/**
* Outer class that exists solely to let us write {@code Partially.GwtIncompatible} instead of plain
* {@code GwtIncompatible}. This is more accurate for {@link Futures#catching}, which is available
* under GWT but with a slightly different signature.
*
* <p>We can't use {@code PartiallyGwtIncompatible} because then the GWT compiler wouldn't recognize
* it as a {@code GwtIncompatible} annotation. And for {@code Futures.catching}, we need the GWT
* compiler to autostrip the normal server method in order to expose the special, inherited GWT
* version.

1.453 jackson-core-asl 1.9.13

1.453.1 Available under license :

This product currently only contains code developed by authors
of specific components, as identified by the source code files;
if such notes are missing files have been created by
Tatu Saloranta.

For additional credits (generally to people who reported problems)
see CREDITS file.
This copy of Jackson JSON processor is licensed under the
Apache (Software) License, version 2.0 ("the License").
See the License for details about distribution rights, and the
specific rights regarding derivate works.

You may obtain a copy of the License at:

http://www.apache.org/licenses/

A copy is also included with both the the downloadable source code package
and jar that contains class bytecodes, as file "ASL 2.0". In both cases,
that file should be located next to this file: in source distribution
the location should be "release-notes/asl"; and in jar "META-INF/"

1.456 xml-commons 1.3.4

1.456.1 Available under license :

Apache License

Version 2.0, January 2004

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source"
form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely

link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean
Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and
You must retain, in the Source form of any Derivative Works that You distribute,
all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the

NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the
trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor
harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: HOW TO APPLY THE APACHE LICENSE TO YOUR WORK
To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the

outstanding shares, or (iii)
beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the
Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication
on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one

of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own
copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names
of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law

(such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole
responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

*/
/**

```
 * DOM Level 3 LS CR - Experimental.
   * Create a new <code>LSParser</code>. The newly constructed parser may
   *
 then be configured by means of its <code>DOMConfiguration</code>
   * object, and used to parse documents by means of its <code>parse</code>
   *  method.
   * @param mode  The <code>mode</code> argument is either
   *   <code>MODE_SYNCHRONOUS</code> or <code>MODE_ASYNCHRONOUS</code>, if
   *   <code>mode</code> is <code>MODE_SYNCHRONOUS</code> then the
   *   <code>LSParser</code> that is created will operate in synchronous
   *   mode, if it's <code>MODE_ASYNCHRONOUS</code> then the
   *   <code>LSParser</code> that is created will operate in asynchronous
   *   mode.
   * @param schemaType  An absolute URI representing the type of the schema
   *   language used during the load of a <code>Document</code> using the
   *   newly created <code>LSParser</code>. Note that no lexical checking
   *   is done on the absolute URI. In order to create a
   *   <code>LSParser</code> for any kind of schema types (i.e. the
   *   LSParser will be free to use any schema
 found), use the value
   *   <code>null</code>.
   * <p ><b>Note:</b>    For W3C XML Schema [<a href='http://www.w3.org/TR/2001/REC-xmlschema-1-
20010502/'>XML Schema Part 1</a>]
   *   , applications must use the value
   *   <code>"http://www.w3.org/2001/XMLSchema"</code>. For XML DTD [<a
href='http://www.w3.org/TR/2000/REC-xml-20001006'>XML 1.0</a>],
   *   applications must use the value
   *   <code>"http://www.w3.org/TR/REC-xml"</code>. Other Schema languages
   *   are outside the scope of the W3C and therefore should recommend an
   *   absolute URI in order to use this method.
   * @return  The newly created <code>LSParser</code> object. This
   *   <code>LSParser</code> is either synchronous or asynchronous
   *   depending on the value of the <code>mode</code> argument.
   * <p ><b>Note:</b>    By default, the newly created <code>LSParser</code>
   *    does not contain a <code>DOMErrorHandler</code>, i.e. the value of
   *   the "<a href='http://www.w3.org/TR/2003/WD-DOM-Level-3-Core-20030609/core.html#parameter-error-
handler'>
    *    error-handler</a>" configuration parameter is <code>null</code>. However, implementations
   *   may provide a default error handler at creation time. In that case,
   *   the initial value of the <code>"error-handler"</code> configuration
   *   parameter on the new created <code>LSParser</code> contains a
   *   reference to the default error handler.
   * @exception DOMException
   *    NOT_SUPPORTED_ERR: Raised if the requested mode or schema type is
   *   not supported.
  */
```

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but

not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial
revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,

where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the
content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct,
indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this

License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the

content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct,
indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Full text: http://creativecommons.org/licenses/by/2.5/legalcode

License

THE WORK (AS DEFINED BELOW) IS PROVIDED UNDER THE TERMS OF THIS CREATIVE COMMONS PUBLIC LICENSE ("CCPL" OR "LICENSE"). THE WORK IS PROTECTED BY COPYRIGHT AND/OR OTHER APPLICABLE LAW. ANY USE OF THE WORK OTHER THAN AS
AUTHORIZED UNDER THIS LICENSE OR COPYRIGHT LAW IS PROHIBITED.

BY EXERCISING ANY RIGHTS TO THE WORK PROVIDED HERE, YOU ACCEPT AND AGREE TO BE BOUND BY THE TERMS OF THIS LICENSE. THE LICENSOR GRANTS YOU THE RIGHTS CONTAINED HERE IN CONSIDERATION OF YOUR ACCEPTANCE OF SUCH TERMS AND CONDITIONS.

1. Definitions

"Collective Work" means a work, such as a periodical issue, anthology or encyclopedia, in which the Work in its entirety in unmodified form, along with a number of other contributions, constituting separate and independent works in themselves, are assembled into a collective whole. A work that constitutes a Collective Work will not be considered a Derivative Work (as defined below) for the purposes of this License.
"Derivative Work" means a work based upon the Work or upon the Work and other pre-existing works, such as a translation, musical arrangement, dramatization, fictionalization, motion picture version, sound recording, art reproduction, abridgment, condensation,
or any other form in which the Work may be recast, transformed, or adapted, except that a work that constitutes a Collective Work will not be considered a Derivative Work for the purpose of this License. For the avoidance of doubt, where the Work is a musical composition or sound recording, the synchronization of the Work in timed-relation with a moving image ("synching") will be considered a Derivative Work for the purpose of this License.

"Licensor" means the individual or entity that offers the Work under the terms of this License.

"Original Author" means the individual or entity who created the Work.

"Work" means the copyrightable work of authorship offered under the terms of this License.

"You" means an individual or entity exercising rights under this License who has not previously violated the terms of this License with respect to the Work, or who has received express permission from the Licensor to exercise rights under this License despite a previous violation.

2.
Fair Use Rights. Nothing in this license is intended to reduce, limit, or restrict any rights arising from fair use, first sale or other limitations on the exclusive rights of the copyright owner under copyright law or other applicable laws.

3. License Grant. Subject to the terms and conditions of this License, Licensor hereby grants You a worldwide, royalty-free, non-exclusive, perpetual (for the duration of the applicable copyright) license to exercise the rights in the Work as stated below:

to reproduce the Work, to incorporate the Work into one or more Collective Works, and to reproduce the Work as incorporated in the Collective Works;

to create and reproduce Derivative Works;

to distribute copies or phonorecords of, display publicly, perform publicly, and perform publicly by means of a digital audio transmission the Work including as incorporated in Collective Works;

to distribute copies or phonorecords of, display publicly, perform publicly, and perform publicly by means of a digital audio transmission Derivative Works.

For the avoidance of doubt, where the work is a musical composition:

Performance Royalties Under Blanket Licenses. Licensor waives the exclusive right to collect, whether individually or via a performance rights society (e.g. ASCAP, BMI, SESAC), royalties for the public performance or public digital performance (e.g. webcast) of the Work.

