Indicates whether a local VPC can resolve public DNS hostnames to private IP addresses when queried from instances in a peer VPC.

```java
@Param allowDnsResolutionFromRemoteVpc
```

**Definition**

- Set the `allowDnsResolutionFromRemoteVpc` boolean to true to allow DNS resolution from remote VPCs.
- Set it to false to prevent DNS resolution from remote VPCs.

**Usage**

- Use the `setAllowDnsResolutionFromRemoteVpc` method to set the `allowDnsResolutionFromRemoteVpc` property.
- Use `allowDnsResolutionFromRemoteVpc` to retrieve the current value.

**Example**

```java
// Set DNS resolution from remote VPCs
settings.setAllowDnsResolutionFromRemoteVpc(true);
```

---

**Related**

- `AllowEgressFromLocalClassicLinkToRemoteVpc`
- `AllowDnsResolutionFromRemoteVpc`

To create a one-time Spot Instance request

This example command creates a one-time Spot Instance request for five instances in the specified subnet. Amazon EC2 launches the instances in the specified subnet. If the VPC is a nondefault VPC, the instances do not receive a public IP address by default.

```
"id" : "ec2-request-spot-instances-2",
"input" : {
  "SpotPrice" : "0.050",
  "InstanceCount" : 5,
  "Type" : "one-time",
  "LaunchSpecification" : {
    "ImageId" : "ami-1a2b3c4d",
    "InstanceType" : "m3.medium",
    "SubnetId" : "subnet-1a2b3c4d",
    "IamInstanceProfile" : {
      "Arn" : "arn:aws:iam::123456789012:instance-profile/my-iam-role"
    }
  }
},
"output" : null,
"title" : "To create a one-time Spot Instance request"
}
```

This example resets the create volume permissions for snapshot `snap-1234567890abcdef0`. If the command succeeds, no output is returned.

```
"id" : "to-reset-a-snapshot-attribute-1472508825735",

"CreateCustomerGateway" : {
"authorizer" : null,
"authtype" : "IAM",
"deprecated" : false,
"documentation" : "<p>Provides information to AWS about your VPN customer gateway device. The customer gateway is the appliance at your end of the VPN connection. (The device on the AWS side of the VPN connection is the virtual private gateway.) You must provide the Internet-routable IP address of the customer gateway’s external interface. The IP address must be static and may be behind a device performing network address translation (NAT).

For devices that use Border Gateway Protocol (BGP), you can also provide the device’s BGP Autonomous System Number (ASN). You can use an existing ASN assigned to your network. If you don’t have an ASN already, you can use a private ASN (in the 64512 - 65534 range).

Amazon EC2 supports all 2-byte ASN numbers in the range of 1 - 65534, with the exception of 7224, which is reserved in the <code>us-east-1</code> region, and 9059, which is reserved in the <code>eu-west-1</code> region.

For more information about VPN customer gateways, see <a href="http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_VPN.html"">Adding a Hardware Virtual Private Gateway to Your VPC</a> in the Amazon Virtual Private Cloud User Guide.

You cannot create more than one customer gateway with the same VPN type, IP address, and BGP ASN parameter values. If you run an identical request more than one time, the first request creates the customer gateway, and subsequent requests return information about the existing customer gateway. The subsequent requests do not create new customer gateway resources.

"authorizer" : null,
"authtype" : "IAM",
"deprecated" : false,
"documentation" : "<p>Creates a set of DHCP options for your VPC. After creating the set, you must associate it with the VPC, causing all existing and new instances that you launch in the VPC to use this set of DHCP options. The following are the individual DHCP options you can specify. For more information about the options, see <a href="http://www.ietf.org/rfc/rfc2132.txt">RFC 2132</a>. The default DHCP
option set specifies AmazonProvidedDNS. If specifying more than one domain name server, specify the IP
addresses in a single parameter, separated by commas. If you want your instance to receive a custom DNS hostname
as specified in <code>domain-name</code>, you must set <code>domain-name-servers</code> to a custom DNS server.</p> 

If you're using AmazonProvidedDNS in "us-east-1", specify "ec2.internal". If you're using AmazonProvidedDNS in another region, specify "region.compute.internal" (for example, "ap-northeast-1.compute.internal"). Otherwise, specify a domain name (for example, "MyCompany.com"). This value is used to complete unqualified DNS hostnames. <b>Important</b>: Some Linux operating systems accept multiple domain names separated by spaces. However, Windows and other Linux operating systems treat the value as a single domain, which results in unexpected behavior. If your DHCP options set is associated with a VPC that has instances with multiple operating systems, specify only one domain name.</p>

- <code>domain-name</code> - If you're using AmazonProvidedDNS in "us-east-1", specify "ec2.internal". If you're using AmazonProvidedDNS in another region, specify "region.compute.internal" (for example, "ap-northeast-1.compute.internal"). Otherwise, specify a domain name (for example, "MyCompany.com"). This value is used to complete unqualified DNS hostnames. <b>Important</b>: Some Linux operating systems accept multiple domain names separated by spaces. However, Windows and other Linux operating systems treat the value as a single domain, which results in unexpected behavior. If your DHCP options set is associated with a VPC that has instances with multiple operating systems, specify only one domain name.</p>

- <code>ntp-servers</code> - The IP addresses of up to four Network Time Protocol (NTP) servers.</p>

- <code>netbios-name-servers</code> - The IP addresses of up to four NetBIOS name servers.</p>

- <code>netbios-node-type</code> - The NetBIOS node type (1, 2, 4, or 8). We recommend that you specify 2 (broadcast and multicast are not currently supported). For more information about these node types, see <a href="http://www.ietf.org/rfc/rfc2132.txt">RFC 2132</a>. Your VPC automatically starts out with a set of DHCP options that includes only a DNS server that we provide (AmazonProvidedDNS). If you create a set of options, and if your VPC has an Internet gateway, make sure to set the <code>domain-name-servers</code> option either to <code>AmazonProvidedDNS</code> or to a domain name server of your choice. For more information about DHCP options, see <a href="http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_DHCP_Options.html">DHCP Options Sets</a> in the Amazon Virtual Private Cloud User Guide.</p>

Creating a network ACL in a VPC provides an optional layer of security (in addition to security groups) for the instances in your VPC.

