+ + Thadeu Lima de Souza Cascardo <cascardo@canonical.com> Fri, 13 Apr 2018 14:40:52 -0300
+ + linux (4.15.0-15.16) bionic; urgency=medium
+ + * linux: 4.15.0-15.16 -proposed tracker (LP: #1761177)
+ + * FFe: Enable configuring resume offset via sysfs (LP: #1760106)
+ + - PM / hibernate: Make passing hibernate offsets more friendly
+ + * /dev/bcache/by-uuid links not created after reboot (LP: #1729145)
+ + - SAUCE: (no-up) bcache: decouple emitting a cached_dev CHANGE uevent
+ + * Ubuntu18.04:POWER9:DD2.2 - Unable to start a KVM guest with default machine type(pseries-bionic) complaining "KVM implementation does not support Transactional Memory, try cap-htm=off" (kvm) (LP: #1752026)
+ + - powerpc: Use feature bit for RTC presence rather than timebase presence
+ + - powerpc: Book E: Remove unused CPU_FTR_L2CSR bit
+ + - powerpc: Free up CPU feature bits on 64-bit machines
+ + - powerpc: Add CPU feature bits for TM bug workarounds on POWER9 v2.2
+ + - powerpc/powerpc: Provide a way to force a core into SMT4 mode
+ + - KVM: PPC: Book3S HV: Work around transactional memory bugs in POWER9
+ + - KVM: PPC: Book3S HV: Work around TEXASR bug in fake suspend state
* Important Kernel fixes to be backported for Power9 (kvm) (LP: #1758910)
  - powerpc/mm: Fixup tlbie vs store ordering issue on POWER9

* Ubuntu 18.04 - IO Hang on some namespaces when running HTX with 16
  namespaces (Bolt / NVMe) (LP: #1757497)
  - irqpe/64s: Fix lost pending interrupt due to race causing lost update to
    irq_happened

* fws-efi-runtime-dkms 18.03.00-0ubuntu1: fws-efi-runtime-dkms kernel module
  failed to build (LP: #1760876)
  - [Packaging] include the retropoline extractor in the headers

-- Seth Forshee <seth.forshee@canonical.com> Wed, 04 Apr 2018 08:26:19 -0500

+linux (4.15.0-14.15) bionic; urgency=medium

* linux: 4.15.0-14.15 -proposed tracker (LP: #1760678)

* [Bionic] mlx4 ETH - mlx_qos failed when set some TC to vendor
  (LP: #1758662)
  - net/mlx4_en: Change default QoS settings

* AT_BASE_PLATFORM in AUXV is absent on kernels available on Ubuntu 17.10
  (LP: #1759312)
  - powerpe/64s: Fix NULL AT_BASE_PLATFORM when using DT CPU features

* Bionic update to 4.15.15 stable release (LP: #1760585)
  - net: dsa: Fix dsa_is_user_port() test inversion
  - openvswitch: meter: fix the incorrect calculation of max delta_t
  - tcp: Fix MPA unalign flow in case header is split across two packets.
  - tcp: purge write queue upon aborting the connection
  - tcp: Fix non TCP packets should be dropped on iWARP l2 connection
  - sysfs: symlink: export sysfs_create_link_nowarn()
  - net: phy: relax error checking when creating sysfs link netdev->phydev
  - devlink: Remove redundant free on error path
  - macvlan: filter out unsupported feature flags
  - net: ipv6: keep sk status consistent after datagram connect failure
  - ipv6: old_dport should be a __be16 in __ip6_datagram_connect()
  - ipv6: sr: fix NULL pointer dereference when setting encap source address
  - ipv6: sr: fix scheduling in RCU when creating seg6 lw tun state
  - mlxsw: spectrum_buffers: Set a minimum quota for CPU port traffic
  - net: phy: Tell caller result of phy_change()
  - ipv6: Reflect MTU changes on PMTU of exceptions for MTU-less routes
  - net sched actions: return explicit error when tunnel_key mode is not
    specified
  - ppp: avoid loop in xmit recursion detection code
  - rhashtable: Fix rlist duplicates insertion
+ - test_rhashtable: add test case for rhtable with duplicate objects
+ - kcm: lock lower socket in kcm_attach
+ - sch_netem: fix skb leak in netem_enqueue()
+ - iee802154; 6lowpan: fix possible NULL deref in lowpan_device_event()
+ - net: use skb_to_full_sk() in skb_update_prio()
+ - net: Fix hlist corruptions in inet_evict_bucket()
+ - s390/qeth: free netdevice when removing a card
+ - s390/qeth: when thread completes, wake up all waiters
+ - s390/qeth: lock read device while queueing next buffer
+ - s390/qeth: on channel error, reject further cmd requests
+ - soc/fsl/qbman: fix issue in qman_delete_cgr_safe()
+ - dpaa_eth: fix error in dpaa_remove()
+ - dpaa_eth: remove duplicate initialization
+ - dpaa_eth: increment the RX dropped counter when needed
+ - dpaa_eth: remove duplicate increment of the tx_errors counter
+ - dccp: check sk for closed state in dccp_sendmsg()
+ - ipv6: fix access to non-linear packet in ndisc_fill_redirect_hdr_option()
+ - I2tp: do not accept arbitrary sockets
+ - net: ethernet: arc: Fix a potential memory leak if an optional regulator is deferred
+ - net: fec: Fix unbalanced PM runtime calls
+ - net/uvc: Free memory obtained by kzalloc
+ - netlink: avoid a double skb free in genlmsg_mcast()
+ - net: Only honor ifindex in IP_PKTINFO if non-0
+ - net: systemport: Rewrite __bcm_sysport_tx_reclaim()
+ - qede: Fix qedr link update
+ - skbuff: Fix not wakening applications when errors are enqueued
+ - team: Fix double free in error path
+ - Linux 4.15.15

+ * Ubuntu 18.04 [ WSP DD2.2 with stop4 and stop5 enabled ]: kdump fails to capture dump when smt=2 or off. (LP: #1758206)
+ - powerpc/crash: Remove the test for cpu_online in the IPI callback
+ - powernv/kdump: Fix cases where the kdump kernel can get HMI's
+ - powernv/kdump: Fix powernv build break when KEXEC_CORE=n

+ * [Intel Ubuntu 18.04 Bug] Null pointer dereference, when disconnecting RAID rebuild target (LP: #1759279)
+ - md: document lifetime of internal rdev pointer.

+ * [Feature]Crystal Ridge:add support for the platform capabilities NFIT sub-table in ACPI 6.2A (LP: #1730829)
+ - ACPI/C: ACPI 6.0A: Changes to the NFIT ACPI table
+ - acpi: nfit: Add support for detect platform CPU cache flush on power loss
+ - acpi: nfit: add persistent memory control flag for nd_region
+ - libnvdimm: expose platform persistence attribute for nd_region

Open Source Used In 5GaaS Edge AC-4 19485
+ - libnvdimm: re-enable deep flush for pmem devices via fsync()
+ - libnvdimm, nfit: fix persistence domain reporting
+
+ * Allow multiple mounts of zfs datasets (LP: #1759848)
+ - SAUCE: Allow mounting datasets more than once (LP: #1759848)
+
+ * Update Aquantia driver to fix various issues (LP: #1759303)
+ - net: aquantia: Eliminate AQ_DIMOF, replace with ARRAY_SIZE
+ - net: aquantia: Cleanup status flags accesses
+ - net: aquantia: Cleanup hardware access modules
+ - net: aquantia: Remove duplicate hardware descriptors declarations
+ - net: aquantia: Add const qualifiers for hardware ops tables
+ - net: aquantia: Simplify dependencies between pci modules
+ - net: aquantia: Eliminate aq_nic structure abstraction
+ - net: aquantia: Fix register definitions to linux style
+ - net: aquantia: Prepend hw access functions declarations with prefix
+ - net: aquantia: Fix internal stats calculation on rx
+ - net: aquantia: Introduce new device ids and constants
+ - net: aquantia: Introduce new AQC devices and capabilities
+ - net: aquantia: Convert hw and caps structures to const static pointers
+ - net: aquantia: Cleanup pci functions module
+ - net: aquantia: Remove create/destroy from hw ops
+ - net: aquantia: Change confusing no_ff_addr to more meaningful name
+ - net: aquantia: Introduce firmware ops callbacks
+ - net: aquantia: Introduce support for new firmware on AQC cards
+ - net: aquantia: Introduce global AQC hardware reset sequence
+ - net: aquantia: Report correct mediatype via ethtool
+ - net: aquantia: bump driver version to match aquantia internal numbering
+ - net: aquantia: Fix hardware reset when SPI may rarely hangup
+ - net: aquantia: Fix a regression with reset on old firmware
+ - net: aquantia: Change inefficient wait loop on fw data reads
+ - net: aquantia: Add tx clean budget and valid budget handling logic
+ - net: aquantia: Allow live mac address changes
+ - net: aquantia: Implement pci shutdown callback
+ - net: aquantia: driver version bump
+
+ * ISST-LTE:KVM:Ubuntu1804:BostonLC:bosclp3: cpu hotplug on bosclp3g4 guest
dumping call traces continuously. (LP: #1759722)
+ - blk-mq: turn WARN_ON in __blk_mq_run_hw_queue into printk
+
+ * ISST-LTE:KVM:Ubuntu18.04:BostonLC:bosclp3: bosclp3g3:Guest conosle hangs
after hotplug CPU add operation. (LP: #1759723)
+ - genirq/affinity: assign vectors to all possible CPUs
+ - blk-mq: simplify queue mapping & schedule with each possiblle CPU
+
+ * test_bpf fails (LP: #1756150)
+ - test_bpf: Fix testing with CONFIG_BPF_JIT_ALWAYS_ON=y on other arches
+
+ * Bionic update to v4.15.14 stable release (LP: #1759655)
+ - MIPS: ralink: Remove ralink_halt()
+ - MIPS: ralink: Fix booting on MT7621
+ - MIPS: lantiq: Fix Danube USB clock
+ - MIPS: lantiq: Enable AHB Bus for USB
+ - MIPS: lantiq: ase: Enable MFD_SYSCON
+ - iio: chemical: ccs811: Corrected firmware boot/application mode transition
+ - iio: st_pressure: st_accel: pass correct platform data to init
+ - iio: adc: meson-saradc: unlock on error in meson_sar_adc_lock()
+ - ALSA: usb-audio: Fix parsing descriptor of UAC2 processing unit
+ - ALSA: aloop: Sync stale timer before release
+ - ALSA: aloop: Fix access to not-yet-ready substream via cable
+ - ALSA: hda - Force polling mode on CFL for fixing codec communication
+ - ALSA: hda/realtek - Fix speaker no sound after system resume
+ - ALSA: hda/realtek - Fix Dell headset Mic can't record
+ - ALSA: hda/realtek - Always immediately update mute LED with pin VREF
+ - mmc: core: Fix tracepoint print of blk_addr and blkpsz
+ - mmc: core: Disable HPI for certain Micron (Numonyx) eMMC cards
+ - mmc: block: fix updating ext_csd caches on ioctl call
+ - mmc: dwmmc: Fix the DTO/CTO timeout overflow calculation for 32-bit systems
+ - mmc: dwmmc: exynos: fix the suspend/resume issue for exynos5433
+ - mmc: dwmmc: fix falling from idmac to PIO mode when dw_mci_reset occurs
+ - PCI: Add function 1 DMA alias quirk for Highpoint RocketRAID 644L
+ - ahci: Add PCI-id for the Highpoint Rocketraider 644L card
+ - lockdep: fix fs_reclaim warning
+ - clk: bcm2835: Fix ana->maskX definitions
+ - clk: bcm2835: Protect sections updating shared registers
+ - clk: sunxi-ng: a31: Fix CLK_OUT_* clock ops
+ - RDMA/mlx5: Fix crash while accessing garbage pointer and freed memory
+ - Drivers: hv: vmbus: Fix ring buffer signaling
+ - pinctrl: samsung: Validate alias coming from DT
+ - Bluetooth: btusb: Remove Yoga 920 from the btusb_needs_reset_resume_table
+ - Bluetooth: btusb: Add Dell OptiPlex 3060 to btusb_needs_reset_resume_table
+ - Bluetooth: btusb: Fix quirk for Atheros 1525/QCA6174
+ - libata: fix length validation of ATAPI-relayed SCSI commands
+ - libata: remove WARN() for DMA or PIO command without data
+ - libata: don't try to pass through NCQ commands to non-NCQ devices
+ - libata: Apply NOLPM quirk to Crucial MX100 512GB SSDs
+ - libata: Enable queued TRIM for Samsung SSD 860
+ - libata: Apply NOLPM quirk to Crucial M500 480 and 960GB SSDs
+ - libata: Make Crucial BX100 500GB LPM quirk apply to all firmware versions
+ - libata: Modify quirks for MX100 to limit NCQ_TRIM quirk to MU01 version
+ - sched, cgroup: Don't reject lower cpu.max on ancestors
+ - cgroup: fix rule checking for threaded mode switching
+ - nfsd: remove blocked locks on client teardown
+ - media: tegra-cec: reset rx_buf_cnt when start bit detected
+ - hugetlbfs: check for pgoff value overflow
+ - b8300: remove extraneous __BIG_ENDIAN definition
+ - mm/vmalloc: add interfaces to free unmapped page table
+ - x86/mm: implement free pmd/pte page interfaces
+ - mm/khugepaged.c: convert VM_BUG_ON() to collapse fail
+ - mm/thp: do not wait for lock_page() in deferred_split_scan()
+ - mm/shmem: do not wait for lock_page() in shmem_unused_huge_shrink()
+ - Revert "mm: page_alloc: skip over regions of invalid pfns where possible"
+ - drm/vmwgfx: Fix black screen and device errors when running without fbdev
+ - drm/vmwgfx: Fix a destroy-while-held mutex problem.
+ - drm/radeon: Don't turn off DP sink when disconnected
+ - drm/amd/display: We shouldn't set format_default on plane as atomic driver
+ - drm/amd/display: Add one to EDID's audio channel count when passing to DC
+ - drm: Reject getfb for multi-plane framebuffers
+ - drm: udl: Properly check framebuffer mmap offsets
+ - mm/vmcs: wake up flushers for legacy cgroups too
+ - module: propagate error in modules_open()
+ - acpi, numa: fix pxm to online numa node associations
+ - ACPI / watchdog: Fix off-by-one error at resource assignment
+ - libnvdimm, {btt, blk}: do integrity setup before add_disk()
+ - brcmfmac: fix P2P_DEVICE ethernet address generation
+ - rtlwifi: rtl8723be: Fix loss of signal
+ - tracing: probeevent: Fix to support minus offset from symbol
+ - mtdchar: fix usage of mtd_ooblayout_ecc()
+ - mtd: nand: fsl_i2c: Fix nand waitfunc return value
+ - mtd: nand: fsl_i2c: Fix eccstat array overflow for IFC ver >= 2.0.0
+ - mtd: nand: fsl_i2c: Read ECCSTAT0 and ECCSTAT1 registers for IFC 2.0
+ - staging: ncpfs: memory corruption in ncp_read_kernel()
+ - can: peak/pcie_fd: fix echo_skb is occupied! bug
+ - can: peak/pcie_fd: remove useless code when interface starts
+ - can: ifi: Repair the error handling
+ - can: ifi: Check core revision upon probe
+ - can: cc770: Fix stalls on rt-linux, remove redundant IRQ ack
+ - can: cc770: Fix queue stall & dropped RTR reply
+ - can: cc770: Fix use after free in cc770_tx_interrupt()
+ - tty: vt: fix up tabstops properly
+ - x86/entry/64: Don't use IST entry for #BP stack
+ - selftests/x86/ptrace_syscall: Fix for yet more glibc interference
+ - x86/syscall/64: Use proper accessor to update P4D entry
+ - x86/efi: Free efi_pgd with free_pages()
+ - posix-timers: Protect posix clock array access against speculation
+ - kvm/x86: fix icebp instruction handling
+ - x86/build/64: Force the linker to use 2MB page size
+ - x86/boot/64: Verify alignment of the LOAD segment
+ - hwmon: (k10temp) Only apply temperature offset if result is positive
+ - hwmon: (k10temp) Add temperature offset for Ryzen 1900X
+ - perf/x86/intel/uncore: Fix Skylake UPI event format
+ - perf stat: Fix CVS output format for non-supported counters
+ - perf/core: Fix ctx_event_type in ctx_resched()
+ - trace/bpf: remove helper bpf_perf_prog_read_value from tracepoint type
+ programs
+ - perf/x86/intel: Don't accidentally clear high bits in bdw_limit_period()
+ - perf/x86/intel/uncore: Fix multi-domain PCI CHA enumeration bug on Skylake
+ servers
+ - iio: ABI: Fix name of timestamp sysfs file
+ - iio: imu: st_lsm6dsx: fix endianness in st_lsm6dsx_read_oneshot()
+ - iio: imu: st_lsm6dsx: introduce conf_lock mutex
+ - staging: android: ion: Zero CMA allocated memory
+ - kbuild: disable clang's default use of -fmerge-all-constants
+ - bpf: skip unnecessary capability check
+ - bpf, x64: increase number of passes
+ - Linux 4.15.14
+
+ * System fails to start (boot) on battery due to read-only root file-system
+  (LP: #1726930) // Bionic update to v4.15.14 stable release (LP: #1759655)
+ - libata: disable LPM for Crucial BX100 SSD 500GB drive
+
+ * [Feature][CFL][ICL] [CNL]Thunderbolt support (Titan Ridge) (LP: #1730775)
+ - thunderbolt: Resume control channel after hibernation image is created
+ - thunderbolt: Serialize PCIe tunnel creation with PCI rescan
+ - thunderbolt: Handle connecting device in place of host properly
+ - thunderbolt: Do not overwrite error code when domain adding fails
+ - thunderbolt: Wait a bit longer for root switch config space
+ - thunderbolt: Wait a bit longer for ICM to authenticate the active NVM
+ - thunderbolt: Handle rejected Thunderbolt devices
+ - thunderbolt: Factor common ICM add and update operations out
+ - thunderbolt: Correct function name in kernel-doc comment
+ - thunderbolt: Add tb_switch_get()
+ - thunderbolt: Add tb_switch_find_by_route()
+ - thunderbolt: Add tb_xdomain_find_by_route()
+ - thunderbolt: Add constant for approval timeout
+ - thunderbolt: Move driver ready handling to struct icm
+ - thunderbolt: Add 'boot' attribute for devices
+ - thunderbolt: Add support for preboot ACL
+ - Documentation/admin-guide: fixes for thunderbolt.rst
+ - thunderbolt: Introduce USB only (SL4) security level
+ - thunderbolt: Add support for Intel Titan Ridge
+
+ * QCA9377 requires more IRAM banks for its new firmware (LP: #1748345)
+ - ath10k: update the IRAM bank number for QCA9377
+
+ * nfp: fix disabling on hw-tc-offload in flower (LP: #1752828)
+ - nfp: bpf: require ETH table
+ - nfp: don't advertise hw-tc-offload on non-port netdevs
+ - nfp: forbid disabling hw-tc-offload on representors while offload active
+
+ * Fix an issue that when system in S3, USB keyboard can't wake up the system.
+  (LP: #1759511)
- ACPI / PM: Allow deeper wakeup power states with no _SxD nor _SxW

* retpoline hints: primary infrastructure and initial hints (LP: #1758856)
- [Packaging] retpoline -- add safe usage hint support
- [Packaging] retpoline-check -- only report additions
- [Packaging] retpoline -- widen indirect call/jmp detection
- [Packaging] retpoline -- elide %rip relative indirections
- [Packaging] retpoline -- clear hint information from packages
- SAUCE: apm -- annotate indirect calls within
  firmware_restrict_branch_speculation_{start,end}
- SAUCE: EFI -- annotate indirect calls within
  firmware_restrict_branch_speculation_{start,end}
- SAUCE: early/late -- annotate indirect calls in early/late initialisation
code
- SAUCE: vga_set_mode -- avoid jump tables
- [Config] retpoine -- switch to new format

* zfs system process hung on container stop/delete (LP: #1754584)
- SAUCE: Fix non-prefaulted page deadlock (LP: #1754584)
- Revert "UBUNTU: SAUCE: Fix non-prefaulted page deadlock (LP: #1754584)"
- SAUCE: Fix non-prefaulted page deadlock (LP: #1754584)

* Important KVM fixes for ppc64el (LP: #1759045)
- KVM: PPC: Book3S HV: Do SLB load/unload with guest LPCR value loaded
- KVM: PPC: Book3S HV: Fix handling of secondary HPTEG in HPT resizing code
- KVM: PPC: Book3S HV: Make HPT resizing work on POWER9
- KVM: PPC: Book3S: Add MMIO emulation for VMX instructions
- KVM: PPC: Book3S: Fix compile error that occurs with some gcc versions
- KVM: PPC: Book3S HV: Fix trap number return from __kvmppc_vcore_entry
- KVM: PPC: Book3S HV: Fix duplication of host SLB entries