Mechanical Rights and Statutory Royalties. Licensor waives the exclusive right to collect, whether individually or via a music rights agency or designated agent (e.g. Harry Fox Agency), royalties for any phonorecord You create from the Work ("cover version") and distribute, subject to the compulsory license created by 17 USC Section 115 of the US Copyright Act (or the equivalent in other jurisdictions).

Webcasting Rights and Statutory Royalties. For the avoidance of doubt, where the Work is a sound recording, Licensor waives the exclusive right to collect, whether
individually or via a performance-rights society (e.g. SoundExchange), royalties for the public digital performance (e.g. webcast) of the Work, subject to the compulsory license created by 17 USC Section 114 of the US Copyright Act (or the equivalent in other jurisdictions).

The above rights may be exercised in all media and formats whether now known or hereafter devised. The above rights include the right to make such modifications as are technically necessary to exercise the rights in other media and formats. All rights not expressly granted by Licensor are hereby reserved.

4. Restrictions.The license granted in Section 3 above is expressly made subject to and limited by the following restrictions:

You may distribute, publicly display, publicly perform, or publicly digitally perform the Work only under the terms of this License, and You must include a copy of, or the Uniform Resource Identifier for, this License with every copy or phonorecord of the Work You distribute, publicly

display, publicly perform, or publicly digitally perform. You may not offer or impose any terms on the Work that alter or restrict the terms of this License or the recipients' exercise of the rights granted hereunder. You may not sublicense the Work. You must keep intact all notices that refer to this License and to the disclaimer of warranties. You may not distribute, publicly display, publicly perform, or publicly digitally perform the Work with any technological measures that control access or use of the Work in a manner inconsistent with the terms of this License Agreement. The above applies to the Work as incorporated in a Collective Work, but this does not require the Collective Work apart from the Work itself to be made subject to the terms of this License. If You create a Collective Work, upon notice from any Licensor You must, to the extent practicable, remove from the Collective Work any credit as required by clause 4(b), as requested. If You create a Derivative Work, upon notice from any Licensor You must, to the extent practicable, remove from the Derivative Work any credit as required by clause 4(b), as requested.

If you distribute, publicly display, publicly perform, or publicly digitally perform the Work or any Derivative Works or Collective Works, You must keep intact all copyright notices for the Work and provide, reasonable to the medium or means You are utilizing: (i) the name of the Original Author (or pseudonym, if applicable) if supplied, and/or (ii) if the Original Author and/or Licensor designate another party or parties (e.g. a sponsor institute, publishing entity, journal) for attribution in Licensor's copyright notice, terms of service or by other reasonable means, the name of such party or parties; the title of the Work if supplied; to the extent reasonably practicable, the Uniform Resource Identifier, if any, that Licensor specifies to be associated with the Work, unless such URI does not refer to the copyright notice or licensing information for the Work; and in the case of a Derivative Work, a credit identifying the use of the Work in the Derivative Work (e.g., "French translation of the Work by Original Author," or "Screenplay based on original Work by Original Author"). Such credit may be implemented in any reasonable manner; provided, however, that in the case of a Derivative Work or Collective Work, at a minimum such credit will appear where any other comparable authorship credit appears and in a manner at least as prominent as such other comparable authorship credit.

5. Representations, Warranties and Disclaimer

UNLESS OTHERWISE MUTUALLY AGREED TO BY THE PARTIES IN WRITING, LICENSOR OFFERS THE WORK AS-IS AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE WORK, EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTIBILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT, OR THE ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OF ABSENCE OF ERRORS, WHETHER OR NOT DISCOVERABLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES, SO SUCH EXCLUSION MAY NOT APPLY TO YOU.

6. Limitation on Liability. EXCEPT TO THE EXTENT REQUIRED BY APPLICABLE LAW, IN NO EVENT WILL LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS LICENSE OR THE USE OF THE WORK, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. Termination

This License and the rights granted hereunder will terminate automatically upon any breach by You of the terms of this License. Individuals or entities who have received Derivative Works or Collective Works from You under this License, however, will not have their licenses terminated provided such individuals or entities remain in full

compliance with those licenses. Sections 1, 2, 5, 6, 7, and 8 will survive any termination of this License.
Subject to the above terms
and conditions, the license granted here is perpetual (for the duration of the applicable copyright in the Work). Notwithstanding the above, Licensor reserves the right to release the Work under different license terms or to stop distributing the Work at any time; provided, however that any such election will not serve to withdraw this License (or any other license that has been, or is required to be, granted under the terms of this License), and this License will continue in full force and effect unless terminated as stated above.

8. Miscellaneous

Each time You distribute or publicly digitally perform the Work or a Collective Work, the Licensor offers to the recipient a license to the Work on the same terms and conditions as the license granted to You under this License.
Each time You distribute or publicly digitally perform a Derivative Work, Licensor offers to the recipient a license to the original Work on the same terms and conditions as the license granted to You under
this License.
If any provision of this License is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this License, and without further action by the parties to this agreement, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.
No term or provision of this License shall be deemed waived and no breach consented to unless such waiver or consent shall be in writing and signed by the party to be charged with such waiver or consent.
This License constitutes the entire agreement between the parties with respect to the Work licensed here. There are no understandings, agreements or representations with respect to the Work not specified here. Licensor shall not be bound by any additional provisions that may appear in any communication from You. This License may not be modified without the mutual written agreement of the Licensor and You.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the
content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each

Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct,
indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership

of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial
revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,

worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or

documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct,

indirect, special,
incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

1.464.1 Available under license :

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial

revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

License

THE WORK (AS DEFINED BELOW) IS PROVIDED UNDER THE TERMS OF THIS CREATIVE COMMONS PUBLIC LICENSE ("CCPL" OR "LICENSE"). THE WORK IS PROTECTED BY COPYRIGHT AND/OR OTHER APPLICABLE LAW. ANY USE OF THE WORK OTHER THAN AS AUTHORIZED UNDER THIS LICENSE OR COPYRIGHT LAW IS PROHIBITED.

BY EXERCISING ANY RIGHTS TO THE WORK PROVIDED HERE, YOU ACCEPT AND AGREE TO BE BOUND BY THE TERMS OF THIS LICENSE. THE LICENSOR GRANTS YOU THE RIGHTS CONTAINED HERE IN CONSIDERATION OF YOUR ACCEPTANCE OF SUCH TERMS AND CONDITIONS.

1. Definitions

"Collective Work" means a work, such as a periodical issue, anthology or encyclopedia, in which the Work in its entirety in unmodified form, along with a number of other contributions, constituting separate and independent works in themselves, are assembled into a collective whole. A work that constitutes a Collective Work will not be

considered a Derivative Work (as defined below) for the purposes of this License.

"Derivative Work" means a work based upon the Work or upon the Work and other pre-existing works, such as a translation, musical arrangement, dramatization, fictionalization, motion picture version, sound recording, art reproduction, abridgment, condensation,

or any other form in which the Work may be recast, transformed, or adapted, except that a work that constitutes a Collective Work will not be considered a Derivative Work for the purpose of this License. For the avoidance of doubt, where the Work is a musical composition or sound recording, the synchronization of the Work in timed-relation with a moving image ("synching") will be considered a Derivative Work for the purpose of this License.

"Licensor" means the individual or entity that offers the Work under the terms of this License.

"Original Author" means the individual or entity who created the Work.

"Work" means the copyrightable work of authorship offered under the terms of this License.

"You" means an individual or entity exercising rights under this License who has not previously violated the terms of this License with respect to the Work, or who has received express permission from the Licensor to exercise rights under this License despite a previous violation.

