instance. 
</li> <li> <code>ramdisk-id</code> - The RAM disk ID. 
</li> <li> <code>reason</code> - The reason for the current state of the instance (for example, shows "User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter. 
</li> <li> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). 
</li> <li> <code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID. 
</li> <li> <code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/sda1</code> or <code>/dev/xvda</code>). 
</li> <li> <code>root-device-type</code> - The type of root device that the instance uses (<code>ebs</code> | <code>instance-store</code>). 
</li> <li> <code>source-dest-check</code> - Indicates whether the instance performs source/destination checking. A value of
true means that checking is enabled, and false means checking is disabled. The value must be false for the instance to perform network address translation (NAT) in your VPC. The ID of the Spot instance request.

The reason code for the state change.

A message that describes the state change.

The ID of the subnet for the instance.

The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

The ID of the VPC that the instance is running in.

The ID of the security group for the instance. EC2-Classic only.

The device name for the EBS volume (for example, /dev/sdh0 or /dev/xvdh). The status for the EBS volume.

The volume ID of the EBS volume.

The idempotency token you provided when you launched the instance.

The Public DNS name of the instance.
<li> <p> <code>group-name</code> - The name of the security group for the instance. EC2-Classic only.</p> </li> <li> <p> <code>host-id</code> - The ID of the Dedicated Host on which the instance is running, if applicable.</p> </li> <li> <p> <code>hypervisor</code> - The hypervisor type of the instance (<code>ovm</code> | <code>xen</code>). </p> </li> <li> <p> <code>iam-instance-profile.arn</code> - The instance profile associated with the instance. Specified as an ARN.</p> </li> <li> <p> <code>image-id</code> - The ID of the image used to launch the instance.</p> </li> <li> <p> <code>instance-id</code> - The ID of the instance.</p> </li> <li> <p> <code>instance-lifecycle</code> - Indicates whether this is a Spot Instance or a Scheduled Instance (<code>spot</code>) | (<code>scheduled</code>). </p> </li> <li> <p> <code>instance-state-code</code> - The state of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented.     <code>network-interface.attachment.attachment-id</code> - The ID of the interface attachment. </li>
</ul>
```
<code>network-interface.attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</li> <li> <p> <code>network-interface.attachment.owner-id</code> - The owner ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>network-interface.attachment.device-index</code> - The device index to which the network interface is attached.</p> </li> <li> <p> <code>network-interface.attachment.status</code> - The status of the attachment (attaching | detached).</p> </li> <li> <p> <code>network-interface.attachment.attach-time</code> - The time that the network interface was attached to an instance.</p> </li> <li> <p> <code>network-interface.attachment.delete-on-termination</code> - Specifies whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>network-interface.availability-zone</code> - The Availability Zone for the network interface.</p> </li> <li> <p> <code>network-interface.description</code> - The description of the network interface.</p> </li> <li> <p> <code>network-interface.group-id</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>network-interface.group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>network-interface.ipv6-addresses.ipv6-address</code> - The IPv6 address associated with the network interface.</p> </li> <li> <p> <code>network-interface.mac-address</code> - The MAC address of the network interface.</p> </li> <li> <p> <code>network-interface.network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>network-interface.owner-id</code> - The ID of the owner of the network interface.</p> </li> <li> <p> <code>network-interface.private-dns-name</code> - The private DNS name of the network interface.</p> </li> <li> <p> <code>network-interface.requester-id</code> - The requester ID for the network interface.</p> </li> <li> <p> <code>network-interface.requester-managed</code> - Indicates whether the network interface is being managed by AWS.</p> </li> <li> <p> <code>network-interface.status</code> - The status of the network interface (available | in-use).</p> </li> <li> <p> <code>network-interface.source-dest-check</code> - Whether the network interface performs source/destination checking. A value of false means checking is enabled, and false means checking is disabled. The value must be false for the network interface to perform network address translation (NAT) in your VPC.</p> </li> <li> <p> <code>network-interface.subnet-id</code> - The ID of the subnet for the network interface.</p> </li> <li> <p> <code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.</p> </li> <li> <p> <code>network-interface.owner-id</code> - The AWS account ID of the instance owner.</p> </li> <li> <p> <code>placement-group-name</code> - The name of the placement group for the instance.</p> </li> <li> <p> <code>platform</code> - The platform. Use windows if you have Windows instances; otherwise, leave blank.</p> </li> <li> <p> <code>private-dns-name</code> - The private IPv4 DNS name of the instance.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address of the instance.</p> </li> <li> <p> <code>product-code</code> - The product code associated with the AMI used to launch the instance.</p> </li> <li> <p> <code>product-code.type</code> - The type of product code (devpay | marketplace | ramdisk-id).</p> </li> <li> <p> <code>product-code.reason</code> - The reason for the current state of the instance (for example, shows User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter.</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID. However, if you launch ten instances using the same launch request, you'll also get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID.</p> </li> <li> <p> <code>root-device-name</code> - The name of the root device for the instance (for example, /dev/sda1 or /dev/xvda).</p> </li> <li> <p> <code>root-device-type</code> - The type of root device that the instance uses (ebs | instance-store).</p> </li> <li> <p> <code>source-dest-check</code> - Indicates whether the instance performs source/destination checking. A value of true means that checking is enabled, and false means checking is disabled. The value
must be false for the instance to perform network address translation (NAT) in your VPC. </li><li> <code>spot-instance-request-id</code> - The ID of the Spot instance request.</li><li> <code>state-reason-code</code> - The reason code for the state change.</li><li> <code>state-reason-message</code> - A message that describes the state change.</li><li> <code>subnet-id</code> - The ID of the subnet for the instance.</li><li> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li><li> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag</code>:<i>key</i>=<i>value</i> filter.</li><li> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filters "tag-key=Name" and the filter "Name=X", you get any resources assigned both the tag key Name and the tag value X.</li>
network interface.</li> <li> <p> <code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.</li> <li> <p> <code>owner-id</code> - The AWS account ID of the instance owner.</li> <li> <p> <code>placement-group-name</code> - The name of the placement group for the instance.</li> <li> <p> <code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</li> <li> <p> <code>private-dns-name</code> - The private IPv4 DNS name of the instance.</li> <li> <p> <code>private-ip-address</code> - The private IPv4 address of the instance.</li> <li> <p> <code>product-code</code> - The product code associated with the AMI used to launch the instance.</li> <li> <p> <code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.</li> <li> <p> <code>network-interface.id</code> - The ID of the network interface.</li> <li> <p> <code>product-code.type</code> - The type of product code (<code>devpay</code> | <code>marketplace</code>).</li> <li> <p> <code>ramdisk-id</code> - The RAM disk ID.</li> <li> <p> <code>reason</code> - The reason for the current state of the instance (for example, shows "User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter.</li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</li> <li> <p> <code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created every time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID.</li> <li> <p> <code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/xvda</code>).</li> <li> <p> <code>source-dest-check</code> - Indicates whether the instance performs source/destination checking. A value of <code>true</code> means that checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the instance to perform network address translation (NAT) in your VPC.</li> <li> <p> <code>spot-instance-request-id</code> - The ID of the Spot instance request.</li> <li> <p> <code>state-reason-code</code> - The reason code for the state change.</li> <li> <p> <code>state-reason-message</code> - A message that describes the state change.</li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-value</code> filter.</li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</li> <li> <p> <code>tag:tenancy</code> - The tenancy of an instance.</li> <li> <p> <code>virtualization-type</code> - The virtualization type of the instance.</li> <li> <p> <code>vpc-id</code> - The ID of the VPC that the instance is running in.

A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled.</p> <li> <p> <code>network-interface.subnet-id</code> - The ID of the subnet for the network interface.</p> <li> <p> <code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.</p> <li> <p> <code>placement-group-name</code> - The name of the placement group for the instance.</p> <li> <p> <code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</p> <li> <p> <code>private-dns-name</code> - The private IPv4 DNS name of the instance.</p> <li> <p> <code>private-ip-address</code> - The private IPv4 address of the instance.</p> <li> <p> <code>product-code</code> - The product code associated with the AMI used to launch the instance.</p> <li> <p> <code>product-code.type</code> - The type of product code (<code>devpay</code> | <code>marketplace</code>).</p> <li> <p> <code>ramdisk-id</code> - The RAM disk ID.</p> <li> <p> <code>reason</code> - The reason for the current state of the instance (for example, shows \"User Initiated [date]\" when you stop or terminate the instance). Similar to the state-reason-code filter.</p> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> <li> <p> <code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get ten reservation IDs.</p> <li> <p> <code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/sda1</code> or <code>/dev/nvda</code>).</p> <li> <p> <code>root-device-type</code> - The type of root device that the instance uses (<code>ebs</code> | <code>instance-store</code>).</p> <li> <p> <code>source-dest-check</code> - Indicates whether the instance performs source/destination checking. A value of
true means that checking is enabled, and false means checking is disabled. The value must be false for the instance to perform network address translation (NAT) in your VPC.

- The ID of the Spot instance request.
- The reason code for the state change.
- A message that describes the state change.
- The ID of the subnet for the instance.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter tag-key=Purpose and the filter tag-value=X, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the code tag:<i>key</i>=<i>value</i> filter.
- The tag-value for the tag assigned to the resource. This filter is independent of the code tag-key filter.
- The tenancy of an instance.
- The address of the Elastic IP address (IPv4) bound to the network interface.
- The address of the Elastic IP address (IPv4) associated with the network interface.
- The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.
- The status of the EBS volume for the Elastic Block Store (EBS) volume.
- The IDempotency token you provided when you launched the instance.
- The public DNS name of the instance.
- The ID of the security group for the instance. EC2-Classic only.
- The name of the security group for the instance. EC2-Classic only.
- The ID of the Dedicated Host on which the instance is running, if applicable.
- The hypervisor type of the instance (code:ovm) with the instance. Specified as an ARN.
- The ID of the image used to launch the instance.
- The ID of the instance.
- Indicates whether this is a Spot Instance or a Scheduled Instance.
- The state of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored.
low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).
<p><code>placement-group-name</code> - The name of the placement group for the instance.</p>

<p><code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</p>

<p><code>private-dns-name</code> - The private IPv4 DNS name of the instance.</p>

<p><code>private-ip-address</code> - The private IPv4 address of the instance.</p>

<p><code>product-code</code> - The product code associated with the AMI used to launch the instance.</p>

<p><code>product-code.type</code> - The type of product code.</p>

<p><code>placement-group-name</code> - The name of the placement group for the instance.</p>

<p><code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</p>

<p><code>private-dns-name</code> - The private IPv4 DNS name of the instance.</p>

<p><code>private-ip-address</code> - The private IPv4 address of the instance.</p>

<p><code>product-code</code> - The product code associated with the AMI used to launch the instance.</p>

<p><code>product-code.type</code> - The type of product code.</p>

<p><code>placement-group-name</code> - The name of the placement group for the instance.</p>

<p><code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</p>

<p><code>private-dns-name</code> - The private IPv4 DNS name of the instance.</p>

<p><code>private-ip-address</code> - The private IPv4 address of the instance.</p>

<p><code>product-code</code> - The product code associated with the AMI used to launch the instance.</p>

<p><code>product-code.type</code> - The type of product code.</p>

<p><code>placement-group-name</code> - The name of the placement group for the instance.</p>

<p><code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</p>

<p><code>private-dns-name</code> - The private IPv4 DNS name of the instance.</p>

<p><code>private-ip-address</code> - The private IPv4 address of the instance.</p>

<p><code>product-code</code> - The product code associated with the AMI used to launch the instance.</p>

<p><code>product-code.type</code> - The type of product code.</p>
device-mapping.delete-on-termination</code> - A Boolean that indicates whether the EBS volume is deleted on instance termination.</li> <li> <p> <code>block-device-mapping.device-name</code> - The device name for the EBS volume (for example, <code>/dev/sdh</code> or <code>xvdh</code>).</p> </li> <li> <p> <code>block-device-mapping.status</code> - The status for the EBS volume (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>). </p> </li> <li> <p> <code>block-device-mapping.volume-id</code> - The volume ID of the EBS volume.</p> </li> <li> <p> <code>client-token</code> - The idempotency token you provided when you launched the instance.</p> </li> <li> <p> <code>dns-name</code> - The public DNS name of the instance.</p> </li> <li> <p> <code>group-id</code> - The ID of the security group for the instance. EC2-Classic only.</p> </li> <li> <p> <code>group-name</code> - The name of the security group for the instance. EC2-Classic only.</p> </li> <li> <p> <code>host-id</code> - The ID of the Dedicated Host on which the instance is running, if applicable.</p> </li> <li> <p> <code>iam-instance-profile.arn</code> - The instance profile associated with the instance. Specified as an ARN. </p> </li> <li> <p> <code>image-id</code> - The ID of the image used to launch the instance.</p> </li> <li> <p> <code>instance-id</code> - The ID of the instance.</p> </li> <li> <p> <code>instance-lifecycle</code> - Indicates whether this is a Spot Instance or a Scheduled Instance (only EC2). </p> </li> <li> <p> <code>instance-state-code</code> - The state of the instance, as a 16-bit unsigned integer. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).</p> </li> <li> <p> <code>instance-state-name</code> - The state of the instance (for example, <code>pending</code> | <code>running</code> | <code>shutting-down</code> | <code>terminated</code> | <code>stopping</code> | <code>stopped</code>). </p> </li> <li> <p> <code>instance-type</code> - The type of instance (for example, <code>t2.micro</code>).</p> </li> <li> <p> <code>ip-address</code> - The public IPv4 address of the instance.</p> </li> <li> <p> <code>key-name</code> - The name of the key pair used when the instance was launched.</p> </li> <li> <p> <code>launch-index</code> - When launching multiple instances, this is the index for the instance in the launch group (for example, 0, 1, 2, and so on).</p> </li> <li> <p> <code>launch-time</code> - The time when the instance was launched.</p> </li> <li> <p> <code>monitoring-state</code> - Indicates whether detailed monitoring is enabled (disabled | enabled). </p> </li> <li> <p> <code>network-interface.addresses.private-ip-address</code> - The private IPv4 address associated with the network interface.</p> </li> <li> <p> <code>network-interface.addresses.primary</code> - Specifies whether the IPv4 address of the network interface is the primary private IPv4 address.</p> </li> <li> <p> <code>network-interface.addresses.association.public-ip</code> - The ID of the association of an Elastic IP address (IPv4) with a network interface.</p> </li> <li> <p> <code>network-interface.addresses.association.ip-owner-id</code> - The owner ID of the private IPv4 address associated with the network interface.</p> </li> <li> <p> <code>network-interface.attachment.attachment-id</code> - The ID of the interface attachment.</p> </li> <li> <p> <code>network-interface.attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>network-interface.attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>network-interface.attachment.attachment-status</code> - The status of the attachment (attaching | attaching | detached | detached). </p> </li> <li> <p> <code>network-interface.attachment.attachment.time</code> - The time that the network interface was attached to an instance.</p> </li> <li> <p> <code>network-interface.attachment.delete-on-termination</code> - Specifies whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>network-interface.availability-zone</code> - The Availability Zone for the network interface.</p> </li> <li> <p> <code>network-interface.description</code> - The description of the network interface.</p> </li> <li> <p> <code>network-interface.group-id</code> - The ID of a
only resources where Purpose is X, see the \texttt{<code>tag</code>:<i>key</i>=<i>value</i>} filter. 

- The value of a tag assigned to the resource. This filter is independent of the \texttt{tag-key} filter.

\texttt{<code>tag-value</code>} - The tenancy of an instance

- The tenancy of an instance

\texttt{<code>tenant</code>} - The virtualization type of the instance

- The virtualization type of the instance

\texttt{<code>virtualization-type</code>} - The ID of the VPC that the instance is running in.

\texttt{<code>vpc-id</code>} - The reference to this object so that method calls can be chained together."",

"fluentSetterMethodName" : "withFilters",

"getterDocumentation" : "/**\p

\texttt{<code>affinity</code>} - The affinity setting for an instance running on a Dedicated Host

\texttt{<code>association</code>} - The association between the instance and the VPC

\texttt{<code>availability-zone</code>} - The Availability Zone of the instance.

\texttt{<code>block-device-mapping</code>} - The attach time for an EBS volume

\texttt{<code>block-device-mapping.delete-on-termination</code>} - A Boolean that indicates whether the EBS volume is deleted on instance termination.

\texttt{<code>block-device-mapping.device-name</code>} - The device name for the EBS volume.

\texttt{<code>block-device-mapping.status</code>} - The status for the EBS volume

\texttt{<code>client-token</code>} - The idempotency token provided when you launched the instance.

\texttt{<code>dns-name</code>} - The public DNS name of the instance.

\texttt{<code>group-id</code>} - The ID of the security group for the instance.

\texttt{<code>group-name</code>} - The name of the security group for the instance.

\texttt{<code>host-id</code>} - The ID of the Dedicated Host on which the instance is running, if applicable.

\texttt{<code>hypervisor</code>} - The hypervisor type of the instance

\texttt{<code>iam-instance-profile.arn</code>} - The ARN of the instance profile.

\texttt{<code>image-id</code>} - The ID of the image used to launch the instance.

\texttt{<code>instance-id</code>} - The ID of the instance.

\texttt{<code>instance-lifecycle</code>} - Indicates whether this is a Spot Instance or a Scheduled Instance.

\texttt{<code>instance-state-name</code>} - The state of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).

\texttt{<code>ip-address</code>} - The public IPv4 address of the instance.

\texttt{<code>kernel-id</code>} - The kernel ID.

\texttt{<code>key-name</code>} - The name of the key pair used when the instance was launched.

\texttt{<code>launch-index</code>} - When launching multiple instances, this is the index for the instance in the launch group (for example, 0, 1, 2, and so on).

\texttt{<code>launch-time</code>} - The time when the instance was launched.
