All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the
intellectual property laws of the United States of America. No party to this
Agreement will bring a legal action under this Agreement more than one year
after the cause of action arose. Each party waives its rights to a jury trial
in any resulting litigation.

GNU LIBRARY GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1991 Free Software Foundation, Inc.
51 Franklin St, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license
document, but changing it is not allowed.

[This is the first released version of the library GPL. It is numbered 2
because it goes with version 2 of the ordinary GPL.]

Preamble

The licenses for most software are designed to take away your freedom to share
and change it. By contrast, the GNU General Public Licenses are intended to
guarantee your freedom to share and change free software--to make sure the
software is free for all its users.

This license, the Library General Public License, applies to some specially
designated Free Software Foundation software, and to any other libraries whose
authors decide to use it. You can use it for your libraries, too.

When we speak of free software, we are referring to freedom, not price. Our
General Public Licenses are designed to make sure that you have the freedom to
distribute copies of free software (and charge for this service if you wish),
that you receive source code or can get it if you want it, that you can change
the software or use pieces of it in new free programs; and that you know you
can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny
you these rights or to ask you to surrender the rights. These restrictions
translate to certain responsibilities for you if you distribute copies of the
library, or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a
fee, you must give the recipients all the rights that we gave you. You must
make sure that they, too, receive or can get the source code. If you link a
program with the library, you must provide complete object files to the
recipients so that they can relink them with the library, after making changes
to the library and recompiling it. And you must show them these terms so they
know their rights.
Our method of protecting your rights has two steps: (1) copyright the library, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the library.

Also, for each distributor's protection, we want to make certain that everyone understands that there is no warranty for this free library. If the library is modified by someone else and passed on, we want its recipients to know that what they have is not the original version, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that companies distributing free software will individually obtain patent licenses, thus in effect transforming the program into proprietary software. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License, which was designed for utility programs. This license, the GNU Library General Public License, applies to certain designated libraries. This license is quite different from the ordinary one; be sure to read it in full, and don't assume that anything in it is the same as in the ordinary license.

The reason we have a separate public license for some libraries is that they blur the distinction we usually make between modifying or adding to a program and simply using it. Linking a program with a library, without changing the library, is in some sense simply using the library, and is analogous to running a utility program or application program. However, in a textual and legal sense, the linked executable is a combined work, a derivative of the original library, and the ordinary General Public License treats it as such.

Because of this blurred distinction, using the ordinary General Public License for libraries did not effectively promote software sharing, because most developers did not use the libraries. We concluded that weaker conditions might promote sharing better.

However, unrestricted linking of non-free programs would deprive the users of those programs of all benefit from the free status of the libraries themselves. This Library General Public License is intended to permit developers of non-free programs to use free libraries, while preserving your freedom as a user of such programs to change the free libraries that are incorporated in them. (We have not seen how to achieve this as regards changes in header files, but we have achieved it as regards changes in the actual functions of the Library.) The hope is that this will lead to faster development of free libraries.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the
library" and a "work that uses the library". The former contains code derived from the library, while the latter only works together with the library.

Note that it is possible for a library to be covered by the ordinary General Public License rather than by this special one.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Library General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language.

(Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications
or work under the terms of Section 1 above, provided that you also meet all of
these conditions:

a) The modified work must itself be a software library.
b) You must cause the files modified to carry prominent notices stating that
you changed the files and the date of any change.
c) You must cause the whole of the work to be licensed at no charge to all
third parties under the terms of this License.
d) If a facility in the modified Library refers to a function or a table of
data to be supplied by an application program that uses the facility, other
than as an argument passed when the facility is invoked, then you must make a
good faith effort to ensure that, in the event an application does not supply
such function or table, the facility still operates, and performs whatever part
of its purpose remains meaningful.
(For example, a function in a library to compute square roots has a purpose
that is entirely well-defined independent of the application. Therefore,
Subsection 2d requires that any application-supplied function or table used by
this function must be optional: if the application does not supply it, the
square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable
sections of that work are not derived from the Library, and can be reasonably
considered independent and separate works in themselves, then this License, and
its terms, do not apply to those sections when you distribute them as separate
works. But when you distribute the same sections as part of a whole which is a
work based on the Library, the distribution of the whole must be on the terms
of this License, whose permissions for other licensees extend to the entire
whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your
rights to work written entirely by you; rather, the intent is to exercise the
right to control the distribution of derivative or collective works based on
the Library.

In addition, mere aggregation of another work not based on the Library with the
Library (or with a work based on the Library) on a volume of a storage or
distribution medium does not bring the other work under the scope of this
License.