2.

Fair Use Rights. Nothing in this license is intended to reduce, limit, or restrict any rights arising from fair use, first sale or other limitations on the exclusive rights of the copyright owner under copyright law or other applicable laws.

3. License Grant. Subject to the terms and conditions of this License, Licensor hereby grants You a worldwide, royalty-free, non-exclusive, perpetual (for the duration of the applicable copyright) license to exercise the rights in the Work as stated below:

to reproduce the Work, to incorporate the Work into one or more Collective Works, and to reproduce the Work as incorporated in the Collective Works;

to create and reproduce Derivative Works;

to distribute copies or phonorecords of, display publicly, perform publicly, and perform publicly by means of a digital audio transmission the Work including as incorporated in Collective Works;

to distribute copies or phonorecords of, display publicly, perform publicly, and perform publicly

by means of a digital audio transmission Derivative Works.

For the avoidance of doubt, where the work is a musical composition:

Performance Royalties Under Blanket Licenses. Licensor waives the exclusive right to collect, whether individually or via a performance rights society (e.g. ASCAP, BMI, SESAC), royalties for the public performance or public digital performance (e.g. webcast) of the Work.

Mechanical Rights and Statutory Royalties. Licensor waives the exclusive right to collect, whether individually or via a music rights agency or designated agent (e.g. Harry Fox Agency), royalties for any phonorecord You create from the Work ("cover version") and distribute, subject to the compulsory license created by 17 USC Section 115 of the US Copyright Act (or the equivalent in other jurisdictions).

Webcasting Rights and Statutory Royalties. For the avoidance of doubt, where the Work is a sound recording, Licensor waives the exclusive right to collect, whether

individually or via a performance-rights society (e.g. SoundExchange), royalties for the public digital performance (e.g. webcast) of the Work, subject to the compulsory license created by 17 USC Section 114 of the US Copyright Act (or the equivalent in other jurisdictions).

The above rights may be exercised in all media and formats whether now known or hereafter devised. The above rights include the right to make such modifications as are technically necessary to exercise the rights in other media and formats. All rights not expressly granted by Licensor are hereby reserved.

4. Restrictions.The license granted in Section 3 above is expressly made subject to and limited by the following restrictions:

You may distribute, publicly display, publicly perform, or publicly digitally perform the Work only under the terms of this License, and You must include a copy of, or the Uniform Resource Identifier for, this License with every copy or phonorecord of the Work You distribute, publicly
display, publicly perform, or publicly digitally perform. You may not offer or impose any terms on the Work that alter or restrict the terms of this License or the recipients' exercise of the rights granted hereunder. You may not sublicense the Work. You must keep intact all notices that refer to this License and to the disclaimer of warranties. You may not distribute, publicly display, publicly perform, or publicly digitally perform the Work with any technological measures that control access or use of the Work in a manner inconsistent with the terms of this License Agreement. The above applies to the Work as incorporated in a Collective Work, but this does not require the Collective Work apart from the Work itself to be made subject to the terms of this License. If You create a Collective Work, upon notice from any Licensor You must, to the extent practicable, remove from the Collective Work any credit as required by clause 4(b), as requested. If You create a Derivative Work, upon
notice from any Licensor You must, to the extent practicable, remove from the Derivative Work any credit as required by clause 4(b), as requested.

If you distribute, publicly display, publicly perform, or publicly digitally perform the Work or any Derivative Works or Collective Works, You must keep intact all copyright notices for the Work and provide, reasonable to the medium or means You are utilizing: (i) the name of the Original Author (or pseudonym, if applicable) if supplied, and/or (ii) if the Original Author and/or Licensor designate another party or parties (e.g. a sponsor institute, publishing entity, journal) for attribution in Licensor's copyright notice, terms of service or by other reasonable means, the name of such party or parties; the title of the Work if supplied; to the extent reasonably practicable, the Uniform Resource Identifier, if any, that Licensor specifies to be associated with the Work, unless such URI does not refer to the copyright notice or licensing
information for the Work; and in the case of a Derivative Work, a credit identifying the use of the Work in the Derivative Work (e.g., "French translation of the Work by Original Author," or "Screenplay based on original Work by Original Author"). Such credit may be implemented in any reasonable manner; provided, however, that in the case of a Derivative Work or Collective Work, at a minimum such credit will appear where any other comparable authorship credit appears and in a manner at least as prominent as such other comparable authorship credit.

5. Representations, Warranties and Disclaimer

UNLESS OTHERWISE MUTUALLY AGREED TO BY THE PARTIES IN WRITING, LICENSOR OFFERS THE WORK AS-IS AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE WORK, EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTIBILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT, OR THE ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE
OF ABSENCE OF ERRORS, WHETHER OR NOT DISCOVERABLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES, SO SUCH EXCLUSION MAY NOT APPLY TO YOU.

6. Limitation on Liability. EXCEPT TO THE EXTENT REQUIRED BY APPLICABLE LAW, IN NO EVENT WILL LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS LICENSE OR THE USE OF THE WORK, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH

DAMAGES.

7. Termination

This License and the rights granted hereunder will terminate automatically upon any breach by You of the terms of this License. Individuals or entities who have received Derivative Works or Collective Works from You under this License, however, will not have their licenses terminated provided such individuals or entities remain in full compliance with those licenses. Sections 1, 2, 5, 6, 7, and 8 will survive any termination of this License.

Subject to the above terms and conditions, the license granted here is perpetual (for the duration of the applicable copyright in the Work). Notwithstanding the above, Licensor reserves the right to release the Work under different license terms or to stop distributing the Work at any time; provided, however that any such election will not serve to withdraw this License (or any other license that has been, or is required to be, granted under the terms of this License), and this License will continue in full force and effect unless terminated as stated above.

8. Miscellaneous

Each time You distribute or publicly digitally perform the Work or a Collective Work, the Licensor offers to the recipient a license to the Work on the same terms and conditions as the license granted to You under this License.

Each time You distribute or publicly digitally perform a Derivative Work, Licensor offers to the recipient a license to the original Work on the same terms and conditions as the license granted to You under this License.

If any provision of this License is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this License, and without further action by the parties to this agreement, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

No term or provision of this License shall be deemed waived and no breach consented to unless such waiver or consent shall be in writing and signed by the party to be charged with such waiver or consent.

This License constitutes the entire agreement between the parties with respect to the Work licensed here. There are no understandings, agreements or representations with respect to the Work not specified here. Licensor shall not be bound by any additional provisions that may appear in any communication from You. This License may not be modified without the mutual written agreement of the Licensor and You.

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts
as the successor of the GNU Library Public License, version 2, hence
the version number 2.1.]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change
free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some
specially designated software packages--typically libraries--of the
Free Software Foundation and other authors who
decide to use it. You
can use it too, but we suggest you first think carefully about whether
this license or the ordinary General Public License is the better
strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use,
not price. Our General Public Licenses are designed to make sure that
you have the freedom to distribute copies of free software (and charge
for this service if you wish); that you receive source code or can get
it if you want it; that you can change the software and use pieces of

it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits

such linking only if the
entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting
the free library to free
software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order
to run.

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License").

Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the
terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be
reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary
GNU General Public
License instead of this License to a given copy of the Library. To do

this, you must alter all the notices that refer to this License, so
that they refer to the ordinary GNU General Public License, version 2,
instead of to this License. (If a newer version than version 2 of the
ordinary GNU General Public License has appeared, then you can specify
that version instead if you wish.) Do not make any other change in
these notices.

Once this change is made in a given copy, it is irreversible for
that copy, so the ordinary GNU General Public License applies to all
subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of
the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or
derivative of it, under Section 2) in object code or executable form
under the terms of Sections 1 and 2 above provided that you accompany
it with the complete corresponding
machine-readable source code, which
must be distributed under the terms of Sections 1 and 2 above on a
medium customarily used for software interchange.