* ubuntu_zram_smoke test will cause soft lockup on Artful ThunderX ARM64
  (LP: #1755073)
- SAUCE: crypto: thunderx_zip: Fix fallout from CONFIG_VMAP_STACK

* Update to ocxl driver (LP: #1755161)
- ocxl: fix signed comparison with less than zero
- ocxl: Fix potential bad errno on irq allocation
- ocxl: Add get_metadata IOCTL to share OCXL information to userspace

* CAPI Flash (cxlflash) update (LP: #1752672)
- scsi: cxlflash: Update cxl-specific arguments to generic cookie
- scsi: cxlflash: Explicitly cache number of interrupts per context
- scsi: cxlflash: Remove embedded CXL work structures
- scsi: cxlflash: Adapter context init can return error
- scsi: cxlflash: Staging to support future accelerators
- SAUCE: cxlflash: Preserve number of interrupts for master contexts
- SAUCE: cxlflash: Avoid clobbering context control register value
+ - SAUCE: cxfiash: Add argument identifier names
+ - SAUCE: cxfiash: Introduce OCXL backend
+ - SAUCE: cxfiash: Hardware AFU for OCXL
+ - SAUCE: cxfiash: Read host function configuration
+ - SAUCE: cxfiash: Setup function acTag range
+ - SAUCE: cxfiash: Read host AFU configuration
+ - SAUCE: cxfiash: Setup AFU acTag range
+ - SAUCE: cxfiash: Setup AFU PASID
+ - SAUCE: cxfiash: Adapter context support for OCXL
+ - SAUCE: cxfiash: Use IDR to manage adapter contexts
+ - SAUCE: cxfiash: Support adapter file descriptors for OCXL
+ - SAUCE: cxfiash: Support adapter context discovery
+ - SAUCE: cxfiash: Support image reload policy modification
+ - SAUCE: cxfiash: MMIO map the AFU
+ - SAUCE: cxfiash: Support starting an adapter context
+ - SAUCE: cxfiash: Support process specific mappings
+ - SAUCE: cxfiash: Support AFU state toggling
+ - SAUCE: cxfiash: Support reading adapter VPD data
+ - SAUCE: cxfiash: Setup function OCXL link
+ - SAUCE: cxfiash: Setup OCXL transaction layer
+ - SAUCE: cxfiash: Support process element lifecycle
+ - SAUCE: cxfiash: Support AFU interrupt management
+ - SAUCE: cxfiash: Support AFU interrupt mapping and registration
+ - SAUCE: cxfiash: Support starting user contexts
+ - SAUCE: cxfiash: Support adapter context polling
+ - SAUCE: cxfiash: Support adapter context reading
+ - SAUCE: cxfiash: Support adapter context mmap and release
+ - SAUCE: cxfiash: Support file descriptor mapping
+ - SAUCE: cxfiash: Introduce object handle fop
+ - SAUCE: cxfiash: Setup LISNs for user contexts
+ - SAUCE: cxfiash: Setup LISNs for master contexts
+ - SAUCE: cxfiash: Update synchronous interrupt status bits
+ - SAUCE: cxfiash: Introduce OCXL context state machine
+ - SAUCE: cxfiash: Register for translation errors
+ - SAUCE: cxfiash: Support AFU reset
+ - SAUCE: cxfiash: Enable OCXL operations

+ * [Feature][CFL] Enable pmc_core driver for H, S, and U SKUs (LP: #1730770)
+ - platform/x86: intel_pmc_core: Remove unused EXPORTED API
+ - platform/x86: intel_pmc_core: Change driver to a module
+ - platform/x86: intel_pmc_core: Fix file permission warnings
+ - platform/x86: intel_pmc_core: Refactor debugfs entries
+ - platform/x86: intel_pmc_core: Substitute PCI with CPUID enumeration
+ - platform/x86: intel_pmc_core: Convert to ICPU macro
+ - platform/x86: intel_pmc_core: Remove unused header file
+ - ACPI / LPIT: Export lpit_read_residency_count_address()
+ - platform/x86: intel_pmc_core: Read base address from LPIT
+ - x86/cpu: Add Cannonlake to Intel family
+ - platform/x86: intel_pmc_core: Add CannonLake PCH support
+ - platform/x86: intel_pmc_core: Special case for CoffeeLake
+
+ * Cpu utilization showing system time for kvm guests (performance) (sysstat)
  + (LP: #1755979)
+ - KVM: PPC: Book3S HV: Fix guest time accounting with VIRT_CPU_ACCOUNTING_GEN
+
+ * [Artful][Wyse 3040] System hang when trying to enable an offlined CPU core
  + (LP: #1736393)
+ - SAUCE: drm/i915: Don't set chip specific data
+ - SAUCE: drm/i915: make previous commit affects Wyse 3040 only
+
+ * [Bug] ISH support for CFL-H (LP: #1739522)
+ - HID: intel-ish-hid: Enable Cannon Lake and Coffee Lake laptop/desktop
+
+ * ath9k can't connect to wifi AP (LP: #1727228)
  + - ath9k: add MSI support
  + - ath9k: add a quirk to set use_msi automatically
+
+ * [P9,Power NV][Witherspoon][Ubuntu 18.04][Perf] : PMU events by name it is
  + not listed under perf list (LP: #1755470)
+ - iperf vendor events: Use more flexible pattern matching for CPU
  + identification for mapfile.csv
+
+ * zed process consuming 100% cpu (LP: #1751796)
+ - SAUCE: Fix ioctl loop-spin in zed (LP: #1751796)
+
+ * Bionic update to 4.15.13 stable release (LP: #1758886)
  + - scsi: megaraid_sas: Do not use 32-bit atomic request descriptor for Ventura
    + controllers
  + - staging: android: ashmem: Fix possible deadlock in ashmem_ioctl
  + - drm/amdgpu: use polling mem to set SDMA3 wptr for VF
  + - Bluetooth: hci_qca: Avoid setup failure on missing rampatch
  + - Bluetooth: btqcomsmd: Fix skb double free corruption
  + - cpufreq: longhaul: Revert transition_delay_us to 200 ms
  + - media: c8sectpfe: fix potential NULL pointer dereference in
    + c8sectpfe_timer_interrupt
  + - drm/msm: fix leak in failed get_pages
  + - IB/ipoib: Warn when one port fails to initialize
  + - RDMA/ipwpm: Fix uninitialized error code in iwpm_send_mapinfo()
  + - hv_netvsc: Fix the receive buffer size limit
  + - hv_netvsc: Fix the TX/RX buffer default sizes
  + - tcp: allow TLP in ECN CWR
  + - spi: sh-msiof: Avoid writing to registers from spi_master.setup()
  + - libbpf: prefer global symbols as bpf program name source
  + - rtlwifi: rtl_pci: Fix the bug when inactiveps is enabled.
  + - rtlwifi: always initialize variables given to RT_TRACE()
  + - media: bt8xx: Fix err 'bt878_probe()'
+ - ath10k: handling qos at STA side based on AP WMM enable/disable
+ - media: [RESEND] media: dvb-frontends: Add delay to Si2168 restart
+ - qmi_wwan: set FLAG_SEND_ZLP to avoid network initiated disconnect
+ - tty: goldfish: Enable 'earlycon' only if built-in
+ - serial: 8250_dw: Disable clock on error
+ - cros_ec: fix nul-termination for firmware build info
+ - watchdog: Fix potential kref imbalance when opening watchdog
+ - watchdog: Fix kref imbalance seen if handle_boot_enabled=0
+ - platform/chrome: Use proper protocol transfer function
+ - dmaengine: zynqmp_dma: Fix race condition in the probe
+ - drm/tilcdc: ensure nonatomic iowrite64 is not used
+ - mmc: avoid removing non-removable hosts during suspend
+ - mmc: block: fix logical error to avoid memory leak
+ - /dev/mem: Add bounce buffer for copy-out
+ - net: phy: meson-gxl: check phy_write return value
+ - sfp: fix EEPROM reading in the case of non-SFF8472 SFPs
+ - sfp: fix non-detection of PHY
+ - media: s5p-mfc: Fix lock contention - request_firmware() once
+ - rtc: ac100: Fix multiple race conditions
+ - IB/ipoib: Avoid memory leak if the SA returns a different DGID
+ - RDMA/cma: Use correct size when writing netlink stats
+ - IB/umem: Fix use of npages/nmap fields
+ - iser-target: avoid reinitializing rdma contexts for isert commands
+ - bpf/group: fix a verification error for a CGROUP_DEVICE type prog
+ - vgacon: Set VGA struct resource types
+ - omapdrm: panel: fix compatible vendor string for td028ttce1
+ - mmc: sdhci-xenon: wait 5ms after set 1.8V signal enable
+ - drm/omap: DMM: Check for DMM readiness after successful transaction commit
+ - pty: cancel pty slave port buf's work in tty_release
+ - PCI: designware-ep: Fix ->get_msi() to check MSI_EN bit
+ - PCI: endpoint: Fix find_first_zero_bit() usage
+ - PCI: rcar: Handle rcar_pci_parse_request_of_pci_ranges() failures
+ - media: davinci: fix a debug printk
+ - clk: check ops pointer on clock register
+ - dt-bindings: display: panel: Fix compatible string for Toshiba LT089AC29000
+ - clk: use round rate to bail out early in set_rate
+ - pinctrl: Really force states during suspend/resume
+ - pinctrl: rockchip: enable clock when reading pin direction register
+ - jommu/vt-d: clean up pr_irq if request_threaded_irq fails
+ - ip6_vti: adjust vti mtu according to mtu of lower device
+ - ip_gre: fix error path when erspan_rcv failed
+ - ip_gre: fix potential memory leak in erspan_rcv
+ - soc: qcom: smm: fix child-node lookup
+ - RDMA/ocrdma: Fix permissions for OCRDMA_RESET_STATS
+ - ARM: dts: aspeed-evb: Add unit name to memory node
+ - nfsd4: permit layoutget of executable-only files
+ - clk: at91: pmc: Wait for clocks when resuming

Open Source Used In 5GaaS Edge AC-4 19493
+ - clk: Don't touch hardware when reparenting during registration
+ - clk: axi-clkgen: Correctly handle noclaim bit in recalc_rate()
+ - clk: si5351: Rename internal plls to avoid name collisions
+ - crypto: artp6e - set correct iv size for gcm(aes)
+ - hwrng: core - Clean up RNG list when last hwrng is unregistered
+ - dmaengine: ti-dma-crossbar: Fix event mapping for TPCC_EVT_MUX_60_63
+ - IB/mlx5: Fix integer overflows in mlx5_ib_create_srq
+ - IB/mlx5: Fix out-of-bounds read in create_raw_packet_qp_rq
+ - RDMA/vmw_pvdma: Fix usage of user response structures in ABI file
+ - serial: 8250_pci: Don't fail on multiport card class
+ - RDMA/core: Do not use invalid destination in determining port reuse
+ - clk: migrate the count of orphaned clocks at init
+ - RDMA/ucma: Fix access to non-initialized CM_ID object
+ - RDMA/ucma: Don't allow join attempts for unsupported AF family
+ - Linux 4.15.13

+ * Ubuntu18.04:PowerPC - Set Transparent Huge Pages (THP) by default to
  "always" (LP: #1753708)
+ - Config: Set TRANSPARENT_HUGEPAGE_ALWAYS=y on ppc64el
+ * Bionic update to 4.15.12 stable release (LP: #1757465)
+ - x86/cpufeatures: Add Intel Total Memory Encryption cpufeature
+ - x86/cpufeatures: Add Intel PCONFIG cpufeature
+ - selftests/x86/entry_from_vm86: Exit with 1 if we fail
+ - selftests/x86/entry_from_vm86: Add test cases for POPF
+ - x86/vm86/32: Fix POPF emulation
+ - x86/speculation, objtool: Annotate indirect calls/jumps for objtool on
  32-bit kernels
+ - x86/speculation: Remove Skylake C2 from Speculation Control microcode
+ blacklist
+ - KVM: x86: Fix device passthrough when SME is active
+ - x86/mm: Fix vmalloc_fault to use pXd_large
+ - parisc: Handle case where flush_cache_range is called with no context
+ - ALSA: pcm: Fix UAF in snd_pcm_oss_get_formats()
+ - ALSA: hda - Revert power_save option default value
+ - ALSA: seq: Fix possible UAF in snd_seq_check_queue()
+ - ALSA: seq: Clear client entry before deleting else at closing
+ - drm/nouveau/bl: Fix oops on driver unbind
+ - drm/nouveau/mmu: ALIGN_DOWN correct variable
+ - drm/amdgpu: fix prime teardown order
+ - drm/radeon: fix prime teardown order
+ - drm/amdgpu/dce: Don't turn off DP sink when disconnected
+ - fs: Teach path_connected to handle nfs filesystems with multiple roots.
+ - KVM: arm/arm64: Reduce verbosity of KVM init log
+ - KVM: arm/arm64: Reset mapped IRQs on VM reset
+ - kvm: arm/arm64: vgic-v3: Tighten synchronization for guests using v2 on v3
+ - KVM: arm/arm64: vgic: Don't populate multiple LRs with the same vintid
+ - lock_parent() needs to recheck if dentry got __dentry_kill'ed under it
- fs/aio: Add explicit RCU grace period when freeing kioctx
- fs/aio: Use RCU accessors for kioctx_table->table[]
- RDMAVT: Fix synchronization around percpu_ref
- irqchip/gic-v3-its: Ensure nr_itcs >= nr_lpis
- nvme: fix subsystem multiple controllers support check
- xfs: preserve i_rdev when recycling a reclaimable inode
- btrfs: Fix NULL pointer exception in find_bio_stripe
- btrfs: add missing initialization in btrfs_check_shared
- btrfs: alloc_chunk: fix DUP stripe size handling
- btrfs: Fix use-after-free when cleaning up fs_devs with a single stale device
- btrfs: remove spurious WARN_ON(ref->count < 0) in find_parent_nodes
- btrfs: Fix memory barriers usage with device stats counters
- scsi: qla2xxx: Fix smatch warning in qla25xx_delete_[rsp|req]_que
- scsi: qla2xxx: Fix NULL pointer access for fcport structure
- scsi: qla2xxx: Fix logo flag for qlt_free_session_done()
- scsi: qla2xxx: Fix crashes in qla2x00_probe_one on probe failure
- usb: dwc2: fix STM32F7 USB OTG HS compatible
- dt-bindings: usb: fix the STM32F7 DWC2 OTG HS core binding
- USB: gadget: udc: Add missing platform_device_put() on error in bdc_pci_probe()
- usb: dwc3: Fix GDBGFIOSPACE_TYPE values
- usb: dwc3: core: Power-off core/PHYs on system_suspend in host mode
- usb: dwc3: of-simple: fix oops by unbalanced clk disable call
- usb: gadget: udc: renesas_usb3: fix oops in renesas_usb3_remove()
- phy: phy-brcm-usb: Fix two DT properties to match bindings doc
- phy: phy-brcm-usb-init: Some Low Speed keyboards fail on 7271
- phy: phy-brcm-usb-init: DRD mode can cause crash on startup
- phy: phy-brcm-usb-init: Power down USB 3.0 PHY when XHCI disabled
- Linux 4.15.12

* cxl: Fix timebase synchronization status on POWER9 missing (CAPI)
  (LP: #1757228)
* cxl: Fix timebase synchronization status on P9

* [Feature][GLK] Enable L2 CDP (Code and Data Prioritization) (LP: #1737873)
- x86/intel_rdt: Enumerate L2 Code and Data Prioritization (CDP) feature
- x86/intel_rdt: Add command line parameter to control L2_CDP

* [Feature] Crystal Ridge-Restrict DAX to configurations with struct page
  (LP: #1751724)
- mm, dax: introduce pfnt_i_special()
- ext2: auto disable dax instead of failing mount
- ext4: auto disable dax instead of failing mount
- dax: require 'struct page' by default for filesystem dax
- Config: Enable CONFIG_FS_DAX_LIMITED

* Bionic update to 4.15.11 stable release (LP: #1756978)
+ x86: Treat R_X86_64_PLT32 as R_X86_64_PC32
+ ASoC: sun4i-i2s: Fix RX slot number of SUN8I
+ ASoC: sgtl5000: Fixsuspend/resume
+ ASoC: wm_adspsp: For TLV controls only register TLV get/set
+ ASoC: rt5651: Fix regcache sync errors on resume
+ usb: host: xhci-rear: add support for r8a77965
+ xhci: Fix front USB ports on ASUS PRIME B350M-A
+ xhci: fix endpoint context tracer output
+ serial: sh-sci: prevent lockup on full TTY buffers
+ tty/serial: atmel: add new version check for usart
+ uas: fix comparison for error code
+ staging: comedi: fix comedi_nsamples_left.
+ staging: android: ashmem: Fix lockdep issue during llseek
+ scsi: sd_zbc: Fix potential memory leak
+ USB: storage: Add JMicron bridge 152d:2567 to unusual_devs.h
+ usbip: vudc: fix null pointer dereference on udc->lock
+ usb: quirks: add control message delay for 1b1c:1b20
+ usb: usbmon: Read text within supplied buffer size
+ usb: gadget: f_fs: Fix use-after-free in ffs_fs_kill_sb()
+ usb: dwc3: Fix lock-up on ID change during system suspend/resume
+ serial: 8250_pci: Add Brainboxes UC-260 4 port serial device
+ serial: core: mark port as initialized in autoconfig
+ earlycon: add reg-offset to physical address before mapping
+ dm mpath: fix passing integrity data
+ - Revert "btrfs: use proper endianness accessors for super_copy"
+ gfs2: Clean up {lookup,fillup}_metapath
+ gfs2: Fixes to "Implement iomap for block_map" (2)
+ drm/panel: rpi-touchscreen: propagate errors in rpi_touchscreen_i2c_read()
+ spi: imx: Fix failure path leak on GPIO request error correctly
+ HID: multouch: Only look at non touch fields in first packet of a frame
+ KVM: PPC: Book3S HV: Avoid shifts by negative amounts
+ drm/edid: set ELD connector type in drm_edid_to_eld()
+ dma-buf/fence: Fix lock inversion within dma-fence-array
+ video/hdmi: Allow "empty" HDMI infoframes
+ KVM: PPC: Book3S HV: Fix typo in kvmppc_hv_get_dirty_log_radix()
+ HID: elo: clear BTN_LEFT mapping
+ iwllifi: mvn: rs: don't override the rate history in the search cycle
+ ARM: dts: koelsch: Move cec_clock to root node

+ - KVM: X86: Restart the guest when insn_len is zero and SEV is enabled
+ - drm/amdgpu:fix random missing of FLR NOTIFY
+ - scsi: ses: don't ask for diagnostic pages repeatedly during probe
+ - pwm: stmpe: Fix wrong register offset for hwpwm=2 case
+ - drm/sun4i: Fix format mask in DE2 driver
+ - pinctrl: sh-pfc: r8a7791: Add can_clk function
+ - pinctrl: sh-pfc: r8a7795-es1: Fix MOD_SEL1 bit[25:24] to 0x3 when using
    STP_PSEN_1_D
+ - perf annotate: Fix unnecessary memory allocation for s390x
+ - perf annotate: Fix objdump comment parsing for Intel mov disassembly
+ - iwlwifi: mvm: avoid dumping assert log when device is stopped
+ - drm/amdgpu:fix virtual dce bug
+ - drm/amdgpu: fix amdgpu_sync_resv v2
+ - bnxt_en: Uninitialized variable in bnxt_tc_parse_actions()
+ - clk: qcom: msm8916: fix mnd_width for codec_digcodec
+ - mwifiex: cfg80211: do not change virtual interface during scan processing
+ - ath10k: fix invalid STS_CAP_OFFSET_MASK
+ - tools/usbip: fixes build with musl libc toolchain
+ - spi: sun6i: disable/unprepare clocks on remove
+ - bnxt_en: Don't print "Link speed -1 no longer supported" messages.
+ - scsi: core: scsi_get_device_flags_keyed(): Always return device flags
+ - scsi: devinfo: apply to HP XP the same flags as Hitachi VSP
+ - scsi: dh: add new rdac devices
+ - clk: renesas: r8a77970: Add LVDS clock
+ - staging: fsl-dpaa2/eth: Fix access to FAS field
+ - media: vsp1: Prevent suspending and resuming DRM pipelines
+ - dm raid: fix raid set size revalidation
+ - media: cpi2: Fix a couple off by one bugs
+ - media: davinci: vpif_capture: add NULL check on devm_kzalloc return value
+ - virtio_net: Disable interrupts if napi_complete_done rescheduled napi
+ - net: sched: drop qdisc_reset from dev_graft_qdisc
+ - veth: set peer GSO values
+ - drm/amdkfd: Fix memory leaks in kfd topology
+ - powerpc/64: Don't trace irqs-off at interrupt return to soft-disabled
+   context
+ - arm64: dts: renesas: salvator-common: Add EthernetAVB PHY reset
+ - apg/intel: Flush all chipset writes after updating the GGTT
+ - mac80211_hwsim: enforce PS_MANUAL_POLL to be set after PS_ENABLED
+ - mac80211: remove BUG() when interface type is invalid
+ - crypto: caam/qi - use correct print specifier for size_t
+ - ASoC: nuc900: Fix a loop timeout test
+ - mmc: mmc_test: Ensure command queue is disabled for testing
+ - Fix misannotated out-of-line _copy_to_user()
+ - ipvlan: add L2 check for packets arriving via virtual devices
+ - rcutorture/confignit: Fix build directory error message
+ - locking/locktorture: Fix num reader/writer corner cases
+ - ima: relax requiring a file signature for new files with zero length
+ - IB/mlx5: revisit -Wmaybe-uninitialized warning
+ - dmaengine: qcom_hidma: check pending interrupts
+ - drm/i915/glk: Disable Guc and HuC on GLK
+ - Linux 4.15.11
+ - Config: Enable CONFIG_DRM_ETNAVIV_THERMAL=y
+ * [FFE][Feature] KVM CLX avx512_vnni (LP: #1739665)
  + - KVM: x86: add support for UMIP
  + - KVM: Expose new cpu features to guest
+ * Ubuntu18.04[P9 DD2.2 Boston]:Unable to boot power8 compat mode
  + guests(ubuntu14.04.5) (kvm) (LP: #1756254)
  + - KVM: PPC: Book3S HV: Allow HPT and radix on the same core for POWER9 v2.2
  + - Allow hugepage backing for “p8compat” mode kvm guests (LP: #1754206)
  + - KVM: PPC: Book3S HV: Fix VRMA initialization with 2MB or 1GB memory backing
+ * [Bug][KVM][Crystal Ridge] Terrible performance of vNVDIMM on QEMU with
  + device DAX backend (LP: #1745899)
  + - x86/mm: add a function to check if a pfno is UC/UC-/WC
  + - KVM: MMU: consider host cache mode in MMIO page check