3. You may opt to apply the terms of the ordinary GNU General Public License
instead of this License to a given copy of the Library. To do this, you must
alter all the notices that refer to this License, so that they refer to the
ordinary GNU General Public License, version 2, instead of to this License. (If
a newer version than version 2 of the ordinary GNU General Public License has
appeared, then you can specify that version instead if you wish.) Do not make
any other change in these notices.
Once this change is made in a given copy, it is irreversible for that copy, so
the ordinary GNU General Public License applies to all subsequent copies and
derivative works made from that copy.
This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange. If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License. However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also compile or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and
reverse engineering for debugging such modifications.
You must give prominent notice with each copy of the work that the Library is
used in it and that the Library and its use are covered by this License. You
must supply a copy of this License. If the work during execution displays
copyright notices, you must include the copyright notice for the Library among
them, as well as a reference directing the user to the copy of this License.
Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source
code for the Library including whatever changes were used in the work (which
must be distributed under Sections 1 and 2 above); and, if the work is an
executable linked with the Library, with the complete machine-readable "work
that uses the Library", as object code and/or source code, so that the user can
modify the Library and then relink to produce a modified executable containing
the modified Library. (It is understood that the user who changes the contents
of definitions files in the Library will not necessarily be able to recompile
the application to use the modified definitions.)

b) Accompany the work with a written offer, valid for at least three years, to
give the same user the materials specified in Subsection 6a, above, for a
charge no more than the cost of performing this distribution.

c) If distribution of the work is made by offering access to copy from a
designated place, offer equivalent access to copy the above specified materials
from the same place.

d) Verify that the user has already received a copy of these materials or that
you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must
include any data and utility programs needed for reproducing the executable
from it. However, as a special exception, the source code distributed need not
include anything that is normally distributed (in either source or binary form)
with the major components (compiler, kernel, and so on) of the operating system
on which the executable runs, unless that component itself accompanies the
executable.

It may happen that this requirement contradicts the license restrictions of
other proprietary libraries that do not normally accompany the operating
system. Such a contradiction means you cannot use both them and the Library
together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library
side-by-side in a single library together with other library facilities not
covered by this License, and distribute such a combined library, provided that
the separate distribution of the work based on the Library and of the other
library facilities is otherwise permitted, and provided that you do these two
things:

a) Accompany the combined library with a copy of the same work based on the
Library, uncombined with any other library facilities. This must be distributed
under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it
is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.
12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Library General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries
If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

one line to give the library's name and an idea of what it does.

Copyright (C) year name of author

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Library General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Library General Public License for more details.

You should have received a copy of the GNU Library General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin St, Fifth Floor, Boston, MA 02110-1301, USA.

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library `Frob' (a library for tweaking knobs) written by James Random Hacker.

signature of Ty Coon, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

MIT License

Copyright (c) <year> <copyright holders>

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in
the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice (including the next paragraph) shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their

Open Source Used In DNAC Platform Arica 9372
Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of Your accepting any such warranty or additional liability.
END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

samples.collections.Collections.Elements.elementAtOrNull

BooleanArray.elementAtOrNull(index: Int): Boolean? {
    return this.getOrNonNull(index)
} *\n
Returns an element at the given [index] or ‘null’ if the [index] is out of bounds of this array.

CharArray.elementAtOrNull(index: Int): Char? {
    return this.getOrNonNull(index)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

CharArray.elementAtOrNull(index: Int): Char? {
    return this.getOrNonNull(index)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

ByteArray.find(predicate: (Byte) -> Boolean): Byte? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

ByteArray.findLast(predicate: (Byte) -> Boolean): Byte? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

ShortArray.find(predicate: (Short) -> Boolean): Short? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

ShortArray.findLast(predicate: (Short) -> Boolean): Short? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

IntArray.find(predicate: (Int) -> Boolean): Int? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

IntArray.findLast(predicate: (Int) -> Boolean): Int? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

LongArray.find(predicate: (Long) -> Boolean): Long? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

LongArray.findLast(predicate: (Long) -> Boolean): Long? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

FloatArray.find(predicate: (Float) -> Boolean): Float? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

FloatArray.findLast(predicate: (Float) -> Boolean): Float? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

DoubleArray.find(predicate: (Double) -> Boolean): Double? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

DoubleArray.findLast(predicate: (Double) -> Boolean): Double? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

CharArray.find(predicate: (Char) -> Boolean): Char? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

CharArray.findLast(predicate: (Char) -> Boolean): Char? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

ByteBuffer.find(predicate: (Byte) -> Boolean): Byte? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

ByteBuffer.findLast(predicate: (Byte) -> Boolean): Byte? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

ShortBuffer.find(predicate: (Short) -> Boolean): Short? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

ShortBuffer.findLast(predicate: (Short) -> Boolean): Short? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

IntBuffer.find(predicate: (Int) -> Boolean): Int? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

IntBuffer.findLast(predicate: (Int) -> Boolean): Int? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

LongBuffer.find(predicate: (Long) -> Boolean): Long? {
    return firstOrNull(predicate)
} *\n
Returns the first element matching the given [predicate], or ‘null’ if no such element was found.

LongBuffer.findLast(predicate: (Long) -> Boolean): Long? {
    return lastOrNull(predicate)
} *\n
Returns the last element matching the given [predicate], or ‘null’ if no such element was found.