If distribution of object code is made by offering access to copy
from a designated place, then offering equivalent access to copy the
source code from the same place satisfies the requirement to
distribute the source code, even though third parties are not
compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the
Library, but is designed to work with the Library by being compiled or
linked with it, is called a "work that uses the Library". Such a
work, in isolation, is not a derivative work of the Library, and
therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library
creates an executable that is a derivative of the Library (because it
contains portions of the Library), rather than a "work that
uses the
library". The executable is therefore covered by this License.
Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file
that is part of the Library, the object code for the work may be a
derivative work of the Library even though the source code is not.
Whether this is true is especially significant if the work can be
linked without the Library, or if the work is itself a library. The
threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the
object code for the work under the terms of Section 6.
Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany
the work with the complete corresponding
machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate
properly with a modified version of the library, if
the user installs one, as long as the modified version is

interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at
least three years, to give the same user the materials
specified in Subsection 6a, above, for a charge no more
than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy
from a designated place, offer equivalent access to copy the above
specified materials from the same place.

e) Verify that the user has already received a copy of these
materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the
Library" must include any data and utility programs needed for
reproducing the executable from it. However, as a special exception,
the materials to be distributed need not include anything that is
normally
distributed (in either source or binary form) with the major
components (compiler, kernel, and so on) of the operating system on
which the executable runs, unless that component itself accompanies
the executable.

It may happen that this requirement contradicts the license
restrictions of other proprietary libraries that do not normally
accompany the operating system. Such a contradiction means you cannot
use both them and the Library together in an executable that you
distribute.

7. You may place library facilities that are a work based on the
Library side-by-side in a single library together with other library
facilities not covered by this License, and distribute such a combined
library, provided that the separate distribution of the work based on
the Library and of the other library facilities is otherwise
permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work
based on the Library, uncombined with any
other library
facilities. This must be distributed under the terms of the
Sections above.

b) Give prominent notice with the combined library of the fact
that part of it is a work based on the Library, and explaining
where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute

the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if
you do not accept this License. Therefore, by
modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse
you from the conditions of this License. If you cannot
distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system

which is
implemented by public license practices. Many people have made
generous contributions to the wide range of software distributed
through that system in reliance on consistent application of that
system; it is up to the author/donor to decide if he or she is willing
to distribute software through any other system and a licensee cannot
impose that choice.

This section is intended to make thoroughly clear what is believed to
be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in
certain countries either by patents or by copyrighted interfaces, the
original copyright holder who places the Library under this License may add
an explicit geographical distribution limitation excluding those countries,
so that distribution is permitted only in or among countries not thus
excluded. In such case, this License incorporates the limitation as if
written in the body of this License.

13. The Free Software Foundation may publish
revised and/or new
versions of the Lesser General Public License from time to time.
Such new versions will be similar in spirit to the present version,
but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library
specifies a version number of this License which applies to it and
"any later version", you have the option of following the terms and
conditions either of that version or of any later version published by
the Free Software Foundation. If the Library does not specify a
license version number, you may choose any version ever published by
the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free
programs whose distribution conditions are incompatible with these,
write to the author to ask for permission. For software which is
copyrighted by the Free Software Foundation, write to the Free
Software Foundation; we sometimes make exceptions for this. Our
decision
will be guided by the two goals of preserving the free status
of all derivatives of our free software and of promoting the sharing
and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO
WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW.
EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR

OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE,
BE LIABLE TO YOU
FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey
the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public
License along with this library; if not, write to the Free Software
Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301
USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library `Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the

direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License,
each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute
copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding

those notices that do not
pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the
content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct,
indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

nextVersion := { ver => Version(ver).map(_.bumpBugfix.asSnapshot.string).getOrElse(versionFormatError) }

// use maven style tag name
tagName <<= (name, version in ThisBuild) map { (n,v) => n + "-" + v }

// don't publish on release, it doesn't work with cross version publishing
// TODO: see about defining multiple release processes, to do prepare/perform
// split processes similar to the Maven release plugin
releaseProcess := Seq(
 // TODO remove when scalabeans isn't a custom build
 // checkSnapshotDependencies,
 inquireVersions,
 runTest,
 setReleaseVersion,
 commitReleaseVersion,
 tagRelease,
 setNextVersion,
 commitNextVersion
)

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent

to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works

that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS,

WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

This program and the accompanying materials are made available under the
terms of the Eclipse Public License 2.0 which is available at
http://www.eclipse.org/legal/epl-2.0, or the Apache Software License
2.0 which is available at https://www.apache.org/licenses/LICENSE-2.0.

Eclipse Public License - v 1.0

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation
distributed under this Agreement, and
b) in the case of each subsequent Contributor:
i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted

hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program. Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who

includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must:
a) promptly notify the Commercial Contributor in writing of such claim, and
b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL,

SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable
law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution
of the Program as soon as
reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after
a new version of the
Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement,

whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a

copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works
that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously
marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a

cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative
Works; within the Source form or
documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions)
on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited
to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason

of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache
License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or

otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License,
each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute
copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one

of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the
content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be

liable to You for damages, including any direct,
indirect, special,
incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

*/
/**
* Handles an I/O event or intercepts an I/O operation, and forwards it to its next handler in
* its {@link ChannelPipeline}.
*
* <h3>Sub-types</h3>
* <p>
* {@link ChannelHandler} itself does not provide many methods, but you usually have to implement one of its
subtypes:
* <ul>
* <li>{@link
 ChannelInboundHandler} to handle inbound I/O events, and</li>
* <li>{@link ChannelOutboundHandler} to handle outbound I/O operations.</li>
* </ul>
* </p>
* <p>
* Alternatively, the following adapter classes are provided for your convenience:
* <ul>
* <li>{@link ChannelInboundHandlerAdapter} to handle inbound I/O events,</li>
* <li>{@link ChannelOutboundHandlerAdapter} to handle outbound I/O operations, and</li>
* <li>{@link ChannelDuplexHandler} to handle both inbound and outbound events</li>
* </ul>
* </p>
* <p>
* For more information, please refer to the documentation of each subtype.
* </p>
```

```
*
* <h3>The context object</h3>
* <p>
* A {@link ChannelHandler} is provided with a {@link ChannelHandlerContext}
* object.  A {@link ChannelHandler} is supposed to interact with the
* {@link ChannelPipeline} it belongs to via a context object.  Using the
* context object, the {@link ChannelHandler} can pass events upstream or
* downstream, modify the pipeline dynamically,
 or store the information
* (using {@link AttributeKey}s) which is specific to the handler.
*
* <h3>State management</h3>
*
* A {@link ChannelHandler} often needs to store some stateful information.
* The simplest and recommended approach is to use member variables:
* <pre>
* public interface Message {
*     // your methods here
* }
*
* public class DataServerHandler extends {@link SimpleChannelInboundHandler}&lt;Message&gt; {
*
*     <b>private boolean loggedIn;</b>
*
*     {@code @Override}
*     public void channelRead0({@link ChannelHandlerContext} ctx, Message message) {
*         {@link Channel} ch = e.getChannel();
*         if (message instanceof LoginMessage) {
*             authenticate((LoginMessage) message);
*             <b>loggedIn = true;</b>
*         } else (message instanceof GetDataMessage) {
*             if (<b>loggedIn</b>) {
*                 ch.write(fetchSecret((GetDataMessage) message));
*             } else {
*
   fail();
*             }
*         }
*     }
*     ...
* }
* </pre>
* Because the handler instance has a state variable which is dedicated to
* one connection, you have to create a new handler instance for each new
* channel to avoid a race condition where a unauthenticated client can get
* the confidential information:
* <pre>
* // Create a new handler instance per channel.
```