For more information about network ACLs, see Amazon Virtual Private Cloud User Guide.

Creating an entry (a rule) in a network ACL with the specified rule number. Each network ACL has a set of numbered ingress rules and a separate set of numbered egress rules. When determining whether a packet should be allowed in or out of a subnet associated with the ACL, we process the entries in the ACL according to the rule numbers, in ascending order. Each network ACL has a set of ingress rules and a separate set of egress rules.

We recommend that you leave room between the rule numbers (for example, 100, 110, 120, ...), and not number them one right after the other (for example, 101, 102, 103, ...). This makes it easier to add a rule between existing ones without having to renumber the rules.

After you add an entry, you can't modify it; you must either replace it, or create an entry and delete the old one.

For more information about network ACLs, see Amazon Virtual Private Cloud User Guide.

Creates a route table for the specified VPC. After you create a route table, you can add routes and associate the table with a subnet.

For more information about route tables, see [Route Tables](http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Route_Tables.html) in the Amazon Virtual Private Cloud User Guide.

### CreateRouteTable

**Documentation**

- **Description**: Creates a route table for the specified VPC. After you create a route table, you can add routes and associate the table with a subnet.
- **Requests**: [CreateRouteTableRequest](http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Route_Tables.html)
- **Result**: [CreateRouteTableResult](http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Route_Tables.html)

**HTTP**

- **Method**: POST
- **Request URI**: `/`
- **Response Code**: null

**Input**

- **Shape**: `CreateRouteTableRequest`
- **XML Namespace**: null

**Output**

- **Result Wrapper**: `CreateRouteTableResult`
- **Shape**: `CreateRouteTableResult`

---

Creates a security group.

**Important**

- **EC2-Classic**: You can have up to 500 security groups.
- **EC2-VPC**: You can create up to 500 security groups per VPC.

When you create a security group, you specify a friendly name of your choice. You can have a security group for use in EC2-Classic with the same name as a security group for use in a VPC. However, you can't have two security groups for use in EC2-Classic with the same name or two security groups for use in a VPC with the same name.

You have a default security group for use in EC2-Classic and a default security group for use in your VPC. If you don't specify a security group when you launch an instance, the instance is launched into the appropriate default security group. A default security group includes a default rule that grants instances unrestricted network access to each other.

},
"CreateSubnet" : {
   "authorizer" : null,
   "authType" : "IAM",
   "deprecated" : false,
   "documentation" : "<p>Creates a subnet in an existing VPC.</p> <p>When you create each subnet, you provide the VPC ID and the CIDR block you want for the subnet. After you create a subnet, you can't change its CIDR block. The subnet's IPv4 CIDR block can be the same as the VPC's IPv4 CIDR block (assuming you want only a single subnet in the VPC), or a subset of the VPC's IPv4 CIDR block. If you create more than one subnet in a VPC, the subnets' CIDR blocks must not overlap. The smallest IPv4 subnet (and VPC) you can create uses a /28 netmask (16 IPv4 addresses), and the largest uses a /16 netmask (65,536 IPv4 addresses).</p> <p>If you've associated an IPv6 CIDR block with your VPC, you can create a subnet with an IPv6 CIDR block that uses a /64 prefix length."
AWS reserves both the first four and the last IP address in each subnet's CIDR block. They're not available for use. If you add more than one subnet to a VPC, they're set up in a star topology with a logical router in the middle. If you launch an instance in a VPC using an Amazon EBS-backed AMI, the IP address doesn't change if you stop and restart the instance (unlike a similar instance launched outside a VPC, which gets a new IP address when restarted). It's therefore possible to have a subnet with no running instances (they're all stopped), but no remaining IP addresses available.

For more information about subnets, see [Your VPC and Subnets](http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Subnets.html) in the Amazon Virtual Private Cloud User Guide.

Add or overwrites one or more tags for the specified Amazon EC2 resource or resources. Each resource can have a maximum of 50 tags. Each tag consists of a key and optional value. Tag keys must be unique per resource.

For more information about tags, see [Tagging Your Resources](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/Using_Tags.html) in the Amazon Elastic Compute Cloud User Guide. For more information about creating IAM policies that control users' access to resources based on tags, see [Supported Resource-Level Permissions for Amazon EC2 API Actions](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ec2-supported-iam-actions-resources.html) in the Amazon Elastic Compute Cloud User Guide.
The volume is created in the regional endpoint that you send the HTTP request to. For more information see <a href="http://docs.aws.amazon.com/general/latest/gr/rande.html">Regions and Endpoints</a>. You can create a new empty volume or restore a volume from an EBS snapshot. Any AWS Marketplace product codes from the snapshot are propagated to the volume. You can create encrypted volumes with the <code>Encrypted</code> parameter. Encrypted volumes may only be attached to instances that support Amazon EBS encryption. Volumes that are created from encrypted snapshots are also automatically encrypted. For more information, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/EBSEncryption.html">Amazon EBS Encryption</a> in the Amazon Elastic Compute Cloud User Guide. For more information, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ebs-creating-volume.html">Creating or Restoring an Amazon EBS Volume</a> in the Amazon Elastic Compute Cloud User Guide.\"
uses a /28 netmask (16 IPv4 addresses), and the largest uses a /16 netmask (65,536 IPv4 addresses). To help you decide how big to make your VPC, see a href="http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Subnets.html">Your VPC and Subnets</a> in the <i>Amazon Virtual Private Cloud User Guide</i>. You can optionally request an Amazon-provided IPv6 CIDR block for the VPC. The IPv6 CIDR block uses a /56 prefix length, and is allocated from Amazon's pool of IPv6 addresses. You cannot choose the IPv6 range for your VPC. By default, each instance you launch in the VPC has the default DHCP options, which includes only a default DNS server that we provide (AmazonProvidedDNS). For more information about DHCP options, see a href="http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_DHCP_Options.html">DHCP Options Sets</a> in the <i>Amazon Virtual Private Cloud User Guide</i>. You can specify the instance tenancy value for the VPC when you create it. You can't change this value for the VPC after you create it. For more information, see a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/dedicated-instance.html">Dedicated Instances</a> in the <i>Amazon Elastic Compute Cloud User Guide</i>.