detailed monitoring is enabled (<code>disabled</code> | <code>enabled</code>).</p>

<h4>network-interface.attachment.instance-owner-id</h4> 
- The owner ID of the instance to which the network interface is attached.
one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. If you launch ten instances using the same launch request, you’ll also get one reservation ID. </p> <li> <code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/sda1</code> or <code>/dev/xvda</code>). </li> <li> <code>root-device-type</code> - The type of root device that the instance uses (<code>ebs</code> | <code>instance-store</code>). </li> <li> <code>source-dest-check</code> - Indicates whether the instance performs source/destination checking. A value of <code>true</code> means that checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the instance to perform network address translation (NAT) in your VPC. </li> <li> <code>spot-instance-request-id</code> - The ID of the Spot instance request. </li> <li> <code>state-reason-code</code> - The reason code for the state change. </li> <li> <code>state-reason-message</code> - A message that describes the state change. </li> <li> <code>subnet-id</code> - The ID of the subnet for the instance. </li> <li> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>Purpose</code> for the filter value. </li> <li> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. </li> <li> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. </li> <li> <code>tenancy</code> - The tenancy of an instance (<code>dedicated</code> | <code>default</code> | <code>host</code>). </li> <li> <code>virtualization-type</code> - The virtualization type of the instance (<code>paravirtual</code> | <code>hvm</code>). </li> <li> <code>vpc-id</code> - The ID of the VPC that the instance is running in. </li> <li> <code>association.allocation-id</code> - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface. </li> <li> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface. </li> <li> <code>association.allocation-id</code> - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface. </li> <li> <code>association.association-id</code> - The association ID returned when the network interface was associated with an IPv4 address. </li> <li> <code>availability-zone</code> - The Availability Zone of the instance. </li> <li> <code>block-device-mapping.attach-time</code> - The attach time for an EBS volume mapped to the instance, for example, <code>2010-09-15T17:15:20.000Z</code>. </li> <li> <code>block-device-mapping.delete-on-termination</code> - A Boolean that indicates whether the EBS volume is deleted on instance termination. </li> <li> <code>block-device-mapping.device-name</code> - The device name for the EBS volume (for example, <code>/dev/sdh</code> or <code>/dev/xvdh</code>). </li> <li> <code>block-device-mapping.status</code> - The status for the EBS volume (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>). </li> <li> <code>client-token</code> - The identity token you provided when you launched the instance. </li> <li> <code>dns-name</code> - The public DNS name of the instance. </li> <li> <code>group-id</code> - The ID of the security group for the instance. </li> <li> <code>group-name</code> - The name of the security group for the instance. </li> <li> <code>host-id</code> - The ID of the Dedicated Host on which the instance is running, if applicable. </li> <li> <code>hypervisor</code> - The hypervisor type of the instance (<code>ovm</code> | <code>xen</code>). </li> <li> <code>iam-instance-profile</code> -
The instance profile associated with the instance. Specified as an ARN. 

- The ID of the image used to launch the instance.</p> 

- The ID of the instance.</p> 

- The state of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped). 

- The type of instance (for example, t2.micro). 

- The ID of the security group for the instance. 

- The name of the security group for the instance. 

- The public IPv4 address of the instance. 

- The kernel ID. 

- The name of the key pair used when the instance was launched. 

- When launching multiple instances, this is the index for the instance in the launch group (for example, 0, 1, 2, and so on). 

- The time when the instance was launched. 

- Indicates whether detailed monitoring is enabled. 

- The primary IPv4 address associated with the network interface. 

- The device index to which the network interface is attached. 

- The availability zone for the network interface. 

- The description of the network interface. 

- The status of the attachment. 

- The network interface's attachment status. 

- The ID of the owner of the instance to which the network interface is attached. 

- The owner ID of the instance. 

- The MAC address of the network interface. 

- The status of the network interface. 

- The ID of the owner of the network interface. 

- The private DNS name of the network interface. 

- The status of the network interface. 

- Whether the network interface performs source/destination checking.
checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.</li>
<li>
<code>network-interface.subnet-id</code> - The ID of the subnet for the network interface.</li>
<li>
<code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.</li>
<li>
<code>owner-id</code> - The AWS account ID of the instance owner.</li>
<li>
<code>placement-group-name</code> - The name of the placement group for the instance.</li>
<li>
<code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.</li>
<li>
<code>private-dns-name</code> - The private IPv4 DNS name of the instance.</li>
<li>
<code>private-ip-address</code> - The private IPv4 address of the instance.</li>
<li>
<code>ramdisk-id</code> - The RAM disk ID.</li>
<li>
<code>reason</code> - The reason for the current state of the instance (for example, shows "User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter.</li>
<li>
<code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</li>
<li>
<code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID.</li>
<li>
<code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/sda1</code> or <code>/dev/xvda</code>).</li>
<li>
<code>root-device-type</code> - The type of root device that the instance uses (<code>ebs</code> | <code>instance-store</code>).</li>
<li>
<code>source-dest-check</code> - Indicates whether the instance performs source/destination checking. A value of <code>true</code> means that checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the instance to perform network address translation (NAT) in your VPC.</li>
<li>
<code>spot-instance-request-id</code> - The ID of the Spot instance request.</li>
<li>
<code>state-reason-code</code> - The reason code for the state change.</li>
<li>
<code>state-reason-message</code> - A message that describes the state change.</li>
<li>
<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
<li>
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
<li>
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
<li>
<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
<li>
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
<li>
<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
<li>
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
<li>
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

- <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> 

- <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> 

- <code>tag-key</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> 

- <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> 

- <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
<code>instance.group-name</code> - The name of the security group for the instance. 

<code>ip-address</code> - The public IPv4 address of the instance. 

<code>key-name</code> - The name of the key pair used when the instance was launched. 

<code>launch-index</code> - When launching multiple instances, this is the index for the instance in the launch group (for example, 0, 1, 2, and so on). 

<code>launch-time</code> - The time when the instance was launched. 

<code>monitoring-state</code> - Indicates whether detailed monitoring is enabled. 

<code>network-interface.addresses.private-ip-address</code> - The private IPv4 address associated with the network interface. 

<code>network-interface.addresses.association.public-ip</code> - The ID of the association of an Elastic IP address (IPv4) with a network interface. 

<code>network-interface.attachment.attachment-id</code> - The ID of the interface attachment. 

<code>network-interface.ipv6-addresses.ipv6-address</code> - The IPv6 address associated with the network interface. 

<code>network-interface.mac-address</code> - The MAC address of the network interface. 

<code>network-interface.private-dns-name</code> - The private DNS name of the network interface. 

<code>network-interface.requester-id</code> - The requester ID for the network interface. 

<code>network-interface.requester-managed</code> - Indicates whether the network interface is being managed by AWS. 

<code>placement-group-name</code> - The name of the placement group for the instance. 

<code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank. 

<code>private-dns-name</code> - The private IPv4 DNS name of the instance. 

<code>private-ip-address</code> - The private IPv4 address of the instance. 

<code>product-code</code> - The product code associated with the AMI used to launch the instance. 

<code>product-code.type</code> - The type of product code.
<code>marketplace</code>).</p> </li> <li> <p> <code>ramdisk-id</code> - The RAM disk ID.</p> </li> <li> <p> <code>reason</code> - The reason for the current state of the instance (for example, shows "User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter.</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>reservation-id</code> - The ID of the instance's reservation. A reservation ID is created any time you launch a reservation. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID.</p> </li> <li> <p> <code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/sda1</code> or <code>/dev/xvda</code>). </p> </li> <li> <p> <code>root-device-type</code> - The type of root device that the instance uses (<code>ebs</code> | <code>instance-store</code>).</p> </li> <li> <p> <code>source_dest_check</code> - Indicates whether the instance performs source/destination checking. A value of <code>true</code> means that checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the instance to perform network address translation (NAT) in your VPC.</p> </li> <li> <p> <code>spot-instance-request-id</code> - The ID of the Spot instance request.</p> </li> <li> <p> <code>state-reason-code</code> - The reason code for the state change.</p> </li> <li> <p> <code>state-reason-message</code> - A message that describes the state change.</p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the instance.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-key=Purpose</code> filter. This filter is independent of the <code>tag-value</code> filter. Example: <code>tag:tag-key=Purpose</code> filter.</p> </li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>tenancy</code> - The tenancy of an instance (<code>dedicated</code> | <code>default</code> | <code>host</code>).</p> </li> <li> <p> <code>virtualization-type</code> - The virtualization type of the instance (<code>paravirtual</code> | <code>hvm</code>). </p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC that the instance is running in.</p> </li>

"<code>architecture</code>" - The instance architecture (<code>i386</code> | <code>x86_64</code>).</p> </li> <li> <p> <code>association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface.</p> </li> <li> <p> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</p> </li> <li> <p> <code>associationallocation-id</code> - The allocation ID returned when you allocated the Elastic IP address.
(IPv4) for your network interface.</p> 

- The availability zone 

- The association ID 

- The attachment status 

- The status of the EBS volume 

- The volume ID of the EBS volume 

- The public DNS name of the instance 

- The ID of the security group for the instance 

- The name of the security group for the instance 

- The ID of the Dedicated Host on which the instance is running, if applicable. 

- The hypervisor type of the instance 

- The instance profile associated with the instance. 

- The ID of the virtual network used to launch the instance. 

- The ID of the instance. 

- Indicates whether this is a Spot Instance or a Scheduled Instance 

- The state of the instance, as a 16-bit unsigned integer. 

- The low byte is set based on the state represented. 

- The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped). 

- The type of instance for example, 

- The public IPv4 address of the instance 

- The private IPv4 address associated with the network interface. 

- The private IPv4 address associated with the network interface is the primary private IPv4 address. 

- The ID of the association of an Elastic IP address (IPv4) with a network interface. 

- The owner ID of the private IPv4 address associated with the network interface. 

- The ID of the interface attachment. 

- The ID of the instance to which the network interface is attached. 

- The owner ID of the instance to which the network interface is attached. 

- The device index to which the network interface is attached. 

- The status of the attachment.
the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.

- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `tag-key=Purpose` and the filter `tag-value=X`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag's value is), and the tag value `X` (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>` filter.

- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter.

- `<code>tenancy</code>` - The tenancy of an instance (`<code>dedicated</code>` | `<code>default</code>` | `<code>host</code>`).

- `<code>virtualization-type</code>` - The virtualization type of the instance (`<code>paravirtual</code>` | `<code>hvm</code>`).

- `<code>vpc-id</code>` - The ID of the VPC that the instance is running in.

- `<code>association.association-id</code>` - The association ID returned when the network interface was associated with an Elastic IP address (IPv4) for your network interface.

- `<code>image-id</code>` - The ID of the image used to launch the instance.

- `<code>instance-state-name</code>` - The state of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).
the EBS volume (for example, `<code>/dev/sdh</code>` or `<code>/dev/xvdh</code>`).

- `<code>block-device-mapping.status</code>`: The status for the EBS volume ( `<code>attaching</code>` | `<code>attached</code>` | `<code>detaching</code>` | `<code>detached</code>`).

- `<code>volume-id</code>`: The volume ID of the EBS volume.

- `<code>client-token</code>`: The idempotency token provided when you launched the instance.

- `<code>dns-name</code>`: The public DNS name of the instance.

- `<code>group-id</code>`: The ID of the security group for the instance.

- `<code>host-id</code>`: The ID of the Dedicated Host on which the instance is running, if applicable.

- `<code>hypervisor</code>`: The hypervisor type of the instance ( `<code>ovm</code>` | `<code>xen</code>` ).

- `<code>iam-instance-profile.arn</code>`: The instance profile associated with the instance. Specified as an ARN.

- `<code>image-id</code>`: The ID of the image used to launch the instance.

- `<code>instance-id</code>`: The ID of the instance, as a 16-bit unsigned integer. The high byte is an opaque internal value and should be ignored. The low byte is set based on the state represented. The valid values are: 0 (pending), 16 (running), 32 (shutting-down), 48 (terminated), 64 (stopping), and 80 (stopped).

- `<code>instance-state-name</code>`: The state of the instance ( `<code>pending</code>` | `<code>running</code>` ).

- `<code>kernel-id</code>`: The kernel ID.

- `<code>key-name</code>`: The name of the key pair used when the instance was launched.

- `<code>launch-time</code>`: The time when the instance was launched.

- `<code>monitoring-state</code>`: Indicates whether detailed monitoring is enabled ( `<code>disabled</code>` | `<code>enabled</code>` ).

- `<code>network-interface.addresses.private-ip-address</code>`: The private IPv4 address associated with the network interface.

- `<code>network-interface.addresses.primary</code>`: Specifies whether the IPv4 address of the network interface is the primary private IPv4 address.

- `<code>network-interface.addresses.association.public-ip</code>`: The ID of the association of an Elastic IP address (IPv4) with a network interface.

- `<code>network-interface.addresses.association.ip-owner-id</code>`: The owner ID of the private IPv4 address associated with the network interface.

- `<code>network-interface.attachment.attachment-id</code>`: The ID of the interface attachment.

- `<code>network-interface.attachment.attachment.owner-id</code>`: The ID of the instance to which the network interface is attached.

- `<code>network-interface.attachment.device-index</code>`: The device index to which the network interface is attached.

- `<code>network-interface.attachment.attach-time</code>`: The time that the network interface was attached to an instance.

- `<code>network-interface.attachment.delete-on-termination</code>`: Specifies whether the attachment is deleted when an instance is terminated.

- `<code>network-interface.availability-zone</code>`: The Availability Zone for the network interface.

- `<code>network-interface.group-id</code>`: The ID of a security group associated with the network interface.

- `<code>network-interface.group-name</code>`: The name of a security group associated with the network interface.
<code>network-interface.ipv6-addresses.ipv6-address</code> - The IPv6 address associated with the network interface.

<code>network-interface.mac-address</code> - The MAC address of the network interface.

<code>network-interface.network-interface-id</code> - The ID of the network interface.

<code>network-interface.owner-id</code> - The ID of the owner of the network interface.

<code>network-interface.private-dns-name</code> - The private DNS name of the network interface.

<code>network-interface.requester-id</code> - The requester ID for the network interface.

<code>network-interface.requester-managed</code> - Indicates whether the network interface is being managed by AWS.

<code>network-interface.requester-managed</code> - The status of the network interface (available|in-use).

<code>network-interface.source-dest-check</code> - Whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>true</code> or <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.

<code>network-interface.subnet-id</code> - The ID of the subnet for the network interface.

<code>network-interface.vpc-id</code> - The ID of the VPC for the network interface.

<code>owner-id</code> - The AWS account ID of the instance owner.

<code>placement-group-name</code> - The name of the placement group for the instance.

<code>platform</code> - The platform. Use <code>windows</code> if you have Windows instances; otherwise, leave blank.

<code>private-dns-name</code> - The private IPv4 DNS name of the instance.

<code>private-ip-address</code> - The private IPv4 address of the instance.

<code>product-code</code> - The product code associated with the AMI used to launch the instance.

<code>product-code.type</code> - The type of product code (devpay|marketplace).

<code>ramdisk-id</code> - The RAM disk ID.

<code>reason</code> - The reason for the current state of the instance (for example, shows "User Initiated [date]" when you stop or terminate the instance). Similar to the state-reason-code filter.

<code>reservation-id</code> - The ID of the reservation that the instance is associated with. A reservation ID is created any time you launch an instance. A reservation ID has a one-to-one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you’ll get one reservation ID. If you launch ten instances using the same launch request, you’ll also get ten reservation IDs.

<code>root-device-name</code> - The name of the root device for the instance (for example, <code>/dev/sda1</code> or <code>/dev/xvda</code>). The type of root device that the instance uses (<code>ebs</code> | <code>instance-store</code>). The location of the root device in the instance (for example, <code>/dev/sda1</code>). Indicates whether the instance performs source/destination checking. A value of <code>true</code> means that checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>true</code> or <code>false</code> for the instance to function properly (NAT) in your VPC.

<code>spot-instance-request-id</code> - The ID of the Spot instance request.

<code>state-reason-code</code> - The reason code for the state change.

<code>state-reason-message</code> - A message that describes the state change.

<code>subnet-id</code> - The ID of the subnet for the instance.

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>-purpose=x</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key="Purpose"</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. This filter is independent of the <code>tag-key</code> filter. Then the filter <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code>.
key<code> filter.</p><li><p><code>tenancy</code> - The tenancy of an instance
(<code>dedicated</code> | <code>default</code> | <code>host</code>).<p/></li><li><p><code>virtualization-type</code> - The virtualization type of the instance (<code>paravirtual</code> | <code>hvm</code>).<p></li><li><p><code>vpc-id</code> - The ID of the VPC that the instance is running in.<p>

The status for each Elastic IP address.

**NOTE:** This method appends the values to the existing list (if any). Use `@link #setMovingAddressStatuses(java.util.Collection)` or `@link #withMovingAddressStatuses(java.util.Collection)` if you want to override the existing values.

@example