```
* // See {@link ChannelInitializer#initChannel(Channel)}.
* public class DataServerInitializer extends {@link ChannelInitializer}&lt;{@link Channel}&gt; {
*     {@code @Override}
*     public void initChannel({@link Channel} channel) {
*         channel.pipeline().addLast("handler", <b>new DataServerHandler()</b>);
*     }
* }
*
* </pre>
*
* <h4>Using {@link AttributeKey}s</h4>
*
* Although it's recommended to use member variables to store the state of a
* handler, for some reason you might not want to create many handler instances.
* In such a case, you can use {@link AttributeKey}s which
 is provided by
* {@link ChannelHandlerContext}:
* <pre>
* public interface Message {
*     // your methods here
* }
*
* {@code @Sharable}
* public class DataServerHandler extends {@link SimpleChannelInboundHandler}&lt;Message&gt; {
*     private final {@link AttributeKey}&lt;{@link Boolean}&gt; auth =
*           {@link AttributeKey#valueOf(String) AttributeKey.valueOf("auth")};
*
*     {@code @Override}
*     public void channelRead({@link ChannelHandlerContext} ctx, Message message) {
*         {@link Attribute}&lt;{@link Boolean}&gt; attr = ctx.attr(auth);
*         {@link Channel} ch = ctx.channel();
*         if (message instanceof LoginMessage) {
*             authenticate((LoginMessage) o);
*             <b>attr.set(true)</b>;
*         } else (message instanceof GetDataMessage) {
*             if (<b>Boolean.TRUE.equals(attr.get())</b>) {
*                 ch.write(fetchSecret((GetDataMessage) o));
*             } else {
*                 fail();
*
*         }
*         }
*     }
*     ...
* }
* </pre>
* Now that the state of the handler is attached to the {@link ChannelHandlerContext}, you can add the
* same handler instance to different pipelines:
```

```
* <pre>
* public class DataServerInitializer extends {@link ChannelInitializer}&lt;{@link Channel}&gt; {
*
*     private static final DataServerHandler <b>SHARED</b> = new DataServerHandler();
*
*     {@code @Override}
*     public void initChannel({@link Channel} channel) {
*         channel.pipeline().addLast("handler", <b>SHARED</b>);
*     }
* }
* </pre>
*
*
* <h4>The {@code @Sharable} annotation</h4>
* <p>
* In the example above which used an {@link AttributeKey},
* you might have noticed the {@code @Sharable} annotation.
* <p>
* If a {@link ChannelHandler} is annotated with the {@code @Sharable}
* annotation, it means you can create an instance of the handler just once and
* add it to one or more {@link ChannelPipeline}s multiple times without
* a race
 condition.
* <p>
* If this annotation is not specified, you have to create a new handler
* instance every time you add it to a pipeline because it has unshared state
* such as member variables.
* <p>
* This annotation is provided for documentation purpose, just like
* <a href="http://www.javaconcurrencyinpractice.com/annotations/doc/">the JCIP annotations</a>.
*
* <h3>Additional resources worth reading</h3>
* <p>
* Please refer to the {@link ChannelHandler}, and
* {@link ChannelPipeline} to find out more about inbound and outbound operations,
* what fundamental differences they have, how they flow in a  pipeline,  and how to handle
* the operation in your application.

*/
/**
* A decoder that splits the received {@link ByteBuf}s dynamically by the
* value of the length field in the message.  It is particularly useful when you
* decode a binary message which has an integer header field that represents the
* length of the message body or the whole message.
*
 <p>
* {@link LengthFieldBasedFrameDecoder} has many configuration parameters so
* that it can decode any message with a length field, which is often seen in
* proprietary client-server protocols. Here are some example that will give
* you the basic idea on which option does what.
*
* <h3>2 bytes length field at offset 0, do not strip header</h3>
*
* The value of the length field in this example is <tt>12 (0x0C)</tt> which
* represents the length of "HELLO, WORLD".  By default, the decoder assumes
* that the length field represents the number of the bytes that follows the
* length field.  Therefore, it can be decoded with the simplistic parameter
* combination.
* <pre>
* <b>lengthFieldOffset</b>   = <b>0</b>
* <b>lengthFieldLength</b>   = <b>2</b>
* lengthAdjustment    = 0
* initialBytesToStrip = 0 (= do not strip header)
*
* BEFORE DECODE (14 bytes)         AFTER DECODE (14 bytes)
* +--------+----------------+      +--------+----------------+
* | Length | Actual Content
 |----->| Length | Actual Content |
* | 0x000C | "HELLO, WORLD" |      | 0x000C | "HELLO, WORLD" |
* +--------+----------------+      +--------+----------------+
* </pre>
*
* <h3>2 bytes length field at offset 0, strip header</h3>
*
* Because we can get the length of the content by calling
* {@link ByteBuf#readableBytes()}, you might want to strip the length
* field by specifying <tt>initialBytesToStrip</tt>.  In this example, we
* specified <tt>2</tt>, that is same with the length of the length field, to
* strip the first two bytes.
* <pre>
* lengthFieldOffset   = 0
* lengthFieldLength   = 2
* lengthAdjustment    = 0
* <b>initialBytesToStrip</b> = <b>2</b> (= the length of the Length field)
*
* BEFORE DECODE (14 bytes)         AFTER DECODE (12 bytes)
```

```
* +--------+----------------+      +----------------+
* | Length | Actual Content |----->| Actual Content |
* | 0x000C | "HELLO, WORLD" |      | "HELLO, WORLD" |
* +--------+----------------+      +----------------+
 * </pre>
*
* <h3>2 bytes length field at offset 0, do not strip header, the length field
*     represents the length of the whole message</h3>
*
* In most cases, the length field represents the length of the message body
* only, as shown in the previous examples.  However, in some protocols, the
* length field represents the length of the whole message, including the
* message header.  In such a case, we specify a non-zero
* <tt>lengthAdjustment</tt>.  Because the length value in this example message
* is always greater than the body length by <tt>2</tt>, we specify <tt>-2</tt>
* as <tt>lengthAdjustment</tt> for compensation.
* <pre>
* lengthFieldOffset   =  0
* lengthFieldLength   =  2
* <b>lengthAdjustment</b>    = <b>-2</b> (= the length of the Length field)
* initialBytesToStrip =  0
*
* BEFORE DECODE (14 bytes)         AFTER DECODE (14 bytes)
* +--------+----------------+      +--------+----------------+
* | Length | Actual Content |----->| Length | Actual
 Content |
* | 0x000E | "HELLO, WORLD" |      | 0x000E | "HELLO, WORLD" |
* +--------+----------------+      +--------+----------------+
* </pre>
*
* <h3>3 bytes length field at the end of 5 bytes header, do not strip header</h3>
*
* The following message is a simple variation of the first example.  An extra
* header value is prepended to the message.  <tt>lengthAdjustment</tt> is zero
* again because the decoder always takes the length of the prepended data into
* account during frame length calculation.
* <pre>
* <b>lengthFieldOffset</b>   = <b>2</b> (= the length of Header 1)
* <b>lengthFieldLength</b>   = <b>3</b>
* lengthAdjustment    = 0
* initialBytesToStrip = 0
*
* BEFORE DECODE (17 bytes)                      AFTER DECODE (17 bytes)
* +----------+----------+----------------+      +----------+----------+----------------+
* | Header 1 |  Length  | Actual Content |----->| Header 1 |  Length  | Actual Content |
* |  0xCAFE  | 0x00000C | "HELLO, WORLD" |      |
  0xCAFE  | 0x00000C | "HELLO, WORLD" |
* +----------+----------+----------------+      +----------+----------+----------------+
```