documentation": "Describes one or more of your instances.
If you specify one or more instance IDs, Amazon EC2 returns information for those instances. If you do not specify instance IDs, Amazon EC2 returns information for all relevant instances. If you specify an instance ID that is not valid, an error is returned. If you specify an instance that you do not own, it is not included in the returned results. Recently terminated instances might appear in the returned results. This interval is usually less than one hour.
If you describe
instances in the rare case where an Availability Zone is experiencing a service disruption and you specify instance IDs that are in the affected zone, or do not specify any instance IDs at all, the call fails. If you describe instances and specify only instance IDs that are in an unaffected zone, the call works normally.

DescribeReservedInstancesListings

- Authorizer: null
- AuthType: "IAM"
- Deprecated: false
- Documentation: Describes your account's Reserved Instance listings in the Reserved Instance Marketplace. The Reserved Instance Marketplace matches sellers who want to resell Reserved Instance capacity that they no longer need with buyers who want to purchase additional capacity. Reserved Instances bought and sold through the Reserved Instance Marketplace work like any other Reserved Instances. As a seller, you choose to list some or all of your Reserved Instances, and you specify the upfront price to receive for them. Your Reserved Instances are then listed in the Reserved Instance Marketplace and are available for purchase. As a buyer, you specify the configuration of the Reserved Instance to purchase, and the Marketplace matches what you're searching for with what's available. The Marketplace first sells the lowest priced Reserved Instances to you, and continues to sell available Reserved Instance listings to you until your demand is met. You are charged based on the total price of all of the listings that you purchase. For more information, see [Reserved Instance Marketplace](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ri-market-general.html) in the Amazon Elastic Compute Cloud User Guide.

Describes one or more of your security groups. A security group is for use with instances either in the EC2-Classic platform or in a specific VPC. For more information, see Amazon EC2 Security Groups in the Amazon Elastic Compute Cloud User Guide and Security Groups for Your VPC in the Amazon Virtual Private Cloud User Guide.

Describes the specified attribute of the specified snapshot. You can specify only one attribute at a time. For more information about EBS snapshots, see Amazon EBS Snapshots in the Amazon Elastic Compute Cloud User Guide.

Describes the specified attribute of the specified VPC. For more information, see VPC Security Groups in the Amazon Virtual Private Cloud User Guide.
Describe one or more of the EBS snapshots available to you. Available snapshots include public snapshots available for any AWS account to launch, private snapshots that you own, and private snapshots owned by another AWS account but for which you've been given explicit create volume permissions.

The create volume permissions fall into the following categories:

- **public**: The owner of the snapshot granted create volume permissions for the snapshot to the `all` group. All AWS accounts have create volume permissions for these snapshots.
- **explicit**: The owner of the snapshot granted create volume permissions to a specific AWS account.
- **implicit**: An AWS account has implicit create volume permissions for all snapshots it owns.

The list of snapshots returned can be modified by specifying snapshot IDs, snapshot owners, or AWS accounts with create volume permissions. If no options are specified, Amazon EC2 returns all snapshots for which you have create volume permissions.

If you specify one or more snapshot IDs, only snapshots that have the specified IDs are returned. If you specify an invalid snapshot ID, an error is returned. If you specify a snapshot ID for which you do not have access, it is not included in the returned results.

If you specify one or more snapshot owners using the `<code>OwnerIds</code>` option, only snapshots from the specified owners and for which you have access are returned. The results can include the AWS account IDs of the specified owners, `<code>amazon</code>` for snapshots owned by Amazon, or `<code>self</code>` for snapshots that you own.

If you specify a list of restorable users, only snapshots with create snapshot permissions for those users are returned. You can specify AWS account IDs (if you own the snapshots), `<code>self</code>` for snapshots for which you own or have explicit permissions, or `<code>all</code>` for public snapshots.

If you are describing a long list of snapshots, you can paginate the output to make the list more manageable. The `<code>MaxResults</code>` parameter sets the maximum number of results returned in a single page. If the list of results exceeds your `<code>MaxResults</code>` value, then that number of results is returned along with a `<code>NextToken</code>` value that can be passed to a subsequent `<code>DescribeSnapshots</code>` request to retrieve the remaining results.

"DescribeVolumeStatus" : {
"authorizer" : null,
"authType": "IAM",
"deprecated": false,
"documentation": "Describes the status of the specified volumes. Volume status provides the result of the checks performed on your volumes to determine events that can impair the performance of your volumes. The performance of a volume can be affected if an issue occurs on the volume's underlying host. If the volume's underlying host experiences a power outage or system issue, after the system is restored, there could be data inconsistencies on the volume. Volume events notify you if this occurs. Volume actions notify you if any action needs to be taken in response to the event.