---

Open Source Used In 5GaaS Edge AC-4 19498
* nfp: read ME frequency from vNIC ctrl memory (LP: #1752818)
- nfp: add TLV capabilities to the BAR
- nfp: read ME frequency from vNIC ctrl memory
- nfp: fix TLV offset calculation

* Miscellaneous Ubuntu changes
- [Packaging] skip cloud tools packaging when not building package
- [Packaging] final-checks -- remove check for empty retpoline files

+ - net: hns3: fix for updating fc_mode_last_time
+ - net: hns3: fix for setting MTU
+ - net: hns3: fix for changing MTU
+ - net: hns3: add MTU initialization for hardware
+ - net: hns3: fix for not setting pause parameters
+ - net: hns3: remove redundant semicolon
+ - net: hns3: Add more packet size statistics
+ - Revert "net: hns3: Add packet statistics of netdev"
+ - net: hns3: report the function type the same line with hns3_nic_get_stats64
+ - net: hns3: add ethtool_ops.get_channels support for VF
+ - net: hns3: remove TSO config command from VF driver
+ - net: hns3: add ethtool_ops.set_coalesce support to PF
+ - net: hns3: add ethtool_ops.get_coalesce support to PF
+ - net: hns3: refactor interrupt coalescing init function
+ - net: hns3: refactor GL update function
+ - net: hns3: remove unused GL setup function
+ - net: hns3: change the unit of GL value macro
+ - net: hns3: add int_gl_idx setup for TX and RX queues
+ - net: hns3: add feature check when feature changed
+ - net: hns3: check for NULL function pointer in hns3_nic_set_features
+ - net: hns: Fix for variable may be used uninitialized warnings
+ - net: hns3: add support for get_regs
+ - net: hns3: add manager table initialization for hardware
+ - net: hns3: add ethtool -p support for fiber port
+ - net: hns3: add net status led support for fiber port
+ - net: hns3: converting spaces into tabs to avoid checkpatch.pl warning
+ - net: hns3: add get/set_coalesce support to VF
+ - net: hns3: add int_gl_idx setup for VF
+ - [Config]: enable CONFIG_HNS3_HCLGEVF as module.

+ * [Bionic][ARM64] add RAS extension and SDEI features (LP: #1756096)
+ - KVM: arm64: Store vcpu on the stack during __guest_enter()
+ - KVM: arm/arm64: Convert kvm_host_cpu_state to a static per-cpu allocation
+ - KVM: arm64: Change hyp_panic(js dependency on tpidr_el2
+ - arm64: alternatives: use tpidr_el2 on VHE hosts
+ - KVM: arm64: Stop save/restoring host tpidr_el1 on VHE
+ - Docs: dt: add devicetree binding for describing arm64 SDEI firmware
+ - firmware: arm_sdei: Add driver for Software Delegated Exceptions
+ - arm64: Add vmap_stack header file
+ - arm64: uaccess: Add PAN helper
+ - arm64: kernel: Add arch-specific SDEI entry code and CPU masking
+ - firmware: arm_sdei: Add support for CPU and system power states
+ - firmware: arm_sdei: add support for CPU private events
+ - arm64: acpi: Remove __init from acpi_psci_use_hvc() for use by SDEI
+ - firmware: arm_sdei: Discover SDEI support via ACPI
+ - arm64: sysreg: Move to use definitions for all the SCTLR bits
+ - arm64: cpufeature: Detect CPU RAS Extentions
+ - arm64: kernel: Survive corrected RAS errors notified by SError
+ - arm64: Unconditionally enable IESB on exception entry/return for firmware-first
+ - arm64: kernel: Prepare for a DISR user
+ - KVM: arm/arm64: mask/unmask daif around VHE guests
+ - KVM: arm64: Save/Restore guest DISR_EL1
+ - KVM: arm64: Save ESR_EL2 on guest SError
+ - KVM: arm64: Handle RAS SErrors from EL1 on guest exit
+ - KVM: arm64: Handle RAS SErrors from EL2 on guest exit
+ - KVM: arm64: Emulate RAS error registers and set HCR_EL2's TERR & TEA
+ - [Config]: enable RAS_EXTN and ARM_SDE_INTERFACE
+ + * [Bionic][ARM64] PCI and SAS driver patches for hip08 SoCs (LP: #1756094)
   + - scsi: hisi_sas: fix dma_unmap_sg() parameter
   + - scsi: ata: enhance the definition of SET MAX feature field value
   + - scsi: hisi_sas: relocate clearing ITCT and freeing device
   + - scsi: hisi_sas: optimise port id refresh function
   + - scsi: hisi_sas: some optimizations of host controller reset
   + - scsi: hisi_sas: modify hisi_sas_dev_gone() for reset
   + - scsi: hisi_sas: add an mechanism to do reset work synchronously
   + - scsi: hisi_sas: change nq process for v3 hw
   + - scsi: hisi_sas: add RAS feature for v3 hw
   + - scsi: hisi_sas: add some print to enhance debugging
   + - scsi: hisi_sas: improve int_chnl_int_v2_hw() consistency with v3 hw
   + - scsi: hisi_sas: add v2 hw port AXI error handling support
   + - scsi: hisi_sas: use an general way to delay PHY work
   + - scsi: hisi_sas: do link reset for some CHL_INT2 ints
   + - scsi: hisi_sas: judge result of internal abort
   + - scsi: hisi_sas: add internal abort dev in some places
   + - scsi: hisi_sas: fix SAS_QUEUE_FULL problem while running IO
   + - scsi: hisi_sas: re-add the llid_port_deformed()
   + - scsi: hisi_sas: add v3 hw suspend and resume
   + - scsi: hisi_sas: Change frame type for SET MAX commands
   + - scsi: hisi_sas: make local symbol host_attrs static
   + - scsi: hisi_sas: fix a bug in hisi_sas_dev_gone()
   + - SAUCE: scsi: hisi_sas: config for hip08 ES
   + - SAUCE: scsi: hisi_sas: export device table of v3 hw to userspace
   + - PM / core: Add LEAVE_SUSPENDED driver flag
   + - PCI / PM: Support for LEAVE_SUSPENDED driver flag
   + - PCI/AER: Skip recovery callbacks for correctable errors from ACPI APEI
   + - PCI/ASPM: Calculate LTR_L1.2_THRESHOLD from device characteristics
   + - PCI/ASPM: Enable Latency Tolerance Reporting when supported
   + - PCI/ASPM: Unexport internal ASPM interfaces
   + - PCI: Make PCI_SCAN_ALL_PCIE_DEVS work for Root as well as Downstream Ports
   + - PCI/AER: Return error if AER is not supported
   + - PCI/DPC: Enable DPC only if AER is available
+ + + * [CVE] Spectre: System Z {kernel} UBUNTU18.04 (LP: #1754580)
   + - s390: scrub registers on kernel entry and KVM exit
   + - s390: add optimized array_index_mask_nospec
   + - s390/alternative: use a copy of the facility bit mask
   + - s390: add options to change branch prediction behaviour for the kernel
   + - s390: run user space and KVM guests with modified branch prediction
   + - s390: introduce execute-trampolines for branches
   + - s390: Replace IS_ENABLED(EXPOLINE_*) with IS_ENABLED(CONFIG_EXPOLINE_*)
   + - s390: do not bypass BPENTER for interrupt system calls
   + - s390/entry.S: fix spurious zeroing of r0
+ +
* s390/crypto: Fix kernel crash on aes_s390 module remove (LP: #1753424)
+ SAUCE: s390/crypto: Fix kernel crash on aes_s390 module remove.
+ [Feature] Update Ubuntu 18.04 lpfc FC driver with 32/64GB HBA support and bug fixes (LP: #1752182)
+ scsi: lpfc: FLOGI failures are reported when connected to a private loop.
+ scsi: lpfc: Expand WQE capability of every NVME hardware queue
+ scsi: lpfc: Handle XRI_ABORTED_CQE in soft IRQ
+ scsi: lpfc: Fix NVME LS abort_xri
+ scsi: lpfc: Raise maximum NVME sg list size for 256 elements
+ scsi: lpfc: Driver fails to detect direct attach storage array
+ scsi: lpfc: Fix display for debugfs queInfo
+ scsi: lpfc: Adjust default value of lpfc_nvmet_mrq
+ scsi: lpfc: Fix ndlp ref count for pt2pt mode issue RSCN
+ scsi: lpfc: Linux LPFC driver does not process all RSCNs
+ scsi: lpfc: correct port registrations with nvme_fc
+ scsi: lpfc: Correct driver deregistrations with host nvme transport
+ scsi: lpfc: Fix crash during driver unload with running nvme traffic
+ scsi: lpfc: Fix driver handling of nvme resources during unload
+ scsi: lpfc: small sg cnt cleanup
+ scsi: lpfc: Fix random heartbeat timeouts during heavy IO
+ scsi: lpfc: update driver version to 11.4.0.5
+ scsi: lpfc: Fix -EOVERFLOW behavior for NVMET and defer_rcv
+ scsi: lpfc: Fix receive PRLI handling
+ scsi: lpfc: Increase SCSI CQ and WQ sizes.
+ scsi: lpfc: Fix SCSI LUN discovery when SCSI and NVME enabled
+ scsi: lpfc: Fix issues connecting with nvme initiator
+ scsi: lpfc: Fix infinite wait when driver unregisters a remote NVME port.
+ scsi: lpfc: Beef up stat counters for debug
+ scsi: lpfc: update driver version to 11.4.0.6
+ scsi: lpfc: correct sg_seg_cnt attribute min vs default
+ scsi: scsi_transport_fc: fix typos on 64/128 GBit define names
+ scsi: lpfc: don't dereference localport before it has been null checked
+ scsi: lpfc: fix a couple of minor indentation issues
+ treewide: Use DEVICE_ATTR_RW
+ treewide: Use DEVICE_ATTR_RO
+ treewide: Use DEVICE_ATTR_WO
+ scsi: lpfc: Fix frequency of Release WQE CQE
+ scsi: lpfc: Increase CQ and WQ sizes for SCSI
+ scsi: lpfc: move placement of target destroy on driver detach
+ scsi: lpfc: correct debug counters for abort
+ scsi: lpfc: Add WQ Full Logic for NVME Target
+ scsi: lpfc: Fix PRLI handling when topology type changes
+ scsi: lpfc: Fix IO failure during hba reset testing with nvme io.
+ scsi: lpfc: Fix RQ empty firmware trap
+ scsi: lpfc: Allow set of maximum outstanding SCSI cmd limit for a target
+ scsi: lpfc: Fix soft lockup in lpfc worker thread during LIP testing
+ scsi: lpfc: Fix issue_lip if link is disabled
+ - scsi: lpfc: Indicate CONF support in NVMe PRLI
+ - scsi: lpfc: Fix SCSI io host reset causing kernel crash
+ - scsi: lpfc: Validate adapter support for SRIU option
+ - scsi: lpfc: Fix header inclusion in lpfc_nvmet
+ - scsi: lpfc: Treat SCSI Write operation Underruns as an error
+ - scsi: lpfc: Fix nonrecovery of NVME controller after cable swap.
+ - scsi: lpfc: update driver version to 11.4.0.7
+ - scsi: lpfc: Update 11.4.0.7 modified files for 2018 Copyright
+ - scsi: lpfc: Rework lpfc to allow different sli4 cq and eq handlers
+ - scsi: lpfc: Rework sli4 doorbell infrastructure
+ - scsi: lpfc: Add SLI-4 if_type=6 support to the code base
+ - scsi: lpfc: Rework sli4 doorbell infrastructure
+ - scsi: lpfc: Add SLI-4 if_type=6 support to the code base
+ - scsi: lpfc: Add push-to-adapter support to sli4
+ - scsi: lpfc: Add PCI Ids for if_type=6 hardware
+ - scsi: lpfc: Add 64G link speed support
+ - scsi: lpfc: Add if_type=6 support for cycling valid bits
+ - scsi: lpfc: Enable fw download on if_type=6 devices
+ - scsi: lpfc: Add embedded data pointers for enhanced performance
+ - scsi: lpfc: Fix nvme embedded io length on new hardware
+ - scsi: lpfc: Work around NVME cmd iu SGL type
+ - scsi: lpfc: Update driver version to 12.0.0.0
+ - scsi: lpfc: Change Copyright of 12.0.0.0 modified files to 2018
+ - scsi: lpfc: use __raw_writeX on DPP copies
+ - scsi: lpfc: Add missing unlock in WQ full logic
+
+ * CVE-2018-8043
+ - net: phy: mdio-bcm-unimac: fix potential NULL dereference in
  unimac_mdio_probe()
+
+ * Bionic update to 4.15.10 stable release (LP: #1756100)
+ - Revert "UBUNTU: SAUCE: ALSA: hda/realtek - Add support headset mode for DELL
  WYSE"
+ - RDMA/ucma: Limit possible option size
+ - RDMA/ucma: Check that user doesn't overflow QP state
+ - RDMA/mlx5: Fix integer overflow while resizing CQ
+ - bpf: cpumap: use GFP_KERNEL instead of GFP_ATOMIC in __cpu_map_entry_alloc()
+ - IB/uverbs: Improve lockdep_check
+ - mac80211_hwsm: don't use WQ_MEM_RECLAIM
+ - net/sm: fix NULL pointer dereference on sock_create_kern() error path
+ - regulator: stm32-vrefbuf: fix check on ready flag
+ - drm/i915: Check for fused or unused pipes
+ - drm/i915/audio: fix check for av_enc_map overflow
+ - drm/i915: Fix rsvd2 mask when out-fence is returned
+ - drm/i915: Clear the in-use marker on execbuf failure
+ - drm/i915: Disable DC states around GMBUS on GLK
+ - drm/i915: Update watermark state correctly in sanitize_watermarks
+ - drm/i915: Try EDID bitbanging on HDMI after failed read
+ - drm/i915/perf: fix perf stream opening lock
+ - scsi: core: Avoid that ATA error handling can trigger a kernel hang or oops
- scsi: qla2xxx: Fix NULL pointer crash due to active timer for ABTS
- drm/i915: Always call to intel_display_set_init_power() in resume_early.
- workqueue: Allow retrieval of current task's work struct
- drm: Allow determining if current task is output poll worker
- drm/nouveau: Fix deadlock on runtime suspend
- drm/radeon: Fix deadlock on runtime suspend
- drm/amdgpu: Fix deadlock on runtime suspend
- drm/nouveau: prefer XBGR2101010 for addfb ioctl
- drm/amd/powerplay/smu7: allow mclk switching with no displays
- drm/amd/powerplay/vega10: allow mclk switching with no displays
- Revert "drm/radeon/pm: autoswitch power state when in balanced mode"
- drm/amd/display: check for ipp before calling cursor operations
- drm/radeon: insist on 32-bit DMA for Cedar on PPC64/PPC64LE
- drm/amd/powerplay: fix power over limit on Fiji
- drm/amd/display: Default HDMI6G support to true. Log VBIOS table error.
- drm/amdgpu: used cached pcie gen info for SI (v2)
- drm/amdgpu: Notify sbios device ready before send request
- drm/radeon: fix KV harvesting
- drm/amdgpu: fix KV harvesting
- drm/amdgpu:Correct max uvd handles
- drm/amdgpu:Always save uvd vcpu_bo in VM Mode
- ovl: redirect_dir=nofollow should not follow redirect for opaque lower
- MIPS: BMIPS: Do not mask IPIs during suspend
- MIPS: ath25: Check for kzalloc allocation failure
- MIPS: OCTEON: irq: Check for null return on kzalloc allocation
- PCI: dwc: Fix enumeration end when reaching root subordinate
- Input: matrix_keypad - fix race when disabling interrupts
- Revert "Input: synaptics - Lenovo Thinkpad T460p devices should use RMI"
- bug: use %pB in BUG and stack protector failure
- lib/bug.c: exclude non-BUG/WARN exceptions from report_bug()
- mm/memblock.c: hardcode the end_pfn being -1
- Documentation/sphinx: Fix Directive import error
- loop: Fix lost writes caused by missing flag
- virtio_ring: fix num_free handling in error case
- KVM: s390: fix memory overwrites when not using SCA entries
- arm64: mm: fix thinko in non-global page table attribute check
- IB/core: Fix missing RDMA cgroups release in case of failure to register device
- Revert "nvme: create 'slaves' and 'holders' entries for hidden controllers"
- kbuild: Handle builtin dtb file names containing hyphens
- dm bufio: avoid false-positive Wmaybe-uninitialized warning
- IB/mlx5: Fix incorrect size of klms in the memory region
- bcache: fix crashes in duplicate cache device register
- bcache: don't attach backing with duplicate UUID
- x86/MCE: Save microcode revision in machine check records
- x86/MCE: Serialize sysfs changes
- perf tools: Fix trigger class trigger_on()
- x86/spectre_v2: Don't check microcode versions when running under
+ hypervisors
+ - ALSA: hda/realtek - Add support headset mode for DELL WYSE
+ - ALSA: hda/realtek - Add headset mode support for Dell laptop

+ - tcp: revert F-RTO extension to detect more spurious timeouts
+ - blk-mq: don't call io sched's .requeue_request when requeueing rq to dispatch
+ - media: m88ds3103: don't call a non-initialized function
+ - EDAC, sb_edac: Fix out of bound writes during DIMM configuration on KNL
+ - KVM: s390: take care of clock-comparator sign control
+ - KVM: s390: provide only a single function for setting the tod (fix SCK)
+ - KVM: s390: consider epoch index on hotplugged CPUs
+ - KVM: s390: consider epoch index on TOD clock syncs
+ - nospec: Allow index argument to have const-qualified type
+ - x86/mm: Fix \{pmd,pud\}\_{set,clear}\_flags()
+ - ARM: orion: fix orion\_get00\_switch\_board\_info initialization
+ - ARM: dts: rockchip: Remove 1.8 GHz operation point from phycore som
+ - ARM: mvebu: Fix broken PL310\_ERRATA\_753970 selects
+ - ARM: kvm: fix building with gcc-8
+ - KVM: X86: Fix SMRAM accessing even if VM is shutdown
+ - KVM: mmu: Fix overlap between public and private memslots
+ - KVM/x86: Remove indirect MSR op calls from SPEC\_CTRL
+ - KVM: x86: move LAPIC initialization after VMCS creation
+ - KVM/VMX: Optimize vmx\_vcpu\_run() and svm\_vcpu\_run() by marking the RDMSR
+ path as unlikely()
+ - KVM: x86: fix vcpu initialization with userspace lapic
+ - KVM/x86: remove WARN\_ON() for when vm\_munmap() fails
+ - ACPI / bus: Parse tables as term\_list for Dell XPS 9570 and Precision M5530
+ - ARM: dts: LogicPD SOM-LV: Fix I2C1 pinmux
+ - ARM: dts: LogicPD Torpedo: Fix I2C1 pinmux
+ - powerpc/64s/radix: Boot-time NULL pointer protection using a guard-PID
+ - md: only allow remove\_and\_add\_spares when no sync\_thread running.
+ - platform/x86: dell-laptop: fix kbd\_get\_state's request value
+ - Linux 4.15.8
+ + * ZFS setgid broken on 0.7 (LP: #1753288)
+ + - SAUCE: Fix ZFS setgid
+ + * /proc/kallsyms prints "(null)" for null addresses in 4.15 (LP: #1754297)
+ + - vsprintf: avoid misleading "(null)" for %px
+ + * Miscellaneous Ubuntu changes
+ + - d-i: Add netsec to nic-modules
+ + - [Config] fix up retpoline abi files
+ + - [Config] set NOBP and expoline options for s390
+ + -- Thadeu Lima de Souza Cascardo <cascardo@canonical.com> Fri, 16 Mar 2018 14:49:27 -0300
+ +linux (4.15.0-12.13) bionic; urgency=medium
+ + * linux: 4.15.0-12.13 -proposed tracker (LP: #1754059)
+ + * CONFIG\_EFI=y on armhf (LP: #1726362)
+ + - [Config] CONFIG\_EFI=y on armhf, reconcile secureboot EFI settings
+ + * ppc64el: Support firmware disable of RFI flush (LP: #1751994)
+ + - powerpc/pseries: Support firmware disable of RFI flush
+ + - powerpc/powernv: Support firmware disable of RFI flush
+ + * [Feature] CFL/CNL (PCH:CNP-H): New GPIO Commit added (GPIO Driver needed)
- gpio / ACPI: Drop unnecessary ACPI GPIO to Linux GPIO translation
- pinctrl: intel: Allow custom GPIO base for pad groups
- pinctrl: cannonlake: Align GPIO number space with Windows

* [Feature] Add xHCI debug device support in the driver (LP: #1730832)
- usb: xhci: Make some static functions global
- usb: xhci: Add DbC support in xHCI driver
- [Config] USB_XHCI_DBGCAp=y for commit mainline dfba217dc42.