```java
def setMovingAddressStatuses(java.util.Collection<MovingAddressStatus> movingAddressStatuses)
```

Returns a reference to this object so that method calls can be chained together.

The status for each Elastic IP address.

This method appends the values to the existing list (if any). Use `@link #setMovingAddressStatuses(java.util.Collection)` or `@link #withMovingAddressStatuses(java.util.Collection)` if you want to override the existing values.

@example

```java
def withMovingAddressStatuses(java.util.Collection<MovingAddressStatus> movingAddressStatuses)
```

The status for each Elastic IP address.

The token to use to retrieve the next page of results. This value is `null` when there are no more results to return.

@example

```java
def getNextToken()
```

The token to use to retrieve the next page of results. This value is
null when there are no more results to return.

@param nextToken The token to use to retrieve the next page of results. This value is null when there are no more results to return.

@return Returns a reference to this object so that method calls can be chained together.*/

- **vpc-id**
  - The ID of the VPC in which the NAT gateway resides.

@returns One or more filters.

- **nat-gateway-id**
  - The ID of the NAT gateway.

- **state**
  - The state of the NAT gateway (pending | failed | available | deleting | deleted).

- **subnet-id**
  - The ID of the subnet in which the NAT gateway resides.

- **vpc-id**
  - The ID of the VPC in which the NAT gateway resides.

@returns Returns a reference to this object so that method calls can be chained together."/";

"}
"fluentSetterDocumentation" : "/**
 One or more filters.
 <ul>
 <li> <p>
 <code>association.association-id</code> - The ID of an association ID for the ACL.</p> </li> <li> <p>
 <code>association.network-acl-id</code> - The ID of the network ACL involved in the association.</p> </li> <li> <p>
 <code>association.subnet-id</code> - The ID of the subnet involved in the association.</p> </li> <li> <p>
 <code>default</code> - Indicates whether the ACL is the default network ACL for the VPC.</p> </li> <li> <p>
 <code>cidr</code> - The IPv4 CIDR range specified in the entry.</p> </li> <li> <p>
 <code>egress</code> - Indicates whether the entry applies to egress traffic.</p> </li> <li> <p>
 <code>icmp.code</code> - The ICMP code specified in the entry, if any.</p> </li> <li> <p>
 <code>icmp.type</code> - The ICMP type specified in the entry, if any.</p> </li> <li> <p>
 <code>ipv6-cidr</code> - The IPv6 CIDR range specified in the entry.</p> </li> <li> <p>
 <code>port-range.from</code> - The start of the port range specified in the entry.</p> </li> <li> <p>
 <code>port-range.to</code> - The end of the port range specified in the entry.</p> </li> <li> <p>
 <code>protocol</code> - The protocol specified in the entry (<code>tcp</code> | <code>udp</code> | <code>icmp</code> or a protocol number).</p> </li> <li> <p>
 <code>rule-action</code> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>).</p> </li> <li> <p>
 <code>rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries.</p> </li> <li> <p>
 <code>network-acl-id</code> - The ID of the network ACL.</p> </li> <li> <p>
 <code>tag:key=value</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p>
 <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:purpose=value</code> filter.</p> </li> <li> <p>
 <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:purpose=value</code> filter.</p> </li> <li> <p>
 <code>vpc-id</code> - The ID of the VPC for the network ACL.</p> </li> </ul>
@param filters One or more filters.
 <ul>
 <li> <p>
 <code>association.association-id</code> - The ID of an association ID for the ACL.</p> </li> <li> <p>
 <code>association.network-acl-id</code> - The ID of the network ACL involved in the association.</p> </li> <li> <p>
 <code>association.subnet-id</code> - The ID of the subnet involved in the association.</p> </li> <li> <p>
 <code>default</code> - Indicates whether the ACL is the default network ACL for the VPC.</p> </li> <li> <p>
 <code>cidr</code> - The IPv4 CIDR range specified in the entry.</p> </li> <li> <p>
 <code>egress</code> - Indicates whether the entry applies to egress traffic.</p> </li> <li> <p>
 <code>icmp.code</code> - The ICMP code specified in the entry, if any.</p> </li> <li> <p>
 <code>icmp.type</code> - The ICMP type specified in the entry, if any.</p> </li> <li> <p>
 <code>ipv6-cidr</code> - The IPv6 CIDR range specified in the entry.</p> </li> <li> <p>
 <code>port-range.from</code> - The start of the port range specified in the entry.</p> </li> <li> <p>
 <code>port-range.to</code> - The end of the port range specified in the entry.</p> </li> <li> <p>
 <code>protocol</code> - The protocol specified in the entry (<code>tcp</code> | <code>udp</code> | <code>icmp</code> or a protocol number).</p> </li> <li> <p>
 <code>rule-action</code> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>).</p> </li> <li> <p>
 <code>rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries.</p> </li> <li> <p>
 <code>network-acl-id</code> - The ID of the network ACL.</p> </li> <li> <p>
 <code>tag:key=value</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p>
 <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:purpose=value</code> filter.</p> </li> <li> <p>
 <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=VPC\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network ACL.</p> <li> <p> <code>entry.icmp.code</code> - The ICMP code specified in the entry, if any.</p> <li> <p> <code>entry.protocol</code> - The protocol specified in the entry (\code{tcp} | \code{udp} | \code{icmp} or a protocol number).</p> <li> <p> <code>entry.icmp.type</code> - The ICMP type specified in the entry.</p> <li> <p> <code>entry.icmp.code</code> - The ICMP code specified in the entry.</p> <li> <p> <code>entry.rule-action</code> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>).</p> <li> <p> <code>entry.rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries.</p> <li> <p> <code>network-acl-id</code> - The ID of the network ACL.</p> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=VPC\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
<code>entry.icmp.type</code> - The ICMP type specified in the entry, if any.

<code>entry.ipv6-cidr</code> - The IPv6 CIDR range specified in the entry.

<code>entry.port-range.from</code> - The start of the port range specified in the entry.

<code>entry.port-range.to</code> - The end of the port range specified in the entry.

<code>entry.protocol</code> - The protocol specified in the entry (<code>tcp</code> | <code>udp</code> | <code>icmp</code> or a protocol number).

<code>entry.rule-action</code> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>).

<code>entry.rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries.

<code>network-acl-id</code> - The ID of the network ACL.

<code>tag.key</code>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Name</code> and the filter <code>tag-value= XYZ</code>, you get any resources assigned both the tag key Name (regardless of what the tag's value is), and the tag value XYZ (regardless of what the tag's key is). If you want to list only resources where Name is XYZ, see the <code>tag:Name</code>=<i>XYZ</i> filter.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <code>tag-key=Name</code> and the filter <code>tag-value= XYZ</code>, you get any resources assigned both the tag key Name (regardless of what the tag's value is), and the tag value XYZ (regardless of what the tag's key is). If you want to list only resources where Name is XYZ, see the <code>tag:Name</code>=<i>XYZ</i> filter.

One or more filters.

- `<code>addresses.private-ip-address</code>` - The private IPv4 addresses associated with the network interface.
- `<code>addresses.association.public-ip</code>` - The association ID returned when the network interface was associated with the Elastic IP address (IPv4).
- `<code>addresses.association.owner-id</code>` - The owner ID of the addresses associated with the network interface.
- `<code>addresses.association.association-id</code>` - The association ID returned when the network interface was associated with an IPv4 address.
- `<code>addresses.association.allocation-id</code>` - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.
- `<code>addresses.association.ip-owner-id</code>` - The owner of the Elastic IP address (IPv4) associated with the network interface.
- `<code>addresses.association.public-ip</code>` - The address of the Elastic IP address (IPv4) bound to the network interface.
- `<code>addresses.association.public-dns-name</code>` - The public DNS name for the network interface (IPv4).
- `<code>attachment.attachment-id</code>` - The ID of the interface attachment.
- `<code>attachment.attachment.associate-time</code>` - The time that the network interface was associated to an instance.
- `<code>attachment.delete-on-termination</code>` - Indicates whether the attachment is deleted when an instance is terminated.
- `<code>attachment.device-index</code>` - The device index to which the network interface is attached.
- `<code>attachment.instance-id</code>` - The instance to which the network interface is attached.
- `<code>attachment.status</code>` - The status of the attachment (attaching | attached | detaching | detached).
- `<code>availability-zone</code>` - The Availability Zone of the network interface.
- `<code>description</code>` - The description of the network interface.
- `<code>group-id</code>` - The ID of a security group associated with the network interface.
- `<code>group-name</code>` - The name of a security group associated with the network interface.
- `<code>ipv6-addresses.ipv6-address</code>` - An IPv6 address associated with the network interface.
- `<code>mac-address</code>` - The MAC address of the network interface.
- `<code>network-interface-id</code>` - The ID of the network interface owner.
- `<code>owner-id</code>` - The AWS account ID of the network interface owner.
- `<code>private-ip-address</code>` - The private IPv4 address or addresses of the network interface.
- `<code>private-dns-name</code>` - The private DNS name of the network interface (IPv4).
- `<code>requester-id</code>` - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).
- `<code>requester-managed</code>` - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).
- `<code>source-desk-check</code>` - Indicates whether the network interface performs source/destination checking.
- `<code>tag:tag</code>` - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:tag=Purpose</code>` for the filter name and `<code>value=X</code>` for the filter value.
- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `\"tag-key=Purpose\"` and the filter `\"tag-value=X\"`, you
get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> 

- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> 

- The ID of the VPC for the network interface.</p> 

- The allocation ID returned when you allocated the Elastic IP address (IPv4).</p> 

- The owner ID of the addresses associated with the network interface.</p> 

- The association ID returned when the network interface was associated with the Elastic IP address (IPv4).</p> 

- The public DNS name for the network interface (IPv4).</p> 

- The ID of the interface attachment.</p> 

- The time that the network interface was attached to an instance.</p> 

- Indicates whether the attachment is deleted when an instance is terminated.</p> 

- The device index to which the network interface is attached.</p> 

- The ID of the instance to which the network interface is attached.</p> 

- The ID of the security group associated with the network interface.</p> 

- The MAC address of the network interface.</p> 

- The network interface ID.</p> 

- The ID of the network interface.</p> 

- The AWS account ID of the network interface owner.</p> 

- The private IP address of the network interface.</p> 

- The private IPv4 address or addresses of the network interface.</p> 

- The private DNS name of the network interface (IPv4).</p> 

- The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> 

- Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).</p> 

- Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be for the network interface to perform network address translation (NAT) in your VPC. 

- The status of the network interface. If the network interface is not attached to an instance, the status is available</code>.

- The ID of the subnet for the network interface.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the

- The ID of the VPC for the network interface.

- The association ID returned when the network interface was associated with the Elastic IP address (IPv4).

- The owner ID of the addresses associated with the network interface.

- The association ID returned when the network interface was associated with an IPv4 address.

- The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.

- The owner of the Elastic IP address (IPv4) associated with the network interface.

- The address of the Elastic IP address (IPv4) bound to the network interface.

- The public DNS name for the network interface (IPv4).

- The ID of the interface attachment.

- The time that the network interface was attached to an instance.

- Indicates whether the attachment is deleted when an instance is terminated.

- The device index to which the network interface is attached.

- The ID of the instance to which the network interface is attached.

- The owner ID of the instance to which the network interface is attached.

- The ID of the NAT gateway to which the network interface is attached.

- The status of the attachment.

- The Availability Zone of the network interface.

- The description of the network interface.

- The ID of a security group associated with the network interface.

- The name of a security group associated with the network interface.

- An IPv6 address associated with the network interface.

- The MAC address of the network interface.

- The ID of the network interface.

- The owner ID of the network interface owner.

- The private IPv4 address or addresses of the network interface.

- The private DNS name of the network interface (IPv4).

- The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).

- Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).

- Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.
- Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).

- Indicates whether the network interface performs source/destination checking. A value of true means checking is enabled, and false means checking is disabled. The value must be false for the network interface to perform network address translation (NAT) in your VPC.

- The status of the network interface. If the network interface is not attached to an instance, the status is available; if a network interface is attached to an instance the status is in-use.

- The ID of the subnet for the network interface.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter tag-key=Purpose and the filter tag-value=X, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose filter.

- The value of a tag assigned to the resource. This filter is independent of the tag-key filter. For example, if you use both the filter tag-value=Purpose and the filter tag-key=X, you get any resources assigned both the tag value Purpose (regardless of what the tag's key is), and the tag key X (regardless of what the tag's value is). If you want to list only resources where X is the tag value, see the tag-value=X filter.

- The association ID returned when the network interface was associated with the Elastic IP address (IPv4).

- The ID of the VPC for the network interface.

- The owner ID of the Elastic IP address (IPv4) bound to the network interface.

- The public DNS name for the network interface (IPv4).

- The time that the network interface was attached to an instance.

- Indicates whether the attachment is deleted when an instance is terminated.

- The device index to which the network interface is attached.

- The owner ID of the instance to which the network interface is attached.

- The ID of the NAT gateway to which the network interface is attached.

- The ID of the security group associated with the network interface.

- The name of the security group associated with the network interface.

- An IPv6 address associated with the network interface.

- The MAC address of the network interface.

- The ID of the network interface.

- The AWS account ID of
the network interface owner.

- The private IPv4 address or addresses of the network interface.
- The private DNS name of the network interface (IPv4).
- The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).

- Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).

- Indicates whether the network interface performs source/destination checking. A value of true means checking is enabled, and false means checking is disabled. The value must be true for the network interface to perform network address translation (NAT) in your VPC.

- The status of the network interface. If the network interface is not attached to an instance, the status is available; if a network interface is attached to an instance the status is in-use.

- The ID of the subnet for the network interface.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and Purpose=X for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the tag-key and tag-value filter. For example, if you use both the filter tag-key=Purpose and the filter tag-value=X, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the filter tag:Purpose filter.

- The value of a tag assigned to the resource. This filter is independent of the tag-key and tag-value filter.

- The ID of the VPC for the network interface.

