These are the credits from Bob's sources:

These are functions for producing 32-bit hashes for hash table lookup.
hashword(), hashlittle(), hashlittle2(), hashbig(), mix(), and final()
are externally useful functions. Routines to test the hash are included
if SELF_TEST is defined. You can use this free for any purpose. It's in
the public domain. It has no warranty.

This code implements the MD5 message-digest algorithm.

The algorithm is due to Ron Rivest. This code was written by Colin Plumb in 1993, no copyright is claimed.

This code is in the public domain; do with it what you wish.

Equivalent code is available from RSA Data Security, Inc.

This code has been tested against that, and is equivalent, except that you don't need to include two pages of legalese with every copy.

To compute the message digest of a chunk of bytes, declare an MD5Context structure, pass it to MD5Init, call MD5Update as needed on buffers full of bytes, and then call MD5Final, which will fill a supplied 16-byte array with the digest.

This code was modified in 1997 by Jim Kingdon of Cyclic Software to not require an integer type which is exactly 32 bits. This work draws on the changes for the same purpose by Tatu Ylonen <ylo@cs.hut.fi> as part of SSH, but since I didn't actually use that code, there is no copyright issue. I hereby disclaim copyright in any changes I have made; this code remains in the public domain.

This function manages its own buffer and returns a pointer to that buffer
in order to avoid expensive memory copies. It also checks for line breaks
32 or 64 bits at a time. It could be improved a lot using mmap() but we
would not be allowed to replace trailing 'n with zeroes and we would be
limited to small log files on 32-bit machines.

The Free Software Foundation has exempted Bash from the requirement of Paragraph 2c of the General Public License. This is to say, there is no requirement for Bash to print a notice when it is started interactively in the usual way. We made this exception because users and standards expect shells not to print such messages. This exception applies to any program that serves as a shell and that is based primarily on Bash as opposed to other GNU software.

Independent implementation of MD5 (RFC 1321).

This code implements the MD5 Algorithm defined in RFC 1321, whose
text is available at
http://www.ietf.org/rfc/rfc1321.txt
The code is derived from the text of the RFC, including the test suite
(section A.5) but excluding the rest of Appendix A. It does not include
any code or documentation that is identified in the RFC as being
copyrighted.

The original and principal author of md5.h is L. Peter Deutsch
<ghost@aladdin.com>. Other authors are noted in the change history
that follows (in reverse chronological order):

2002-04-13 lpd Removed support for non-ANSI compilers; removed
references to Ghostscript; clarified derivation from RFC 1321;
now handles byte order either statically or dynamically.
1999-11-04 lpd Edited comments slightly for automatic TOC extraction.
1999-10-18 lpd Fixed typo in header comment (ansi2knr rather than md5);
added conditionalization for C++ compilation from Martin
Purschke <purschke@bnl.gov>.
1999-05-03 lpd Original version.

UNMODIFIED BINARY DISTRIBUTION LICENCE

PREAMBLE

The GNU General Public License provides a legal guarantee that software covered by it remains free (in the sense of freedom, not price). It achieves this guarantee by imposing obligations on anyone who chooses to distribute the software.

Some of these obligations may be seen as unnecessarily burdensome. In particular, when the source code for the software is already publicly and freely available, there is minimal value in imposing upon each distributor the obligation to provide the complete source code (or an equivalent written offer to provide the complete source code).
This Licence allows for the distribution of unmodified binaries built from publicly available source code, without imposing the obligations of the GNU General Public License upon anyone who chooses to distribute only the unmodified binaries built from that source code.

The extra permissions granted by this Licence apply only to unmodified binaries built from source code which has already been made available to the public in accordance with the terms of the GNU General Public Licence. Nothing in this Licence allows for the creation of closed-source modified versions of the Program. Any modified versions of the Program are subject to the usual terms and conditions of the GNU General Public License.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

This Licence applies to any Program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this Unmodified Binary Distribution Licence. All terms used in the text of this Licence are to be interpreted as they are used in version 2 of the GNU General Public License as published by the Free Software Foundation.
If you have made this Program available to the public in both source
code and executable form in accordance with the terms of the GNU
General Public License as published by the Free Software Foundation;
either version 2 of the License, or (at your option) any later
version, then you are hereby granted an additional permission to use,
copy, and distribute the unmodified executable form of this Program
(the "Unmodified Binary") without restriction, including the right to
permit persons to whom the Unmodified Binary is furnished to do
likewise, subject to the following conditions:

- when started running, the Program must display an announcement which
  includes the details of your existing publication of the Program
  made in accordance with the terms of the GNU General Public License.
  For example, the Program could display the URL of the publicly
  available source code from which the Unmodified Binary was built.