    }
    return emptyList()
}

/**
 * Returns a list containing all elements except last elements that satisfy the given 
 * [predicate].
 * 
 * @sample samples.collections.Collections.Transformations.dropLastWhile
 */
public inline fun DoubleArray.dropLastWhile(predicate: (Double) -> Boolean): List<Double> {
    for (index in lastIndex downTo 0) {
        if (!predicate(this[index])) {
            return take(index + 1)
        }
    }
    return emptyList()
}
Returns a list containing all elements except first elements that satisfy the given [predicate].

```kotlin
inline fun <T> Array<out T>.dropWhile(predicate: (T) -> Boolean): List<T> {
    var yielding = false
    val list = ArrayList<T>()
    for (item in this)
        if (yielding)
            list.add(item)
        else if (!predicate(item)) {
            list.add(item)
            yielding = true
        }
    return list
}
```

The `dropWhile` function iterates through the array, adding elements to the list if the current element does not satisfy the given predicate. Once a non-satisfying element is encountered, the loop stops, and the list is returned. This behavior is useful for filtering out elements that meet certain criteria, allowing for efficient processing of large datasets.
a list containing only elements matching the given [predicate].

    set.retainAll(other)
    return set
}
val set = this.toMutableSet()
    set.retainAll(other)
    return set

Returns a set containing all elements that are contained by both this array and the specified collection. The returned set preserves the element iteration order of the original array. To get a set containing all elements that are contained at least in one of these collections use [union].

public infix fun BooleanArray.intersect(other: Iterable<Boolean>): Set<Boolean> {
    val set = this.toMutableSet()
    set.retainAll(other)
    return set
}

Returns a set containing all elements that are contained by this array and not contained by the specified collection. The returned set preserves the element iteration order of the original array.

public infix fun CharArray.intersect(other: Iterable<Char>): Set<Char> {
    val set = this.toMutableSet()
    set.retainAll(other)
    return set
}

Returns a new [MutableSet] containing all distinct elements from the given array. The returned set preserves the element iteration order of the original array.

public fun <T> Array<out T>.subtract(other: Iterable<T>): Set<T> {
    val set = this.toMutableSet()
    set.removeAll(other)
    return set
}

Returns a new [MutableSet] containing all distinct elements from the given array. The returned set preserves the element iteration order of the original array.
of the original array.

The code snippet is a Kotlin function that finds the maximum value among all values produced by a given selector function applied to each element in an array. The function is defined for different array types: `ShortArray`, `IntArray`, `LongArray`, `FloatArray`, and `DoubleArray`. It uses a lambda expression to apply the selector function to each element of the array and returns the maximum value or `null` if the array is empty. The function checks if the result of any selector function application is `NaN` and returns `NaN` in such cases. The code is structured with Kotlin's function overloading, where the return type and parameter type are specified for each array type.
if there are no elements.\n * \n * If any of values produced by [selector] function is `NaN`, the returned result is 
 * `'NaN'`.\n

@sample samples.collections.Collections.Aggregates.runningFold
next accumulator value.

```kotlin
@SinceKotlin("1.4")
@kotlin.internal.InlineOnly
public inline fun <R>
        DoubleArray.runningFoldIndexed(initial: R, operation: (index: Int, acc: Double) -> R): List<R> {
    if (isEmpty()) return listOf(initial)
    val result = ArrayList<R>(size + 1).apply { add(initial) }
    var accumulator = initial
    for (index in indices) { // accumulator = operation(index, accumulator, this[index])
        accumulator = operation(accumulator, acc)
    }
    return result
}
```

The above code snippet demonstrates how to use the `runningFoldIndexed` function for a `DoubleArray`. It takes an initial value and an operation function as parameters. The operation function is applied to each element of the array, along with its index and the accumulator value from the previous step. The result is a list containing the successive accumulation values.

This function is part of the Kotlin standard library and is useful for processing arrays in a functional way. It's particularly handy when you need to perform calculations that depend on the previous element's value for the current one.

public fun <A : Appendable> CharArray.joinTo(buffer: A, separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Char) -> CharSequence)? = null): A {

    buffer.append(prefix)
    var count = 0
    for (element in this) {
        if (++count > 1)
            break
    } else break

    buffer.append(separator)
    if (limit < 0 || count <= limit) {
        if (transform != null)
            buffer.append(transform(element))
        else
            buffer.append(element.toString())
    } else break

    buffer.append(truncated)
    buffer.append(postfix)
    return

null): A `Buffer` can be created as follows:

```kotlin
Buffer(buffer.append(prefix) var count = 0n for (element in this) {
    if (++count > 1)
    buffer.append(separator)
    if (limit < 0 || count <= limit) {
        if (transform != null)
            buffer.append(transform(element))
        else
            buffer.append(element)
    } else break
} if (limit >= 0 && count > limit)
    buffer.append(truncated)
}
```

This method takes the following parameters:

- `prefix`: The prefix to append to each element.
- `separator`: A delimiter between elements.
- `postfix`: The suffix to append to the last element.
- `limit`: The maximum number of elements to append. A negative value means no limit.
- `truncated`: The string used when the limit is exceeded.
- `transform`: A transformation function applied to each element.

The method appends each element, separated by `separator`, and appends a prefix and a postfix if required. If the limit is exceeded, it appends a truncated string. If the collection is huge, it may append only the first `limit` elements, followed by a truncated string.