The <code>DescribeVolumeStatus</code> operation provides the following information about the specified volumes:

<p> <i>Status</i>: Reflects the current status of the volume. The possible values are <code>ok</code>, <code>impaired</code>, <code>warning</code>, or <code>insufficient-data</code>. If all checks pass, the overall status of the volume is <code>ok</code>. If the check fails, the overall status is <code>impaired</code>. If the status is <code>insufficient-data</code>, then the checks may still be taking place on your volume at the time. We recommend that you retry the request. For more information on volume status, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/monitoring-volume-status.html">Monitoring the Status of Your Volumes</a>.</p>

<p> <i>Events</i>: Reflect the cause of a volume status and may require you to take action. For example, if your volume returns an <code>impaired</code> status, then the volume event might be <code>potential-data-inconsistency</code>. This means that your volume has been affected by an issue with the underlying host, has all I/O operations disabled, and may have inconsistent data.</p>

<p> <i>Actions</i>: Reflect the actions you may have to take in response to an event. For example, if the status of the volume is <code>impaired</code> and the volume event shows <code>potential-data-inconsistency</code>, then the action shows <code>enable-volume-io</code>. This means that you may want to enable the I/O operations for the volume by calling the <a>EnableVolumeIO</a> action and then check the volume for data consistency.</p>

<p>Note: Volume status is based on the volume status checks, and does not reflect the volume state. Therefore, volume status does not indicate volumes in the <code>error</code> state (for example, when a volume is incapable of accepting I/O.)</p>

Instances do not have a physical monitor through which you can view their console output. They also lack physical controls that allow you to power up, reboot, or shut them down. To allow these actions, we provide them through the Amazon EC2 API and command line interface. Instance console output is buffered and posted shortly after instance boot, reboot, and termination. Amazon EC2 preserves the most recent 64 KB output which is available for at least one hour after the most recent post.

For Linux instances, the instance console output displays the exact console output that would normally be displayed on a physical monitor attached to a computer. This output is buffered because the instance produces it and then posts it to a store where the instance's owner can retrieve it.

For Windows instances, the instance console output includes output from the EC2Config service.

Retrieves the encrypted administrator password for an instance running Windows.

The Windows password is generated at boot if the EC2Config service plugin, Ec2SetPassword, is enabled. This usually only happens the first time an AMI is launched, and then Ec2SetPassword is automatically disabled. The password is not generated for rebundled AMIs unless Ec2SetPassword is enabled before bundling. The password is encrypted using the key pair that you specified when you launched the instance. You must provide the corresponding key pair file. We recommend that you wait up to 15 minutes after launching an instance before trying to retrieve the generated password.

Returns details about the values and term of your specified Convertible Reserved Instances. When a target configuration is specified, it returns information about whether the exchange is valid and can be performed.

specified AWS account IDs from a snapshot’s list of create volume permissions, but you cannot do both in a single API call. If you need to both add and remove account IDs for a snapshot, you must use multiple API calls.</p> <p>Encrypted snapshots and snapshots with AWS Marketplace product codes cannot be made public. Snapshots encrypted with your default CMK cannot be shared with other accounts.</p> <p>For more information on modifying snapshot permissions, see the Sharing Snapshots in the Amazon Elastic Compute Cloud User Guide.</p> <p>While the Spot fleet request is being modified, it is in the modifying state. To scale up your Spot fleet, increase its target capacity. The Spot fleet launches the additional Spot instances according to the allocation strategy for the Spot fleet request. If the allocation strategy is lowestPrice, the Spot fleet launches instances using the Spot pool with the lowest price. If the allocation strategy is diversified, the Spot fleet distributes the instances across the Spot pools. To scale down your Spot fleet, decrease its target capacity. First, the Spot fleet cancels any open bids that exceed the new target capacity. You can request that the Spot fleet terminate Spot instances until the size of the fleet no longer exceeds the new target capacity. If the allocation strategy is lowestPrice, the Spot fleet terminates the instances with the highest price per unit. If the allocation strategy is diversified, the Spot fleet terminates instances across the Spot pools. Alternatively, you can request that the Spot fleet keep the fleet at its current size, but not replace any Spot instances that are interrupted or that you terminate manually.</p>

four minutes, Amazon EC2 performs a hard reboot.</p> <p>For more information about troubleshooting, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/instance-console.html">Getting Console Output
and Rebooting Instances</a> in the Amazon Elastic Compute Cloud User Guide.</p> "
},
"RegisterImage" : {
  "authorizer" : null,
  "authtype" : "IAM",
  "deprecated" : false,
  "documentation" : "<p>Registers an AMI. When you're creating an AMI, this is the final step you must complete
before you can launch an instance from the AMI. For more information about creating AMIs, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/creating-an-ami.html">Creating Your Own
AMI</a> in the Amazon Elastic Compute Cloud User Guide.</p> <p>Note: For Amazon EBS-backed
instances, <a>CreateImage</a> creates and registers the AMI in a single request, so you don't have to register the
AMI yourself.</p> <p>You can also use <code>CreateImage</code> to create an Amazon EBS-backed
Linux AMI from a snapshot of a root device volume. For more information, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/Using_LaunchingInstanceFromSnapshot.html">Launching an
Instance from a Snapshot</a> in the Amazon Elastic Compute Cloud User Guide.</p>
  <p>Some Linux distributions, such as Red Hat Enterprise Linux (RHEL) and SUSE Linux Enterprise
Server (SLES), use the EC2 <code>billingProduct</code> code associated with an AMI to verify subscription status
for package updates. Creating an AMI from an EBS snapshot does not maintain this billing code, and subsequent
instances launched from such an AMI will not be able to connect to package update infrastructure.</p>
  <p>Similarly, although you can create a Windows AMI from a snapshot, you can't successfully launch an instance
from the AMI.</p> <p>To create Windows AMIs or to create AMIs for Linux operating systems that must retain
AMI billing codes to work properly, see <a>CreateImage</a>.</p> <p>If needed, you can deregister
an AMI at any time. Any modifications you make to an AMI backed by an instance store volume invalidates its
registration. If you make changes to an image, deregister the previous image and register the new image.

You can’t register an image where a secondary (non-root) snapshot has AWS Marketplace product codes.

"deprecated" : false,
Replace an existing route within a route table in a VPC. You must provide only one of the following: Internet gateway or virtual private gateway, NAT instance, NAT gateway, VPC peering connection, network interface, or egress-only Internet gateway. For more information about route tables, see Route Tables in the Amazon Virtual Private Cloud User Guide. You can also use ReplaceRouteTableAssociation to change which table is the main route table in the VPC. You just specify the main route table's association ID and the route table to be the new main route table.