- when exercising your right to grant permissions under this Licence,
  you do not need to refer directly to the text of this Licence, but
  you may not grant permissions beyond those granted to you by this
  Licence.

Bison interface for Yacc-like parsers in C

This program is free software: you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation, either version 3 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton. Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public
License without this special exception.

This special exception was added by the Free Software Foundation in
version 2.2 of Bison.

This C header file is part of the SoftFloat IEC/IEEE Floating-point Arithmetic Package, Release 2.

Written by John R. Hauser. This work was made possible in part by the International Computer Science Institute, located at Suite 600, 1947 Center Street, Berkeley, California 94704. Funding was partially provided by the National Science Foundation under grant MIP-9311980. The original version of this code was written as part of a project to build a fixed-point vector processor in collaboration with the University of California at Berkeley, overseen by Profs. Nelson Morgan and John Wawrzynek. More information is available through the Web page http://www.jhauser.us/arithmetic/SoftFloat-2b/SoftFloat-source.txt

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card.

it under the terms of the GNU General Public License as published by
the Free Software Foundation, either version 3 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton. Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public
License without this special exception.

This special exception was added by the Free Software Foundation in
version 2.2 of Bison.

This code offers a very basic support for this EISA bus present in
the SGI Indigo-2. It currently only supports PIO (forget about DMA
for the time being). This is enough for a low-end ethernet card,
but forget about your favorite SCSI card...

and Marc Zyngier <mzyngier@freesurf.fr>

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in
the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

linux-4.4.35.tar.xz\linux-4.4.35.tar\linux-4.4.35\arch\alpha\lib\memset.S

This is an efficient (and small) implementation of the C library "memset()" function for the alpha.

This routine is "moral-ware": you are free to use it any way you wish, and
the only obligation I put on you is a moral one: if you make any improvements
to the routine, please send me your improvements for me to use similarly.

The scheduling comments are according to the EV5 documentation (and done by
hand, so they might well be incorrect, please do tell me about it..)

`linux-4.4.41.tar.xz/linux-4.4.41.tar/linux-4.4.41\Documentation\vDSO\parse_vdso.c`

`parse_vdso.c`: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.
This code is meant to be linked in to various programs that run on Linux. As such, it is available with as few restrictions as possible. This file is licensed under the Creative Commons Zero License, version 1.0, available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.
This code is meant to be linked in to various programs that run on Linux. As such, it is available with as few restrictions as possible. This file is licensed under the Creative Commons Zero License, version 1.0, available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

Reasonably optimised generic C-code for memcpy on Microblaze
This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original author of this code (Michael Morrow, Intel). Below is the original copyright notice.

This software has been developed by Intel Corporation.
Intel specifically disclaims all warranties, express or implied, and all liability, including consequential and other indirect damages, for the use of this program, including liability for infringement of any proprietary rights, and including the warranties of merchantability and fitness for a particular purpose. This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Various virtualization hardware acceleration techniques allow bypassing or
offloading interrupts received from devices around the host kernel. Posted
Interrupts on Intel VT-d systems can allow interrupts to be received
directly by a virtual machine. ARM IRQ Forwarding allows forwarded physical
interrupts to be directly deactivated by the guest. This manager allows
interrupt producers and consumers to find each other to enable this sort of
bypass.

Reasonably optimised generic C-code for memcpy on Microblaze

This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from

http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original

author of this code (Michael Morrow, Intel). Below is the original

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

This C header file is part of the SoftFloat IEC/IEEE Floating-point Arithmetic Package, Release 2.