* [SRU] Lenovo E41 Mic mute hotkey is not responding (LP: #1753347)
- platform/x86: ideapad-laptop: Increase timeout to wait for EC answer

* headset mic can't be detected on two Dell machines (LP: #1748807)
- ALSA: hda - Fix a wrong FIXUP for alc289 on Dell machines

* hisi_sas: Add disk LED support (LP: #1752695)
- scsi: hisi_sas: directly attached disk LED feature for v2 hw

* [Feature] [Graphics]Whiskey Lake (CoffeeLake-U 4+2) new PCI Device ID adds
  (LP: #1742561)
- drm/i915/cfl: Adding more Coffee Lake PCI IDs.

* [Bug] [USB Function][CFL-CNL PCH]Stall Error and USB Transaction Error in
  trace, Disable of device-initiated U1/U2 failed and rebind failed: -517
  during suspend/resume with usb storage. (LP: #1730599)
- - usb: Don't print a warning if interface driver rebind is deferred at resume

* retpoline: ignore %cs:0xNNN constant indirections (LP: #1752655)
- [Packaging] retpoline -- elide %cs:0xNNNN constants on i386
- [Config] retpoline -- clean up i386 retpoline files

* hisilicon hibmc regression due to ea642c3216cb ("drm/ttm: add io_mem_pfn
  callback") (LP: #1738334)
- drm/ttm: add ttm_bo_io_mem_pfn to check io_mem_pfn

* [Asus UX360UA] battery status in unity-panel is not changing when battery is
  being charged (LP: #1661876) // AC adapter status not detected on Asus
  ZenBook UX410UAK (LP: #1745032)
- ACPI / battery: Add quirk for Asus UX360UA and UX410UAK

* ASUS UX305LA - Battery state not detected correctly (LP: #1482390)
- ACPI / battery: Add quirk for Asus GL502VSK and UX305LA

* [18.04 FEAT] Automatically detect layer2 setting in the qeth device driver
  (LP: #1747639)
- s390/diag: add diag26c support for VNIC info
- s390/qeth: support early setup for z/VM NICs
+ * Bionic update to v4.15.7 stable release (LP: #1752317)
+ - netfilter: drop outermost socket lock in getsockopt()
+ - arm64: mm: don't write garbage into TTBR1_EL1 register
+ - kconfig.h: Include compiler types to avoid missed struct attributes
+ - MIPS: boot: Define __ASSEMBLY__ for its.S build
+ - xtnsa: fix high memory/reserved memory collision
+ - scsi: ibmvfc: fix misdefined reserved field in ibmvfc_fcp_rsp_info
+ - MIPS: Drop spurious __unused in struct compat_flock
+ - cfg80211: fix cfg80211 Beacon dup
+ - i2c: designware: must wait for enable
+ - i2c: bcm2835: Set up the rising/falling edge delays
+ - X.509: fix BUG_ON() when hash algorithm is unsupported
+ - X.509: fix NULL dereference when restricting key with unsupported_sig
+ - PKCS#7: fix certificate chain verification
+ - PKCS#7: fix certificate blacklisting
+ - extcon: int3496: process id-pin first so that we start with the right status
+ - genirq/matrix: Handle CPU offlining proper
+ - RDMA/uverbs: Protect from races between lookup and destroy of uobjects
+ - RDMA/uverbs: Protect from command mask overflow
+ - RDMA/uverbs: Fix bad unlock balance in ib_uverbs_close_xrcd
+ - RDMA/uverbs: Fix circular locking dependency
+ - RDMA/uverbs: Sanitize user entered port numbers prior to access it
+ - iio: adc: stm32: fix stm32h7_adc_enable error handling
+ - iio: srf08: fix link error "devm_iio_triggered_buffer_setup" undefined
+ - iio: buffer: check if a buffer has been set up when poll is called
+ - iio: adis_lib: Initialize trigger before requesting interrupt
+ - Kbuild: always define endianess in kconfig.h
+ - x86/apic/vector: Handle vector release on CPU unplug correctly
+ - x86/oprofile: Fix bogus GCC-8 warning in nmi_setup()
+ - mm, swap, frontswap: fix THP swap if frontswap enabled
+ - mm: don't defer struct page initialization for Xen pv guests
+ - uapi/if_ether.h: move __UAPI_DEF_ETHHDR libc define
+ - irqchip/gic-v3: Use wmb() instead of smb_wmb() in gic_raise_softirq()
+ - irqchip/mips-gic: Avoid spuriously handling masked interrupts
+ - PCI/cxgb4: Extend T3 PCI quirks to T4+ devices
+ - net: thunderbolt: Tear down connection properly on suspend
+ - net: thunderbolt: Run disconnect flow asynchronously when logout is received
+ - ohci-hcd: Fix race condition caused by ohci_urb_enqueue() and
+   io_watchdog_func()
+ - usb: ohci: Proper handling of ed_rm_list to handle race condition between
   usb_kill_urb() and finish_unlinks()
+ - arm64: Remove unimplemented syscall log message
+ - arm64: Disable unhandled signal log messages by default
+ - arm64: cpufeature: Fix CTR_EL0 field definitions
+ - Add delay-init quirk for Corsair K70 RGB keyboards
+ - usb: host: Ohci: use correct device pointer for dma ops
+ - usb: dwc3: gadget: Set maxpacket size for ep0 IN
* [regression] Colour banding and artefacts appear system-wide on an Asus Zenbook UX303LA with Intel HD 4400 graphics (LP: #1749420) // Bionic update to v4.15.7 stable release (LP: #1752317)
  - drm/edid: Add 6 bpc quirk for CPT panel in Asus UX303LA
  + *
  + * errors with sas hotplug (LP: #1752146)
  + - scsi: libsas: fix memory leak in sas_snp_get_phy_events()
  + - scsi: libsas: fix error when getting phy events
  + - scsi: libsas: initialize sas_phy status according to response of DISCOVER
  + - scsi: libsas: Use dynamic allocated work to avoid sas event lost
  + - scsi: libsas: shut down the PHY if events reached the threshold
  + - scsi: libsas: make the event threshold configurable
  + - scsi: libsas: Use new workqueue to run sas event and disco event
  + - scsi: libsas: use flush_workqueue to process disco events synchronously
  + - scsi: libsas: direct call probe and destruct
  + - scsi: libsas: notify event PORTE_BROADCAST_RCVD in sas_enable_revalidation()
  + *
  + * rtnetlink: enable namespace identifying properties in rtnetlink requests
  + (LP: #1748232)
  + - rtnetlink: enable IFLA_IF_NETNSID in do_setlink()
  + - rtnetlink: enable IFLA_IF_NETNSID for RTM_SETLINK
  + - rtnetlink: enable IFLA_IF_NETNSID for RTM_DELLINK
  + - rtnetlink: enable IFLA_IF_NETNSID for RTM_NEWLINK
  + - rtnetlink: remove check for IFLA_IF_NETNSID
  + - rtnetlink: require unique netns identifier
  + *
  + * Bionic update to v4.15.6 stable release (LP: #1752119)
- tun: fix tun_napi_alloc_frags() frag allocator
- ptr_ring: fail early if queue occupies more than KMALLOC_MAX_SIZE
- ptr_ring: try vmalloc() when kmalloc() fails
- selinux: ensure the context is NUL terminated in
- security_context_to_sid_core()
- selinux: skip bounded transition processing if the policy isn't loaded
- media: pvusb2: properly check endpoint types
- crypto: x86/twofish-3way - Fix %rbp usage
- staging: android: ion: Add __GFP_NOWARN for system contig heap
- staging: android: ion: Switch from WARN to pr_warn
- blk_rq_map_user_iov: fix error override
- KVM: x86: fix escape of guest dr6 to the host
- kcov: detect double association with a single task
- netfilter: x_tables: fix int overflow in xt_alloc_table_info()
- netfilter: x_tables: avoid out-of-bounds reads in
- xt_request_find_[match|target]
- netfilter: ipt_CLUSTERIP: fix out-of-bounds accesses in clusteripTp_check()
- netfilter: on sockopt() acquire sock lock only in the required scope
- netfilter: xt_cgroup: initialize info->priv in cgroupMt_check_v1()
- netfilter: xt_RATEEST: acquire xt_rateest_mutex for hash insert
- rds: tcp: correctly sequence cleanup on netns deletion.
- rds: tcp: atomically purge entries from rds_tcp_conn_list during netns
- delete
- net: avoid skb_warn_bad_offload on IS_ERR
- net_sched: gen_estimator: fix lockdep splat
- soc: qcom: rmfs_mem: add missing MODULE_DESCRIPTION/AUTHOR/LICENSE
- ASoC: ux500: add MODULE_LICENSE tag
- video: fbdev/mmp: add MODULE_LICENSE
- ARM: 8743/1: bl Switcher: add MODULE_LICENSE tag
- arm64: dts: add #cooling-cells to CPU nodes
- dn_getsockoptdecent: move nf_[get/set]sockopt outside sock lock
- ANDROID: binder: remove WARN() for redundant txn error
- ANDROID: binder: synchronize_rcu() when using POLLFREE.
- staging: android: ashmem: Fix a race condition in pin ioctl
- binder: check for binder_thread allocation failure in binder_poll()
- binder: replace "%p" with "%pK"
- staging: fsl-mc: fix build testing on x86
- staging: iio: adc: ad7192: fix external frequency setting
- staging: iio: ad5933: switch buffer mode to software
- xhci: Fix NULL pointer in xhci debugfs
- xhci: Fix xhci debugfs devices node disappearance after hibernation
- xhci: xhci debugfs device nodes weren't removed after device plugged out
- xhci: fix xhci debugfs errors in xhci_stop
- usbip: keep usbip_device sockfd state in sync with tcp_socket
- crypto: s5p-sss - Fix kernel Oops in AES-ECB mode
- mei: me: add cannon point device ids
- mei: me: add cannon point device ids for 4th device
- vmalloc: fix __GFP_HIGHMEM usage for vmalloc_32 on 32b systems
+ - Linux 4.15.6
+ + * Unable to insert test_bpf module on Bionic s390x (LP: #1751234)
+ + - bpf: fix selftests/bpf test_kmod.sh failure when CONFIG_BPF_JIT_ALWAYS_ON=y
+ + * [Ubuntu 18.04 FEAT] OpenCAPI enabling (LP: #1746988)
+ + - powerpc/powernv: Introduce new PHB type for opencapi links
+ + - powerpc/powernv: Set correct configuration space size for opencapi devices
+ + - powerpc/powernv: Add opal calls for opencapi
+ + - powerpc/powernv: Add platform-specific services for opencapi
+ + - powerpc/powernv: Capture actag information for the device
+ + - ocxl: Driver code for 'generic' opencapi devices
+ + - ocxl: Add AFU interrupt support
+ + - ocxl: Add a kernel API for other opencapi drivers
+ + - ocxl: Add trace points
+ + - ocxl: Add Makefile and Kconfig
+ + - [Config] CONFIG_OCXL=m for ppc64el
+ + - cxl: Remove support for "Processing accelerators" class
+ + - ocxl: Documentation
+ + - ocxl: add MAINTAINERS entry
+ + - cxl: Add support for ASB_Notify on POWER9
+ + * Request to update 18.04 kernel aacraid to upstream 4.16 version
+ + (LP: #1746801)
+ + - scsi: aacraid: remove unused variable managed_request_id
+ + - scsi: aacraid: Do not attempt abort when Fw panicked
+ + - scsi: aacraid: Do not remove offlined devices
+ + - scsi: aacraid: Fix ioctl reset hang
+ + - scsi: aacraid: Allow reset_host sysfs var to recover Panicked Fw
+ + - scsi: aacraid: Refactor reset_host store function
+ + - scsi: aacraid: Move code to wait for IO completion to shutdown func
+ + - scsi: aacraid: Create bmic submission function from bmic identify
+ + - scsi: aacraid: Change phy luns function to use common bmic function
+ + - scsi: aacraid: Refactor and rename to make mirror existing changes
+ + - scsi: aacraid: Add target setup helper function
+ + - scsi: aacraid: Untangle targets setup from report phy luns
+ + - scsi: aacraid: Move function around to match existing code
+ + - scsi: aacraid: Create helper functions to get lun info
+ + - scsi: aacraid: Save bmic phy information for each phy
+ + - scsi: aacraid: Add helper function to set queue depth
+ + - scsi: aacraid: Merge func to get container information
+ + - scsi: aacraid: Process hba and container hot plug events in single function
+ + - scsi: aacraid: Added macros to help loop through known buses and targets
+ + - scsi: aacraid: Refactor resolve luns code and scsi functions
+ + - scsi: aacraid: Merge adapter setup with resolve luns
+ + - scsi: aacraid: Block concurrent hotplug event handling
+ + - scsi: aacraid: Use hotplug handling function in place of scsi_scan_host
+ + - scsi: aacraid: Reschedule host scan in case of failure
+ - scsi: aacraid: Fix hang while scanning in eh recovery
+ - scsi: aacraid: Skip schedule rescan in case of kdump
+ - scsi: aacraid: Remove unused rescan variable
+ - scsi: aacraid: Remove AAC_HIDE_DISK check in queue command
+ - scsi: aacraid: Update driver version to 50877
+ - scsi: aacraid: Fix driver oops with dead battery
+ - scsi: aacraid: remove redundant setting of variable c
+ - scsi: aacraid: Get correct lun count
+ - scsi: aacraid: Delay for rescan worker needs to be 10 seconds

+ * [18.04] kpatch - Add livepatch hook support for ppc64le (LP: #1741992)
+ - powerpc/modules: Add REL24 relocation support of livepatch symbols
+ - powerpc/modules: Don't try to restore r2 after a sibling call
+ - powerpc/modules: Improve restore_r2() error message

+ * Ubuntu 18.04 - Include latest ibmvnic fixes in Ubuntu kernel (LP: #1748517)
+ - ibmvnic: Rename IBMVNIC_MAX_TX_QUEUES to IBMVNIC_MAX_QUEUES
+ - ibmvnic: Increase maximum number of RX/TX queues
+ - ibmvnic: Include header descriptor support for ARP packets
+ - ibmvnic: Don't handle RX interrupts when not up.
+ - ibmvnic: Wait for device response when changing MAC
+ - ibmvnic: fix firmware version when no firmware level has been provided by
+ + the VIOS server
+ - ibmvnic: fix empty firmware version and errors cleanup
+ - ibmvnic: Fix rx queue cleanup for non-fatal resets
+ - ibmvnic: Ensure that buffers are NULL after free
+ - ibmvnic: queue reset when CRQ gets closed during reset
+ - ibmvnic: Reset long term map ID counter
+ - ibmvnic: Remove skb->protocol checks in ibmvnic_xmit
+ - ibmvnic: Wait until reset is complete to set carrier on
+ - ibmvnic: Fix login buffer memory leaks
+ - ibmvnic: Fix NAPI structures memory leak
+ - ibmvnic: Free RX socket buffer in case of adapter error
+ - ibmvnic: Clean RX pool buffers during device close
+ - ibmvnic: Check for NULL skb's in NAPI poll routine
+ - ibmvnic: Fix early release of login buffer

+ * Power9 DD 2.2 needs HMI fixup backport of upstream
+ - patch(d075745d893c78730e4a3b7a60fca23c21f764081) into kernel (LP: #1751834)
+ - KVM: PPC: Book3S HV: Improve handling of debug-trigger HMIIs on POWER9

+ * Driver not found in Ubuntu kernel does not detect interface (LP: #1745927)
+ - d-i: add cxgb4 to nic-modules

+ * BCM5719/tg3 loses connectivity due to missing heartbeats between fw and
+ + driver (LP: #1751337)
+ - tg3: APE heartbeat changes