Here are some examples of how to use the `joinToString` method for different collection types:

1. **For a generic array:**
   ```kotlin
   fun joinToString<T>(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((T) -> CharSequence)? = null): String {
       return joinToString(separator, prefix, postfix, limit, truncated, transform).toString()
   }
   ```

2. **For a `ByteArray`:**
   ```kotlin
   fun ByteArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Byte) -> CharSequence)? = null): String {
       return joinToString(separator, prefix, postfix, limit, truncated, transform).toString()
   }
   ```

3. **For a `ShortArray`:**
   ```kotlin
   fun ShortArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Short) -> CharSequence)? = null): String {
       return joinToString(separator, prefix, postfix, limit, truncated, transform).toString()
   }
   ```

4. **For an `IntArray`:**
   ```kotlin
   fun IntArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Int) -> CharSequence)? = null): String {
       return joinToString(separator, prefix, postfix, limit, truncated, transform).toString()
   }
   ```

5. **For a `LongArray`:**
   ```kotlin
   fun LongArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Long) -> CharSequence)? = null): String {
       return joinToString(separator, prefix, postfix, limit, truncated, transform).toString()
   }
   ```

6. **For a `FloatArray`:**
   ```kotlin
   fun FloatArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Float) -> CharSequence)? = null): String {
       return joinToString(separator, prefix, postfix, limit, truncated, transform).toString()
   }
   ```
append, followed by the [truncated] string (which defaults to "...").

```java
public fun DoubleArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Double) -> CharSequence)? = null): String {
    return joinTo(StringBuilder(), separator, prefix, postfix, limit, truncated, transform).toString()
}
```

```java
/**
 * Creates a string from all the elements separated using [separator] and using the given [prefix] and [postfix] if supplied.
 * If the collection could be huge, you can specify a non-negative value of [limit], in which case only the first
 * [limit] elements will be appended, followed by the [truncated] string (which defaults to "..."").
 * @sample samples.collections.Collections.Transformations.joinToString
 */
public fun BooleanArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = ",", limit: Int = -1, truncated: CharSequence = "...", transform: ((Boolean) -> CharSequence)? = null): String {
    return joinTo(StringBuilder(), separator, prefix, postfix, limit, truncated, transform).toString()
}
```

```java
/**
 * Creates a string from all the elements separated using [separator] and using the given [prefix] and [postfix] if supplied.
 * If the collection could be huge, you can specify a non-negative value of [limit], in which case only the first
 * [limit] elements will be appended, followed by the [truncated] string (which defaults to "..."").
 * @sample samples.collections.Collections.Transformations.joinToString
 */
public fun CharArray.joinToString(separator: CharSequence = ", ", prefix: CharSequence = "", postfix: CharSequence = "", limit: Int = -1, truncated: CharSequence = "...", transform: ((Char) -> CharSequence)? = null): String {
    return joinTo(StringBuilder(), separator, prefix, postfix, limit, truncated, transform).toString()
}
```

```java
/**
 * Creates an [Iterable] instance that wraps the original array returning its elements when being iterated.
 * @sample samples.collections.Collections.Transformations.joinToString
 */
public fun <T> Array<out T>.asIterable(): Iterable<T> {
    if (isEmpty()) return emptyList()

/**
 * Returns a pair of lists,
where

*first* list is built from the first values of each pair from this sequence,

*second* list is built from the second values of each pair from this sequence.

The operation is _terminal_ and _stateful_.

`unzip()`:

```kotlin
Pair<List<T>, List<R>>
```

`unzip()` builds two lists from the input pairs:

- *first* list is built from the first values of each pair from this sequence,
- *second* list is built from the second values of each pair from this sequence.

The operation is _terminal_.

@sample

```kotlin
samples.collections.Sequences.Transformations.unzip
```

```
open fun <T, R> Sequence<Pair<T, R>>.unzip():
Pais<List<T>, List<R>> { 
  val listT = ArrayList<T>()
  val listR = ArrayList<R>()
  for (pair in this) {
    listT.add(pair.first)
    listR.add(pair.second)
  }
  return listT to listR
}
```

**Returns a sequence that yields elements of this sequence randomly shuffled.**

Note that every iteration of the sequence returns elements in a different order.

The operation is _intermediate_ and _stateful_.

`shuffled()`:

```kotlin
Sequence<T>.shuffled(): Sequence<T> = shuffled(Random)
```

Note that every iteration of the sequence returns elements in a different order.

The operation is _intermediate_ and _stateful_.

`shuffled()` shuffles the sequence using a specified `Random` instance as the source of randomness.

```kotlin
shuffled(Random): Sequence<T> = sequence<T> { 
  val buffer = toMutableList() 
  while (buffer.isNotEmpty()) {
    val j = random.nextInt(buffer.size)
    val last = buffer.removeLast()
    val value = if (j < buffer.size) buffer.set(j, last)
      else last
    yield(value)
  }
}
```

**Returns a sequence that yields elements of this sequence randomly shuffled using the specified [random] instance as the source of randomness.**

The operation is _intermediate_ and _stateful_.

`shuffled(random: Random): Sequence<T> = sequence<T> {
  val buffer = toMutableList() 
  while (buffer.isNotEmpty()) {
    val j = random.nextInt(buffer.size)
    val last = buffer.removeLast()
    val value = if (j < buffer.size) buffer.set(j, last)
      else last
    yield(value)
  }
}
```

**Shuffles the sequence using the specified `Random` instance as the source of randomness.**

The operation is _intermediate_ and _stateful_.