```
* </pre>
*
* <h3>3 bytes length field at the beginning of 5 bytes header, do not strip header</h3>
*
* This is an advanced example that shows the case where there is an extra
* header between the length field and the message body.  You have to specify a
* positive <tt>lengthAdjustment</tt> so that the decoder counts the extra
* header into the frame length calculation.
* <pre>
* lengthFieldOffset   = 0
* lengthFieldLength   = 3
* <b>lengthAdjustment</b>    = <b>2</b> (= the length of Header 1)
* initialBytesToStrip = 0
*
* BEFORE DECODE (17 bytes)                 AFTER DECODE (17 bytes)
* +----------+----------+----------------+      +----------+----------+----------------+
* |  Length  | Header 1 | Actual Content |----->|  Length  | Header 1 | Actual Content |
* | 0x00000C |  0xCAFE  | "HELLO, WORLD" |      | 0x00000C |  0xCAFE  | "HELLO,
 WORLD" |
* +----------+----------+----------------+      +----------+----------+----------------+
* </pre>
*
* <h3>2 bytes length field at offset 1 in the middle of 4 bytes header,
*     strip the first header field and the length field</h3>
*
* This is a combination of all the examples above.  There are the prepended
* header before the length field and the extra header after the length field.
* The prepended header affects the <tt>lengthFieldOffset</tt> and the extra
* header affects the <tt>lengthAdjustment</tt>.  We also specified a non-zero
* <tt>initialBytesToStrip</tt> to strip the length field and the prepended
* header from the frame.  If you don't want to strip the prepended header, you
* could specify <tt>0</tt> for <tt>initialBytesToSkip</tt>.
* <pre>
* lengthFieldOffset   = 1 (= the length of HDR1)
* lengthFieldLength   = 2
* <b>lengthAdjustment</b>    = <b>1</b> (= the length of HDR2)
* <b>initialBytesToStrip</b> = <b>3</b> (= the length of HDR1 + LEN)
 *
* BEFORE DECODE (16 bytes)                 AFTER DECODE (13 bytes)
* +------+--------+------+----------------+      +------+----------------+
* | HDR1 | Length | HDR2 | Actual Content |----->| HDR2 | Actual Content |
* | 0xCA | 0x000C | 0xFE | "HELLO, WORLD" |      | 0xFE | "HELLO, WORLD" |
* +------+--------+------+----------------+      +------+----------------+
* </pre>
*
* <h3>2 bytes length field at offset 1 in the middle of 4 bytes header,
*     strip the first header field and the length field, the length field
*     represents the length of the whole message</h3>
```

```
*
* Let's give another twist to the previous example.  The only difference from
* the previous example is that the length field represents the length of the
* whole message instead of the message body, just like the third example.
* We have to count the length of HDR1 and Length into <tt>lengthAdjustment</tt>.
* Please note that we don't need to take the length of HDR2 into account
* because
 the length field already includes the whole header length.
* <pre>
* lengthFieldOffset   =  1
* lengthFieldLength   =  2
* <b>lengthAdjustment</b>    = <b>-3</b> (= the length of HDR1 + LEN, negative)
* <b>initialBytesToStrip</b> = <b> 3</b>
*
* BEFORE DECODE (16 bytes)                       AFTER DECODE (13 bytes)
* +------+--------+------+----------------+      +------+----------------+
* | HDR1 | Length | HDR2 | Actual Content |----->| HDR2 | Actual Content |
* | 0xCA | 0x0010 | 0xFE | "HELLO, WORLD" |      | 0xFE | "HELLO, WORLD" |
* +------+--------+------+----------------+      +------+----------------+
* </pre>
* @see LengthFieldPrepender

lodash v4.5.1

The [lodash](https://lodash.com/) library exported as a [UMD](https://github.com/umdjs/umd) module.

Generated using [lodash-cli](https://www.npmjs.com/package/lodash-cli):
```bash
$ npm run build
$ lodash -o ./dist/lodash.js
$ lodash core -o ./dist/lodash.core.js
```

Documentation

 * [API Documentation](https://lodash.com/docs)
 * [FP Guide](https://github.com/lodash/lodash/wiki/FP-Guide)

Download

Lodash is released under the [MIT license](https://raw.githubusercontent.com/lodash/lodash/4.5.1/LICENSE) & supports [modern environments](#support).
Review the [build differences](https://github.com/lodash/lodash/wiki/build-differences) & pick one thatâ€™s right for you.

* [Core build](https://raw.githubusercontent.com/lodash/lodash/4.5.1/dist/lodash.core.js) ([~4 kB gzipped](https://raw.githubusercontent.com/lodash/lodash/4.5.1/dist/lodash.core.min.js))
 * [Full build](https://raw.githubusercontent.com/lodash/lodash/4.5.1/dist/lodash.js) ([~21 kB gzipped](https://raw.githubusercontent.com/lodash/lodash/4.5.1/dist/lodash.min.js))
* [CDN copies](https://www.jsdelivr.com/projects/lodash)

Why Lodash?

Lodash makes JavaScript easier by taking the hassle out of working with arrays,
numbers, objects, strings, etc. Lodashâ€™s modular methods are great for:

* Iterating arrays, objects, & strings
* Manipulating & testing values
* Creating composite functions

Module Formats

Lodash is available in a [variety of builds](https://lodash.com/custom-builds) & module formats.

* [lodash](https://www.npmjs.com/package/lodash) & [per method packages](https://www.npmjs.com/browse/keyword/lodash-modularized)
* [lodash-amd](https://www.npmjs.com/package/lodash-amd)
* [lodash-es](https://www.npmjs.com/package/lodash-es) & [babel-plugin-lodash](https://www.npmjs.com/package/babel-plugin-lodash)

* [lodash/fp](https://github.com/lodash/lodash/tree/4.5.1-npm/fp)

Further Reading

* [Contributing](https://github.com/lodash/lodash/blob/4.5.1/.github/CONTRIBUTING.md)
* [Release Notes](https://github.com/lodash/lodash/releases/tag/4.0.0)
* [Wiki (Changelog, Roadmap, etc.)](https://github.com/lodash/lodash/wiki)

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,

except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the

same "printed page" as the copyright notice for easier
identification within third-party archives.

/**
* Encodes and decodes to and from Base64 notation.
*
* <p>
* Change Log:
*
 </p>
* <ul>
* <li>v2.1 - Cleaned up javadoc comments and unused variables and methods. Added some convenience methods
for reading
* and writing to and from files.</li>
* <li>v2.0.2 - Now specifies UTF-8 encoding in places where the code fails on systems with other encodings (like
* EBCDIC).</li>
* <li>v2.0.1 - Fixed an error when decoding a single byte, that is, when the encoded data was a single byte.</li>
* <li>v2.0 - I got rid of methods that used booleans to set options. Now everything is more consolidated and cleaner.
* The code now detects when data that's being decoded is gzip-compressed and will decompress it automatically.
* Generally things are cleaner. You'll probably have to change some method calls that you were making to support
the
* new options format (<tt>int</tt>s that you "OR" together).</li>
* <li>v1.5.1 - Fixed bug when decompressing and decoding to a byte[] using
* <tt>decode( String s, boolean gzipCompressed )</tt>. Added the ability to "suspend" encoding
 in the Output Stream
* so you can turn on and off the encoding if you need to embed base64 data in an otherwise "normal" stream (like an
XML
* file).</li>
* <li>v1.5 - Output stream pases on flush() command but doesn't do anything itself. This helps when using GZIP
* streams. Added the ability to GZip-compress objects before encoding them.</li>
* <li>v1.4 - Added helper methods to read/write files.</li>
* <li>v1.3.6 - Fixed OutputStream.flush() so that 'position' is reset.</li>
* <li>v1.3.5 - Added flag to turn on and off line breaks. Fixed bug in input stream where last buffer being read, if
* not completely full, was not returned.</li>
* <li>v1.3.4 - Fixed when "improperly padded stream" error was thrown at the wrong time.</li>
* <li>v1.3.3 - Fixed I/O streams which were totally messed up.</li>
```