---

Open Source Used In 5GaaS Edge AC-4 19517

+  
+ + * linux: 4.15.0-11.12 -proposed tracker (LP: #1751285)  
+  
+ + * Support low-pin-count devices on Hisilicon SoCs (LP: #1677319)  
+ - [Config] CONFIG_INDIRECTPIO=y  
+ - SAUCE: LIB: Introduce a generic PIO mapping method  
+ - SAUCE: PCI: Remove unused __weak attribute in pci_register_io_range()  
+ - SAUCE: PCI: Add fwnode handler as input param of pci_register_io_range()  
+ - SAUCE: PCI: Apply the new generic I/O management on PCI IO hosts  
+ - SAUCE: OF: Add missing I/O range exception for indirect-I0 devices  
+ - [Config] CONFIG_HISILICON_LPC=y  
+ - SAUCE: HISI LPC: Support the LPC host on Hip06/Hip07 with DT bindings  
+ - SAUCE: ACPI / scan: do not enumerate Indirect IO host children  
+ - SAUCE: HISI LPC: Add ACPI support  
+ - SAUCE: MAINTAINERS: Add maintainer for HiSilicon LPC driver  
+  
+ + * Bionic update to v4.15.5 stable release (LP: #1751131)  
+ - scsi: smartpqi: allow static build ("built-in")  
+ - IB/umad: Fix use of unprotected device pointer  
+ - IB/qib: Fix comparison error with qperf compare/swap test  
+ - IB/mlx4: Fix incorrectly releasing steerable UD QPs when have only ETH ports  
+ - IB/core: Fix two kernel warnings triggered by rxe registration  
+ - IB/core: Fix ib_wc structure size to remain in 64 bytes boundary  
+ - IB/core: Avoid a potential OOPs for an unused optional parameter  
+ - selftests: seccomp: fix compile error seccomp_bpf  
+ - kselftest: fix OOM in memory compaction test  
+ - RDMA/rxe: Fix a race condition related to the QP error state  
+ - RDMA/rxe: Fix a race condition in rxe_requester()  
+ - RDMA/rxe: Fix rxe_qp_cleanup()  
+ - cpufreq: powernv: Dont assume distinct pstate values for nominal and pmin  
+ - PM / devfreq: Propagate error from devfreq_add_device()  
+ - mwifiex: resolve reset vs. remove()/shutdown() deadlocks  
+ - ocfs2: try a blocking lock before return AOP_TRUNCATED_PAGE  
+ - trace_uprobe: Display correct offset in uprobe_events  
+ - powerpc/radix: Remove trace_tlbie call from radix__flush_tlb_all  
+ - powerpc/kernel: Block interrupts when updating TIDR
+ - powerpc/vas: Don't set uses_vas for kernel windows
+ - powerpc/numa: Invalidate numa_cpu_lookup_table on cpu remove
+ - powerpc/mm: Flush radix process translations when setting MMU type
+ - powerpc/xive: Use hw CPU ids when configuring the CPU queues
+ - dma-buf: fix reservation-object_wait_timeout_rcu once more v2
+ - s390: fix handling of -1 in set{,fs}[gu]id16 syscalls
+ - arm64: dts: msm8916: Correct ipc references for smsm
+ - ARM: lp3250: fix uda1380 gpio numbers
+ - ARM: dts: STi: Add gpio property for "hdtmi,hpd-gpio" property
+ - ARM: dts: nomadik: add interrupt-parent for clcd
+ - arm: dts: mt7623: fix card detection issue on bananapi-r2
+ - arm: spear600: Add missing interrupt-parent of rtc
+ - arm: spear13xx: Fix dmas cells
+ - arm: spear13xx: Fix spics gpio controller's warning
+ - x86/gpu: add CFL to early quirks
+ - x86/kexec: Make kexec (mostly) work in 5-level paging mode
+ - x86/xen: init %gs very early to avoid page faults with stack protector
+ - x86: PM: Make APM idle driver initialize polling state
+ - mm, memory_hotplug: fix memmap initialization
+ - x86/entry/64: Clear extra registers beyond syscall arguments, to reduce speculation attack surface
+ - x86/entry/64/compat: Clear registers for compat syscalls, to reduce speculation attack surface
+ - compiler-gcc.h: Introduce __optimize function attribute
+ - compiler-gcc.h: __nostackprotector needs gcc-4.4 and up
+ - crypto: sun4i_ss_prng - fix return value of sun4i_ss_prng_generate
+ - crypto: sun4i_ss_prng - convert lock to _bh in sun4i_ss_prng_generate
+ - powerpc/mm/radix: Split linear mapping on hot-unplug
+ - x86/mm/pti: Fix PTI comment in entry_SYSCALL_64()
+ - x86/speculation: Update Speculation Control microcode blacklist
+ - x86/speculation: Correct Speculation Control microcode blacklist again
+ - Revert "x86/speculation: Simplify indirect_branch_prediction_barrier()"
+ - KVM/x86: Reduce retpoline performance impact in slot_handle_level_range(), by always inlining iterator helper methods
+ - X86/nVMX: Properly set spec_ctrl and pred_cmd before merging MSRs
+ - KVM/nVMX: Set the CPU_BASED_USE_MSRS_BITMAPS if we have a valid L02 MSR bitmap
+ - x86/speculation: Clean up various Spectre related details
+ - PM / runtime: Update links_count also if !CONFIG_SRCU
+ - PM: cpuidle: Fix cpuidle_poll_state_init() prototype
+ - platform/x86: wmi: fix off-by-one write in wmi_dev_probe()
+ - x86/entry/64: Clear registers for exceptions/interrupts, to reduce speculation attack surface
+ - x86/entry/64: Merge SAVE_C_REGS and SAVE_EXTRA_REGS, remove unused extensions
+ - x86/entry/64: Merge the POP_C_REGS and POP_EXTRA_REGS macros into a single POP_REGS macro
+ - x86/entry/64: Interleave XOR register clearing with PUSH instructions
- x86/entry/64: Introduce the PUSH_AND_CLEAN_REGS macro
- x86/entry/64: Use PUSH_AND_CLEAN_REGS in more cases
- x86/entry/64: Get rid of the ALLOC_PT_GPREGS_ON_STACK and SAVE_AND_CLEAR_REGS macros
- x86/entry/64: Indent PUSH_AND_CLEAR_REGS and POP_REGS properly
- x86/entry/64: Fix paranoid_entry() frame pointer warning
- x86/entry/64: Remove the unused ‘icebp’ macro
- selftests/x86: Fix vDSO selftest segfault for vsyscall=none
- selftests/x86: Clean up and document sscanf() usage
- selftests/x86/pkeys: Remove unused functions
- selftests/x86: Fix build bug caused by the 5lvl test which has been moved to the VM directory
- selftests/x86: Do not rely on “int $0x80” in test_mremap_vdso.c
- gfs2: Fixes to “Implement iomap for block_map”
- selftests/x86: Do not rely on “int $0x80” in single_step_syscall.c
- selftests/x86: Disable tests requiring 32-bit support on pure 64-bit systems
- objtool: Fix segfault in ignore_unreachable_insn()
- x86/debug, objtool: Annotate WARN()-related UD2 as reachable
- x86/debug: Use UD2 for WARN()
- x86/speculation: Fix up array_index_nospec_mask() asm constraint
- nospec: Move array_index_nospec() parameter checking into separate macro
- x86/speculation: Add <asm/msr-index.h> dependency
- x86/mm: Rename flush_tlb_single() and flush_tlb_one() to __flush_tlb_one_[user|kernel]()
- selftests/x86/mpx: Fix incorrect bounds with old _sigfault
- x86/cpu: Rename cpu_data.x86_mask to cpu_data.x86_stepping
- x86/specrte: Fix an error message
- x86/cpu: Change type of x86_cache_size variable to unsigned int
- x86/entry/64: Fix CR3 restore in paranoid_exit()
- drm/ttm: Don't add swapped BOs to swap-LRU list
- drm/ttm: Fix 'buf' pointer update in ttm_bo_vm_access_kmap() (v2)
- drm/qxl: unref cursor bo when finished with it
- drm/qxl: reapply cursor after resetting primary
- drm/amd/powerplay: Fix smu_table_entry.handle type
- drm/ast: Load lut in crtc_commit
- drm: Check for lessee in DROP_MASTER ioctl
- arm64: Add missing Falkor part number for branch predictor hardening
- drm/radeon: Add dpm quirk for Jet PRO (v2)
- drm/radeon: adjust tested variable
- x86/smpboot: Fix uncore_pci_remove() indexing bug when hot-removing a physical CPU
- rtc-opal: Fix handling of firmware error codes, prevent busy loops
- mbcache: initialize entry->e_referenced in mb_cache_entry_create()
- mmc: sdhci: Implement an SDHCI-specific bounce buffer
- mmc: bcm2835: Don't overwrite max frequency unconditionally
- Revert "mmc: meson-gx: include tx phase in the tuning process"
- mlx5: fix mlx5_get_vector_affinity to start from completion vector 0
- Revert "apple-gmux: lock iGP IO to protect from vgaarb changes"
+  - jbd2: fix sphinx kernel-doc build warnings
+  - ext4: fix a race in the ext4 shutdown path
+  - ext4: save error to disk in __ext4_grp_locked_error()
+  - ext4: correct documentation for grpid mount option
+  - mm: hide a #warning for COMPILE_TEST
+  - mm: Fix memory size alignment in devm_memremap_pages_release()
+  - MIPS: Fix typo BIG_ENDIAN to CPU_BIG_ENDIAN
+  - MIPS: CPS: Fix MIPS_ISA_LEVEL_RAW fallout
+  - MIPS: Fix incorrect mem=X@Y handling
+  - PCI: Disable MSI for HiSilicon Hip06/Hip07 only in Root Port mode
+  - PCI: iopro: Fix NULL pointer dereference for BCMA
+  - PCI: pciehp: Assume NoCompl+ for Thunderbolt ports
+  - PCI: keystone: Fix interrupt-controller-node lookup
+  - video: fbdev: atmel_lcdfb: fix display-timings lookup
+  - console/dummy: leave _con_font_get set to NULL
+  - rbd: whitelist RBD_FEATURE_OPERATIONS feature bit
+  - xen: Fix {set,clear}_foreign_p2m_mapping on autotranslating guests
+  - xenbus: track caller request id
+  - seq_file: fix incomplete reset on read from zero offset
+  - tracing: Fix parsing of globs with a wildcard at the beginning
+  - mpls, nospec: Sanitize array index in mpls_label_ok()
+  - rtlwifi: rt8821ae: Fix connection lost problem correctly
+  - arm64: proc: Set PTE_NG for table entries to avoid traversing them twice
+  - xprtdma: Fix calculation of ri_max_send_sges
+  - xprtdma: Fix BUG after a device removal
+  - blk-wbt: account flush requests correctly
+  - target/scsi: avoid NULL dereference in CHAP auth error path
+  - iscsi-target: make sure to wake up sleeping login worker
+  - dm: correctly handle chained bios in dec_pending()
+  - Btrfs: fix deadlock in run_delalloc_nocow
+  - Btrfs: fix crash due to not cleaning up tree log block's dirty bits
+  - Btrfs: fix extent state leak from tree log
+  - Btrfs: fix btrfs_evict_inode to handle abnormal inodes correctly
+  - Btrfs: fix use-after-free on root->orphan_block_rsv
+  - Btrfs: fix unexpected -EEXIST when creating new inode
+  - 9p/trans_virtio: discard zero-length reply
+  - ALSA: usb-audio: Fix UAC2 get_ctl request with a RANGE attribute
+  - ALSA: hda/realtek - Add headset mode support for Dell laptop
+  - ALSA: hda/realtek - Enable Thinkpad Dock device for ALC298 platform
+  - ALSA: hda/realtek: PCI quirk for Fujitsu U7x7
+  - ALSA: usb-audio: add implicit fb quirk for Behringer UFX1204
+  - ALSA: usb: add more device quirks for USB DSD devices
+  - ALSA: seq: Fix racy pool initializations
+  - mvp2: fix multicast address filter
+  - usb: Move USB_UHCI_BIG_ENDIAN_* out of USB_SUPPORT
+  - x86/mm, mm/hwpoison: Don't unconditionally unmap kernel 1:1 pages
+  - ARM: dts: exynos: fix RTC interrupt for exynos5410
+ - ARM: pxa/tosa-bt: add MODULE_LICENSE tag
+ - arm64: dts: msm8916: Add missing #phy-cells
+ - ARM: dts: s5pv210: add interrupt-parent for ohci
+ - arm: dts: mt7623: Update ethsys binding
+ - arm: dts: mt2701: Add reset-cells
+ - ARM: dts: Delete bogus reference to the charlcd
+ - media: r820t: fix r820t_write_reg for KASAN
+ - mmc: sdhci-of-esdhc: fix eMMC couldn't work after kexec
+ - mmc: sdhci-of-esdhc: fix the mmc error after sleep on ls1046ardb
+ - Linux 4.15.5

+ * retpoline abi files are empty on i386 (LP: #1751021)
+ - [Packaging] retpoline-extract -- instantiate retpoline files for i386
+ - [Packaging] final-checks -- sanity checking ABI contents
+ - [Packaging] final-checks -- check for empty retpoline files
+ - [Config] Disable i386 retpoline check for next upload

+ * Bionic update to v4.15.4 stable release (LP: #1751064)
+ - watchdog: indydog: Add dependency on SGI_HAS_INDYDOG
+ - cifs: Fix missing put_xid in cifs_file_strict_mmap
+ - cifs: Fix autonegotiate security settings mismatch
+ - CIFS: zero sensitive data when freeing
+ - cpufreq: mediatek: add mediatek related projects into blacklist
+ - dmaengine: dmatest: fix container_of member in dmatest_callback
+ - ssb: Do not disable PCI host on non-Mips
+ - watchdog: gpio_wdt: set WDOG_HW_RUNNING in gpio_wdt_stop
+ - Revert "drm/i915: mark all device info struct with __initconst"
+ - sched/rt: Use container_of() to get root domain in rto_push_irq_work_func()
+ - sched/rt: Up the root domain ref count when passing it around via IPIs
+ - media: dvb-usb-v2: lmedm04: Improve logic checking of warm start
+ - media: dvb-usb-v2: lmedm04: move ts2020 attach to dm04_lme2510_tuner
+ - media: hdhpvr: Fix an error handling path in hdhpvr_probe()
+ - arm64: mm: Use non-global mappings for kernel space
+ - arm64: mm: Temporarily disable ARM64_SW_TTBR0_PAN
+ - arm64: mm: Move ASID from TTBR0 to TTBR1
+ - arm64: mm: Remove pre_ttb0_update_workaround for Falkor erratum #E1003
+ - arm64: mm: Rename post_ttb0_update_workaround
+ - arm64: mm: Fix and re-enable ARM64_SW_TTBR0_PAN
+ - arm64: mm: Allocate ASIDs in pairs
+ - arm64: mm: Add arm64_kernel_unmapped_at_el0 helper
+ - arm64: mm: Invalidate both kernel and user ASIDs when performing TLBI
+ - arm64: entry: Add exception trampoline page for exceptions from EL0
+ - arm64: mm: Map entry trampoline into trampoline and kernel page tables
+ - arm64: entry: Explicitly pass exception level to kernel_ventry macro
+ - arm64: entry: Hook up entry trampoline to exception vectors
+ - arm64: erratum: Work around Falkor erratum #E1003 in trampoline code
+ - arm64: cpu_errata: Add Kryo to Falkor 1003 errata
+ - arm64: tls: Avoid unconditional zeroing of tpidro_el0 for native tasks
+ - arm64: entry: Add fake CPU feature for unmapping the kernel at EL0
+ - arm64: kaslr: Put kernel vectors address in separate data page
+ - arm64: use RET instruction for exiting the trampoline
+ - arm64: Kconfig: Add CONFIG_UNMAP_KERNEL_AT_EL0
+ - arm64: Kconfig: Reword UNMAP_KERNEL_AT_EL0 kconfig entry
+ - arm64: Take into account ID_AA64PFR0_EL1.CSV3
+ - arm64: capabilities: Handle duplicate entries for a capability
+ - arm64: mm: Introduce TTBR_ASID_MASK for getting at the ASID in the TTBR
+ - arm64: kpti: Fix the interaction between ASID switching and software PAN
+ - arm64: cputype: Add MIDR values for Cavium ThunderX2 CPUs
+ - arm64: kpti: Make use of nG dependent on arm64_kernel_unmapped_at_el0()
+ - arm64: mm: Permit transitioning from Global to Non-Global without BBM
+ - arm64: kpti: Add ->enable callback to remap swapper using nG mappings
+ - arm64: Force KPTI to be disabled on Cavium ThunderX
+ - arm64: entry: Reword comment about post_ttbr_update_workaround
+ - arm64: idmap: Use "awx" flags for .idmap.text .pushsection directives
+ - perf: arm_spe: Fail device probe when arm64_kernel_unmapped_at_el0()
+ - arm64: barrier: Add CSDB macros to control data-value prediction
+ - arm64: Implement array_index_mask_nospec()
+ - arm64: Make USER_DS an inclusive limit
+ - arm64: Use pointer masking to limit uaccess speculation
+ - arm64: entry: Ensure branch through syscall table is bounded under speculation
+ - arm64: uaccess: Prevent speculative use of the current addr_limit
+ - arm64: uaccess: Don't bother eliding access_ok checks in __{get, put}_user
+ - arm64: uaccess: Mask __user pointers for __arch_{clear, copy_*}_user
+ - arm64: futex: Mask __user pointers prior to dereference
+ - arm64: cpufeature: __this_cpu_has_cap() shouldn't stop early
+ - arm64: Run enable method for errata work arounds on late CPUs
+ - arm64: cpufeature: Pass capability structure to ->enable callback
+ - drivers/firmware: Expose psci_get_version through psci_ops structure
+ - arm64: Move post_ttbr_update_workaround to C code
+ - arm64: Add skeleton to harden the branch predictor against aliasing attacks
+ - arm64: Move BP hardening to check_and_switch_context
+ - arm64: KVM: Use per-CPU vector when BP hardening is enabled
+ - arm64: entry: Apply BP hardening for high-priority synchronous exceptions
+ - arm64: entry: Apply BP hardening for suspicious interrupts from EL0
+ - arm64: cpufeature: Add missing MIDR values for Cortex-A72 and Cortex-A75
+ - arm64: Implement branch predictor hardening for affected Cortex-A CPUs
+ - arm64: Implement branch predictor hardening for Falkor
+ - arm64: Branch predictor hardening for Cavium ThunderX2
+ - arm64: KVM: Increment PC after handling an SMC trap
+ - arm/arm64: KVM: Consolidate the PSCI include files
+ - arm/arm64: KVM: Add PSCI_VERSION helper
+ - arm/arm64: KVM: Add smccc accessors to PSCI code
+ - arm/arm64: KVM: Implement PSCI 1.0 support
+ - arm/arm64: KVM: Advertise SMCCC v1.1
+ - arm64: KVM: Make PSCI_VERSION a fast path
+ arm/arm64: KVM: Turn kvm_psci_version into a static inline
+ arm/arm64: KVM: Report SMCCC_ARCH_WORKAROUND_1 BP hardening support
+ arm64: KVM: Add SMCCC_ARCH_WORKAROUND_1 fast handling
+ firmware/psci: Expose PSCI conduit
+ firmware/psci: Expose SMCCC version through psci_ops
+ arm/arm64: smccc: Make function identifiers an unsigned quantity
+ arm/arm64: smccc: Implement SMCCC v1.1 inline primitive
+ arm64: KVM: Add SMCCC_ARCH_WORKAROUND_1 fast handling
+ arm64: Kill PSCI_GET_VERSION as a variant-2 workaround
+ mtd: cfi: convert inline functions to macros
+ mtd: nand: brcmnand: Disable prefetch by default
+ mtd: nand: Fix nand_do_read_oob() return value
+ mtd: nand: sunxi: Fix ECC strength choice
+ ubi: Fix race condition between ubi volume creation and udev
+ ubi: fastmap: Erase outdated anchor PEBs during attach
+ ubi: block: Fix locking for idr_alloc/idr_remove
+ ubifs: free the encrypted symlink target
+ nfs/pnfs: fix nfs_direct_req ref leak when i/o falls back to the mds
+ nfs41: do not return ENOMEM on LAYOUTUNAVAILABLE
+ NFS: Add a cond_resched() to nfs_commit_release_pages()
+ NFS: Fix nfsstat breakage due to LOOKUP
+ NFS: commit direct writes even if they fail partially
+ NFS: reject request for id_legacy key without auxdata
+ NFS: Fix a race between mmap() and O_DIRECT
+ nfsd: Detect unhashed stids in nfsd4_verify_open_stid()
+ kernfs: fix regression in kernfs_fop_write caused by wrong type
+ ahci: Annotate PCI ids for mobile Intel chipsets as such
+ ahci: Add PCI ids for Intel Bay Trail, Cherry Trail and Apollo Lake AHCI
+ ahci: Add Intel Cannon Lake PCH-H PCI ID
+ crypto: hash - introduce crypto_hash_alg_has_setkey()
+ crypto: cryptd - pass through absence of ->setkey()
+ crypto: mrcryptd - pass through absence of ->setkey()
+ crypto: poly1305 - remove ->setkey() method
+ crypto: hash - annotate algorithms taking optional key
+ crypto: hash - prevent using keyed hashes without setting key
+ media: v4l2-ioctl.c: use check_fmt for enum/g/s/try_fmt
+ media: v4l2-ioctl.c: don't copy back the result for -ENOTTY
+ media: v4l2-compat-ioctl32.c: add missing VIDIOC_PREPARE_BUF

+ - media: dt-bindings/media/cec-gpio.txt: mention the CEC/HPD max voltages
+ - media: ts2020: avoid integer overflows on 32 bit machines
+ - media: vivid: fix module load error when enabling fb and no_error_inj=1
+ - media: cxusb, dib0700: ignore XC2028_I2C_FLUSH
+ - fs/proc/kcore.c: use probe_kernel_read() instead of memcpy()
+ - kernel/async.c: revert "async: simplify lowest_in_progress()"
+ - kernel/relay.c: revert "kernel/relay.c: fix potential memory leak"
+ - pipe: actually allow root to exceed the pipe buffer limits
+ - pipe: fix off-by-one error when checking buffer limits
+ - HID: quirks: Fix keyboard + touchpad on Toshiba Click Mini not working
+ - Bluetooth: btstdio: Do not bind to non-removable BCM43341
+ - ipmi: use dynamic memory for DMI driver override
+ - signal/openrisc: Fix do_unaligned_access to send the proper signal
+ - signal/sh: Ensure si_signo is initialized in do_divide_error
+ - alpha: fix crash if pthread_create races with signal delivery
+ - alpha: osf_sys.c: fix put_tv32 regression
+ - alpha: Fix mixed up args in EXC macro in futex operations
+ - alpha: fix reboot on Avanti platform
+ - alpha: fix formatting of stack content
+ - xtensa: fix futex_atomic_cmpxchg_inatomic
+ - EDAC, octeon: Fix an uninitialized variable warning
+ - genirq: Make legacy autoprobing work again
+ - pinctrl: intel: Initialize GPIO properly when used through irqchip
+ - pinctrl: mcp23s08: fix irq setup order
+ - pinctrl: sx150x: Unregister the pinctrl on release
+ - pinctrl: sx150x: Register pinctrl before adding the gpiochip
+ - pinctrl: sx150x: Add a static gpio/pinctrl pin range mapping
+ - pktcdvd: Fix pkt_setup_dev() error path
+ - pktcdvd: Fix a recently introduced NULL pointer dereference
+ - blk-mq: quiesce queue before freeing queue
+ - clocksource/drivers/stm32: Fix kernel panic with multiple timers
+ - lib/ubsan.c: s/missaligned/misaligned/
+ - lib/ubsan: add type mismatch handler for new GCC/Clang
+ - objtool: Fix switch-table detection
+ - arm64: dts: marvell: add Ethernet aliases
+ - drm/i915: Avoid PPS HW/SW state mismatch due to rounding
+ - ACPI: sbshc: remove raw pointer from printk() message
+ - acpi, nfit: fix register dimm error handling
+ - ovl: force r/o mount when index dir creation fails
+ - ovl: fix failure to fsync lower dir
+ - ovl: take mnt_want_write() for work/index dir setup
+ - ovl: take mnt_want_write() for removing impure xattr
+ - ovl: hash directory inodes for fsnotify
+ - mm10300/misalignment: Use SIGSEGV SEGV_MAPERR to report a failed user copy
+ - devpts: fix error handling in devpts_mntget()
+ - ftrace: Remove incorrect setting of glob search field
+ - scsi: core: Ensure that the SCSI error handler gets woken up
+ - scsi: lpfc: Fix crash after bad bar setup on driver attachment
+ - scsi: cxlflash: Reset command ioasc
+ - rcu: Export init_rcu_head() and destroy_rcu_head() to GPL modules
+ - Linux 4.15.4
+ - updateconfigs after v4.14.4 stable updates