Changes the route table associated with a given subnet in a VPC. After the operation completes, the subnet uses the routes in the new route table it's associated with. For more information about route tables, see Route Tables in the Amazon Virtual Private Cloud User Guide. You can also use ReplaceRouteTableAssociation to change which table is the main route table in the VPC. You just specify the main route table's association ID and the route table to be the new main route table.
Submits feedback about the status of an instance. The instance must be in the <code>running</code> state. If your experience with the instance differs from the instance status returned by <a href="/DescribeInstanceStatus">DescribeInstanceStatus</a>, use <a href="/ReportInstanceStatus">ReportInstanceStatus</a> to report your experience with the instance. Amazon EC2 collects this information to improve the accuracy of status checks.

Use of this action does not change the value returned by <a href="/DescribeInstanceStatus">DescribeInstanceStatus</a>.

You can submit a single request that includes multiple launch specifications that vary by instance type, AMI, Availability Zone, or subnet. By default, the Spot fleet requests Spot instances in the Spot pool where the price per unit is the lowest. Each launch specification can include its own instance weighting that reflects the value of the instance type to your application workload. Alternatively, you can specify that the Spot fleet distribute the target capacity across the Spot pools included in its launch specifications. By ensuring that the Spot instances in your Spot fleet are in different Spot pools, you can improve the availability of your fleet. For more information, see Spot Fleet Requests in the <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-fleet-requests.html">Amazon Elastic Compute Cloud User Guide</a>.

}

"RunInstances": {
  "authorizer": null,
  "authtype": "IAM",
  "deprecated": false,
  "documentation": "Launches the specified number of instances using an AMI for which you have permissions. You can specify a number of options, or leave the default options. The following rules apply:

- **[EC2-VPC]** If you don’t specify a subnet ID, we choose a default subnet from your default VPC for you. If you don’t have a default VPC, you must specify a subnet ID in the request.
- **[EC2-Classic]** If you don’t specify an Availability Zone, we choose one for you.
- Some instance types must be launched into a VPC. If you do not have a default VPC, or if you do not specify a subnet ID, the request fails. For more information, see [Instance Types Available Only in a VPC](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-vpc.html#vpc-only-instance-types).
- All instances have a network interface with a primary private IPv4 address. If you do not specify this address, we choose one from the IPv4 range of your subnet.
- Not all instance types support IPv6 addresses. For more information, see [Instance Types](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/instance-types.html).
- If you don’t specify a security group ID, we use the default security group. For more information, see [Security Groups](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-network-security.html).
- If any of the AMIs have a product code attached for which the user has not subscribed, the request fails.
- To ensure faster instance launches, break up large requests into smaller batches. For example, create 5 separate launch requests for 100 instances each instead of 1 launch request for 500 instances.
- An instance is ready for you to use when it’s in the `running` state. You can check the state of your instance using [DescribeInstances](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-network-security.html).
- Linux instances have access to the public key of the key pair at boot. You can use this key to provide secure access to the instance. Amazon EC2 public images use this feature to provide secure access without passwords. For more information, see [Key Pairs](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ec2-key-pairs.html)
- For troubleshooting, see [What To Do If An Instance Immediately Terminates](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/TroubleshootingInstancesConnecting.html)."

"documentation": "> Stops an Amazon EBS-backed instance. <p>We don't charge hourly usage for a stopped instance, or data transfer fees; however, your root partition Amazon EBS volume remains, continues to persist your data, and you are charged for Amazon EBS volume usage. Each time you transition an instance from stopped to started, Amazon EC2 charges a full instance hour, even if transitions happen multiple times within a single hour. <p>You can't start or stop Spot instances, and you can't stop instance store-backed instances. <p>"
When you stop an instance, we shut it down. You can restart your instance at any time. Before stopping an instance, make sure it is in a state from which it can be restarted. Stopping an instance does not preserve data stored in RAM.

Stopping an instance is different to rebooting or terminating it. For example, when you stop an instance, the root device and any other devices attached to the instance persist. When you terminate an instance, the root device and any other devices attached during the instance launch are automatically deleted. For more information about the differences between rebooting, stopping, and terminating instances, see Instance Lifecycle in the Amazon Elastic Compute Cloud User Guide.

When you stop an instance, we attempt to shut it down forcibly after a short while. If your instance appears stuck in the stopping state after a period of time, there may be an issue with the underlying host computer. For more information, see Troubleshooting Stopping Your Instance in the Amazon Elastic Compute Cloud User Guide.

Shuts down one or more instances. This operation is idempotent; if you terminate an instance more than once, each call succeeds. If you specify multiple instances and the request fails (for example, because of a single incorrect instance ID), none of the instances are terminated.

Terminated instances remain visible after termination (for approximately one hour). By default, Amazon EC2 deletes all EBS volumes that were attached when the instance launched. Volumes attached after instance launch continue running. You can stop, start, and terminate EBS-backed instances. You can only terminate instance store-backed instances. What happens to an instance differs if you stop it or terminate it. For example, when you stop an instance, the root device and any other devices attached to the instance persist. When you terminate an instance, any attached EBS volumes with the <code>DeleteOnTermination</code> block device mapping parameter set to true are automatically deleted. For more information about the differences between stopping and terminating instances, see Instance Lifecycle in the Amazon Elastic Compute Cloud User Guide.

Attachment Classic Link VPC Request:

- **description**: Contains the parameters for AttachClassicLinkVpc.
- **parameters**:
  - **AssociationIdList**
    - **AssociationId**: The ID of the VPC association.
  - **idempotencyToken**
  - **key**
  - **location**
  - **locationName**
  - **max**
  - **member**
  - **min**
  - **payload**
  - **queryName**
  - **shape**
  - **streaming**
  - **xmlNamespace**

**Note**: For more details on the parameters, refer to the official documentation of the Cisco Identity Service API.
The ID of one or more of the VPC's security groups. You cannot specify security groups from a different VPC.