```
* </ul>

  SYNTAX  DisplayString (SIZE (0..255))
  ACCESS  read-only
  STATUS  mandatory
  DESCRIPTION
        "A textual description of the entity.  This value
        should include the full name and version
        identification of the
 system's hardware type,
        software operating-system, and networking
        software.  It is mandatory that this only contain
        printable ASCII characters."
  ::= { system 1 }

sysObjectID OBJECT-TYPE
  SYNTAX  OBJECT IDENTIFIER
  ACCESS  read-only
  STATUS  mandatory
  DESCRIPTION
        "The vendor's authoritative identification of the
        network management subsystem contained in the
        entity.  This value is allocated within the SMI
        enterprises subtree (1.3.6.1.4.1) and provides an
        easy and unambiguous means for determining `what
        kind of box' is being managed.  For example, if
        vendor `Flintstones, Inc.' was assigned the
        subtree 1.3.6.1.4.1.4242, it could assign the
        identifier 1.3.6.1.4.1.4242.1.1 to its `Fred
        Router'."
  ::= { system 2 }

sysUpTime OBJECT-TYPE
  SYNTAX  TimeTicks
```

```
  ACCESS  read-only
  STATUS  mandatory
  DESCRIPTION
        "The time (in hundredths of a second) since the
        network management portion of the system was last
        re-initialized."
  ::= { system 3 }

sysContact OBJECT-TYPE
  SYNTAX  DisplayString (SIZE (0..255))
  ACCESS  read-write
  STATUS  mandatory
  DESCRIPTION
        "The textual identification of the contact person
        for this managed node, together with information
        on how to contact this person."
  ::= { system 4 }

sysName OBJECT-TYPE
  SYNTAX  DisplayString (SIZE (0..255))
  ACCESS  read-write
  STATUS  mandatory
  DESCRIPTION
        "An administratively-assigned name for this
        managed node.  By convention, this is the node's
        fully-qualified domain name."
  ::= { system 5 }

sysLocation OBJECT-TYPE
  SYNTAX  DisplayString (SIZE (0..255))
  ACCESS  read-write
  STATUS  mandatory
  DESCRIPTION
        "The physical location of this node (e.g.,
        `telephone closet,
 3rd floor')."
  ::= { system 6 }

sysServices OBJECT-TYPE
  SYNTAX  INTEGER (0..127)
  ACCESS  read-only
  STATUS  mandatory
  DESCRIPTION
        "A value which indicates the set of services that
        this entity primarily offers.

        The value is a sum.  This sum initially takes the
        value zero, Then, for each layer, L, in the range
```

```
        1 through 7, that this node performs transactions
        for, 2 raised to (L - 1) is added to the sum.  For
        example, a node which performs primarily routing
        functions would have a value of 4 (2^(3-1)).  In
        contrast, a node which is a host offering
        application services would have a value of 72
        (2^(4-1) + 2^(7-1)).  Note that in the context of
        the Internet suite of protocols, values should be
        calculated accordingly:

            layer  functionality
              1  physical (e.g., repeaters)

             2  datalink/subnetwork (e.g., bridges)
              3  internet (e.g., IP gateways)
              4  end-to-end  (e.g., IP hosts)
              7  applications (e.g., mail relays)

        For systems including OSI protocols, layers 5 and
        6 may also be counted."
    ::= { system 7 }

-- the Interfaces group

-- Implementation of the Interfaces group is mandatory for
-- all systems.

ifNumber OBJECT-TYPE

-- the Address Translation group

-- Implementation of the Address Translation group is
-- mandatory for all
 systems.  Note however that this group
-- is deprecated by MIB-II. That is, it is being included

-- solely for compatibility with MIB-I nodes, and will most
-- likely be excluded from MIB-III nodes.  From MIB-II and
-- onwards, each network protocol group contains its own
-- address translation tables.

-- The Address Translation group contains one table which is
-- the union across all interfaces of the translation tables
-- for converting a NetworkAddress (e.g., an IP address) into
-- a subnetwork-specific address.  For lack of a better term,
-- this document refers to such a subnetwork-specific address
-- as a `physical' address.

-- Examples of such translation tables are: for broadcast
-- media where ARP is in use, the translation table is
-- equivalent to the ARP cache; or, on an X.25 network where
-- non-algorithmic translation to X.121 addresses is
```

```
-- required, the translation table contains the
-- NetworkAddress to X.121 address equivalences.

atTable OBJECT-TYPE
  SYNTAX

  DESCRIPTION
        "The interface on which this entry's equivalence
        is effective.  The interface identified by a
        particular value of this index is the same
```

```
        interface as identified by the same value of
        ifIndex."
  ::= { atEntry 1 }

atPhysAddress OBJECT-TYPE
  SYNTAX  PhysAddress
  ACCESS  read-write
  STATUS  deprecated
  DESCRIPTION
        "The media-dependent `physical' address.

        Setting this object to a null string (one of zero
        length) has the effect of invaliding the
        corresponding entry in the atTable object.  That
        is, it effectively dissasociates the interface
        identified with said entry from the mapping
        identified with said entry.  It is an
        implementation-specific matter as to whether the
        agent removes an invalidated entry from the table.
        Accordingly,
 management stations must be prepared
        to receive tabular information from agents that
        corresponds to entries not currently in use.
        Proper interpretation of such entries requires
        examination of the relevant atPhysAddress object."
  ::= { atEntry 2 }

             other(1),       -- none of the following
             invalid(2),     -- an invalidated mapping
             dynamic(3),
             static(4)
          }
  ACCESS  read-write
  STATUS  mandatory
   DESCRIPTION
        "The type of mapping.

        Setting this object to the value invalid(2) has
        the effect of invalidating the corresponding entry
        in the ipNetToMediaTable.  That is, it effectively
        dissasociates the interface identified with said
        entry from the mapping identified with said entry.
        It is an implementation-specific matter as to
        whether the agent removes an invalidated entry
        from the table.  Accordingly, management stations
        must be prepared to receive tabular information
        from agents that corresponds to entries not
        currently in use.  Proper interpretation of such
        entries requires examination of the relevant
        ipNetToMediaType object."

            "The state of this TCP connection.