Written by John R. Hauser. This work was made possible in part by the International Computer Science Institute, located at Suite 600, 1947 Center Street, Berkeley, California 94704. Funding was partially provided by the National Science Foundation under grant MIP-9311980. The original version of this code was written as part of a project to build a fixed-point vector processor in collaboration with the University of California at Berkeley, overseen by Profs. Nelson Morgan and John Wawrzynek. More information is available through the Web page http://www.jhauser.us/arithmetic/SoftFloat-2b/SoftFloat-source.txt

This C header file is part of the SoftFloat IEC/IEEE Floating-point Arithmetic Package, Release 2.

Written by John R. Hauser. This work was made possible in part by the International Computer Science Institute, located at Suite 600, 1947 Center Street, Berkeley, California 94704. Funding was partially provided by the National Science Foundation under grant MIP-9311980. The original version of this code was written as part of a project to build a fixed-point vector processor in collaboration with the University of California at Berkeley, overseen by Profs. Nelson Morgan and John Wawrzynek. More information is available through the Web page http://www.jhauser.us/arithmetic/SoftFloat-2b/SoftFloat-source.txt

This C header file is part of the SoftFloat IEC/IEEE Floating-point Arithmetic Package, Release 2.

Written by John R. Hauser. This work was made possible in part by the International Computer Science Institute, located at Suite 600, 1947 Center Street, Berkeley, California 94704. Funding was partially provided by the National Science Foundation under grant MIP-9311980. The original version of this code was written as part of a project to build a fixed-point vector processor in collaboration with the University of California at Berkeley, overseen by Profs. Nelson Morgan and John Wawrzynek. More information is available through the Web page http://www.jhauser.us/arithmetic/SoftFloat-2b/SoftFloat-source.txt

THIS SOFTWARE IS DISTRIBUTED AS IS, FOR FREE. Although reasonable effort has been made to avoid it, THIS SOFTWARE MAY CONTAIN FAULTS THAT WILL AT TIMES RESULT IN INCORRECT BEHAVIOR. USE OF THIS SOFTWARE IS RESTRICTED TO PERSONS AND ORGANIZATIONS WHO CAN AND WILL TAKE FULL RESPONSIBILITY FOR ANY AND ALL LOSSES, COSTS, OR OTHER PROBLEMS ARISING FROM ITS USE.

Derivative works are acceptable, even for commercial purposes, so long as (1) they include prominent notice that the work is derivative, and (2) they include prominent notice akin to these three paragraphs for those parts of this code that are retained.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Reasonably optimised generic C-code for memcpy on Microblaze
This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original author of this code (Michael Morrow, Intel). Below is the original copyright notice.

This software has been developed by Intel Corporation.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Reasonably optimised generic C-code for memcpy on Microblaze
This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original author of this code (Michael Morrow, Intel). Below is the original copyright notice.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

PARSE_VDSO.C: LINUX REFERENCE VDSO PARSER
WRITTEN BY ANDREW LUTOMIRSKI, 2011-2014.

THIS CODE IS MEANT TO BE LINKED IN TO VARIOUS PROGRAMS THAT RUN ON LINUX.
AS SUCH, IT IS AVAILABLE WITH AS FEW RESTRICTIONS AS POSSIBLE. THIS FILE
is licensed under the Creative Commons Zero License, version 1.0, available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

linux-4.4.54.tar.xz\linux-4.4.54.tar\linux-4.4.54\Documentation\vDSO\parse_vdso.c

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

You should have received a copy of the GNU General Public License along with this program. If not, see <http://www.gnu.org/licenses/>.

As a special exception, you may create a larger work that contains part or all of the Bison parser skeleton and distribute that work under terms of your choice, so long as that work isn’t itself a parser generator using the skeleton or a modified version thereof as a parser skeleton. Alternatively, if you modify or redistribute the parser skeleton itself, you may (at your option) remove this special exception, which will cause the skeleton and the resulting Bison output files to be licensed under the GNU General Public License without this special exception.

This special exception was added by the Free Software Foundation in version 2.2 of Bison.

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

bit 0 is the LSB of an "unsigned long" quantity.

Please note that the code in this file should never be included from user space. Many of these are not implemented in assembler since they would be too costly. Also, they require privileged instructions (which are not available from user mode) to ensure that they are atomic.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

the Free Software Foundation, either version 3 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton. Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public
License without this special exception.

This special exception was added by the Free Software Foundation in
version 2.2 of Bison.