The ID of an EC2-Classic instance to link to the ClassicLink-enabled VPC.

The ID of a ClassicLink-enabled VPC.

Open Source Used in CISCO IDENTITY SERVICE 12.5(1)SU2

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify
the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X,
specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the
<code>tag-value</code> filter. For example, if you use both the filter "<code>tag-key=Purpose</code>" and the filter "<code>tag-value=X</code>",
you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X
(regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the
<code>tag-value</code> filter.

One or more filters. The instance family of the offering (e.g., `m4`). The payment option (`NoUpfront` | `PartialUpfront` | `AllUpfront`).

This is the maximum duration of the reservation you'd like to purchase, specified in seconds. Reservations are available in one-year and three-year terms. The number of seconds specified must be the number of seconds in a year (365x24x60x60) times one of the supported durations (1 or 3). For example, specify 94608000 for three years.

The maximum number of results to return for the request in a single page. The remaining results can be seen by sending another request with the returned `<code>nextToken</code>` value. This value can be between 5 and 500; if `<code>maxResults</code>` is given a larger value than 500, you will receive an error.

- network-interface.addresses.association.public-ip - The ID of the association of an Elastic IP address (IPv4) with a network interface.
- network-interface.addresses.association.ip-owner-id - The owner ID of the private IPv4 address associated with the network interface.
- network-interface.attachment.attachment-id - The ID of the interface attachment.
- network-interface.attachment.instance-id - The ID of the instance to which the network interface is attached.
- network-interface.attachment.instance-owner-id - The owner ID of the instance to which the network interface is attached.
one relationship with an instance launch request, but can be associated with more than one instance if you launch multiple instances using the same launch request. For example, if you launch one instance, you'll get one reservation ID. If you launch ten instances using the same launch request, you'll also get one reservation ID. The value must be false for the instance to perform network address translation (NAT) in your VPC.

- `<code>root-device-name</code>` - The name of the root device for the instance (for example, `</code>/dev/sda1</code>` or `</code>/dev/xvda</code>`).
- `<code>root-device-type</code>` - The type of root device that the instance uses (`</code>ebs</code>` | `</code>instance-store</code>`).
- `<code>source-dest-check</code>` - Indicates whether the instance performs source/destination checking. A value of true means that checking is enabled, and false means checking is disabled. The value must be false for the instance to perform network address translation (NAT) in your VPC.
- `<code>spot-instance-request-id</code>` - The ID of the Spot instance request.
- `<code>state-reason-code</code>` - The reason code for the state change.
- `<code>state-reason-message</code>` - A message that describes the state change.
- `<code>state-transition</code>` - The state transition (for example, `</code>in-use</code>`).
- `<code>tag</code>`: `<i>key</i>=<i>value</i>` - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the filter "tag-value=X" filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is).
- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `</code>tag-value</code>` filter.
- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `</code>tag-key</code>` filter.
- `<code>virtualization-type</code>` - The virtualization type of the instance (</code>paravirtual</code> | </code>hvm</code>).</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC that the instance is running in.</p> </li>

"Filters": {
"deprecated": false,
"documentation": "One or more filters.\n- `<code>association.association-id</code>` - The ID of an association ID for the ACL.
- `<code>association.network-acl-id</code>` - The ID of the network ACL involved in the association.
- `<code>association.subnet-id</code>` - The ID of the subnet involved in the association.
- `<code>code=default</code>` - Indicates whether the ACL is the default network ACL for the VPC.
- `<code>entry.cidr</code>` - The IPv4 CIDR range specified in the entry.
- `<code>entry.icmp.code</code>` - The ICMP code specified in the entry, if any.
- `<code>entry.icmp.type</code>` - The ICMP type specified in the entry, if any.
- `<code>entry.ipv6-cidr</code>` - The IPv6 CIDR range specified in the entry.
- `<code>entry.egress</code>` - Indicates whether the entry applies to egress traffic.
- `<code>entry.port-range.from</code>` - The start of the port range specified in the entry.
- `<code>entry.port-range.to</code>` - The end of the port range specified in the entry.
- `<code>entry.protocol</code>` - The protocol specified in the entry (\`tcp\` | \`udp\` | \`icmp\` or a protocol number).
- `<code>entryrule-action</code>` - Allows or denies the matching traffic.
- `<code>entryrule-number</code>` - The number of an entry (in other words, rule) in the ACL's set of entries.
- `<code>network-acl-id</code>` - The ID of the network ACL.
- `<code>tag</code>` - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag `Purpose=X`, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.
- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `tag-value` filter. For example, if you use both the filter `\^tag-key=Purpose\$` and the filter `\^tag-value=X\$`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `\^tag-value=X\$` filter.
- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `tag-key` filter.\n\nThe ID of the VPC for the network ACL.
ACLs.

The private IPv4 addresses associated with the network interface.

Whether the private IPv4 address is the primary IP address associated with the network interface.

The association ID returned when the network interface was associated with the Elastic IP address (IPv4).

The owner ID of the addresses associated with the network interface.

The association ID returned when the network interface was associated with an IPv4 address.

The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.

The owner ID of the Elastic IP Address (IPv4) associated with the network interface.

The address of the Elastic IP address (IPv4) bound to the network interface.

The public DNS name for the network interface (IPv4).

The ID of the interface attachment.

Indicates whether the attachment is deleted when an instance is terminated.

The device index to which the network interface is attached.

The ID of the instance to which the network interface is attached.

The owner ID of the instance to which the network interface is attached.

The ID of the NAT gateway to which the network interface is attached.

The status of the attachment.

The ID of a security group associated with the network interface.

The name of a security group associated with the network interface.

An IPv6 address associated with the network interface.

The MAC address of the network interface.

The ID of the network interface.

The AWS account ID of the network interface owner.