`FilteringSequence<T>`:

```kotlin
FilteringSequence<T>(sequence: Sequence<T>, sendWhen: Boolean = true, predicate: (T) -> Boolean) : Sequence<T> {
  override fun iterator(): Iterator<T> = object : Iterator<T> {
    val iterator = sequence.iterator()
    var nextState: Int = -1 // -1 for unknown, 0 for done, 1 for continue
    var nextItem: T? = null

    private fun calcNext() {
      while (iterator.hasNext()) {
        val item = iterator.next()
        if (predicate(item) == sendWhen) {
          nextItem = item
          nextState = 1
          return
        }
      }
      nextState = 0
    }

    override fun next(): T {
      if (nextState == -1)
        calcNext()
      if (nextState == 0)
        throw NoSuchElementException()
      val result = nextItem
      nextItem = null
      nextState = -1
      return result
    }

    override fun hasNext(): Boolean {
      if (nextState == -1)
        calcNext()
      return nextState == 1
    }
  }
}
```

`FilteringSequence<T>` filters the sequence based on a predicate function:

**Returns a sequence that matches or does not match the specified [predicate].**

The operation is _intermediate_ and _stateful_.

`TransformingSequence<T, R>`:

```kotlin
TransformingSequence<T, R>(sequence: Sequence<T>, transformer: (T) -> R) : Sequence<R> {
  override fun iterator(): Iterator<R> = object : Iterator<R> {
    val iterator = sequence.iterator()
    override fun next(): R {
      return transformer(iterator.next())
    }

    override fun hasNext(): Boolean {
      return iterator.hasNext()
    }
  }
}
```

`TransformingSequence<T, R>` applies a function to each value in the sequence:

**Returns a sequence that applies the given [transformer] function to the values in the underlying [sequence].**

The operation is _intermediate_.

`TransformingIndexedSequence<T, R>`:

```kotlin
TransformingIndexedSequence<T, R>(sequence: Sequence<T>, transformer: (Int, T) -> R) : Sequence<R> {
  override fun iterator(): Iterator<R> = object : Iterator<R> {
    val iterator = sequence.iterator()
    var index = 0
    override fun next(): R {
      return transformer(checkIndexOverflow(index++), iterator.next())
    }

    override fun hasNext(): Boolean {
      return iterator.hasNext()
    }
  }
}
```

`TransformingIndexedSequence<T, R>` applies a function to each value and its index:

**Returns a sequence that applies the given [transformer] function to the values and their indices.**

The operation is _intermediate_.

`IndexingSequence<T>`:

```kotlin
IndexingSequence<T>(sequence: Sequence<T>) : Sequence<IndexedValue<T>> {
  override fun iterator(): Iterator<IndexedValue<T>> = object : Iterator<IndexedValue<T>> {
    val iterator = sequence.iterator()
    var index = 0
    override fun next(): IndexedValue<T> {
      return IndexedValue(checkIndexOverflow(index++), iterator.next())
    }

    override fun hasNext(): Boolean {
      return iterator.hasNext()
    }
  }
}
```

`IndexingSequence<T>` returns IndexedValue objects along with the sequence:

**Returns a sequence that applies the given [transformer] function to the values and their indices.**

The operation is _intermediate_.

`FlatteningSequence<T, R>`:

```kotlin
FlatteningSequence<T, R>: Sequence<FlatteningSequence<T, R, E>>(sequence, transformer, iterator: FlatteningSequence<T, R, E>) : Sequence<E> {
  override fun iterator(): Iterator<E> = object : Iterator<E> {
    val iterator = sequence.iterator()
    val buffer = toMutableList()
    override fun next(): E {
      return transformer(iterator.next(), buffer.removeLast())
    }

    override fun hasNext(): Boolean {
      return iterator.hasNext()
    }
  }
}
```

`FlatteningSequence<T, R>` combines values from two sequences:

**Returns a sequence that combines values from two parallel underlying sequences.**

The operation is _intermediate_.

values of this sequence, but ensures it can be iterated only one time.

* The operation is _intermediate_ and _stateless_.

* `IllegalStateException` is thrown on iterating the returned sequence from the second time.

* `ConstrainedOnceSequence<T>` returns a sequence which invokes the function to calculate the next value on each iteration until the function returns `null`. The returned sequence is constrained to be iterated only once.

* `generateSequence(seed: T?, nextFunction: (T) -> T?): Sequence<T>` returns a sequence defined by the starting value `seed` and the function `nextFunction`, which is invoked to calculate the next value based on the previous one on each iteration. If `seed` is `null`, an empty sequence is produced. The sequence can be iterated multiple times, each time starting with `seed`.

* `generateSequence(seedFunction: () -> T?, nextFunction: (T) -> T?): Sequence<T>` returns a sequence defined by the function `seedFunction`, which is invoked to produce the starting value, and the `nextFunction`, which is invoked to calculate the next value based on the previous one. If `seedFunction` returns `null`, an empty sequence is produced.

* `generateSequenceWithSeed(seed: T?, nextFunction: (T) -> T?): Sequence<T>` returns a sequence defined by the starting value `seed` and the function `nextFunction`, which is invoked to calculate the next value based on the previous one. If `seed` is `null`, an empty sequence is produced. The sequence can be iterated multiple times, each time starting with `seed`.