Various virtualization hardware acceleration techniques allow bypassing or
offloading interrupts received from devices around the host kernel. Posted
Interrupts on Intel VT-d systems can allow interrupts to be received
directly by a virtual machine. ARM IRQ Forwarding allows forwarded physical
interrupts to be directly deactivated by the guest. This manager allows
interrupt producers and consumers to find each other to enable this sort of
bypass.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Use this one for any 680x0 assumes no floating point hardware. The trailing " " appearing on some lines is for ANSI preprocessors. Yuk. Some of this code comes from MINIX, via the folks at ericsson.

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton. Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

and Marc Zyngier <mzyngier@freesurf.fr>

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Reasonably optimised generic C-code for memcpy on Microblaze
This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from
http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original
author of this code (Michael Morrow, Intel). Below is the original
copyright notice.

This software has been developed by Intel Corporation.
Intel specifically disclaims all warranties, express or
implied, and all liability, including consequential and
other indirect damages, for the use of this program, including
liability for infringement of any proprietary rights,
and including the warranties of merchantability and fitness
for a particular purpose. Intel does not assume any
responsibility for and errors which may appear in this program
not any responsibility to update it.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Reasonably optimised generic C-code for memcpy on Microblaze
This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original author of this code (Michael Morrow, Intel). Below is the original copyright notice.

This software has been developed by Intel Corporation. Intel specifically disclaims all warranties, express or implied, and all liability, including consequential and other indirect damages, for the use of this program, including liability for infringement of any proprietary rights, and including the warranties of merchantability and fitness for a particular purpose. Intel does not assume any responsibility for and errors which may appear in this program not any responsibility to update it.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card,
but forget about your favorite SCSI card...

Reasonably optimised generic C-code for memcpy on Microblaze
This is generic C code to do efficient, alignment-aware memcpy.

It is based on demo code originally Copyright 2001 by Intel Corp, taken from http://www.embedded.com/showArticle.jhtml?articleID=19205567

Attempts were made, unsuccessfully, to contact the original author of this code (Michael Morrow, Intel). Below is the original copyright notice.

This software has been developed by Intel Corporation. Intel specifically disclaims all warranties, express or implied, and all liability, including consequential and other indirect damages, for the use of this program, including
liability for infringement of any proprietary rights,
and including the warranties of merchantability and fitness
for a particular purpose. Intel does not assume any
responsibility for and errors which may appear in this program
not any responsibility to update it.

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.
This code is meant to be linked in to various programs that run on Linux. As such, it is available with as few restrictions as possible. This file is licensed under the Creative Commons Zero License, version 1.0, available at http://creativecommons.org/publicdomain/zero/1.0/legalcode.

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

27053
parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

As a special exception, you may create a larger work that contains part or all of the Bison parser skeleton and distribute that work under terms of your choice, so long as that work isn’t itself a parser generator using the skeleton or a modified version thereof as a parser skeleton. Alternatively, if you modify or redistribute the parser skeleton itself, you may (at your option) remove this special exception, which will cause the skeleton and the resulting Bison output files to be licensed under the GNU General Public License without this special exception.

This special exception was added by the Free Software Foundation in version 2.2 of Bison.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux. As such, it is available with as few restrictions as possible. This file is licensed under the Creative Commons Zero License, version 1.0, available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

This code is meant to be linked in to various programs that run on Linux.

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux.
As such, it is available with as few restrictions as possible. This file
is licensed under the Creative Commons Zero License, version 1.0,
available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when
it starts a program. It works equally well in statically and dynamically
linked binaries.

This code is tested on x86. In principle it should work on any
architecture that has a vDSO.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program. If not, see <http://www.gnu.org/licenses/>.

As a special exception, you may create a larger work that contains part or all of the Bison parser skeleton and distribute that work under terms of your choice, so long as that work isn't itself a parser generator using the skeleton or a modified version thereof as a parser skeleton. Alternatively, if you modify or redistribute the parser skeleton itself, you may (at your option) remove this special exception, which will cause the skeleton and the resulting Bison output files to be licensed under the GNU General Public License without this special exception.

This special exception was added by the Free Software Foundation in version 2.2 of Bison.

parse_vdso.c: Linux reference vDSO parser
Written by Andrew Lutomirski, 2011-2014.