The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).
and so on).</p> <li> <p> <code>source-desk-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. </p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>. </p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the network interface. </p> </li> <li> <p> <code>tag:Key</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Key</code> filter. </p> </li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li> </ul>

Availability Zone where the Reserved Instance can be used.

- The duration of the Reserved Instance (one year or three years), in seconds (31536000).
- The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
- The purchase price of the Reserved Instance (for example, 9800.0).
- The instance type that is covered by the reservation.
- The scope of the Reserved Instance.
- The Reserved Instance product platform description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC.

- The ID of the Reserved Instance.
- The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- The state of the Reserved Instance (payment-pending | active | payment-failed | retired).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>key</code>=<i>purpose</i> for the filter value.

- The usage price of the Reserved Instance, per hour (for example, 0.84).

"Filters" : {
  "deprecated" : false,
  "documentation" : "One or more filters. <ul>
  <li> <code>description</code> - A description of the snapshot.</li>
  <li> <code>owner-alias</code> - Value from an Amazon-maintained list (amazon|aws-marketplace|microsoft) of snapshot owners. Not to be confused with the user-configured AWS account alias, which is set from the IAM console.</li>
  <li> <code>owner-id</code> - The ID of the AWS account that owns the snapshot.</li>
  <li> <code>progress</code> - The progress of the snapshot, as a percentage (for example, 80%).</li>
  <li> <code>snapshot-id</code> - The snapshot ID.</li>
  <li> <code>start-time</code> - The time stamp when the snapshot was initiated.</li>
  <li> <code>status</code> - The status of the snapshot (pending|completed|error).</li>
  <li> <code>tag:key</code>=<code:value</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
  <li> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-value</code> filter. For example, "purpose=E" will return resources that have a tag of Purpose=E.</li>
  <li> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</li>
  <li> <code>volume-id</code> - The ID of the volume the snapshot is for.</li>
  <li> <code>volume-size</code> - The size of the volume, in GiB.</li>
</ul>

- The primary private IP address of the Spot instance.</li>

Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see &lt;a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html"&gt;Spot Bid Status&lt;/a&gt; in the Amazon Elastic Compute Cloud User Guide. This is the most recent evaluation of your Spot instance request. - The message explaining the status of the Spot instance request. - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. - The key of a tag assigned to the resource. This filter is independent of the filter value. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=XY", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the filter. - The value of a tag assigned to the resource. This filter is independent of the filter value. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=XY", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the filter. - The type of Spot instance request (one-time | persistent). - The Availability Zone in which the bid is launched. - The start date of the request. - The end date of the request.

  "documentation": "Contains the parameters for DescribeVpcs.
<p>This method returns all the VPCs owned by your account. The
VPCs are returned in the order they were created. You can filter
the list of VPCs returned by specifying one or more filters.
An IPv4 CIDR block associated with the VPC</p>
<p>Must contain the slash followed by one or two digits (for example, /28).
One or more filters are provided. The following filters are available:
- cidr - The IPv4 CIDR block of the VPC.
- dhcp-options-id - The ID of a set of DHCP options.
- ipv6-cidr-block-association.ipv6-cidr-block - An IPv6 CIDR block associated with the VPC.
- ipv6-cidr-block-association.association-id - The association ID for an IPv6 CIDR block associated with the VPC.
- ipv6-cidr-block-association.state - The state of an IPv6 CIDR block associated with the VPC.
- isDefault - Indicates whether the VPC is the default VPC.
- state - The state of the VPC (pending | available).
- tag: key - The key of a tag assigned to the resource.</p>
<p>Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and tag=X for the filter value. This filter is independent of the tag-value filter.
For example, if you use both the filter \"tag-key=\"Purpose\"\" and the filter \"tag-value=\"X\"\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag-value filter.</p>
- tag-value - The value of a tag assigned to the resource. This filter is independent of the tag-key filter.
- vpc-id - The ID of the VPC.

<li><p><code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=XY</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p></li>
<li><p><code>tag-value</code> - The value of a
tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> <li> <p> <code>type</code> - The type of virtual private gateway. Currently the only supported type is <code>ipsec.1</code>.
</p> <li> <p> <code>vpn-gateway-id</code> - The ID of the virtual private gateway.
</p> <ul>

"EventInformation" : {

Describes a Spot fleet event.

The description of the event.

The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.

You've reached the limit on the number of Spot instances that you can launch.

The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.

The Spot fleet request was modified.

The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- A bid was fulfilled and a new instance was launched.<p> </li> <li> <p> <code>terminated</code> - An instance was terminated by the user.<p> </li> </ul>

    "deprecated": false,
The IP protocol name (\texttt{tcp}, \texttt{udp}, \texttt{icmp}) or number (see [Protocol Numbers](http://www.iana.org/assignments/protocol-numbers/protocol-numbers.xhtml)) allows traffic on all ports, regardless of any port range you specify. For \texttt{tcp}, \texttt{udp}, and \texttt{icmp}, you must specify a port range. For \texttt{58} (ICMPv6), you can optionally specify a port range; if you don't, traffic for all types and codes is allowed when authorizing rules.

IPv4 and IPv6 ranges can be used to specify a range of IP addresses. Prefix list IDs are used to specify a list of CIDR blocks that are included in the rule. The prefix list IDs can be used to group multiple rules under a single prefix list ID.

- **IPv4 Ranges**
  - One or more IPv4 ranges.

- **IPv6 Ranges**
  - [EC2-VPC only] One or more IPv6 ranges.

- **Prefix List IDs**
  - (Valid for \texttt{AuthorizeSecurityGroupEgress}, \texttt{RevokeSecurityGroupEgress}, and \texttt{DescribeSecurityGroups} only) One or more prefix list IDs for an
AWS service. In an <a>AuthorizeSecurityGroupEgress</a> request, this is the AWS service that you want to access through a VPC endpoint from instances associated with the security group.</p>"},

"documentation" : "If the NAT gateway could not be created, specifies the error message for the failure,
that corresponds to the error code.