* `generateSequenceWithLazySeed(seedFunction: () -> T?, nextFunction: (T) -> T?): Sequence<T>` returns a sequence defined by the function `seedFunction`, which is invoked to produce the starting value, and the `nextFunction`, which is invoked to calculate the next value based on the previous one. If `seedFunction` returns `null`, an empty sequence is produced.

* `require(value: Boolean): Unit` throws an `IllegalArgumentException` if the `value` is false.

* `require(value: Boolean, lazyMessage: () -> Any): Unit` throws an `IllegalArgumentException` with the result of calling `lazyMessage` if the `value` is false.

* `requireNotNull(value: T?): T` throws an `IllegalArgumentException` if the `value` is null. Otherwise returns the not null value.

* `check(value: Boolean): Unit` throws an `IllegalStateException` if the `value` is false.

CharSequence.associateBy(keySelector: (Char) -> K, valueTransform: (Char) -> V): Map<K, V> {
    val capacity = mapCapacity(length).coerceAtLeast(16)
    return associateByTo(LinkedHashMap<K, V>(capacity),
    keySelector, valueTransform)\n}

AssociateByToMap inherits from Map, which means that the return value of the function will be a Map<K, V>.

**CharSequence.associateTo(destination: M, transform: (Char) -> Pair<K, V>): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `transform`: A function that takes a Char and returns a Pair<K, V>.

This function will add all elements of this char sequence to the provided destination map, with keys and values transformed by the `transform` function.

**Example**

```kotlin
CharSequence.associateTo(destination: LinkedHashMap<Int, String>(), transform = { it -> Pair(it, it.toString()) })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `transform` function applied to each character of the given char sequence.

---

**CharSequence.associateWith(valueSelector: (Char) -> V): Map<Char, V>**

- `valueSelector`: A function that takes a Char and returns a V.

This function will create a new Map with keys as Char and values as V, where each key-value pair is derived from the `valueSelector` function applied to each character of the given char sequence.

**Example**

```kotlin
CharSequence.associateWith(valueSelector = { it -> it.toString() })
```

This will create a new Map with keys as Char and values as String, where each key-value pair is derived from the `valueSelector` function applied to each character of the given char sequence.

---

**CharSequence.toCollection(destination: C): C**

- `destination`: The collection to which the elements of this char sequence will be added.

This function will add all elements of this char sequence to the provided collection.

**Example**

```kotlin
CharSequence.toCollection(ArrayList<String>())
```

This will create a new ArrayList with all elements of the given char sequence.

---

**CharSequence.toHashSet(): Set<Char>**

This function will create a new HashSet with all elements of this char sequence.

**Example**

```kotlin
CharSequence.toHashSet()
```

This will create a new HashSet with all elements of the given char sequence.

---

**CharSequence.toMutableList(): MutableList<Char>**

This function will create a new MutableList with all elements of this char sequence.

**Example**

```kotlin
CharSequence.toMutableList()
```

This will create a new MutableList with all elements of the given char sequence.

---

**CharSequence.flatMap(transform: (Char) -> Iterable<R>): List<R>**

- `transform`: A function that takes a Char and returns an Iterable<R>.

This function will create a new List with all elements of this char sequence, where each element is obtained by applying the `transform` function to each character of the given char sequence.

**Example**

```kotlin
CharSequence.flatMap { it -> List<String>(it.toString()) }
```

This will create a new List with all elements of the given char sequence, where each element is obtained by converting each character to a String.

---

**CharSequence.associateWithTo(destination: M, keySelector: (Char) -> K): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `keySelector`: A function that takes a Char and returns a K.

This function will add all elements of this char sequence to the provided destination map, with keys derived from the `keySelector` function.

**Example**

```kotlin
CharSequence.associateWithTo(destination: LinkedHashMap<Int, String>(), keySelector = { it -> it.toInt() })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `keySelector` function applied to each character of the given char sequence.

---

**CharSequence.associateByTo(destination: M, keySelector: (Char) -> K): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `keySelector`: A function that takes a Char and returns a K.

This function will add all elements of this char sequence to the provided destination map, with keys derived from the `keySelector` function.

**Example**

```kotlin
CharSequence.associateByTo(destination: LinkedHashMap<Int, String>(), keySelector = { it -> it.toInt() })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `keySelector` function applied to each character of the given char sequence.

---

**CharSequence.associateByToWithValueTransform(destination: M, keySelector: (Char) -> K, valueTransform: (Char) -> V): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `keySelector`: A function that takes a Char and returns a K.
- `valueTransform`: A function that takes a Char and returns a V.

This function will add all elements of this char sequence to the provided destination map, with keys derived from the `keySelector` function and values derived from the `valueTransform` function.

**Example**

```kotlin
CharSequence.associateByToWithValueTransform(destination: LinkedHashMap<Int, String>(), keySelector = { it -> it.toInt() }, valueTransform = { it -> it.toString().toUpperCase() })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `keySelector` function applied to each character of the given char sequence, and the values are derived from the `valueTransform` function applied to the same characters.

---

**CharSequence.associateTo(destination: M, transform: (Char) -> Pair<K, V>): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `transform`: A function that takes a Char and returns a Pair<K, V>.

This function will add all elements of this char sequence to the provided destination map, with keys and values derived from the `transform` function applied to each character of the given char sequence.