This code is meant to be linked in to various programs that run on Linux. As such, it is available with as few restrictions as possible. This file is licensed under the Creative Commons Zero License, version 1.0, available at http://creativecommons.org/publicdomain/zero/1.0/legalcode

The vDSO is a regular ELF DSO that the kernel maps into user space when it starts a program. It works equally well in statically and dynamically linked binaries.

This code is tested on x86. In principle it should work on any architecture that has a vDSO.

As a special exception, you may create a larger work that contains part or all of the Bison parser skeleton and distribute that work under terms of your choice, so long as that work isn't itself a parser generator using the skeleton or a modified version thereof as a parser skeleton. Alternatively, if you modify or redistribute the parser skeleton itself, you may (at your option) remove this special exception, which will cause the skeleton and the resulting Bison output files to be licensed under the GNU General Public License without this special exception.

This special exception was added by the Free Software Foundation in version 2.2 of Bison.

This code is released under both the GPL version 2 and BSD

This code offers a very basic support for this EISA bus present in
the SGI Indigo-2. It currently only supports PIO (forget about DMA
for the time being). This is enough for a low-end ethernet card,
but forget about your favorite SCSI card...

Various virtualization hardware acceleration techniques allow bypassing or
offloading interrupts received from devices around the host kernel. Posted
Interrupts on Intel VT-d systems can allow interrupts to be received
directly by a virtual machine. ARM IRQ Forwarding allows forwarded physical
interrupts to be directly deactivated by the guest. This manager allows
interrupt producers and consumers to find each other to enable this sort of
bypass.

This code offers a very basic support for this EISA bus present in

for the time being). This is enough for a low-end ethernet card,
but forget about your favorite SCSI card...

linux-4.4.71.tar.xz\linux-4.4.71.tar\linux-4.4.71\scripts\dtc\ dtc-parser.tab.h_shipped

A Bison parser, made by GNU Bison 3.0.2.

Bison interface for Yacc-like parsers in C

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton. Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public
License without this special exception.

This special exception was added by the Free Software Foundation in
version 2.2 of Bison.

linux-4.4.74.tar.xz\linux-4.4.74.tar\linux-4.4.74\scripts\dtc\ dtc-parser.tab.h_shipped

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton. Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this special exception, which will cause the skeleton and the resulting Bison output files to be licensed under the GNU General Public License without this special exception.

This special exception was added by the Free Software Foundation in version 2.2 of Bison.

linux-4.4.77\scripts\dtc\ dtc-parser.tab.h_shipped

A Bison parser, made by GNU Bison 3.0.2.

Bison interface for Yacc-like parsers in C

This program is free software: you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation, either version 3 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,

You should have received a copy of the GNU General Public License
along with this program.  If not, see <http://www.gnu.org/licenses/>.

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton.  Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public
License without this special exception.

This special exception was added by the Free Software Foundation in
version 2.2 of Bison.

As a special exception, if you link this library with files compiled with GCC to produce an executable, this does not cause the resulting executable to be covered by the GNU General Public License. This exception does not however invalidate any other reasons why the executable file might be covered by the GNU General Public License.

Use this one for any 680x0 assumes no floating point hardware. The trailing " " appearing on some lines is for ANSI preprocessors. Yuk. Some of this code comes from MINIX, via the folks at ericsson. D. V. Henkel-Wallace (gumby@cygnus.com) Fete Bastille, 1992

This code is released under both the GPL version 2 and BSD licenses. Either license may be used.

This code offers a very basic support for this EISA bus present in the SGI Indigo-2. It currently only supports PIO (forget about DMA for the time being). This is enough for a low-end ethernet card, but forget about your favorite SCSI card...

Bison interface for Yacc-like parsers in C

This program is free software: you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation, either version 3 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,

As a special exception, you may create a larger work that contains
part or all of the Bison parser skeleton and distribute that work
under terms of your choice, so long as that work isn't itself a
parser generator using the skeleton or a modified version thereof
as a parser skeleton.  Alternatively, if you modify or redistribute
the parser skeleton itself, you may (at your option) remove this
special exception, which will cause the skeleton and the resulting
Bison output files to be licensed under the GNU General Public
License without this special exception.

This special exception was added by the Free Software Foundation in
version 2.2 of Bison.