interface.</p> </li> <li> <p> <code>association.association-id</code> - The association ID returned when the network interface was associated with an IPv4 address.</p> </li> <li> <p> <code>association.allocation-id</code> - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.</p> </li> <li> <p> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</p> </li> <li> <p> <code>association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface.</p> </li> <li> <p> <code>association.public-dns-name</code> - The public DNS name for the network interface (IPv4).</p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the interface attachment.</p> </li> <li> <p> <code>attachment.attach.time</code> - The time that the network interface was attached to an instance.</p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>availability-zone</code> - The Availability Zone of the network interface.</p> </li> <li> <p> <code>description</code> - The description of the network interface.</p> </li> <li> <p> <code>group-id</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface.</p> </li> <li> <p> <code>mac-address</code> - The MAC address of the network interface.</p> </li> <li> <p> <code>network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>source-desk-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.</p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=Example, specify <code>tag:Purpose</code> for the filter name and <code>Example</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key= Purpose" and the filter "tag-value=Production", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value Production (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag: Purpose</code>:<i>key</i>=<i>value</i> filter.</p> </li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li> </ul>

**NOTE:** This method appends the values to the existing list (if any). Use [@link #setFilters(java.util.Collection)] or [@link #withFilters(java.util.Collection)] if you want to override the existing values.
- The private IPv4 addresses associated with the network interface.
- Whether the private IPv4 address is the primary IP address associated with the network interface.
- The association ID returned when the network interface was associated with the Elastic IP address (IPv4).
- The owner ID of the addresses associated with the network interface.
- The association ID returned when the network interface was associated with an IPv4 address.
- Whether the private IPv4 address is the primary IP address associated with the network interface.
- Indicates whether the attachment is deleted when an instance is terminated.
- The device index to which the network interface is attached.
- The ID of the instance to which the network interface is attached.
- The ID of the network interface attached to an instance.
- The time that the network interface was attached to an instance.
- Indicates whether the attachment is managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).
- Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).
- Indicates whether the network interface performs source/destination checking. A value of "true" means checking is enabled, and "false" means checking is disabled. The value must be "false" for the network interface to perform network address translation (NAT) in your VPC.
- The status of the network interface. If the network interface is not attached to an instance, the status is "available"; if a network interface is attached to an instance, the status is "in-use".
- The ID of the subnet for the network interface.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose
is X, see the \texttt{<code>tag</code>:<i>key</i>=<i>value</i> filter}.\texttt{</li>\texttt{<p> \texttt{<code>tag-value</code>} - The value of a tag assigned to the resource. </li> <li> <p> <code>attachment.attach-time</code> - The time that the network interface was attached to an instance.</p>
</li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated.</p>
</li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached.</p>
</li>
DNS name for the network interface (IPv4).

- The ID of the interface attachment.
- The time that the network interface was attached to an instance.
- Indicates whether the attachment is deleted when an instance is terminated.
- The device index to which the network interface is attached.
- The ID of the interface to which the network interface is attached.
- The owner ID of the instance to which the network interface is attached.
- The ID of the NAT gateway to which the network interface is attached.
- The status of the attachment.
- The private IPv4 address or addresses of the network interface.
- The MAC address of the network interface.
- The AWS account ID of the network interface owner.
- The ID of the entity that launched the instance on your behalf.
- Indicates whether the network interface performs source/destination checking. A value of true means checking is enabled, and false means checking is disabled.
- The status of the network interface. If the network interface is not attached to an instance, the status is available.
- If a network interface is attached to an instance the status is in-use.
- The ID of the subnet for the network interface.
- The ID of the VPC for the network interface.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose=X for the filter name and X for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the tag:value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:tag-key=X tag-value=X filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:tag-key=X tag-value=X filter.
- The value of a tag assigned to the resource. This filter is independent of the tag:tag-key filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:tag-key=X tag-value=X filter.
- The ID of the VPC for the network interface.
- The association ID returned when the network interface was associated with the Elastic IP address (IPv4).
- The owner ID of the addresses associated with the network interface.
- The association ID returned when the network interface was associated with an IPv4 address.
- The allocation ID returned when
you allocated the Elastic IP address (IPv4) for your network interface.</li> <li> <p> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</p> </li> <li> <p> <code>association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface.</p> </li> <li> <p> <code>association.public-dns-name</code> - The public DNS name for the network interface (IPv4).</p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the interface attachment.</p> </li> <li> <p> <code>attachment.associate-time</code> - The time that the network interface was attached to an instance.</p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached.</p> </li> <li> <p> <code>attachment.status</code> - The status of the attachment (attaching | attached | detaching | detached).</p> </li> <li> <p> <code>availability-zone</code> - The Availability Zone of the network interface.</p> </li> <li> <p> <code>description</code> - The description of the network interface.</p> </li> <li> <p> <code>group-id</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface.</p> </li> <li> <p> <code>mac-address</code> - The MAC address of the network interface.</p> </li> <li> <p> <code>network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>source-dedes-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>true</code> for the network interface to perform network address translation (NAT) in your VPC.</p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.</p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the network interface.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li>

<li> <code>addresses.private-ip-address</code> - The private IPv4 addresses associated with the network interface.\n</li>
<li> <p>\n</p>\n</li>
"
addresses.primary - Whether the private IPv4 address is the primary IP address associated with the network interface. </li> <li> <code>addresses.association.public-ip</code> - The association ID returned when the network interface was associated with the Elastic IP address (IPv4). </li> <li> <code>addresses.association.owner-id</code> - The owner ID of the addresses associated with the network interface. </li> <li> <code>addresses.association.association-id</code> - The association ID returned when the network interface was associated with an IPv4 address. </li> <li> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface. </li> <li> <code>association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface. </li> <li> <code>association.public-dns-name</code> - The public DNS name for the network interface (IPv4). </li> <li> <code>attachment.attachment-id</code> - The ID of the interface attachment. </li> <li> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated. </li> <li> <code>attachment.device-index</code> - The device index to which the network interface is attached. </li> <li> <code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached. </li> <li> <code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached. </li> <li> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached. </li> <li> <code>attachment.status</code> - The status of the attachment. </li> <code>availability-zone</code> - The Availability Zone of the network interface. </li> <li> <code>description</code> - The description of the network interface. </li> <li> <code>group-id</code> - The ID of a security group associated with the network interface. </li> <li> <code>group-name</code> - The name of a security group associated with the network interface. </li> <li> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface. </li> <li> <code>mac-address</code> - The MAC address of the network interface. </li> <li> <code>network-interface-id</code> - The ID of the network interface. </li> <li> <code>owner-id</code> - The AWS account ID of the network interface owner. </li> <li> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface. </li> <li> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4). </li> <li> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). </li> <li> <code>source-desk-check</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). </li> <li> <code>tag.key=value</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. </li> <li> <code>tag:tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-key=value</code> filter.
tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li> <li> <p> <code>addresses.private-ip-address</code> - The private IPv4 addresses associated with the network interface.</p> </li> <li> <p> <code>addresses.primary</code> - Whether the private IPv4 address is the primary IP address associated with the network interface.</p> </li> <li> <p> <code>addresses.association.public-ip</code> - The association ID returned when the network interface was associated with the Elastic IP address (IPv4).</p> </li> <li> <p> <code>addresses.association.owner-id</code> - The owner ID of the addresses associated with the network interface.</p> </li> <li> <p> <code>addresses.association-id</code> - The association ID returned when the network interface was associated with an IPv4 address.</p> </li> <li> <p> <code>association.allocation-id</code> - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.</p> </li> <li> <p> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li> <li> <p> <code>attachment.attach.time</code> - The time that the network interface was attached to an instance.</p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the interface attachment.</p> </li> <li> <p> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached.</p> </li> <li> <p> <code>attachment.status</code> - The status of the attachment (attaching, attached, detaching, detached).</p> </li> <li> <p> <code>description</code> - The description of the network interface.</p> </li> <li> <p> <code>group-id</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface.</p> </li> <li> <p> <code>mac-address</code> - The MAC address of the network interface.</p> </li> <li> <p> <code>network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>source-desock-check</code> - Indicates whether the network interface performs source/destination checking. A value of true means checking is enabled, and false means checking is disabled. The value must be false for the network interface to perform network address translation (NAT) in your VPC.</p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is available; if a network interface is attached to an instance the status is in-use.</p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the network interface.</p> </li> <li> <p> <code>tag:Key</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>purpose</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and
You can use the filter "tag-value=X" to get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. The ID of the VPC for the network interface.

- The <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
- The ID of the VPC for the network interface.

- The <code>addresses</code> - The private IPv4 addresses associated with the network interface.
  - The private IPv4 addresses associated with the network interface.
  - The association ID returned when the network interface was associated with the Elastic IP address (IPv4).
  - The association ID returned when you allocated the Elastic IP address (IPv4) for your network interface.
  - The owner ID of the addresses associated with the network interface.
  - The association ID returned when the network interface was associated with an IPv4 address.
  - The address of the Elastic IP address (IPv4) bound to the network interface.
  - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.
  - The owner ID of the Elastic IP address (IPv4) associated with the network interface.
  - The address of the Elastic IP address (IPv4) associated with the network interface.
  - The public DNS name for the network interface (IPv4).
  - The ID of the attachment.
  - Indicates whether the attachment is deleted when an instance is terminated.
  - The device index to which the network interface is attached.
  - The ID of the instance to which the network interface is attached.
  - The ID of the instance to which the network interface is attached.
  - The status of the attachment.
  - The Availability Zone of the network interface.
  - The description of the network interface.
  - The ID of a security group associated with the network interface.
  - The name of a security group associated with the network interface.
  - An IPv6 address associated with the network interface.
  - The MAC address of the network interface.
  - The ID of the network interface.
  - The AWS account ID of the network interface owner.
  - The private IPv4 address associated with the network interface.
  - The private IPv4 address or addresses of the network interface.
  - The private DNS name of the network interface (IPv4).
  - The ID of the entity that launched the instance on your behalf (for example, AWS Management
address</code> - The MAC address of the network interface.

- <code>network-interface-id</code> - The ID of the network interface.
- <code>owner-id</code> - The AWS account ID of the network interface owner.
- <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.
- <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).
- <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).
- <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).
- <code>source-dhcp-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.
- <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.
- <code>tag:Key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag:Value</code> filter. For example, if you use both the filter "tag:Key=Purpose" and the filter "tag:Value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Key=Purpose</code> for the filter name and <code>Value=X</code> for the filter value.
- <code>tag:Value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag:Key</code> filter. For example, if you use both the filter "tag:Key=Purpose" and the filter "tag:Value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Key=Purpose</code> for the filter name and <code>Value=X</code> for the filter value.

The time when the modification request was last updated.

The number of new Reserved Instances.

- The instance type of the new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
- The number of new Reserved Instances.
- The network platform of the new Reserved Instances.
- The ID of the Reserved Instances modified.
- The ID of the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is fulfilled.
- The Availability Zone for the new Reserved Instances.
<code>modification-result.reserved-instances-id</code> - The ID for the Reserved Instances created as part of the modification request. This ID is only available when the status of the modification is <code>fulfilled</code>.

<code>modification-result.target-configuration.availability-zone</code> - The Availability Zone for the new Reserved Instances.

<code>modification-result.target-configuration.instance-count</code> - The number of new Reserved Instances.

<code>modification-result.target-configuration.instance-type</code> - The instance type of the new Reserved Instances.

<code>reserved-instances-id</code> - The ID of the Reserved Instances modified.

<code>reserved-instances-modification-id</code> - The ID of the modification request.

<code>status</code> - The status of the Reserved Instances modification request (processing | fulfilled | failed).

<code>status-message</code> - The reason for the status.

<code>update-date</code> - The time when the modification request was last updated.

**DescribeReservedInstancesOfferings**

**Parameters:**

- `reservedInstancesOfferingIds` (List<String>)

**Returns:**

A reference to this object so that method calls can be chained together.

**Example:**