**Example**

```kotlin
CharSequence.associateTo(destination = LinkedHashMap<Int, String>(), transform = { it -> Pair(it.toInt(), it.toString().toUpperCase()) })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `transform` function applied to each character of the given char sequence.

---

**CharSequence.associateWithToWithValueTransform(destination: M, keySelector: (Char) -> K, valueTransform: (Char) -> V): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `keySelector`: A function that takes a Char and returns a K.
- `valueTransform`: A function that takes a Char and returns a V.

This function will add all elements of this char sequence to the provided destination map, with keys derived from the `keySelector` function and values derived from the `valueTransform` function.

**Example**

```kotlin
CharSequence.associateWithToWithValueTransform(destination = LinkedHashMap<Int, String>(), keySelector = { it -> it.toInt() }, valueTransform = { it -> it.toString().toUpperCase() })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `keySelector` function applied to each character of the given char sequence, and the values are derived from the `valueTransform` function applied to the same characters.

---

**CharSequence.associateWithTo(destination: M, transform: (Char) -> Pair<K, V>): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `transform`: A function that takes a Char and returns a Pair<K, V>.

This function will add all elements of this char sequence to the provided destination map, with keys and values derived from the `transform` function applied to each character of the given char sequence.

**Example**

```kotlin
CharSequence.associateWithTo(destination = LinkedHashMap<Int, String>(), transform = { it -> Pair(it.toInt(), it.toString().toUpperCase()) })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `transform` function applied to each character of the given char sequence.

---

**CharSequence.associateWithToWithValueTransform(destination: M, keySelector: (Char) -> K, valueTransform: (Char) -> V): M**

- `destination`: The mutable Map to which the key-value pairs will be added.
- `keySelector`: A function that takes a Char and returns a K.
- `valueTransform`: A function that takes a Char and returns a V.

This function will add all elements of this char sequence to the provided destination map, with keys derived from the `keySelector` function and values derived from the `valueTransform` function.

**Example**

```kotlin
CharSequence.associateWithToWithValueTransform(destination = LinkedHashMap<Int, String>(), keySelector = { it -> it.toInt() }, valueTransform = { it -> it.toString().toUpperCase() })
```

This will create a new LinkedHashMap with keys as Int and values as String, where each key-value pair is derived from the `keySelector` function applied to each character of the given char sequence, and the values are derived from the `valueTransform` function applied to the same characters.

---

**CharSequence.associateWith(valueSelector: (Char) -> V): Map<Char, V>**

- `valueSelector`: A function that takes a Char and returns a V.

This function will create a new Map with keys as Char and values as V, where each key-value pair is derived from the `valueSelector` function applied to each character of the given char sequence.

**Example**

```kotlin
CharSequence.associateWith(valueSelector = { it -> it.toString().toUpperCase() })
```

This will create a new Map with keys as Char and values as String, where each key-value pair is derived from the `valueSelector` function applied to each character of the given char sequence.

---

**CharSequence.toHashSet(): Set<Char>**

This function will create a new HashSet with all elements of this char sequence.

**Example**

```kotlin
CharSequence.toHashSet()
```

This will create a new HashSet with all elements of the given char sequence.

---

**CharSequence.toMutableList(): MutableList<Char>**

This function will create a new MutableList with all elements of this char sequence.

**Example**

```kotlin
CharSequence.toMutableList()
```

This will create a new MutableList with all elements of the given char sequence.

---

**CharSequence.toSet(): Set<Char>**

This function will create a new Set with all elements of this char sequence.

**Example**

```kotlin
CharSequence.toSet()
```

This will create a new Set with all elements of the given char sequence.

```

- The `maxOrNull()` function returns the largest character in the sequence or `null` if the sequence is empty.
- The `maxWithOrNull()` function allows for a custom comparator to be used for comparison.
- The `min()` function returns the smallest character in the sequence.
- The `minBy()` function allows for a custom function to be used for comparison.
- The `minByOrNull()` function returns the smallest character in the sequence or `null` if the sequence is empty.

These functions are designed to work with the `CharSequence` interface, which is part of the Kotlin standard library, providing flexibility and convenience for working with character sequences in Android development.
each character in the char sequence or `null` if there are no characters.

If any of values produced by [selector] function is `NaN`, the returned result is `NaN`.

Creates a new array of the specified [size], where each element is calculated by calling the specified
function.

The function [init] is called for each array element sequentially starting from the first one. It should return the value for an array element given its index.