For InsufficientFreeAddressesInSubnet:
Subnet has insufficient free addresses to create this NAT gateway.
For Gateway.NotAttached:
Network vpc-xxxxxxx has no Internet gateway attached.
For InvalidAllocationID.NotFound:
Elastic IP address eipalloc-xxxxxxx could not be associated with this NAT gateway.
For Resource.AlreadyAssociated:
Elastic IP address eipalloc-xxxxxxx is already associated.
For InternalError:
Network interface eni-xxxxxxx, created and used internally by this NAT gateway is in an invalid state. Please try again.
For InvalidSubnetID.NotFound:
The specified subnet subnet-xxxxxxx does not exist or could not be found.

The current price schedule, as determined by the term remaining for the Reserved Instance in the listing. A specific price schedule is always in effect, but only one price schedule can be active at any time. Take, for example, a Reserved Instance listing that has five months remaining in its term. When you specify price schedules for five months and two months, this means that schedule 1, covering the first three months of the remaining term, will be active during months 5, 4, and 3. Then schedule 2, covering the last two months of the term, will be active for months 2 and 1.

The currency for transacting the Reserved Instance resale. At this time, the only supported currency is $USD.

The fixed price for the term.

The frequency (Daily, Weekly, or Monthly).

The interval quantity. The interval unit depends on the value of frequency. For example, every 2 weeks or every 2 months.

The days. For a monthly schedule, this is one or more days of the month (1-31). For a weekly schedule, this is one or more days of the week (1-7, where 1 is Sunday).
Indicates whether the occurrence is relative to the end of the specified week or month.

The unit for occurrenceDaySet (DayOfWeek or DayOfMonth).

Describes the recurring schedule for a Scheduled Instance.

Encrypted Amazon EBS snapshots are copied asynchronously. If a snapshot copy operation fails (for example, if the proper AWS Key Management Service (AWS KMS) permissions are not obtained) this field displays error state details to help you diagnose why the error occurred. This parameter is only returned by the `<a>DescribeSnapshots</a>` API operation.

The ID of the volume that was used to create the snapshot. Snapshots created by the `<a>CopySnapshot</a>` action have an arbitrary volume ID that should not be used for any purpose.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free
software--to make sure the software is free for all its users. This
General Public License applies to most of the Free Software
Foundation's software and to any other program whose authors commit to
using it. (Some other Free Software Foundation software is covered by
the GNU Lesser General Public License instead.) You can apply it to
your programs, too.

When we speak of free software, we are referring to freedom, not
price. Our General Public Licenses are designed to make sure that you
have the freedom to distribute copies of free software (and charge for
this service if you wish), that you receive source code or can get it
if you want it, that you can change the software or use pieces of it
in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid
anyone to deny you these rights or to ask you to surrender the rights.
These restrictions translate to certain responsibilities for you if you
distribute copies of the software, or if you modify it.
For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's
source code as you receive it, in any medium, provided that you
conspicuously and appropriately publish on each copy an appropriate
copyright notice and disclaimer of warranty; keep intact all the
notices that refer to this License and to the absence of any warranty;
and give any other recipients of the Program a copy of this License
along with the Program.

You may charge a fee for the physical act of transferring a copy, and
you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion
of it, thus forming a work based on the Program, and copy and
distribute such modifications or work under the terms of Section 1
above, provided that you also meet all of these conditions:

   a) You must cause the modified files to carry prominent notices
      stating that you changed the files and the date of any change.

   b) You must cause any work that you distribute or publish, that in
      whole or in part contains or is derived from the Program or any
      part thereof, to be licensed as a whole at no charge to all third
      parties under the terms of this License.

   c) If the modified program normally reads commands interactively
      when run, you must cause it, when started running for such
      interactive use in the most ordinary way, to print or display an
      announcement including an appropriate copyright notice and a
      notice that there is no warranty (or else, saying that you provide
      a warranty) and that users may redistribute the program under
      these conditions, and telling the user how to view a copy of this
      License.  (Exception: if the Program itself is interactive but
      does not normally print such an announcement, your work based
      on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole.  If
identifiable sections of that work are not derived from the Program,
and can be reasonably considered independent and separate works in
themselves, then this License, and its terms, do not apply to those
sections when you distribute them as separate works.  But when you
distribute the same sections as part of a whole which is a work based
on the Program, the distribution of the whole must be on the terms of
this License, whose permissions for other licensees extend to the
entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest
your rights to work written entirely by you; rather, the intent is to
exercise the right to control the distribution of derivative or
collective works based on the Program.
In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License.
However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot
impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR
REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.
The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program 'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

------------------------------------------------------------------------

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991
Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software
patents. We wish to avoid the danger that redistributors of a free
program will individually obtain patent licenses, in effect making the
program proprietary. To prevent this, we have made it clear that any
patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and
modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains
a notice placed by the copyright holder saying it may be distributed
under the terms of this General Public License. The "Program", below,
refers to any such program or work, and a "work based on the Program"
means either the Program or any derivative work under copyright law:
that is to say, a work containing the Program or a portion of it,
either verbatim or with modifications and/or translated into another
language. (Hereinafter, translation is included without limitation in
the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not
covered by this License; they are outside its scope. The act of
running the Program is not restricted, and the output from the Program
is covered only if its contents constitute a work based on the
Program (independent of having been made by running the Program).
Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's
source code as you receive it, in any medium, provided that you
conspicuously and appropriately publish on each copy an appropriate
copyright notice and disclaimer of warranty; keep intact all the
notices that refer to this License and to the absence of any warranty;
and give any other recipients of the Program a copy of this License
along with the Program.

You may charge a fee for the physical act of transferring a copy, and
you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion
of it, thus forming a work based on the Program, and copy and
distribute such modifications or work under the terms of Section 1
above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices
stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in
whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium
c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program
specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least
the "copyright" line and a pointer to where the full notice is found.