+ * Bionic update to v4.15.4 stable release (LP: #1751064) // CVE-2017-5754 and
do not need KPTI when KASLR is off.
+ - arm64: Turn on KPTI only on CPUs that need it
+ * Miscellaneous Ubuntu changes
+ - [Config] fix up removed retpoline call sites

+ Bionic update to v4.15.2 stable release (LP: #1748072)
  * KVM: x86: Make indirect calls in emulator speculation safe
  * KVM: VMX: Make indirect call speculation safe
  * module/retpoline: Warn about missing retpoline in module
  * x86/cpufeatures: Add CPUID_7_EDX CPUID leaf
  * x86/cpufeatures: Add Intel feature bits for Speculation Control
  * x86/cpufeatures: Add AMD feature bits for Speculation Control
  * x86/msr: Add definitions for new speculation control MSR
  * x86/pti: Do not enable PTI on CPUs which are not vulnerable to Meltdown
  * x86/cpufeature: Blacklist SPEC_CTRL/PRED_CMD on early Spectre v2 microcodes
  * x86/speculation: Add basic IBPB (Indirect Branch Prediction Barrier) support
  * x86/alternative: Print unadorned pointers
  * x86/nospec: Fix header guards names
  * x86/bugs: Drop one "mitigation" from dmesg
- x86/cpu/bugs: Make retpoline module warning conditional
- x86/cpufeatures: Clean up Spectre v2 related CPUID flags
- x86/retpoline: Simplify vmexit_fill_RSB()
- x86/speculation: Simplify indirect_branch_prediction_barrier()
- auxdisplay: img-ascii-led: add missing MODULE_DESCRIPTION/AUTHOR/LICENSE
- iio: adc/accel: Fix up module licenses
- pinctrl: pxa: pxa2xx: add missing MODULE_DESCRIPTION/AUTHOR/LICENSE
- ASoC: pcm512x: add missing MODULE_DESCRIPTION/AUTHOR/LICENSE
- KVM: nVMX: Eliminate vmcs02 pool
- KVM: VMX: introduce alloc_loaded_vmcs
- objtool: Improve retpoline alternative handling
- objtool: Add support for alternatives at the end of a section
- objtool: Warn on stripped section symbol
- x86/mm: Fix overlap of i386 CPU ENTRY AREA with FIX_BTMAP
- x86/spec: Check CONFIG_RETPOLINE in command line parser
- x86/entry/64: Remove the SYSCALL64 fast path
- x86/entry/64: Push extra regs right away
- x86/asm: Move 'status' from thread_struct to thread_info
- Documentation: Document array_index_nospec
- array_index_nospec: Sanitize speculative array de-references
- x86: Implement array_index_mask_nospec
- x86: Introduce barrier_nospec
- x86: Introduce __uaccess_begin_nospec() and uaccess_try_nospec
- x86/usercopy: Replace open coded stac/clac with __uaccess_{begin, end}
- x86/uaccess: Use __uaccess_begin_nospec() and uaccess_try_nospec
- x86/get_user: Use pointer masking to limit speculation
- x86/syscall: Sanitize syscall table de-references under speculation
- vfs, ftable: Prevent bounds-check bypass via speculative execution
- nl80211: Sanitize array index in parse_rxq_params
- x86/spec: Report get_user mitigation for spectre_v1
- x86/spec: Fix spelling mistake: "vunerable" -> "vulnerable"
- x86/cpuuid: Fix up "virtual" IBRS/IBPB/STIBP feature bits on Intel
- x86/speculation: Use Indirect Branch Prediction Barrier in context switch
- x86/paravirt: Remove 'noreplace-paravirt' cmdline option
- KVM: VMX: make MSR bitmaps per-VCPU
- x86/kvm: Update spectre_v1 mitigation
- x86/retpoline: Avoid retpolines for built-in __init functions
- x86/spec: Simplify spectre_v2 command line parsing
- x86/pti: Mark constant arrays as __initconst
- x86/speculation: Fix typo IBRS_ATT, which should be IBRS_ALL
- KVM/x86: Update the reverse_cpuid list to include CPUID_7_EDX
- KVM/x86: Add IBPB support
- KVM/VMX: Emulate MSR_IA32_ARCH_CAPABILITIES
- KVM/VMX: Allow direct access to MSR_IA32_SPEC_CTRL
- KVM/SVM: Allow direct access to MSR_IA32_SPEC_CTRL
- serial: core: mark port as initialized after successful IRQ change
- fpga: region: release of_parse_phandle nodes after use
- Linux 4.15.2
Add support for the NIC on SynQuacer E-Series boards (LP: #1747792)
- net: phy: core: remove now unneeded disabling of interrupts
- [Config] CONFIG_NET_VENDOR_SOCIONEXT=y & CONFIG_SNI_NETSEC=m
- net: socionext: Add Synquacer NetSec driver
- net: socionext: include linux/io.h to fix build
- net: socionext: Fix error return code in netsec_netdev_open()

- [Artful/Bionic] [Config] enable EDAC_GHES for ARM64 (LP: #1747746)
- [Config] CONFIG_EDAC_GHES=y

- support thunderx2 vendor pmu events (LP: #1747523)
  - perf pmu: Pass pmu as a parameter to get_cpuid_str()
  - perf tools arm64: Add support for get_cpuid_str function.
  - perf pmu: Add helper function is_pmu_core to detect PMU CORE devices
  - perf vendor events arm64: Add ThunderX2 implementation defined pmu core events
  - perf pmu: Add check for valid cpuid in perf_pmu__find_map()

  - SAUCE: mm: disable vma based swap readahead by default
  - SAUCE: mm: fix memory hotplug in ZONE_HIGHPAGE

- Miscellaneous Ubuntu changes
  - [Config] Fix CONFIG_PROFILE_ALL_BRANCHES annotations

-- Seth Forshee <seth.forshee@canonical.com>  Wed, 07 Feb 2018 21:13:27 -0600

+linux (4.15.0-7.8) bionic; urgency=medium
+* Bionic update to v4.15.1 stable release (LP: #1747169)
+ Bluetooth: hci_serdev: Init hci_uart proto_lock to avoid oops
+ tools/gpio: Fix build error with musl libc
+ gpio: stmpe: i2c transfer are forbidden in atomic context
+ gpio: Fix kernel stack leak to userspace
+ ALSA: hda - Reduce the suspend time consumption for ALC256
+ crypto: ecdh - fix typo in KPP dependency of CRYPTO_ECDH
+ crypto: aesni - handle zero length dst buffer
+ crypto: aesni - fix typo in generic(gcaes decrypt
+ crypto: aesni - add wrapper for generic gcm(aes)
+ crypto: aesni - Fix out-of-bounds access of the data buffer in generic-gcm-aesni
+ crypto: aesni - Fix out-of-bounds access of the AAD buffer in generic-gcm-aesni
+ crypto: inside-secure - fix hash when length is a multiple of a block
+ crypto: inside-secure - avoid unmapping DMA memory that was not mapped
+ crypto: sha3-generic - fixes for alignment and big endian operation
+ crypto: af_alg - whitelist mask and type
+ - HID: wacom: EKR: ensure devres groups at higher indexes are released
+ - HID: wacom: Fix reporting of touch toggle (WACOM_HID_WD_MUTE_DEVICE) events
+ - power: reset: zx-reboot: add missing MODULE_DESCRIPTION/AUTHOR/LICENSE
+ - gpio: iop: add missing MODULE_DESCRIPTION/AUTHOR/LICENSE
+ - gpio: ath79: add missing MODULE_DESCRIPTION/LICENSE
+ - mtd: nand: denali_pci: add missing MODULE_DESCRIPTION/LICENSE
+ - igb: Free IRQs when device is hotplugged
+ - ima/policy: fix parsing of fsuuid
+ - scsi: aacraid: Fix udev inquiry race condition
+ - scsi: aacraid: Fix hang in kdump
+ - scsi: storvsc: missing error code in storvsc_probe()
+ - staging: lustre: separate a connection destroy from free struct kib_conn
+ - staging: ccree: NULLify backup_info when unused
+ - staging: ccree: fix fips event irq handling build
+ - tty: fix data race between tty_init_dev and flush of buf
+ - usb: option: Add support for FS040U modem
+ - USB: serial: pl2303: new device id for Chilitag
+ - USB: cdc-acm: Do not log urb submission errors on disconnect
+ - CDC-ACM: apply quirk for card reader
+ - USB: serial: io_edgeport: fix possible sleep-in-atomic
+ - usbip: prevent bind loops on devices attached to vhci_hcd
+ - usbip: list: don't list devices attached to vhci_hcd
+ - USB: serial: simple: add Motorola Tetra driver
+ - usb: f_fs: Prevent gadget unbind if it is already unbound
+ - usb: uas: unconditionally bring back host after reset
+ - usb/gadget: Fix "high bandwidth" check in usb_gadget_ep_match_desc()
+ - ANDROID: binder: remove waitqueue when thread exits.
+ - android: binder: use VM_ALLOC to get vm area
+ - mei: me: allow runtime pm for platform with D0i3
+ - serial: 8250_of: fix return code when probe function fails to get reset
+ - serial: 8250_uniphier: fix error return code in uniphier_uart_probe()
+ - serial: 8250_dw: Revert "Improve clock rate setting"
+ - serial: imx: Only wakeup via RTSDEN bit if the system has RTS/CTS
+ - spi: imx: do not access registers while clocks disabled
+ - iio: adc: stm32: fix scan of multiple channels with DMA
+ - iio: chemical: ccs811: Fix output of IIO_CONCENTRATION channels
+ - test_firmware: fix missing unlock on error in config_num_requests_store()
+ - Input: synaptics-rmi4 - unmask F03 interrupts when port is opened
+ - Input: synaptics-rmi4 - do not delete interrupt memory too early
+ - x86/efi: Clarify that reset attack mitigation needs appropriate userspace
+ - Linux 4.15.1

+ Dell XPS 13 9360 bluetooth (Atheros) won't connect after resume
+ (LP: #1744712)
+ - Revert "Bluetooth: btusb: fix QCA Rome suspend/resume"
+ - Bluetooth: btusb: Restore QCA Rome suspend/resume fix with a "rewritten"
+ version
+ * apparmor profile load in stacked policy container fails (LP: #1746463)
+ - SAUCE: apparmor: fix display of .ns_name for containers
+
+ -- Seth Forshee <seth.forshee@canonical.com> Sun, 04 Feb 2018 11:56:32 +0100
+
+linux (4.15.0-6.7) bionic; urgency=low
+
+ * upload urgency should be medium by default (LP: #1745338)
+ - [Packaging] update urgency to medium by default
+
+ * Shutdown hang on 16.04 with iscsi targets (LP: #1569925)
+ - scsi: libiscsi: Allow sd_shutdown on bad transport
+
+ * Miscellaneous Ubuntu changes
+ - SAUCE: (noup) Update spl to 0.7.5-1ubuntu1, zfs to 0.7.5-1ubuntu1
+ - Revert "UBUNTU: SAUCE: mm: fix memory hotplug in ZONE_HIGMEM"
+ - Revert "UBUNTU: SAUCE: mm: disable vma based swap readahead by default"
+
+ [ Upstream Kernel Changes ]
+
+ * Rebase to v4.15
+

+ * linux: 4.14.0-11.13 -proposed tracker (LP: #1736168)
+ * CVE-2017-1000405
+ - mm, thp: Do not make page table dirty unconditionally in touch_p[mu]d()
+ * linux 4.14.0-7.9 ADT test failure with linux 4.14.0-7.9 (LP: #1732463)
+ - SAUCE: mm: disable vma based swap readahead by default
+ - SAUCE: mm: fix memory hotplug in ZONE_HIGHMEM
+ * Bionic update to v4.14.3 stable release (LP: #1735843)
+ - s390: fix transactional execution control register handling
+ - s390/noexec: execute kexec datamover without DAT
+ - s390/runtime instrumentation: fix possible memory corruption
+ - s390/guarded storage: fix possible memory corruption
+ - s390/disassembler: add missing end marker for e7 table
+ - s390/disassembler: increase show_code buffer size
+ - ACPI / PM: Fix acpi_pm_notifier_lock vs flush_workqueue() deadlock
+ - ACPI / EC: Fix regression related to triggering source of EC event handling
+ - cpufreq: schedutil: Reset cached_raw_freq when not in sync with next_freq
+ - serdev: fix registration of second slave
+ - sched: Make resched_cpu() unconditional
+ - lib/mpi: call cond_resched() from mpi_pown() loop
+ - x86/booth: Fix boot failure when SMP MP-table is based at 0
+ - x86/decoder: Add new TEST instruction pattern
+ - x86/entry/64: Fix entry_SYSCALL_64_after_hwframe() IRQ tracing
+ - perf/x86/intel: Hide TSX events when RTM is not supported
+ - perf: archspecific pte_access_permitted()
+ - ARM: 8722/1: mm: make STRICT_KERNEL_RWX effective for LPAE
+ - ARM: 8721/1: mm: dump: check hardware RO bit for LPAE
+ - uapi: fix linux/tls.h userspace compilation error
+ - uapi: fix linux/rrxcpc.h userspace compilation errors
+ - MIPS: cmpxchg64() and HAVE_VIRT_CPU_ACCOUNTING_GEN don't work for 32-bit SMP
+ - MIPS: ralink: Fix MT7628 pimmux
+ - MIPS: ralink: Fix typo in mt7628 pymux function
+ - net: mvneta: fix handling of the Tx descriptor counter
+ - nbd: wait uninterruptible for the dead timeout
+ - nbd: don't start req until after the dead connection logic
+ - PM / OPP: Add missing of_node_put(np)
+ - PCI/ASPM: Account for downstream device's Port Common_Mode_Restore_Time
+ - PCI/ASPM: Use correct capability pointer to program LTR_L1.2_THRESHOLD
+ - PCI: hv: Use effective affinity mask
+ - PCI: Set Cavium ACS capability quirk flags to assert RR/CR/SV/UF
+ - PCI: Apply Cavium ThunderX ACS quirk to more Root Ports
+ - ALSA: hda: Add Raven PCI ID
+ - dm integrity: allow unaligned bv_offset
+ - dm cache: fix race condition in the writeback mode overwrite_bio
+ - optimisation
+ - dm crypt: allow unaligned bv_offset
+ - dm zoned: ignore last smaller runt zone
+ - dm mpath: remove annoying message of 'blk_get_request() returned -11'
+ - dm bufio: fix integer overflow when limiting maximum cache size
+ - ovl: Put upperdentry if ovl_check_origin() fails
+ - dm: allocate struct mapped_device with kvzalloc
+ - sched/rt: Simplify the IPI based RT balancing logic
+ - MIPS: pci: Remove KERN_WARN instance inside the mt7620 driver
+ - dm: fix race between dm_get_from_kobject() and __dm_destroy()
+ - dm: discard support requires all targets in a table support discards
+ - MIPS: Fix odd fp register warnings with MIPS64r2
+ - MIPS: Fix MIPS64 FP save/restore on 32-bit kernels
+ - MIPS: dts: remove bogus bcm96358nb4ser.dtb from dtb-y entry
+ - MIPS: Fix an n32 core file generation regset support regression
+ - MIPS: BCM47XX: Fix LED inversion for WRT54GSv1
+ - MIPS: math-emu: Fix final emulation phase for certain instructions
+ - rt2x00usb: mark device removed when get ENOENT usb error
+ - mm/z3fold.c: use kref to prevent page free/compact race
+ - autofs: don't fail mount for transient error
+ - nilfs2: fix race condition that causes file system corruption
+ - fscrypt: lock mutex before checking for bounce page pool
+ - eCryptfs: use after free in ecryptfs_release_messaging()
+ - libceph: don't WARN() if user tries to add invalid key
+ - bcache: check ca->alloc_thread initialized before wake up it
+ - fs: guard_bio_eod() needs to consider partitions
+ - fANotify: fix fsnotify_prepare_user_wait() failure
+ - isoFs: fix timestamps beyond 2027
+ - btrfs: change how we decide to commit transactions during flushing
+ - f2fs: expose some sectors to user in inline data or dentry case
+ - NFS: Fix typo in nomigration mount option
+ - NFS: Revert "NFS: Move the flock open mode check into nfs_flock()"
+ - nfs: Fix ugly referral attributes
+ - NFS: Avoid RCU usage in tracepoints
+ - NFS: revalidate ",,” etc correctly on "open".
+ - nfsd: deal with revoked delegations appropriately
+ - rtlwifi: rtl8192ee: Fix memory leak when loading firmware
+ - rtlwifi: fix uninitialized rtlhal->last_suspend_sec time
+ - iwlfwifi: fix firmware names for 9000 and A000 series hw
+ - md: fix deadlock error in recent patch.
+ - md: don't check MD_SB_CHANGE_CLEAN in md_allow_write
+ - Bluetooth: btqcomsmd: Add support for BD address setup
+ - md(bitmap): revert a patch
+ - fsnotify: clean up fsnotify_prepare/finish_user_wait()
+ - fsnotify: pin both inode and vfsmount mark
+ - fsnotify: fix pinning group in fsnotify_prepare_user_wait()
+ - ata: fixes kernel crash while tracing ata eh_link_autopsy event
+ - ext4: fix interaction between i_size, fallocate, and delalloc after a crash
+ - ext4: prevent data corruption with inline data + DAX
+ - ext4: prevent data corruption with journaling + DAX
+ - ALSA: pcm: update tsamp only if audio tsamp changed
+ - ALSA: usb-audio: Add sanity checks to FE parser
+ - ALSA: usb-audio: Fix potential out-of-bound access at parsing SU
+ - ALSA: usb-audio: Add sanity checks in v2 clock parsers
+ - ALSA: timer: Remove kernel warning at compat ioctl error paths
+ - ALSA: hda/realtek - Fix ALC275 no sound issue
+ - ALSA: hda: Fix too short HDMI/DP chmap reporting
+ - ALSA: hda - Fix yet remaining issue with vmaster 0dB initialization
+ - ALSA: hda/realtek - Fix ALC700 family no sound issue
+ - ASoC: sun8i-codec: Invert Master / Slave condition
+ - ASoC: sun8i-codec: Fix left and right channels inversion
+ - ASoC: sun8i-codec: Set the BCLK divider
+ - mfd: lpc_ich: Avoton/Rangeley uses SPI_BYT method
+ - fix a page leak in vhost_scsi iov_to_sgl() error recovery
+ - 9p: Fix missing commas in mount options
+ - fs/9p: Compare qid.path in v9fs_test_inode
+ - net/9p: Switch to wait_event_killable()
+ - scsi: qla2xxx: Suppress a kernel complaint in qla_init_base_qpairo()
+ - scsi: sd_zbc: Fix sd_zbc_read_zoned_characteristics()
+ - scsi: lpfc: fix pci hot plug crash in timer management routines
+ - scsi: lpfc: fix pci hot plug crash in list_add call
+ - scsi: lpfc: Fix crash receiving ELS while detaching driver
+ - scsi: lpfc: Fix FCP hba_wqidx assignment
+ - scsi: lpfc: Fix oops if nvmet_fc_register_targetport fails
+ - iscsi-target: Make TASK_REASSIGN use proper se_cmd->cmd_kref
+ - iscsi-target: Fix non-immediate TMR reference leak
+ - target: fix null pointer regression in core_tmr_drain_tmr_list
+ - target: fix buffer offset in core_scsi3_pri_read_full_status
+ - target: Fix QUEUE_FULL + SCSI task attribute handling
+ - target: Fix caw_sem leak in transport_generic_request_failure
+ - target: Fix quiese during transport write_pending_qf endless loop
+ - target: Avoid early CMD_T_PRE_EXECUTE failures during ABORT_TASK
+ - mtd: Avoid probe failures when mtd->dbg.dfs_dir is invalid
+ - mtd: nand: Export nand_reset() symbol
+ - mtd: nand: atmel: Actually use the PM ops
+ - mtd: nand: omap2: Fix subpage write
- mailbox: bcm-flexrm-mailbox: Fix FlexRM ring flush sequence
- p54: don't unregister leds when they are not initialized
- block: Fix a race between blk_cleanup_queue() and timeout handling
- raid1: prevent freeze_array/wait_all_barriers deadlock
- genirq: Track whether the trigger type has been set
- irqchip/gic-v3: Fix ppi-partitions lookup
- lockd: double unregister of inetaddr notifiers
- KVM: PPC: Book3S HV: Don't call real-mode XICS hypercall handlers if not enabled
- KVM: nVMX: set IDTR and GDTR limits when loading L1 host state
- KVM: SVM: obey guest PAT
- kvm: vmx: Reinstate state for CPUs without virtual NMI
- dax: fix PMD faults on zero-length files
- dax: fix general protection fault in dax_alloc_inode
- SUNRPC: Fix tracepoint storage issues with svc_recv and svc_rqst_status
- clk: ti: dra7-atl-clock: fix child-node lookups
- libnvmm, dimm: clear 'locked' status on successful DIMM enable
- libnvmm, pfn: make 'resource' attribute only readable by root
- libnvmm, namespace: fix label initialization to use valid seq numbers
- libnvmm, region : make 'resource' attribute only readable by root
- libnvmm, namespace: make 'resource' attribute only readable by root
- svcrdma: Preserve CB send buffer across retransmits
- IB/srpt: Do not accept invalid initiator port names
- IB/cm: Fix memory corruption in handling CM request
- IB/hfi1: Fix incorrect available receive user context count
- IB/srp: Avoid that a cable pull can trigger a kernel crash
- IB/core: Avoid crash on pkey enforcement failed in received MADs
- IB/core: Only maintain real QPs in the security lists
- KVM: PPC: Book3S HV: Don't call real-mode XICS hypercall handlers if not enabled
- powerpc: Fix boot on BOOK3S_32 with CONFIG STRICT_KERNEL_RWX
- powerpc/mm/radix: Fix crashes on Power9 DD1 with radix MMU and STRICT_RWX
- powerpc/perf/imc: Use cpu_to_node() not topology_physical_package_id()
- powerpc/signal: Properly handle return value from uprobe_deny_signal()
- powerpc/64s: Fix masking of SRR1 bits on instruction fault
- powerpc/64s/radix: Fix 128TB-512TB virtual address boundary case allocation
- powerpc/64s/hash: Fix 512T hint detection to use >= 128T
- powerpc/64s/hash: Fix 128TB-512TB virtual address boundary case allocation
- powerpc/64s/hash: Fix fork() with 512T process address space
+ - powerpc/64s/hash: Allow MAP_FIXED allocations to cross 128TB boundary
+ - media: Don't do DMA on stack for firmware upload in the AS102 driver
+ - media: rc: check for integer overflow
+ - media: rc: nec decoder should not send both repeat and keycode
+ - ex231xx-cards: fix NULL-deref on missing association descriptor
+ - media: v4l2-ctrl: Fix flags field on Control events
+ - media: venus: fix wrong size on dma_free
+ - media: venus: venc: fix bytesused v4l2_plane field
+ - media: venus: reimplement decoder stop command
+ - ARM64: dts: meson-gxl: Add alternate ARM Trusted Firmware reserved memory zone
+ - iwlwifi: fix wrong struct for a000 device
+ - iwlwifi: add a new a000 device
+ - iwlwifi: pcie: sort IDs for the 9000 series for easier comparisons
+ - iwlwifi: add new cards for a000 series
+ - iwlwifi: add new cards for 8265 series
+ - iwlwifi: add new cards for 8260 series
+ - iwlwifi: fix PCI IDs and configuration mapping for 9000 series
+ - iwlwifi: mvm: support version 7 of the SCAN_REQ_UMAC FW command
+ - e1000e: Fix error path in link detection
+ - e1000e: Fix return value test
+ - e1000e: Separate signaling for link check/link up
+ - e1000e: Avoid receiver overrun interrupt bursts
+ - e1000e: fix buffer overrun while the I219 is processing DMA transactions
+ - Linux 4.14.3
+
+ * Miscellaneous Ubuntu changes
+ - SAUCE: s390/topology: don't inline cpu_to_node
+ - SAUCE: (noup) Update spl to 0.7.3-1ubuntu1, zfs to 0.7.3-1ubuntu1