UIntArray.reverse(): Unit {
    storage.reverse()
}
```

This page contains code snippets related to the `takeLastWhile` and `reverse` methods in the `kotlin.collections` package. The `takeLastWhile` method is used to return a list containing last elements satisfying a given predicate. The `reverse` method reverses the elements in an array in-place.

The code is written in Kotlin and demonstrates the usage of these methods with various array types such as `UIntArray`, `ULongArray`, `UByteArray`, `UShortArray`, `ULongArray`, and `UByteArray`. Each method is accompanied by a brief description of its functionality and usage examples.
or [toIndex] is greater than the size of this array.

 * @throws IndexOutOfBoundsException if [fromIndex] is less than zero or [toIndex] is greater than the size of this array.
 * @throws IllegalArgumentException if [fromIndex] is greater than [toIndex].
 */
@SinceKotlin("1.3")
@ExperimentalUnsignedTypes
public fun ULongArray.fill(element: ULong, fromIndex: Int = 0, toIndex: Int = size): Unit {
    storage.fill(element.toLong(), fromIndex, toIndex)
}
Fills this array or its subrange with the specified [element] value. This method fills the range from [fromIndex] to [toIndex]. If [fromIndex] is greater than [toIndex], this method fills from [fromIndex] to the end of the array. If [fromIndex] is less than zero or [toIndex] is greater than the size of this array, this method throws an exception.

@SinceKotlin("1.3")

Starts an unintercepted coroutine without a receiver and with result type \([T]\) and executes it until its first suspension.

* Returns the result of the coroutine or throws its exception if it does not suspend or \([\text{COROUTINE\_SUSPENDED}]\) if it suspends.

* In the latter case, the \([\text{completion}]\) continuation is invoked when the coroutine completes with a result or an exception.

* The coroutine is started directly in the invoker's thread without going through the \([\text{ContinuationInterceptor}]\) that might\(n\) * be present in the completion's \([\text{CoroutineContext}]\).

It is the invoker's responsibility to ensure that a proper invocation context is established.

* This function is designed to be used from inside of \([\text{suspendCoroutineUninterceptedOrReturn}]\) to resume the execution of the suspended\(n\) * coroutine using a reference to the suspending function.

file you tell the compiler to import a JavaScript object → that contain all the declarations from the file.

Example:

```kotlin
*S* *un* * `kotlin* * @JsModule("jquery")* * external abstract class JQuery(* * @un* * // some declarations here un * )un * @JsModule("jquery")* * external fun JQuery(element: Element): JQueryun * * @property import name of a module to import declaration from.un * It is not interpreted by the Kotlin compiler, it's passed as is directly to the target module system.un * @see JsNonModuleName
```

Some JavaScript libraries are distributed both as a standalone downloadable piece of JavaScript and as a module available as an npm package. To tell the Kotlin compiler to accept both cases, you can augment `[JsModule]` with the `@JsNonModule` annotation.

```kotlin
@JsModule("jquery")
@JsNonModule
@JsName("$")
external abstract class JQuery() {
    // some declarations here
}
```

@JsModule annotation you can make a declaration unavailable to plain module system.

Some JavaScript libraries are distributed both as a standalone downloadable piece of JavaScript and as a module available as an npm package. To tell the Kotlin compiler to accept both cases, you can augment `[JsModule]` with the `@JsNonModule` annotation.

```kotlin
@JsModule("jquery")
@JsNonModule
@JsName("$")
external abstract class JQuery() {
    // some declarations here
}
```

@JsModule annotation you can make a declaration unavailable to plain module system.

---

Surrogate pairs included in this string builder are treated as single characters. Therefore, the order of the high-low surrogates is never reversed.

---

Note that the reverse operation may produce new surrogate pairs that were unpaired low-surrogates and high-surrogates before the
Open Source Used In DNAC Platform Arica

The `set` operator function has non-constant execution time complexity. Therefore, increasing length of this string can go in the same order as in the `value` character array, starting at `index`. The inserted characters go in the same order as in the `value` character sequence, starting at `index`. The overall effect is exactly as if the `value` were converted to a string by the `value.toString()` method, and then that string was inserted into this string builder and returns this instance. The inserted characters go in the same order as in the `value` character sequence, starting at `index`. The overall effect is exactly as if the `value` were converted to a string by the `value.toString()` method, and then that string was inserted into this string builder and returns this instance. This method returns the `string` without any modifications. The `string` without any modifications. The `string` without any modifications.
builder and then updating each character by index may slow down your program.

Open Source Used In DNAC Platform Arica
The code snippet provided seems to be a representation of the JavaScript API for text tracks in a web browser's media player. It includes various classes and methods related to handling text tracks, including methods for adding, removing, and manipulating text tracks and cues. The code is written in Kotlin and includes inline XML annotations for JavaScript events.

The snippet contains classes such as `TextTrack`, `TextTrackList`, `TextTrackCueList`, `TextTrackCue`, and `TimeRanges`, each with their respective properties and methods. The `TextTrack` class, for example, contains properties like `kind`, `label`, `language`, `id`, `inBandMetadataTrackDispatchType`, and `cues`, along with methods for adding and removing cues.

The code is part of a larger framework that interacts with the browser's media player API, allowing developers to dynamically manipulate text tracks in a video or audio content.

```
public external abstract class TextTrack : EventTarget, UnionAudioTrackOrTextTrackOrVideoTrack {
    open val kind: TextTrackKind
    open val label: String
    open val language: String
    open val id: String
    open val inBandMetadataTrackDispatchType: String
    open var mode: TextTrackMode
    open val cues: TextTrackCueList?
    open val activeCues: TextTrackCueList?
    open var oncuechange: ((Event) -> dynamic)?
    open val sourceBuffer: SourceBuffer?
    fun addCue(cue: TextTrackCue)
    fun removeCue(cue: TextTrackCue)
}
```

This is just a snippet of the larger codebase, which is designed to provide a Kotlin interface to the JavaScript API for text tracks, enabling developers to write more idiomatic Kotlin code for managing media player features.