```java
DescribeReservedInstancesOfferingsRequest request = new DescribeReservedInstancesOfferingsRequest()
    .withReservedInstancesOfferingIds(reservedInstancesOfferingIds);
```

**Description:**

Contains the output of DescribeReservedInstancesOfferings.

**Usage Notes:**

- This method appends the values to the existing list (if any). Use `setReservedInstancesOfferingIds(java.util.Collection)` or `withReservedInstancesOfferingIds(java.util.Collection)` if you want to override the existing values.
- Returns a reference to this object so that method calls can be chained together.

<li><p><code>duration</code></p> - The duration of the Reserved Instance (one year or three years), in seconds.</li>
<li><p><code>end</code></p> - The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).</li>
<li><p><code>fixed-price</code></p> - The purchase price of the Reserved Instance (for example, 9800.00).</li>
<li><p><code>instance-type</code></p> - The instance type that is covered by the reservation.</li>
<li><p><code>product-description</code></p> - The scope of the Reserved Instance (Region or Availability Zone).</li>
</ul> - The Reserved Instance product platform description. Instances that include
<code>(Amazon VPC)</code> in the product description will only be displayed to EC2-Classic account holders and are for
use with Amazon VPC (<code>Linux/UNIX</code> | <code>Linux/UNIX (Amazon VPC)</code> | <code>SUSE
| Availability Zone | The Availability Zone where the Reserved Instance can be used.  
| Duration | The duration of the Reserved Instance (one year or three years), in seconds (31536000 | 94608000000).  
| End | The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).  
| Fixed Price | The purchase price of the Reserved Instance (for example, 9800.0).  
| Instance Type | The instance type that is covered by the reservation.  
| Scope | The scope of the Reserved Instance (Region or Availability Zone).  
| Product Description | The Reserved Instance product platform description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (Linux/UNIX | Linux/UNIX (Amazon VPC) | SUSE Linux | Red Hat Enterprise Linux | Windows | Windows (Amazon VPC) | Windows with SQL Server Standard | Windows with SQL Server Web | Windows with SQL Server Web (Amazon VPC) | Windows with SQL Server Enterprise | Windows with SQL Server Enterprise (Amazon VPC).  
| Reserved Instances ID | The ID of the Reserved Instance.  
| Start | The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).  
| State | The state of the Reserved Instance (payment-pending | active | payment-failed | retired).  
| Tag | The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.  
| Tag Key | The key of a tag assigned to the resource. This filter is independent of the tag:value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:value filter.  
| Tag Value | The value of a tag assigned to the resource. This filter is independent of the tag:key filter. If you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:value filter.

<li><code>duration</code> - The duration of the Reserved Instance (one year or three years), in seconds.
</li>
<li><code>fixed-price</code> - The purchase price of the Reserved Instance (for example, 9800.000000).
</li>
<li><code>instance-type</code> - The instance type that is covered by the reservation.
</li>
<li><code>scope</code> - The scope of the Reserved Instance (Region or Availability Zone).
</li>
<li><code>product-description</code> - The Reserved Instance product platform description. Instances that include <code>(Amazon VPC)</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC.
</li>
<li><code>reserved-instances-id</code> - The ID of the Reserved Instance.</li>
<li><code>start</code> - The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
</li>
<li><code>state</code> - The state of the Reserved Instance (payment-pending, active, payment-failed, retired).
</li>
<li><code>tag-key</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
<li><code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>key</i>=<i>value</i> filter.</li>
<li><code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>key</i>=<i>value</i> filter.</li>
<li><code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>key</i>=<i>value</i> filter.
combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify &lt;code&gt;tag:Purpose&lt;/code&gt; for the filter name and &lt;code&gt;X&lt;/code&gt; for the filter value.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;tag-key&lt;/code&gt; - The key of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-value&lt;/code&gt; filter. For example, if you use both the filter \”tag-key=Purpose\” and the filter \”tag-value=XX\”, you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the &lt;code&gt;tag:&lt;i&gt;key&lt;/i&gt;=&lt;i&gt;value&lt;/i&gt; filter.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;tag-value&lt;/code&gt; - The value of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-key&lt;/code&gt; filter.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;usage-price&lt;/code&gt; - The usage price of the Reserved Instance, per hour (for example, 0.84).&lt;/p&gt; &lt;/li&gt; &lt;/ul&gt;&lt;p&gt;NOTE:&lt;/b&gt; This method appends the values to the existing list (if any). Use { @link #setFilters(java.util.Collection) } or { @link #withFilters(java.util.Collection) } if you want to override the existing values.&lt;/p&gt; &lt;ul&gt; &lt;li&gt; &lt;p&gt; &lt;code&gt;availability-zone&lt;/code&gt; - The Availability Zone where the Reserved Instance can be used.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;duration&lt;/code&gt; - The duration of the Reserved Instance (one year or three years), in seconds (&lt;code&gt;31536000&lt;/code&gt; | &lt;code&gt;94608000&lt;/code&gt;).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;end&lt;/code&gt; - The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;fixed-price&lt;/code&gt; - The purchase price of the Reserved Instance (for example, 9800.0).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;instance-type&lt;/code&gt; - The instance type that is covered by the reservation.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;scope&lt;/code&gt; - The scope of the Reserved Instance (&lt;code&gt;Region&lt;/code&gt; or &lt;code&gt;Availability Zone&lt;/code&gt;).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;product-description&lt;/code&gt; - The Reserved Instance product platform description. Instances that include &lt;code&gt;(Amazon VPC)&lt;/code&gt; in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (&lt;code&gt;Linux/UNIX&lt;/code&gt; | &lt;code&gt;Linux/UNIX (Amazon VPC)&lt;/code&gt; | &lt;code&gt;SUSE Linux&lt;/code&gt; | &lt;code&gt;SUSE Linux (Amazon VPC)&lt;/code&gt; | &lt;code&gt;Red Hat Enterprise Linux&lt;/code&gt; | &lt;code&gt;Red Hat Enterprise Linux (Amazon VPC)&lt;/code&gt; | &lt;code&gt;Windows&lt;/code&gt; | &lt;code&gt;Windows (Amazon VPC)&lt;/code&gt; | &lt;code&gt;Windows with SQL Server Standard&lt;/code&gt; | &lt;code&gt;Windows with SQL Server Standard (Amazon VPC)&lt;/code&gt; | &lt;code&gt;Windows with SQL Server Web&lt;/code&gt; | &lt;code&gt;Windows with SQL Server Web (Amazon VPC)&lt;/code&gt; | &lt;code&gt;Windows with SQL Server Enterprise&lt;/code&gt; | &lt;code&gt;Windows with SQL Server Enterprise (Amazon VPC)&lt;/code&gt;).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;reserved-instances-id&lt;/code&gt; - The ID of the Reserved Instance.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;start&lt;/code&gt; - The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;state&lt;/code&gt; - The state of the Reserved Instance (&lt;code&gt;payment-pending&lt;/code&gt; | &lt;code&gt;active&lt;/code&gt; | &lt;code&gt;payment-failed&lt;/code&gt; | &lt;code&gt;retired&lt;/code&gt;).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;tag&lt;/code&gt; - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify &lt;code&gt;tag:Purpose&lt;/code&gt; for the filter name and &lt;code&gt;X&lt;/code&gt; for the filter value.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;tag-key&lt;/code&gt; - The key of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-value&lt;/code&gt; filter. For example, if you use both the filter \”tag-key=Purpose\” and the filter \”tag-value=XX\”, you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the &lt;code&gt;tag:tag:&lt;i&gt;key&lt;/i&gt;=&lt;i&gt;value&lt;/i&gt; filter.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;tag-value&lt;/code&gt; - The value of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-key&lt;/code&gt; filter.&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;code&gt;usage-price&lt;/code&gt; - The usage price of the Reserved Instance, per hour (for example, 0.84).&lt;/p&gt; &lt;/li&gt; &lt;i&gt; &lt;p&gt; &lt;/li&gt; &lt;/ul&gt;Returns a reference to this object so that method calls can be chained together.&gt;"};

One or more filters.

Availability Zone where the Reserved Instance can be used.

The time when the Reserved Instance expires

The purchase price of the Reserved Instance

The instance type that is covered by the reservation.

The scope of the Reserved Instance

Region

Availability Zone

The Reserved Instance product platform description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for

- **availability-zone** - The Availability Zone where the Reserved Instance can be used.</p> 

- **duration** - The duration of the Reserved Instance (one year or three years), in seconds.</p> 

- **end** - The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).</p> 

- **fixed-price** - The purchase price of the Reserved Instance (for example, 9800.0).</p> 

- **instance-type** - The instance type that is covered by the reservation.</p> 

- **product-description** - The Reserved Instance product platform description. Instances that include <code>(Amazon VPC)</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (<code>Linux/UNIX</code> | <code>SUSE Linux</code> | <code>SUSE Linux (Amazon VPC)</code> | <code>Red Hat Enterprise Linux</code> | <code>Red Hat Enterprise Linux (Amazon VPC)</code> | <code>Windows</code> | <code>Windows (Amazon VPC)</code> | <code>Windows with SQL Server Standard</code> | <code>Windows with SQL Server Web</code> | <code>Windows with SQL Server Web (Amazon VPC)</code> | <code>Windows with SQL Server Enterprise</code> | <code>Windows with SQL Server Enterprise (Amazon VPC)</code>). </p> 

- **reserved-instances-id** - The ID of the Reserved Instance.</p> 

- **start** - The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).</p> 

- **state** - The state of the Reserved Instance (<code>payment-pending</code> | <code>active</code> | <code>payment-failed</code> | <code>retired</code>). </p> 

- **tag**:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> 

- **tag-key** - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=Xi\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> 

- **tag-value** - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> 

- **usage-price** - The usage price of the Reserved Instance, per hour (for example, 0.84). </p> 

"enumType" : null,
value="X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
</ul>
<p>For example, to list only resources where the tag key Purpose is X, use the following filter:

<code>tag:Purpose=X</code>.</p>

### Filters for Reserved Instances

Here is a list of filters that you can use to search Reserved Instances:</li>

- **availability-zone** - The Availability Zone where the Reserved Instance can be used.</li>
- **duration** - The duration of the Reserved Instance (one year or three years), in seconds (<code>31536000</code> | <code>94608000</code>).<p> You can use this filter to find out how much time is remaining on the Reserved Instance.</p>
- **end** - The time when the Reserved Instance expires (for example, 2014-08-07T11:54:42.000Z).<p> You can use this filter to find out when the Reserved Instance will expire.</p>
- **fixed-price** - The purchase price of the Reserved Instance (for example, 9800.0).<p> You can use this filter to find out how much you paid for the Reserved Instance.</p>
- **instance-type** - The instance type that is covered by the reservation.<p> You can use this filter to find out what type of instance is covered by the reservation.</p>
- **scope** - The scope of the Reserved Instance (<code>Region</code> or <code>Availability Zone</code>).<p> You can use this filter to find out where the Reserved Instance is located.</p>
- **product-description** - The Reserved Instance product platform description. Instances that include <code>(Amazon VPC)</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (<code>Linux/UNIX</code> | <code>Linux/UNIX (Amazon VPC)</code> | <code>SUSE Linux</code> | <code>SUSE Linux (Amazon VPC)</code> | <code>Red Hat Enterprise Linux (Amazon VPC)</code> | <code>Windows</code> | <code>Windows (Amazon VPC)</code> | <code>Windows with SQL Server Standard</code> | <code>Windows with SQL Server Enterprise (Amazon VPC)</code> | <code>Windows with SQL Server Web</code> | <code>Windows with SQL Server Enterprise (Amazon VPC)</code> | <code>Windows with SQL Server Web (Amazon VPC)</code> | <code>Windows with SQL Server Enterprise (Amazon VPC)</code>).<p> You can use this filter to find out what type of instance is covered by the reservation.</p>
- **reserved-instances-id** - The ID of the Reserved Instance.<p> You can use this filter to find out the ID of the Reserved Instance.</p>
- **start** - The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).<p> You can use this filter to find out when the Reserved Instance was purchased.</p>
- **state** - The state of the Reserved Instance (<code>payment-pending</code> | <code>active</code> | <code>payment-failed</code> | <code>retired</code>).<p> You can use this filter to find out the state of the Reserved Instance.</p>
- **tag**:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>Purpose</code> for the filter value.</li>
- **tag-key** - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <"tag-key=Purpose" and the filter <"tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
- **tag-value** - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <"tag-key=Purpose" and the filter <"tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>

### Example Usage

Here is an example of how to use the filters to find out information about Reserved Instances:

- To find out all Reserved Instances that are in the Region, use the following filter:

  <code>scope=Region</code>

- To find out all Reserved Instances that are in the Availability Zone, use the following filter:

  <code>scope=Availability Zone</code>

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, use the following filter:

  <code>tag:Purpose=X</code>

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, and a tag key Tags with a value Tags, use the following filters:

  <code>tag:Purpose=X</code> and <code>tag:Tags=Tags</code>

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, and a tag key Tags with a value Tags, and a tag key Region with a value Region, use the following filters:

  <code>tag:Purpose=X</code> and <code>tag:Tags=Tags</code> and <code>tag:Region=Region</code>

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, and a tag key Tags with a value Tags, and a tag key Region with a value Region, and a tag key Availability Zone with a value Availability Zone, use the following filters:

  <code>tag:Purpose=X</code> and <code>tag:Tags=Tags</code> and <code>tag:Region=Region</code> and <code>tag:Availability Zone=Availability Zone</code>