+  - bio: ensure __bio_clone_fast copies bi_partno
+  - af_netlink: ensure that NLMSG_DONE never fails in dumps
+  - vxlan: fix the issue that neigh proxy blocks all icmpv6 packets
+  - net: cdc_ncm: GetNtbFormat endian fix
+  - fealnx: Fix building error on MIPS
+  - net/scp: Always set scope_id in sctp_inet6_skb_msgname
+  - ima: do not update security ima if appraisal status is not INTEGRITY_PASS
+  - serial: omap: Fix EFR write on RTS deassertion
+  - serial: 8250_fintek: Fix finding base_port with activated SuperIO
+  - tpmm-dev-common: Reject too short writes
+  - rcu: Fix up pending cbs check in rcu_prepare_for_idle
+  - mm/pagewalk.c: report holes in hugetlb ranges
+  - ocfs2: fix cluster hang after a node dies
+  - ocfs2: should wait dio before inode lock in ocfs2_setattr() 
+  - ipmi: fix unsigned long underflow
+  - mm/page_alloc.c: broken deferred calculation
+  - mm/page_ext.c: check if page_ext is not prepared
+  - coda: fix 'kernel memory exposure attempt' in fsync
+  - ipmi: Prefer ACPI system interfaces over SMBIOS ones
+  - Linux 4.14.2
+
+ * Bionic update to v4.14.1 stable release (LP: #1734693)
+  - EDAC, sb_edac: Don't create a second memory controller if HA1 is not present
+  - dmaengine: dmatest: warn user when dma test times out
+  - media: imon: Fix null-ptr-deref in imon_probe
+  - media: dib0700: fix invalid dvb_detach argument
+  - crypto: dh - Fix double free of ctx->p
+  - crypto: dh - Don't permit 'p' to be 0
+  - crypto: dh - Don't permit 'key' or 'g' size longer than 'p'
+  - crypto: brcm - Explicity ACK mailbox message
+  - USB: early: Use new USB product ID and strings for DbC device
+  - USB: usbfs: compute urb->actual_length for isochronous
+  - USB: Add delay-init quirk for Corsair K70 LUX keyboards
+  - usb: gadget: f_fs: Fix use-after-free in ffs_free_inst
+  - USB: serial: metro-usb: stop I/O after failed open
+  - USB: serial: Change DbC debug device binding ID
+  - USB: serial: qcserial: add pid/vid for Sierra Wireless EM7355 fw update
+  - USB: serial: garmin_gps: fix I/O after failed probe and remove
+  - USB: serial: garmin_gps: fix memory leak on probe errors
+ selftests/x86/protection_keys: Fix syscall NR redefinition warnings
+ x86/MCE/AMD: Always give panic severity for UC errors in kernel context
+ platform/x86: peaq-wmi: Add DMI check before binding to the WMI interface
+ platform/x86: peaq_wmi: Fix missing terminating entry for peaq_dmi_table
+ HID: cp2112: add HIDRAW dependency
+ HID: wacom: generic: Recognize WACOM_HID_WD_PEN as a type of pen collection
+ rpmsg: glink: Add missing MODULE_LICENSE
+ staging: wlc1000: Fix bssid buffer offset in Txq
+ staging: sm750fb: Fix parameter mistake in poke32
+ staging: ccree: fix 64 bit scatter/gather DMA ops
+ staging: greybus: spilib: fix use-after-free after deregistration
+ staging: rtl8188eu: Revert 4 commits breaking ARP
+ spi: fix use-after-free at controller deregistration
+ sparc32: Add cmpxchg64().
+ sparc64: mmu_context: Add missing include files
+ sparc64: Fix page table walk for PUD hugepages
+ Linux 4.14.1

+
+ * ThunderX: soft lockup on 4.8+ kernels when running qemu-efi with vhost=on
+ (LP: #1673564)
+ - arm64: Add a facility to turn an ESR syndrome into a sysreg encoding
+ - KVM: arm/arm64: vgic-v3: Add accessors for the ICH_APxRn_EL2 registers
+ - KVM: arm64: Make kvm_condition_valid32() accessible from EL2
+ - KVM: arm64: vgic-v3: Add hook to handle guest GICv3 sysreg accesses at EL2
+ - KVM: arm64: vgic-v3: Add ICV_BPR1_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_IAR1_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_EOIR1_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_AP1Rn_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_HPPIR1_EL1 handler
+ - KVM: arm64: vgic-v3: Enable trapping of Group-1 system registers
+ - KVM: arm64: Enable GICv3 Group-1 sysreg trapping via command-line
+ - KVM: arm64: vgic-v3: Add ICV_BPR0_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_IGNREN0_EL1 handler
+ - KVM: arm64: Add misc Group-0 handlers
+ - KVM: arm64: vgic-v3: Enable trapping of Group-0 system registers
+ - KVM: arm64: Enable GICv3 Group-0 sysreg trapping via command-line
+ - arm64: Add MIDR values for Cavium cn83XX SoCs
+ - arm64: Add workaround for Cavium Thunder erratum 30115
+ - KVM: arm64: vgic-v3: Add ICV_DIR_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_RPR_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_CTLR_EL1 handler
+ - KVM: arm64: vgic-v3: Add ICV_PMR_EL1 handler
+ - KVM: arm64: Enable GICv3 common sysreg trapping via command-line
+ - KVM: arm64: vgic-v3: Log which GICv3 system registers are trapped
+ - KVM: arm64: Log an error if trapping a read-from-write-only GICv3 access
+ - KVM: arm64: Log an error if trapping a write-to-read-only GICv3 access

+ * hns: under heavy load, NIC may fail and require reboot (LP: #1704146)
+ - net: hns: Bugfix for Tx timeout handling in hns driver

+ * New ACPI identifiers for ThunderX SMMU (LP: #1703437)
+ - iommu/arm-smmu: Plumb in new ACPI identifiers

+ * Transparent hugepages should default to enabled=madvise (LP: #1703742)
+ - SAUCE: use CONFIG_TRANSPARENT_HUGEPAGE_MADVISE=y as default

+ * Artful update to v4.12.1 stable release (LP: #1703858)
+ - driver core: platform: fix race condition with driver_override
+ - RDMA/uverbs: Check port number supplied by user verbs cmds
+ - usb: dwc3: replace %p with %pK
+ - USB: serial: cp210x: add ID for CEL EM3588 USB ZigBee stick
+ - usb: usbip: set buffer pointers to NULL after free
+ - Add USBquirk for HVR-950q to avoid intermittent device resets
+ - usb: Fix typo in the definition of Endpoint[out]Request
+ - USB: core: fix device node leak
+ - USB: serial: option: add two Longcheer device ids
+ - USB: serial: qserial: new Sierra Wireless EM7305 device ID
+ - xhci: Limit USB2 port wake support for AMD Promontory hosts
+ - gfs2: Fix glock rhashtable rcu bug
+ - Add "shutdown" to "struct class".
+ - tpms: Issue a TPM2_Shutdown for TPM2 devices.
+ - tpm: fix a kernel memory leak in tpm-sysfs.c
+ - powerpc/powerenv: Fix CPU_HOTPLUG=n idle.c compile error
+ - x86/ucaccess: Optimize copy_user_enhanced_fast_string() for short strings
+ - sched/fair, cpumask: Export for_each_cpu_wrap()
+ - sched/core: Implement new approach to scale select_idle_cpu()
+ - sched/numa: Use down_read_trylock() for the mmap_sem
+ - sched/numa: Override part of migrate_degrades_locality() when idle balancing
+ - sched/fair: Simplify wake_affine() for the single socket case
+ - sched/numa: Implement NUMA node level wake_affine()
+ - sched/fair: Remove effective_load()
+ - sched/numa: Hide numa_wake_affine() from UP build
+ - xen: avoid deadlock in xenbus driver
+ - crypto: drbg - Fixes panic in wait_for_completion call
+ - Linux 4.12.1

+ * cxlflash update request in the Xenial SRU stream (LP: #1702521)
+ - scsi: cxlflash: Combine the send queue locks
+ - scsi: cxlflash: Update cxlflash_afu_sync() to return errno
+ - scsi: cxlflash: Reset hardware queue context via specified register
+ - scsi: cxlflash: Schedule asynchronous reset of the host
+ - scsi: cxlflash: Handle AFU sync failures
+ - scsi: cxlflash: Track pending scsi commands in each hardware queue
+ - scsi: cxlflash: Flush pending commands in cleanup path
+ - scsi: cxlflash: Add scsi command abort handler
+ - scsi: cxlflash: Create character device to provide host management interface
+ - scsi: cxlflash: Separate AFU internal command handling from AFU sync specifics
+ - scsi: cxlflash: Introduce host ioctl support
+ - scsi: cxlflash: Refactor AFU capability checking
+ - scsi: cxlflash: Support LUN provisioning
+ - scsi: cxlflash: Support AFU debug
+ - scsi: cxlflash: Support WS16 unmap
+ - scsi: cxlflash: Remove zeroing of private command data
+ - scsi: cxlflash: Update TMF command processing
+ - scsi: cxlflash: Avoid double free of character device
+ - scsi: cxlflash: Update send_tmf() parameters
+ - scsi: cxlflash: Update debug prints in reset handlers

+ * make snap-pkg support (LP: #1700747)
+ - make snap-pkg support

+ * Quirk for non-compliant PCI bridge on HiSilicon D05 board (LP: #1698706)
+ - SAUCE: PCI: Support hibmc VGA cards behind a misbehaving HiSilicon bridge

+ * arm64: fix crash reading /proc/kcore (LP: #1702749)
+ - fs/proc: kcore: use kcore_list type to check for vmalloc/module address
+ - arm64: mm: select CONFIG_ARCH_PROC_KCORE_TEXT

Open Source Used In 5GaaS Edge AC-4 19553
* Opal and POWER9 DD2 (LP: #1702159)
  * SAUCE: powerpc/powernv: Tell OPAL about our MMU mode on POWER9

* Data corruption with hio driver (LP: #1701316)
  * SAUCE: hio: Fix incorrect use of enum req_ofp values

* Miscellaneous Ubuntu changes
  * (noup) Update spl to 0.6.5.10-1, zfs to 0.6.5.10-1ubuntu2
  * snapcraft.yaml: Sync with xenial
  * [Config] CONFIG_CAVIUM_ERRATUM_30115=y

* Miscellaneous upstream changes
  * Revert "UBUNTU: SAUCE: (efi-lockdown) efi: Add sysctls for secureboot and MokSBState"

-- Seth Forshee <seth.forshee@canonical.com> Fri, 14 Jul 2017 15:25:41 -0500

linux (4.12.0-6.7) artful; urgency=low

* update ENA driver to 1.2.0k from net-next (LP: #1701575)
  * net: ena: change return value for unsupported features unsupported return value
  * net: ena: add hardware hints capability to the driver
  * net: ena: change sizeof() argument to be the type pointer
  * net: ena: add reset reason for each device FLR
  * net: ena: add support for out of order rx buffers refill
  * net: ena: allow the driver to work with small number of msix vectors
  * net: ena: use napi_schedule_irqoff when possible
  * net: ena: separate skb allocation to dedicated function
  * net: ena: use lower_32_bits()/upper_32_bits() to split dma address
  * net: ena: update driver's rx drop statistics
  * net: ena: update ena driver to version 1.2.0

* APST gets enabled against explicit kernel option (LP: #1699004)
  * nvme: explicitly disable APST on quirked devices

* Miscellaneous Ubuntu changes
  * SAUCE: hio: Update to Huawei ES3000_V2 (2.1.0.40)
  * SAUCE: hio updates for 4.12
  * SAUCE: Enable hio build

* Rebase to v4.12-rc2

-- Seth Forshee <seth.forshee@canonical.com> Sun, 21 May 2017 23:44:44 -0500

* Release Tracking Bug
  - LP: #1690999

* apparmor_parser hangs indefinitely when called by multiple threads
  (LP: #1645037)
  - SAUCE: apparmor: fix lock ordering for mkdir

* apparmor leaking securityfs pin count (LP: #1660846)
  - SAUCE: apparmor: fix leak on securityfs pin count

* apparmor reference count leak when securityfs_setup_d_inode() fails
  (LP: #1660845)
  - SAUCE: apparmor: fix reference count leak when securityfs_setup_d_inode()
  - fails

* apparmor not checking error if security_pin_fs() fails (LP: #1660842)
  - SAUCE: apparmor: fix not handling error case when securityfs_pin_fs() fails

* libvirt profile is blocking global setrlimit despite having no rlimit rule
  (LP: #1679704)
  - SAUCE: apparmor: fix complain mode failure for rlimit mediation
  - apparmor: update auditing of rlimit check to provide capability information

---
+ * apparmor: does not provide a way to detect policy updates (LP: #1678032)
+ - SAUCE: apparmor: add policy revision file interface
+ + * apparmor does not make support of query data visible (LP: #1678023)
+ - SAUCE: apparmor: add label data availability to the feature set
+ + * apparmor query interface does not make supported query info available
+ (LP: #1678030)
+ - SAUCE: apparmor: add information about the query interface to the feature set
+ + * change_profile incorrect when using namespaces with a compound stack
+ (LP: #1677959)
+ - SAUCE: apparmor: fix label parse for stacked labels
+ + * Regression in 4.4.0-65-generic causes very frequent system crashes
+ (LP: #1669611)
+ - apparmor: sync of apparmor 3.6+ (17.04)
+ + * Artful update to 4.11.1 stable release (LP: #1690814)
+ - dm ioctl: prevent stack leak in dm ioctl call
+ - drm/sti: fix GDP size to support up to UHD resolution
+ - power: supply: lp8788: prevent out of bounds array access
+ - brcmfmac: Ensure pointer correctly set if skb data location changes
+ - brcmfmac: Make skb header writable before use
+ - sparc64: fix fault handling in NGbzero.S and GENbzero.S
+ - refcount: change EXPORT_SYMBOL markings
+ - net: mach: fix phy interrupt parsing
+ - tcp: fix access to sk->sk_state in tcp_poll()
+ - geneve: fix incorrect setting of UDP checksum flag
+ - bpf: enhance verifier to understand stack pointer arithmetic
+ - bpf, arm64: fix jit branch offset related to ldimm64
+ - tcp: fix wraparound issue in tcp_lps
+ - net: ipv6: Do not duplicate DAD on link up
+ - net: usb: qmi_wwan: add Telit ME910 support
+ - tcp: do not inherit fastopen_req from parent
+ - ipv4, ipv6: ensure raw socket message is big enough to hold an IP header
+ - rtnetlink: NUL-terminate IFLA_PHYS_PORT_NAME string
+ - ipv6: initialize route null entry in addrconf_init()
+ - ipv6: reorder ip6_route_dev_notifier after ipv6_dev_notf
+ - tcp: randomize timestamps on synccookies
+ - bnxt_en: allocate enough space for ->ntp_fltr_bmap
+ - bpf: don't let ldimm64 leak map addresses on unprivileged
+ - net: mldo-mux: bcm-iproc: call mdiobus_free() in error path
+ - if2fs: sanity check segment count
+ - xen/arm,arm64: fix xen_dma_ops after 815dd18 "Consolidate get_dma_ops..."
+ - xen: Revert commits da72ff5bfc0 and 72a9b186292d
+ - block: get rid of blk_integrity_revalidate()
+ - Linux 4.11.1
+ * Module signing exclusion for staging drivers does not work properly
  + (LP: #1690908)
+ * SAUCE: Fix module signing exclusion in package builds
+ * perf: qcom: Add L3 cache PMU driver (LP: #1689856)
  + + [Config] CONFIG_QCOM_L3_PMU=y
  + * perf: qcom: Add L3 cache PMU driver
+ * No PMU support for ACPI-based arm64 systems (LP: #1689661)
  + - drivers/perf: arm_pmu: rework per-cpu allocation
  + - drivers/perf: arm_pmu: manage interrupts per-cpu
  + - drivers/perf: arm_pmu: split irq request from enable
  + - drivers/perf: arm_pmu: remove pointless PMU disabling
  + - drivers/perf: arm_pmu: define armpmu_init_fn
  + - drivers/perf: arm_pmu: fold init into alloc
  + - drivers/perf: arm_pmu: factor out pmu registration
  + - drivers/perf: arm_pmu: simplify cpu_pmu_request_irqs()
  + - drivers/perf: arm_pmu: handle no platform_device
  + - drivers/perf: arm_pmu: rename irq request/free functions
  + - drivers/perf: arm_pmu: split cpu-local irq request/free
  + - drivers/perf: arm_pmu: move irq request/free into probe
  + - drivers/perf: arm_pmu: split out platform device probe logic
  + - arm64: add function to get a cpu's MADT GICC table
  + - [Config] CONFIG_ARM_PMU_ACPI=y
  + - drivers/perf: arm_pmu: add ACPI framework
  + - arm64: pmuv3: handle !PMUv3 when probing
  + - arm64: pmuv3: use arm_pmu ACPI framework
+ * Fix NVLINK2 TCE route (LP: #1690155)
  + - powerpc/powerpc: Fix TCE kill on NVLink2
+ * CVE-2017-0605
  + - tracing: Use strlcpy() instead of strcpy() in __trace_find_cmdline()
+ * Miscellaneous Ubuntu changes
  + - [Config] Restore powerpc arch to annotations file
  + - [Config] Disable runtime testing modules
  + - [Config] Disable drivers not needed on s390x
  + - [Config] Update annotations for 4.11
  + - [Config] updateconfigs after apparmor updates
+ * Miscellaneous upstream changes
  + - apparmor: use SHASH_DESC_ON_STACK
  + - apparmor: fix invalid reference to index variable of iterator line 836
  + - apparmor: fix parameters so that the permission test is bypassed at boot
  + - apparmor: Make path_max parameter readonly
  + - apparmorfs: Combine two function calls into one in aa_fs_seq_raw_abi_show()
+ - apparmorfs: Use seq_putc() in two functions
+ - apparmor: provide information about path buffer size at boot
+ - apparmor: add/use fns to print hash string hex value

+# Ubuntu commit template.
+
+# NOTE: This gets reformatted for debian/changelog
+
+# SAUCE refers to the fact that this patch might not go upstream, but we need to
+# carry it to successive releases. In most cases you DONOT want to use this
+# template.
+
+# An example of a SAUCE patch is the ACPI DSDT-in-initramfs patch which has been
+# refused upstream, but still provides useful functionality to users with broken
+# BIOSes.
+
+# The initial UBUNTU is a flag that this is an Ubuntu commit. It will be
+# referenced to the Author in the debian/changelog entry.
+
+# The text following is the short message that will be placed in the
+# changelog. Extra text on the following lines will be ignored, but left
+# in the git commit. Lines with # will be ignored in the commit.
+
+# OriginalAuthor allows for alternate attribution.
+
+# OriginalLocation allows for a URL or description of where the patch came
+# from.
+
+# BugLink is a URL to a Malone bug.
+
+# Ignore: yes will keep this commit from showing up in the changelog.
+

+ XS-Testsuite-Depends: gcc-4.7 binutils
Package: linux-source-4.15.0
Build-Profiles: <!stage1>
Architecture: all
Section: devel
Priority: optional
Provides: linux-source, linux-source-3
Depends: ${misc:Depends}, binutils, bzip2, coreutils
Recommends: libc-dev, gcc, make
Suggests: libncurses-dev | ncurses-dev, kernel-package, libqt3-dev
Description: Linux kernel source for version 4.15.0 with Ubuntu patches
This package provides the source code for the Linux kernel version 4.15.0.
This package is mainly meant for other packages to use, in order to build custom flavours.