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, and a tag key Tags with a value Tags, and a tag key Region with a value Region, and a tag key Availability Zone with a value Availability Zone, and a tag key Product Description with a value Product Description, use the following filters:

  <code>tag:Purpose=X</code> and <code>tag:Tags=Tags</code> and <code>tag:Region=Region</code> and <code>tag:Availability Zone=Availability Zone</code> and <code>tag:Product Description=Product Description</code>

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, and a tag key Tags with a value Tags, and a tag key Region with a value Region, and a tag key Availability Zone with a value Availability Zone, and a tag key Product Description with a value Product Description, and a tag key Product Type with a value Product Type, use the following filters:

  <code>tag:Purpose=X</code> and <code>tag:Tags=Tags</code> and <code>tag:Region=Region</code> and <code>tag:Availability Zone=Availability Zone</code> and <code>tag:Product Description=Product Description</code> and <code>tag:Product Type=Product Type</code>

### Examples

Here are some examples of how to use the filters:

- To find out all Reserved Instances that are in the Region and have a tag key Purpose with a value of X, use the following filter:

  <code>tag:Purpose=X</code>

- To find out all Reserved Instances that are in the Region and have a tag key Tags with a value Tags, use the following filter:

  <code>tag:Tags=Tags</code>

- To find out all Reserved Instances that are in the Region and have a tag key Region with a value Region, use the following filter:

  <code>tag:Region=Region</code>

- To find out all Reserved Instances that are in the Region and have a tag key Availability Zone with a value Availability Zone, use the following filter:

  <code>tag:Availability Zone=Availability Zone</code>

- To find out all Reserved Instances that are in the Region and have a tag key Product Description with a value Product Description, use the following filter:

  <code>tag:Product Description=Product Description</code>

- To find out all Reserved Instances that are in the Region and have a tag key Product Type with a value Product Type, use the following filter:

  <code>tag:Product Type=Product Type</code>
<code>tag</code>::<i>key</i>=<i>value</i> filter.  

- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

- The usage price of the Reserved Instance, per hour (for example, 0.84).

One or more filters.
The Availability Zone where the Reserved Instance can be used.
The duration of the Reserved Instance (one year or three years), in seconds.
The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
- The purchase price of the Reserved Instance (for example, 9800.0).
- The instance type that is covered by the reservation.
- The scope of the Reserved Instance (Region or Availability Zone).
- The Reserved Instance product description.
- The ID of the Reserved Instance.
- The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- The state of the Reserved Instance.
- The ID of the Reserved Instance.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-filter</code>:<i>key</i>=<i>value</i> filter.
- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
- The usage price of the Reserved Instance, per hour (for example, 0.84).
- One or more filters.
- The Availability Zone where the Reserved Instance can be used.
- The duration of the Reserved Instance (one year or three years), in seconds.
The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
- The purchase price of the Reserved Instance (for example, 9800.0).
- The instance type that is covered by the reservation.
- The scope of the Reserved Instance.
- The Reserved Instance product description.
Instances that include <code>(Amazon VPC)</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC.
The state of the Reserved Instance (payment-pending)
| active | payment-failed | retired

The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>Y</code> for the filter value.

The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=XY", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-value=0.84" and the filter "tag-key=usage-price", you get any resources assigned both the tag value 0.84 (regardless of what the tag's key is). If you want to list only resources where the usage price is 0.84, use the <code>tag-value=0.84</code> filter.

The usage price of the Reserved Instance, per hour (for example, 0.84).

This method appends the values to the existing list (if any). Use @link #setFilters(java.util.Collection) or @link #withFilters(java.util.Collection) if you want to override the existing values.

The Availability Zone where the Reserved Instance can be used.

The duration of the Reserved Instance (one year or three years), in seconds (31536000 | 94608000).

The time when the Reserved Instance expires (for example, 2015-08-07T11:54:20.000Z).

The purchase price of the Reserved Instance (for example, 9800.0).

The instance type that is covered by the reservation.

The scope of the Reserved Instance (Region | Availability Zone).

The Reserved Instance product platform description. Instances that include <code>Amazon VPC</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (Linux/UNIX | Linux/UNIX (Amazon VPC) | SUSE Linux | SUSE Linux (Amazon VPC) | Red Hat Enterprise Linux | Red Hat Enterprise Linux (Amazon VPC) | Windows | Windows (Amazon VPC) | Windows with SQL Server Standard | Windows with SQL Server Enterprise (Amazon VPC)).

The ID of the Reserved Instance.

The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:20.000Z).

The state of the Reserved Instance (payment-pending | active | payment-failed | retired).

The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=XY", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "usage-price=0.84" and the filter "usage-price", you get any resources assigned both the tag usage price 0.84 (regardless of what the tag's key is). If you want to list only resources where the usage price is 0.84, use the <code>tag-value=0.84</code> filter.

This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag</code>:<i>key</i>=<i>value</i> filter.
The ID of the VPC for the route table.

- Indicates whether the route table is the main route table for the VPC

The ID of an association ID for the route table.

The ID of the route table involved in the association.

The ID of the subnet involved in the association.

The ID of the route table.

The IPv4 CIDR range specified in a route in the table.

The IPv6 CIDR range specified in a route in the route table.

The ID (prefix) of the AWS service specified in a route in the table.

One or more filters.

- Indicates whether the route table is the main route table for the VPC

- The IPv4 CIDR range specified in a route in the table.

- The IPv6 CIDR range specified in a route in the route table.

- The ID (prefix) of the AWS service specified in a route in the table.

- The ID of the route table.

- The ID of an instance specified in a route in the table.

- The ID of a NAT gateway.

- Describes how the route was created. Indicates that the route was automatically created when the route table was created; indicates that the route was manually added to the route table; indicates that the route was propagated by route propagation.

- The state of a route in the route table

The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has been terminated, and so on).

The ID of a VPC peering connection specified in a route in the table.

The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

The ID of the VPC for the route table.

The ID of an association ID for the route table.

The ID of the route table involved in the association.

The ID of the subnet involved in the association.

Indicates whether the route table is the main route table for the VPC

The ID (prefix) of the AWS service specified in a route in the table.

The ID of an egress-only Internet gateway specified in a route in the route table.

The IP range specified in a route in the route table.

The ID of a gateway specified in a route in the table.

The ID of a VPC peering connection specified in a route in the table.

Indicates that the route was manually added to the route table; indicates that the route was propagated by route propagation.

Indicates that the route was automatically created when the route table was created; indicates that the route was manually added to the route table; indicates that the route was propagated by route propagation.

Indicates whether the route table is the main route table for the VPC

The ID (prefix) of the AWS service specified in a route in the table.

The ID of an egress-only Internet gateway specified in a route in the route table.

The ID of a gateway specified in a route in the table.

The ID of a NAT gateway.

Describes how the route was created.
CreateRouteTable</code> indicates that the route was automatically created when the route table was created; <code>CreateRoute</code> indicates that the route was manually added to the route table; <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation. The state of a route in the route table (<code>active</code> | <code>blackhole</code>). The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has been terminated, and so on). <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created; <code>CreateRoute</code> indicates that the route was manually added to the route table; <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation. The state of a route in the route table (<code>active</code> | <code>blackhole</code>). The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has been terminated, and so on).

        <p><code>association.main</code> - Indicates whether the route table is the main route table for the VPC (<code>true</code> | <code>false</code>).</p>
      </li>
      <li>
        <p><code>route-table-id</code> - The ID of the route table.</p>
      </li>
      <li>
        <p><code>route.destination-cidr-block</code> - The IPv4 CIDR range specified in a route in the table.</p>
      </li>
      <li>
        <p><code>route.destination-ipv6-cidr-block</code> - The IPv6 CIDR range specified in a route in the route table.</p>
      </li>
      <li>
        <p><code>route.destination-prefix-list-id</code> - The ID (prefix) of the AWS service specified in a route in the table.</p>
      </li>
      <li>
        <p><code>route.egress-only-internet-gateway-id</code> - The ID of an egress-only Internet gateway specified in a route in the route table.</p>
      </li>
      <li>
        <p><code>route.gateway-id</code> - The ID of a gateway specified in a route in the table.</p>
      </li>
      <li>
        <p><code>route.instance-id</code> - The ID of an instance specified in a route in the table.</p>
      </li>
      <li>
        <p><code>route.nat-gateway-id</code> - The ID of a NAT gateway.</p>
      </li>
      <li>
        <p><code>route.origin</code> - Describes how the route was created. <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created; <code>CreateRoute</code> indicates that the route was manually added to the route table; <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation.</p>
      </li>
      <li>
        <p><code>route.state</code> - The state of a route in the route table (<code>active</code> | <code>blackhole</code>). The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has been terminated, and so on).</p>
      </li>
    </ul>

</li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the route table.</p> </li> </ul>

<p><b>NOTE:</b> This method appends the values to the existing list (if any). Use [@link #setFilters(java.util.Collection)] or [@link #withFilters(java.util.Collection)] if you want to override the existing values.</p>
id</code> - The ID of an instance specified in a route in the table.

- <code>route.nat-gateway-id</code> - The ID of a NAT gateway.
- <code>route.origin</code> - Describes how the route was created.
- <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created;
- <code>CreateRoute</code> indicates that the route was manually added to the route table;
- <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation.

- <code>route.state</code> - The state of a route in the route table.
- <code>active</code> - Indicates whether the route table is the main route table for the VPC (true).
- <code>true</code> - The ID of the route table.
- <code>route-table-id</code> - The ID of the route table involved in the association.
- <code>association.subnet-id</code> - The ID of the subnet involved in the association.
- <code>association.main</code> - Indicates whether the route table is the main route table for the VPC.
- <code>route.destination-cidr-block</code> - The IPv4 CIDR range specified in a route in the table.
- <code>route.destination-ipv6-cidr-block</code> - The IPv6 CIDR range specified in a route in the table.
- <code>route.destination-prefix-list-id</code> - The ID (prefix) of the AWS service specified in a route in the table.
- <code>route.egress-only-internet-gateway-id</code> - The ID of an egress-only Internet gateway specified in a route in the route table.
- <code>route.gateway-id</code> - The ID of a gateway specified in a route in the table.
- <code>route.instance-id</code> - The ID of an instance specified in a route in the table.
- <code>route.nat-gateway-id</code> - The ID of a NAT gateway.
- <code>route.origin</code> - Describes how the route was created.
- <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created;
- <code>CreateRoute</code> indicates that the route was manually added to the route table;
- <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation.

- <code>route.state</code> - The state of a route in the route table.
- <code>active</code> - Indicates whether the route table is the main route table for the VPC.
filter value. The key of a tag assigned to the resource. This filter is independent of the `tag-value` filter. For example, if you use both the filter `tag-key=Purpose` and the filter `tag-value=XV`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `tag-key=Purpose` filter. The value of a tag assigned to the resource. This filter is independent of the `tag-key` filter.

*/"
access.</p> 
<li> <p> <code>group-id</code> - The ID of the security group.</p> </li> 
<li> <p> <code>group-name</code> - The name of the security group.</p> </li> 
<li> <p> <code>ip-permission.cidr</code> - An IPv4 CIDR range that has been granted permission in a security group rule.</p> </li> 
<li> <p> <code>ip-permission.from-port</code> - The start of port range for the TCP and UDP protocols, or an ICMP type number.</p> </li> 
<li> <p> <code>ip-permission.group-id</code> - The ID of a security group that has been granted permission.</p> </li> 
<li> <p> <code>ip-permission.group-name</code> - The name of a security group that has been granted permission.</p> </li> 
<li> <p> <code>ip-permission.ipv6-cidr</code> - An IPv6 CIDR range that has been granted permission in a security group rule.</p> </li> 
<li> <p> <code>ip-permission.protocol</code> - The IP protocol for the permission (<code>tcp</code> | <code>udp</code> | <code>icmp</code> or a protocol number).</p> </li> 
<li> <p> <code>ip-permission.to-port</code> - The end of port range for the TCP and UDP protocols, or an ICMP code.</p> </li> 
<li> <p> <code>tag-key</code> - The key of a tag assigned to the security group.</p> </li> 
<li> <p> <code>tag-value</code> - The value of a tag assigned to the security group.</p> </li> 
<li> <p> <code>vpc-id</code> - The ID of the VPC specified when the security group was created.</p> </li> 

```java
public List<String> getAllFilters() {
    return filters;
}
```

The method `getAllFilters` returns a list of all filters that have been set for the security group. If multiple filters are set for rules, the method returns a list of all filters that match the rules.

```java
public void setFilters(List<String> filters) {
    this.filters = filters;
}
```

The method `setFilters` sets the list of filters for the security group. If multiple filters are set for rules, the method sets the list of filters that match the rules.
- The IP protocol for the permission (<code>tcp</code> | <code>udp</code> | <code>icmp</code> or a protocol number).
- The end of port range for the TCP and UDP protocols, or an ICMP code.
- The ID of an AWS account that has been granted permission.
- The AWS account ID of the owner of the security group.
- The key of a tag assigned to the security group.
- The value of a tag assigned to the security group.
- The ID of the VPC specified when the security group was created.

[EC2-Classic and default VPC only] One or more security group names. You can specify either the security group name or the security group ID. For security groups in a nondefault VPC, use the <code>groupName</code> filter to describe security groups by name. </p>

Default: Describes all your security groups.

NOTE: This method appends the values to the existing list (if any). Use
 {@link #setGroupNames(java.util.Collection)} or {@link #withGroupNames(java.util.Collection)} if you want to override the existing values.

@returns groupNames [EC2-Classic and default VPC only] One or more security group names. You can specify either the security group name or the security group ID. For security groups in a nondefault VPC, use the <code>groupName</code> filter to describe security groups by name. </p>

Default: Describes all your security groups.

Returns a reference to this object so that method calls can be chained together.*/

"deprecated" : false,
Amazon Elastic Compute Cloud User Guide. 

- The short code describing the most recent evaluation of your Spot instance request.
- The message explaining the status of the Spot instance request.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=XX\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.
- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=XX\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.
- One or more filters.
- The Availability Zone group.
- The time stamp when the Spot instance request was created.
- The fault code related to the request.
- The fault message related to the request.
- The ID of the instance that fulfilled the request.
- The Spot instance launch group.
- Whether monitoring is enabled for the Spot instance.
- The type of instance (for example, <code>m3.medium</code>).
- The kernel ID.
- The name of the key pair the instance launched with.
- Whether monitoring is enabled for the Spot instance.
- The ID of the network interface.
- The index of the device for the network interface attachment on the instance.
- The index of the device for the network interface attachment on the instance.
- The ID of the subnet for the instance.
- The primary private IP address of the network interface.
- The product description associated with the product.

Open Source Used In 12.6(1) VOS assets for CCBU Projects (CentOS) 12.6(1) 5711

For more information, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html">Spot Bid Status</a> in the Amazon Elastic Compute Cloud User Guide.</p> </li> <li> <p> <code>tag:Key</code>: <i>Value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code-tag-key</code>: <i>value</i> - The key of a tag assigned to the resource. This filter is independent of the <code-tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code-tag-value</code>: <i>value</i> filter.</p> </li> <li> <p> <code-type</code> - The type of Spot instance request (<code-one-time</code> | <code-persistent</code>).</p> </li> <li> <p> <code>launched-availability-zone</code> - The Availability Zone in which the bid is launched.</p> </li> <li> <p> <code>valid-from</code> - The start date of the request.</p> </li> <li> <p> <code>valid-until</code> - The end date of the request.</p> </li> <li> <p> <code>availability-zone-group</code> - The Availability Zone group.</p> </li> <li> <p> <code>fault-code</code> - The fault code related to the request.</p> </li> <li> <p> <code>fault-message</code> - The fault message related to the request.</p> </li> <li> <p> <code>instance-id</code> - The ID of the instance that fulfilled the request.</p> </li> <li> <p> <code>launch-group</code> - The Spot instance launch group.</p> </li> <li> <p> <code>launch.block-device-mapping.delete-on-termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.</p> </li> <li> <p> <code>launch.block-device-mapping.snapshot-id</code> - The ID of the snapshot used for the Amazon EBS volume.</p> </li> <li> <p> <code>launch.block-device-mapping.volume-size</code> - The size of the Amazon EBS volume, in GiB.</p> </li> <li> <p> <code>launch.block-device-mapping.device-type</code> - The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS.
SSD, `<code>st1</code>` for Throughput Optimized HDD, `<code>sc1</code>` for Cold HDD, or `<code>standard</code>` for Magnetic. 

- `<code>launch.group-id</code>` - The security group for the instance.
- `<code>launch.image-id</code>` - The ID of the AMI.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.
- `<code>launch.ramdisk-id</code>` - The RAM disk ID.
- `<code>launch.instance-id</code>` - The ID of the instance.
- `<code>launch.instance-type</code>` - The type of instance (for example, `<code>m3.medium</code>`).
- `<code>launch.kernel-id</code>` - The kernel ID.
- `<code>launch.key-name</code>` - The name of the key pair the instance launched with.
- `<code>launch.monitoring-enabled</code>` - Whether monitoring is enabled for the Spot instance.

One or more filters. */<ul>
<li><p>availability-zone-group</p></li>
<li><p>create-time</p></li>
<li><p>fault-code</p></li>
<li><p>fault-message</p></li>
</ul> - The Availability Zone group. <p><li><p>create-time</p></li>
- The time stamp when the Spot instance request was created. <p><li><p>fault-code</p></li>
- The fault code related to the request. <p><li><p>fault-message</p></li>
- The fault message related to the request.
<p>The ID of the instance that fulfilled the request.</p>

- **<code>instance-id</code>**

- **<code>launch-group</code>** - The Spot instance launch group.

- **<code>launch.block-device-mapping.delete-on-termination</code>** - Indicates whether the Amazon EBS volume is deleted on instance termination.

- **<code>launch.block-device-mapping.device-name</code>** - The device name for the Amazon EBS volume (for example, `<code>/dev/sdh</code>`).

- **<code>launch.block-device-mapping.snapshot-id</code>** - The ID of the snapshot used for the Amazon EBS volume.

- **<code>launch.block-device-mapping.volume-size</code>** - The size of the Amazon EBS volume, in GiB.

- **<code>launch.block-device-mapping.volume-type</code>** - The type of the Amazon EBS volume:

  - `<code>gp2</code>` for General Purpose SSD,
  - `<code>io1</code>` for Provisioned IOPS SSD,
  - `<code>st1</code>` for Throughput Optimized HDD,
  - `<code>sc1</code>` for Cold HDD,
  - `<code>standard</code>` for Magnetic.

- **<code>launch.image-id</code>** - The ID of the AMI.

- **<code>launch.group-id</code>** - The security group for the instance.

- **<code>launch.instance-type</code>** - The type of instance (for example, `<code>m3.medium</code>`).

- **<code>launch.key-name</code>** - The name of the key pair the instance launched with.

- **<code>launch.kernel-id</code>** - The kernel ID.

- **<code>launch.terminated-instance-id</code>** - The ID of the instance that was terminated.

- **<code>launch.network-interface.association-subnet-id</code>** - The ID of the subnet for the network interface attachment.

- **<code>launch.network-interface.delete-on-termination</code>** - Indicates whether the network interface is deleted when the instance is terminated.

- **<code>launch.network-interface.private-ip-address</code>** - The primary private IP address of the network interface.

- **<code>launch.price</code>** - The maximum hourly price for any Spot instance launched to fulfill the request.

<p><code>valid-from</code> - The start date of the request.</p>
<p><code>valid-until</code> - The end date of the request.</p>
<p><code>availability-zone-group</code> - The Availability Zone group.</p>
<p><code>create-time</code> - The time stamp when the Spot instance request was created.</p>
<p><code>fault-code</code> - The fault code related to the request.</p>
<p><code>instance-id</code> - The ID of the instance that fulfilled the request.</p>
<p><code>launch-group</code> - The Spot instance launch group.</p>
<p><code>launch.block-device-mapping.delete-on-termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.</p>
<p><code>launch.block-device-mapping.size</code> - The size of the Amazon EBS volume, in GiB.</p>
<p><code>launch.block-device-mapping.volume-type</code> - The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.</p>
<p><code>launch.group-id</code> - The security group for the instance.</p>
<p><code>launch.image-id</code> - The ID of the AMI.</p>
<p><code>launch.instance-type</code> - The type of instance (for example, <code>m3.medium</code>).</p>
<p><code>launch.kernel-id</code> - The kernel ID.</p>
<p><code>launch.key-name</code> - The name of the key pair the instance launched with.</p>
<p><code>launch.monitoring-enabled</code> - Whether monitoring is enabled for the Spot instance.</p>
<p><code>launch.ramdisk-id</code> - The RAM disk ID.</p>
<p><code>network.interface-network-interface-id</code> - The ID of the network interface.</p>
<p><code>network.interface-device-index</code> - The index of the device for the network interface attachment on the instance.</p>
<p><code>network.interface.subnet-id</code> - The ID of the subnet for the instance.</p>
<p><code>network.interface.description</code> - A description of the network interface.</p>
<p><code>network.interface.private-ip-address</code> - The primary private IP address of the network interface.</p>
<p><code>network.interface.delete-on-termination</code> - Indicates whether the network interface is deleted when the instance is terminated.</p>
<p><code>network-interface.group-id</code> - The ID of the security group associated with the network interface.</p>
<p><code>network-interface.group-name</code> - The name of the security group associated with the network interface.</p>
<p><code>network-interface.addresses.primary</code> - Indicates whether the IP address is the primary private IP address.</p>
<p><code>product-description</code> - The product description associated with the instance (<code>Linux/UNIX</code> | <code>Windows</code>). The Spot instance request ID.</p>
<p><code>spot-instance-request-id</code> - The Spot instance request ID.</p>
<p><code>state</code> - The state of the Spot instance request.</p>
<p><code>tag:Key</code>:<i>Value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p>
<p><code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=XV", you get any resources assigned the tag key Purpose (regardless of what the tag's value is), and the tag value X.
Open Source Used In 12.6(1) VOS assets for CCBU Projects (CentOS) 12.6(1)  5720

(regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the
*<code>tag</code>:<code>tag-value</code> filter.*

<ul>
    <li><code>type</code> - The type of Spot instance request (</li>
    <li><code>one-time</code> | <code>persistent</code>).</li>
    <li><code>launched-availability-zone</code> - The Availability Zone in which the bid is launched.</li>
    <li><code>valid-from</code> - The start date of the request.</li>
    <li><code>valid-until</code> - The end date of the request.</li>
</ul>

Throughput Optimized HDD, &lt;code&gt;sc1&lt;/code&gt; for Cold HDD, or &lt;code&gt;standard&lt;/code&gt; for Magnetic.  

- The ID of the AMI. 
- The type of instance (for example, &lt;code&gt;m3.medium&lt;/code&gt;). 
- The kernel ID. 
- The index of the device for the network interface attachment on the instance. 
- The ID of the subnet for the instance. 
- A description of the network interface. 
- The index of the key pair the instance launched with. 
- Whether monitoring is enabled for the Spot instance. 

- The security group for the instance. 
- The RAM disk ID. 
- The ID of the network interface. 
- The ID of the network interface attachment on the instance. 
- The primary private IP address of the network interface. 
- Indicates whether the network interface is deleted when the instance is terminated. 
- The ID of the security group associated with the network interface. 
- The name of the security group associated with the network interface. 
- Indicates whether the IP address is the primary private IP address. 
- The product description associated with the instance (Linux/UNIX | Windows). 
- The Spot instance request ID. 
- The maximum hourly price for any Spot instance launched to fulfill the request. 
- The short code describing the most recent evaluation of your Spot instance request. 
- The message explaining the status of the Spot instance request. 
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify &lt;code&gt;tag:Purpose&lt;/code&gt; for the filter name and &lt;code&gt;X&lt;/code&gt; for the filter value. 
- The key of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-value&lt;/code&gt; filter. For example, if you use both the filter \\
  "tag-key=Purpose" and the filter \\
  "tag-value=XL", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the &lt;code&gt;tag&lt;/code&gt; filter. 
- The value of a tag assigned to the resource. This filter is independent of the &lt;code&gt;tag-key&lt;/code&gt; filter. 
- The type of Spot instance request (one-time | persistent).

- **instance-id**: The ID of the instance that fulfilled the request.<p></p>
- **launch-group**: The Spot instance launch group.<p></p>
- **launch.block-device-mapping.delete-on-termination**: Indicates whether the Amazon EBS volume is deleted on instance termination.<p></p>
- **launch.block-device-mapping.device-name**: The device name for the Amazon EBS volume (for example, <code>/dev/sdh</code>).<p></p>
- **launch.block-device-mapping.volume-size**: The size of the Amazon EBS volume, in GiB.<p></p>
- **launch.block-device-mapping.volume-type**: The type of the Amazon EBS volume:
  - <code>gp2</code> for General Purpose SSD,
  - <code>io1</code> for Provisioned IOPS SSD,
  - <code>st1</code> for Throughput Optimized HDD,
  - <code>sc1</code> for Cold HDD, or
  - <code>standard</code> for Magnetic.<p></p>
- **launch.group-id**: The security group for the instance.<p></p>
- **launch.image-id**: The ID of the AMI.<p></p>
- **launch.instance-type**: The type of instance (for example, <code>m3.medium</code>).<p></p>
- **launch.key-name**: The name of the key pair the instance launched with.<p></p>
- **launch.monitoring-enabled**: Whether monitoring is enabled for the Spot instance.<p></p>
- **launch.block-device-mapping.block-device-name**: The RAM disk ID.<p></p>
- **launch.block-device-mapping.device-name**: The type of the device for the network interface attachment on the instance.<p></p>
- **launch.block-device-mapping.subnet-id**: The ID of the subnet for the instance.<p></p>
- **launch.block-device-mapping.description**: A description of the network interface.<p></p>
- **launch.block-device-mapping.private-ip-address**: The primary private IP address of the network interface.<p></p>
- **launch.block-device-mapping.delete-on-termination**: Indicates whether the network interface is deleted when the instance is terminated.<p></p>
- **network-interface.network-interface-id**: The ID of the security group associated with the network interface.<p></p>
- **network-interface.network-interface-group-id**: The ID of the security group associated with the network interface.<p></p>
- **network-interface.network-interface-group-name**: The name of the security group associated with the network interface.<p></p>
- **network-interface.network-interface-attributes.primary**: Indicates whether the IP address is the primary private IP address.<p></p>
- **product-description**: The product description associated with the instance (Linux/UNIX | Windows).<p></p>
- **spot-instance-request-id**: The Spot instance request ID.<p></p>
- **spot-price**: The maximum hourly price for any Spot instance launched to fulfill the request.<p></p>
- **state**: The state of the Spot instance request (open | active | closed | cancelled | failed). Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html">Spot Bid Status</a> in the Amazon Elastic Compute Cloud User Guide.<p></p>
value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the
<code>tag</code>: <i>tag-key</i>/<i>tag-value</i> filter. The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code>/</i>tag-value</code> filter.</p> <li> <i>tag-value</i> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code>/</i>tag-value</code> filter.</li> <li> <code>type</code> - The type of Spot instance request (<code>one-time</code> | <code>persistent</code>). The Availability Zone in which the bid is launched.</p> <li> <i>valid-from</i> - The start date of the request.</p> <li> <i>valid-until</i> - The end date of the request.</li>

The type of the Amazon EBS volume:
<code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.

- The type of instance (for example, <code>m3.medium</code>):
- The security group for the instance:
- The name of the key pair the instance launched with:
- Whether monitoring is enabled for the Spot instance:
- The index of the device for the network interface attachment on the instance:
- The ID of the subnet for the instance:
- A description of the network interface:
- The primary private IP address of the network interface:
- Indicates whether the network interface is deleted when the instance is terminated:
- The ID of the security group associated with the network interface:
- The name of the security group associated with the network interface:
- Indicates whether the IP address is the primary private IP address:
- The product description associated with the instance:
- The Spot instance request ID:
- The maximum hourly price for any Spot instance launched to fulfill the request:
- The state of the Spot instance request:
- The status code describing the most recent evaluation of your Spot instance request:
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=\textit{X}, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value:
- The value of a tag assigned to the resource. This filter is independent of the <code>tag:tag-key</code> filter. For example, if you use both the filter "\textit{tag-key}=\textit{Purpose}" and the filter "\textit{tag-value}=\textit{X}", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-key=\textit{Purpose}</code> filter.
<code>launch.block-device-mapping.delete-on-termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.
</li></ul>
- The device name for the Amazon EBS volume (for example, <code>dev/sdb</code>).<p></li></ul>
</li><p></p><code>launch.block-device-mapping.snapshot-id</code> - The ID of the snapshot used for the Amazon EBS volume.<p></li></ul>

- The Spot instance request ID.
- The state of the Spot instance request (code>open</code> | code>active</code> | code>closed</code> | code>cancelled</code> | code>failed</code>). Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see &lt;a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html"&gt;Spot Bid Status&lt;/a&gt; in the Amazon Elastic Compute Cloud User Guide.

- The short code describing the most recent evaluation of your Spot instance request.
- The message explaining the status of the Spot instance request.
- The state of the Spot instance request (<code>open</code> | <code>active</code> | <code>closed</code> | <code>cancelled</code> | <code>failed</code>). Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see &lt;a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html"&gt;Spot Bid Status&lt;/a&gt; in the Amazon Elastic Compute Cloud User Guide.

- The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).<br>
- The Availability Zone in which the bid is launched.
- The end date of the request.

@return Returns a reference to this object so that method calls can be chained together.