If you wish to use this package to create a custom Linux kernel, then it is suggested that you investigate the package kernel-package, which has been designed to ease the task of creating kernel image packages.

If you are simply trying to build third-party modules for your kernel, you do not want this package. Install the appropriate linux-headers package instead.

Package: linux-doc
Build-Profiles: <!stage1>
Architecture: all
Section: doc
Priority: optional
Depends: ${misc:Depends}
Description: Linux kernel specific documentation for version 4.15.0
This package provides the various documents in the 4.15.0 kernel Documentation/ subdirectory. These document kernel subsystems, APIs, device drivers, and so on. See /usr/share/doc/linux-doc/00-INDEX for a list of what is contained in each file.

Package: linux-headers-4.15.0-166
Build-Profiles: <!stage1>
Architecture: all
Multi-Arch: foreign
Section: devel
Priority: optional
Depends: ${misc:Depends}, coreutils
Description: Header files related to Linux kernel version 4.15.0
This package provides kernel header files for version 4.15.0, for sites that want the latest kernel headers. Please read /usr/share/doc/linux-headers-4.15.0-166/debian.README.gz for details.
+ Package: linux-libc-dev
+ Architecture: i386 amd64 armhf arm64 x32 ppc64el s390x
+ Depends: ${misc:Depends}
+ Conflicts: linux-kernel-headers
+ Replaces: linux-kernel-headers
+ Provides: linux-kernel-headers, aufs-dev
+ Multi-Arch: same
+ Description: Linux Kernel Headers for development
  + This package provides headers from the Linux kernel. These headers
  + are used by the installed headers for GNU glibc and other system
  + libraries. They are NOT meant to be used to build third-party modules for
  + your kernel. Use linux-headers-* packages for that.
  +
  + Package: linux-tools-common
  + Build-Profiles: <!stage1>
  + Architecture: all
  + Multi-Arch: foreign
  + Section: kernel
  + Priority: optional
  + Depends: ${misc:Depends}, lsb-release
  + Description: Linux kernel version specific tools for version 4.15.0
    + This package provides the architecture independent parts for kernel
    + version locked tools (such as perf and x86_energy_perf_policy) for
    + version 4.15.0.
    +
    + Package: linux-tools-4.15.0-166
      + Build-Profiles: <!stage1>
      + Architecture: i386 amd64 armhf arm64 ppc64el s390x
      + Section: devel
      + Priority: optional
      + Depends: ${misc:Depends}, ${shlibs:Depends}, linux-tools-common
      + Description: Linux kernel version specific tools for version 4.15.0-166
        + This package provides the architecture dependant parts for kernel
        + version locked tools (such as perf and x86_energy_perf_policy) for
        + version 4.15.0-166 on
        + 64 bit x86.
        + You probably want to install linux-tools-4.15.0-166-<flavour>.
        +
        + Package: linux-cloud-tools-common
          + Build-Profiles: <!stage1>
          + Architecture: all
          + Multi-Arch: foreign
          + Section: kernel
          + Priority: optional
          + Depends: ${misc:Depends}
          + Description: Linux kernel version specific cloud tools for version 4.15.0
            + This package provides the architecture independent parts for kernel
version locked tools for cloud tools for version 4.15.0.

Package: linux-cloud-tools-4.15.0-166
Build-Profiles: <!stage1>
Architecture: i386 amd64 armf
Section: devel
Priority: optional
Depends: ${misc:Depends}, ${shlibs:Depends}, linux-cloud-tools-common
Description: Linux kernel version specific cloud tools for version 4.15.0-166
This package provides the architecture dependant parts for kernel
version locked tools for cloud tools for version 4.15.0-166 on
64 bit x86.
You probably want to install linux-cloud-tools-4.15.0-166-<flavour>.

Package: linux-tools-host
Build-Profiles: <!stage1>
Architecture: all
Multi-Arch: foreign
Section: kernel
Priority: optional
Depends: ${misc:Depends}, python3
Description: Linux kernel VM host tools
This package provides kernel tools useful for VM hosts.

Package: linux-image-unsigned-4.15.0-166-generic
Build-Profiles: <!stage1>
Architecture: i386 amd64 armf arm64 ppc64el s390x
Section: kernel
Priority: optional
Provides: linux-image, fuse-module, aufs-dkms, kvm-api-4, redhat-cluster-modules, ivtv-modules, virtualbox-guest-modules [i386 amd64 x32] $[linux:rprovides]
Depends: ${misc:Depends}, ${shlibs:Depends}, kmod, linux-base (>= 4.5ubuntu1~16.04.1), linux-modules-4.15.0-166-generic
Recommends: grub-pc [i386 amd64 x32] | grub-efi-amd64 [amd64 x32] | grub-efi-ia32 [i386 amd64 x32] | grub [i386 amd64 x32] | lilo [i386 amd64 x32] | flash-kernel [armhf arm64] | grub-ieee1275 [ppc64el], initramfs-tools | linux-initramfs-tool
Breaks: flash-kernel (<< 3.90ubuntu2) [arm64 armhf], s390-tools (<< 2.3.0-0ubuntu3) [s390x]
Conflicts: linux-image-4.15.0-166-generic
Suggests: fdutils, linux-doc-4.15.0 | linux-source-4.15.0, linux-tools, linux-headers-4.15.0-166-generic
Description: Linux kernel image for version 4.15.0 on 64 bit x86 SMP
This package contains the unsigned Linux kernel image for version 4.15.0 on
64 bit x86 SMP.
Supports Generic processors.

Geared toward desktop and server systems.
You likely do not want to install this package directly. Instead, install the linux-generic meta-package, which will ensure that upgrades work correctly, and that supporting packages are also installed.

Package: linux-modules-4.15.0-166-generic
Build-Profiles: <!stage1>
Architecture: i386 amd64 armhf arm64 ppc64el s390x
Section: kernel
Priority: optional
Depends: ${misc:Depends}, ${shlibs:Depends}
Description: Linux kernel extra modules for version 4.15.0 on 64 bit x86 SMP
Contains the corresponding System.map file, the modules built by the packager, and scripts that try to ensure that the system is not left in an unbootable state after an update.

Supports Generic processors.

Geared toward desktop and server systems.

You likely do not want to install this package directly. Instead, install the linux-generic meta-package, which will ensure that upgrades work correctly, and that supporting packages are also installed.

+Depends: ${misc:Depends}, linux-headers-4.15.0-166, ${shlibs:Depends}
+Provides: linux-headers, linux-headers-3.0
+Description: Linux kernel headers for version 4.15.0 on 64 bit x86 SMP
+ This package provides kernel header files for version 4.15.0 on
+ 64 bit x86 SMP.
+ .
+ This is for sites that want the latest kernel headers. Please read
+ /usr/share/doc/linux-headers-4.15.0-166/debian.README.gz for details.
+
Package: linux-image-unsigned-4.15.0-166-lowlatency-dbgsym
+Build-Profiles: <!stage1>
+Architecture: i386 amd64
+Section: devel
+Priority: optional
+Depends: ${misc:Depends}
+Provides: linux-debug
+Description: Linux kernel debug image for version 4.15.0 on 64 bit x86 SMP
+ This package provides the unsigned kernel debug image for version 4.15.0 on
+ 64 bit x86 SMP.
+ .
+ This is for sites that wish to debug the kernel.
+ .
+ The kernel image contained in this package is NOT meant to boot from. It
+ is uncompressed, and unstripped. This package also includes the
+ unstripped modules.
+
Package: linux-tools-4.15.0-166-lowlatency
+Build-Profiles: <!stage1>
+Architecture: i386 amd64
+Section: devel
+Priority: optional
+Depends: ${misc:Depends}, linux-tools-4.15.0-166
+Description: Linux kernel version specific tools for version 4.15.0-166
+ This package provides the architecture dependant parts for kernel
+ version locked tools (such as perf and x86_energy_perf_policy) for
+ version 4.15.0-166 on
+ 64 bit x86.
+
Package: linux-cloud-tools-4.15.0-166-lowlatency
+Build-Profiles: <!stage1>
+Architecture: i386 amd64
+Section: devel
+Priority: optional
+Depends: ${misc:Depends}, linux-cloud-tools-4.15.0-166
+Description: Linux kernel version specific cloud tools for version 4.15.0-166
+ This package provides the architecture dependant parts for kernel
+ version locked tools for cloud for version 4.15.0-166 on
+ 64 bit x86.
+
+Package: linux-udebs-lowlatency
+Build-Profiles: <!stage1>
+XC-Package-Type: udeb
+Section: debian-installer
+Architecture: i386 amd64
+Depends: ${udeb:Depends}
+Description: Metapackage depending on kernel udebs
+ This package depends on the all udebs that the kernel build generated,
+ for easier version and migration tracking.
+
+Package: linux-buildinfo-4.15.0-166-lowlatency
+Build-Profiles: <!stage1>
+Architecture: i386 amd64
+Section: kernel
+Priority: optional
+Depends: ${misc:Depends}, ${shlibs:Depends}
+Built-Using: ${linux:BuiltUsing}
+Description: Linux kernel buildinfo for version 4.15.0 on 64 bit x86 SMP
+ This package contains the Linux kernel buildinfo for version 4.15.0 on
+ 64 bit x86 SMP.
+ You likely do not want to install this package.

+++ linux-4.15.0/debian/docs/README.inclusion-list
@@ -0,0 +1,51 @@
+This README describes the reason for, and the use of, module
+inclusion lists.
+
+The original Hardy release had the notion of sub-flavours,
+e.g., a flavour that was constructed as a subset of an existing flavour.
For example, the virtual flavour was extracted from the server flavour using a subset of the server flavour modules. However, there were some difficult maintenance issues with regard to packaging, make rules, and scripts. This re-implementation of the sub-flavours philosophy is hopefully simpler, and retrofittable to all releases.

A module inclusion list looks at the problem of constructing a package from the perspective of what modules do we _want_ in the package, as opposed to what modules we _don't_ want. As the kernel matures, more and more devices are added which makes the problem of configuration maintenance a real pain in the ass.

If we took the approach of disabling all of the config options that we don't want, then the differences between flavours will quickly become quite large, making it difficult to quickly compare the individual flavour configs. Each time a new config option is added then we also have to make a decision about disabling in order to continue to keep the minimal number of modules.

A module inclusion list is applied on a per-flavour basis. For example, debian.<BRANCH>/control.d/${flavour}.inclusion-list. For example, the config for virtual is very close to server and generic, but the inclusion list causes the virtual package to be constructed with _only_ the modules described in the inclusion list.

The inclusion list format is a simple bash regular expression list of files. For example,

```
+arch/*/\{crypto,kernel,oprofile\}
+drivers/acpi/\*
+drivers/ata/ahci.ko
```

These 3 regular expression forms are suitable for expansion by bash and as inputs to 'find'. See debian/scripts/module-inclusion for details.

There are 2 log files created as a side effect of the application of the module inclusion list; $(flavour).inclusion-list.log and $(flavour).depmod.log.

$(flavour).inclusion-list.log : This log is created while the inclusion list modules are being copied. If any are missing, then those warnings go in this log. While its not considered a fatal error, you should endeavour to correct your inclusion list such that there are no missing modules.

$(flavour).depmod.log : The log is created as a result of running depmod on the resulting set of modules. If there are missing symbols then you'll find that information here. Again, you should modify your inclusion list such that there are no missing symbols.

+# When we install linux-image we have to run kernel postinst.d support to
+# generate the initramfs, create links etc. Should it have an associated
+# linux-image-extra package and we install that we also need to run kernel
+# postinst.d, to regenerate the initramfs. If we are installing both at the
+# same time, we necessarily trigger kernel postinst.d twice. As this includes
+# rebuilding the initramfs and reconfiguring the boot loader this is very time
+# consuming.
+#
+# Similarly for removal when we remove the linux-image-extra package we need to
+# run kernel postinst.d handling in order to pare down the initramfs to
+# linux-image contents only. When we remove the linux-image need to remove the
+# now redundant initramfs. If we are removing both at the same time, then
+# we will rebuilt the initramfs and then immediately remove it.
+#
+# Switches to using a trigger against the linux-image package for all
+# postinst.d and postrm.d handling. On installation postinst.d gets triggered
+# twice once by linux-image and once by linux-image-extra. As triggers are
+# non-cumulative we will only run this processing once. When removing both
+# packages we will trigger postinst.d from linux-image-extra and then in
+# linux-image postrm.d we effectively ignore the pending trigger and simply run
+# the postrm.d. This prevents us from rebuilding the initramfs.

+Scripts placed in this directory get called one at a time by run-parts(8).
+The scripts are expected to perform some sort of sanity checks on the
+finished build. Scripts will be called once for each flavour.
+
+Some environment variables are exported to make life a little easier:
+
+DPKG_ARCH     : The dpkg architecture (e.g. "amd64")
+KERN_ARCH     : The kernel architecture (e.g. "x86_64")
+FLAVOUR       : The specific flavour for this run (e.g. "generic")
+VERSION       : The full version of this build (e.g. 2.6.22-1)
+REVISION      : The exact revision of this build (e.g. 1.3)
+PREV_REVISION : The revision prior to this one
+ABI_NUM       : The specific ABI number for this build (e.g. 2)
+PREV_ABI_NUM  : The previous ABI number. Can be the same as ABI_NUM.
+BUILD_DIR     : The directory where this build took place
+INSTALL_DIR   : The directory where the package is prepared
+SOURCE_DIR    : Where the main kernel source is
+
+Scripts are expected to have a zero exit status when no problems occur,
+and non-zero when an error occurs that should stop the build. Scripts
+should print whatever info they deem needed to deduce the problem.

+help
+ Select the Default SATA Link Power Management (LPM) policy to use
+ for mobile / laptop variants of chipsets / "South Bridges".
+ The value set has the following meanings:
+0 => Keep firmware settings
+1 => Maximum performance
+2 => Medium power
+3 => Medium power with Device Initiated PM enabled
+4 => Minimum power
+ Note "Minimum power" is known to cause issues, including disk
+ corruption, with some disks and should not be used.

+ * abort attach on peer;
+ *
+ * If this node does not have good data, was already connected, but
+ * the peer did a late attach only now, trying to "negotiate" with me,
+ * AND I am currently Primary, possibly frozen, with some specific
+ * "effective" uuid, this should never be reached, really, because
+ * we first send the uuids, then the current state.
In this scenario, we already dropped the connection hard when we received the unsuitable uuids (receive_uuids()). Should we want to change this, that is: not drop the connection in receive_uuids() already, then we would need to add a branch here that aborts the attach of "unsuitable uuids" on the peer in case this node is currently Diskless Primary.

+% The specification is all messed up dealing with sending
+% multi-part messages. Per what the specification says, it
+% is impossible to send a message that is a multiple of 32
+% bytes, except for 32 itself. It talks about a "start"
+% transaction (cmd=6) that must be 32 bytes, "middle"
+% transaction (cmd=7) that must be 32 bytes, and an "end"
+% transaction. The "end" transaction is shown as cmd=7 in
+% the text, but if that's the case there is no way to
+% differentiate between a middle and end part except the
+% length being less than 32. But there is a table at the far
+% end of the section (that I had never noticed until someone
+% pointed it out to me) that mentions it as cmd=8.
+
+% After some thought, I think the example is wrong and the
+% end transaction should be cmd=8. But some systems don't
+% implement cmd=8, they use a zero-length end transaction,
+% even though that violates the SMBus specification.
+
+% So, to work around this, this code tests if cmd=8 works.
+% If it does, then we use that. If not, it tests zero-
+% byte end transactions. If that works, good. If not,
+% we only allow 63-byte transactions max.

 * crng_slow_load() is called by add_device_randomness, which has two
 * attributes. (1) We can't trust the buffer passed to it is
 * guaranteed to be unpredictable (so it might not have any entropy at
 * all), and (2) it doesn't have the performance constraints of
 * crng_fast_load().
 * 
 * So we do something more comprehensive which is guaranteed to touch
 * all of the primary_crng's state, and which uses a LFSR with a
period of 255 as part of the mixing algorithm. Finally, we do
*not* advance crng_init_cnt since buffer we may get may be something
like a fixed DMI table (for example), which might very well be
unique to the machine, but is otherwise unvarying.

```

This code defines a function `mux_div_set_src_div` to set the source divider configuration for a multiplexer in a device, using the `regmap` interface for accessing and updating the configuration registers. It also includes a version `mux_div_get_src_div` for reading the configuration. The code is part of a larger system, possibly related to 5G network infrastructure, as suggested by the context.

The code snippet is part of a larger context, possibly related to the 5G Network Infrastructure, as indicated by the surrounding text and function names.

    using the TCG Platform Reset Attack Mitigation specification. This
    protects against an attacker forcibly rebooting the system while it
    still contains secrets in RAM, booting another OS and extracting the
    secrets. This should only be enabled when userland is configured to
    clear the MemoryOverwriteRequest flag on clean shutdown after secrets
    have been evicted, since otherwise it will trigger even on clean
    reboots.

+ *
+ * This module contains the kernel support for the Linux EFI Machine
+ * Owner Key (MOK) variable configuration table, which is identified by
+ * the LINUX_EFI_MOK_VARIABLE_TABLE_GUID.
+ *
+ * This EFI configuration table provides a more robust alternative to
+ * EFI volatile variables by which an EFI boot loader can pass the
+ * contents of the Machine Owner Key (MOK) certificate stores to the
+ * kernel during boot. If both the EFI MOK config table and corresponding
+ * EFI MOK variables are present, the table should be considered as
+ * more authoritative.
+ *
+ * This module includes code that validates and maps the EFI MOK table,
+ * if it's presence was detected very early in boot.
+ *
+ * Kernel interface routines are provided to walk through all the
+ * entries in the MOK config table or to search for a specific named
+ * entry.
+ *
+ * The contents of the individual named MOK config table entries are
+ * made available to user space via read-only sysfs binary files under:
+ *