```java

```
<code>network-interface.network-interface-id</code> - The ID of the network interface.

<code>network-interface.device-index</code> - The index of the device for the network interface attachment on the instance.

<code>network-interface.subnet-id</code> - The ID of the subnet for the instance.

<code>network-interface.private-ip-address</code> - The primary private IP address of the network interface.

<code>network-interface.delete-on-termination</code> - Indicates whether the network interface is deleted when the instance is terminated.

<code>network-interface.group-id</code> - The ID of the security group associated with the network interface.

<code>network-interface.group-name</code> - The name of the security group associated with the network interface.

<code>network-interface.addresses.primary</code> - Indicates whether the IP address is the primary private IP address.

<code>product-description</code> - The product description associated with the instance.

<code>spot-instance-request-id</code> - The Spot instance request ID.

<code>spot-price</code> - The maximum hourly price for any Spot instance launched to fulfill the request.

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=XY", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<code>type</code> - The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).

The Spot price. The value must match exactly (or use wildcards; greater than or less than comparison is not supported).

**Availability Zone**
- The Availability Zone for which prices should be returned.

**Instance Type**
- The type of instance (for example, `m3.medium`).

**Product Description**
- The product description for the Spot price (Linux/UNIX | SUSE Linux | Windows | Linux/UNIX (Amazon VPC) | SUSE Linux (Amazon VPC) | Windows (Amazon VPC)).

**Spot Price**
- The Spot price. The value must match exactly (or use wildcards; greater than or less than comparison is not supported).

**Timestamp**
- The timestamp of the Spot price history, in UTC format (for example, `YYYY-MM-DD HH:MM:SSZ`). You can use wildcards (* and ?). Greater than or less than comparison is not supported.
"varargSetterDocumentation" : "**One or more filters.**

- The Availability Zone for which prices should be returned.