            The only value which may
 be set by a management
            station is deleteTCB(12).  Accordingly, it is
            appropriate for an agent to return a `badValue'
```

response if a management station attempts to set
this object to any other value.

If a management station sets this object to the
value deleteTCB(12), then this has the effect of
deleting the TCB (as defined in RFC 793) of the
corresponding connection on the managed node,
resulting in immediate termination of the
connection.

As an implementation-specific option, a RST
segment may be sent from the managed node to the
other TCP endpoint (note however that RST segments
are not sent reliably)."

egpNeighEventTrigger OBJECT-TYPE
  SYNTAX  INTEGER
 { start(1), stop(2) }
  ACCESS  read-write
  STATUS  mandatory
  DESCRIPTION
        "A control variable used to trigger operator-
        initiated Start and Stop events.  When read, this
        variable always returns the most recent value that
        egpNeighEventTrigger was set to.  If it has not
        been set since the last initialization of the
        network management subsystem on the node, it
        returns a value of `stop'.
```

```
            When set, this variable causes a Start or Stop
            event on the specified neighbor, as specified on
            pages 8-10 of RFC 904.  Briefly, a Start event
            causes an Idle peer to begin neighbor acquisition
            and a non-Idle peer to reinitiate neighbor
            acquisition.  A stop event causes a non-Idle peer
            to return to the Idle state until a Start event
            occurs, either via egpNeighEventTrigger or
            otherwise."

            "The autonomous system number of this EGP entity."
    ::= { egp 6 }

-- the Transmission group

-- Based on the transmission media underlying each interface
-- on a system, the corresponding portion of the Transmission
-- group is mandatory for that system.

-- When Internet-standard definitions for managing
-- transmission media are defined, the transmission group is
-- used to provide a prefix for the names of those objects.

-- Typically, such definitions reside in the experimental
-- portion of the MIB until they are "proven", then as a
-- part of the Internet standardization process, the
-- definitions are accordingly elevated and a new object
-- identifier, under the transmission group is defined. By
-- convention, the name assigned is:
--
--      type OBJECT IDENTIFIER    ::= { transmission number }
--
-- where "type" is the symbolic
   value used for the media in
-- the ifType column of the ifTable object, and "number" is
-- the actual integer value corresponding to the symbol.
```

```
-- the SNMP group

-- Implementation of the SNMP group is mandatory for all
-- systems which support an SNMP protocol entity.  Some of
-- the objects defined below will be zero-valued in those
-- SNMP implementations that are optimized to support only
-- those functions specific to either a management agent or
-- a management station.  In particular, it should be
-- observed that the objects below refer to an SNMP entity,
-- and there may be several SNMP entities residing on a
-- managed node (e.g., if the node is hosting acting as
-- a management station).

                 at: ftp://ftp.isi.edu/mib/ianaiftype.mib"

    REVISION     "199401310000Z"  -- Jan 31, 1994
    DESCRIPTION  "Initial version of this MIB as published in
                 RFC 1573."

    ::= { mib-2 30 }

 IANAifType ::= TEXTUAL-CONVENTION
    STATUS       current
    DESCRIPTION
          "This data type is used as the syntax of the ifType
          object in the (updated) definition of MIB-II's
          ifTable.

          The definition of this textual convention with the
          addition of newly assigned values is published
          periodically by the IANA, in either the Assigned
          Numbers RFC, or some derivative of it specific to
          Internet
Network Management number assignments.  (The
          latest arrangements can be obtained by contacting the
```

```
        IANA.)

        Requests for new values should be made to IANA via
        email (iana&iana.org).

        The relationship between the assignment of ifType
        values and of OIDs to particular media-specific MIBs
        is solely the purview of IANA and is subject to change
        without notice.  Quite often, a media-specific MIB's
        OID-subtree assignment within MIB-II's 'transmission'
        subtree will be the same as its ifType value.
        However, in some circumstances this will not be the
        case, and implementors must not pre-assume any
        specific relationship between ifType values and
        transmission subtree OIDs."

IANAtunnelType ::= TEXTUAL-CONVENTION
  STATUS     current
  DESCRIPTION
        "The encapsulation method used by a tunnel. The value
        direct indicates that a packet is encapsulated
        directly within a normal IP header, with no
        intermediate header, and unicast to the remote tunnel
        endpoint (e.g., an RFC 2003 IP-in-IP tunnel, or an RFC
        1933 IPv6-in-IPv4 tunnel). The value minimal indicates
        that a Minimal Forwarding Header (RFC 2004) is
        inserted between the outer header and the payload
        packet. The value UDP indicates that the payload
        packet is encapsulated within a normal UDP packet
        (e.g., RFC 1234).

        The values sixToFour, sixOverFour, and isatap
        indicates that an IPv6 packet is encapsulated directly
        within an IPv4 header, with no intermediate header,

        and unicast to the destination determined by the 6to4,
        6over4, or ISATAP protocol.

        The remaining protocol-specific values indicate that a
        header of the protocol of that name is inserted
        between the outer header and the payload header.

        The assignment policy for IANAtunnelType values is
        identical to the policy for assigning IANAifType
        values."

DESCRIPTION

"The MIB module for measuring application performance as experienced by end-users.

Copyright (C) The Internet Society (2004). This version of this MIB module is part of RFC 3729; see the RFC itself for full legal notices."

REVISION "200402190000Z" -- February 19, 2004

DESCRIPTION

"The original version of this MIB Module, published as RFC3729."

::= { rmon 23 }

apmMibObjects OBJECT IDENTIFIER ::= { apm 1 }
apmConformance OBJECT IDENTIFIER ::= { apm 2 }
apmCompliances
OBJECT IDENTIFIER ::= { apmConformance 1 }
apmGroups OBJECT IDENTIFIER ::= { apmConformance 2 }

AppLocalIndex ::= TEXTUAL-CONVENTION

STATUS current

DESCRIPTION

"A locally arbitrary unique identifier associated with an application or application verb.

All objects of type AppLocalIndex are assigned by the agent out of a common number space. In other words, AppLocalIndex values assigned to entries in one table must not overlap with AppLocalIndex values assigned to entries in another table. Further, every protocolDirLocalIndex value registered by the agent automatically assigns the same value out of the

AppLocalIndex number space.

For example, if the protocolDirLocalIndex values { 1, 3, 5, 7 } have been assigned, and the apmHttpFilterAppLocalIndex values { 6, 8, 9 } have been assigned:

- Assignment of new AppLocalIndex values must not use the values { 1, 3, 5, 6, 7, 8, 9 }.
- AppLocalIndex values { 1, 3, 5, 7 } are automatically

assigned and are associated with the identical value of
protocolDirLocalIndex. In particular, an entry in the
apmAppDirTable indexed by a value provides further
information about a protocol indexed by the same value
in the protocolDirTable of RMON2.

The value for each supported application must remain constant
at least from one re-initialization of the entity's network
management system to the next re-initialization, except that
if an application is deleted and re-created, it must be
re-created with a new value that has not been used since the
last re-initialization.

The specific value is meaningful only within a given SNMP
entity. An AppLocalIndex value must not be re-used until the
next agent restart."
SYNTAX Unsigned32
(1..2147483647)

ProtocolDirNetworkAddress ::= TEXTUAL-CONVENTION
STATUS current
DESCRIPTION
"A network level address whose semantics and encoding are
specified by an associated protocolDirLocalIndex
value. Objects of this type must specify which
protocolDirLocalIndex value is used. This value is encoded
according to the encoding rules for the identified
protocolDirectory entry.

For example, if the associated protocolDirLocalIndex indicates
an encapsulation of ip, this object is encoded as a length
octet of 4, followed by the 4 octets of the ip address,
in network byte order.

Objects of this type may allow this value to be the zero
length string. If so, they must identify they meaning of this
value."
SYNTAX OCTET STRING (SIZE(0..255))

DataSourceOrZero ::= TEXTUAL-CONVENTION

STATUS current
DESCRIPTION
"Identifies the source of
the data that the associated
function is configured to analyze. This source can be any

```
        interface on this device.

        In order to identify a particular interface, this
        object shall identify the instance of the ifIndex
        object, defined in [4], for the desired interface.

        For example, if an entry were to receive data from
        interface #1, this object would be set to ifIndex.1.

        If the source of the data isn't an interface or cannot be
        localized to an interface, this object would be set to 0.0"

    REFERENCE    "The DataSource textual convention is defined in
                  RFC 2021 [5]."
    SYNTAX       OBJECT IDENTIFIER

RmonClientID ::= TEXTUAL-CONVENTION
    STATUS       current
    DESCRIPTION
        "A long-lived unique ID assigned to an end-system. This ID is
        assigned by the agent using an implementation-specific
        algorithm.

        Because a client machine may be assigned multiple addresses

       over any time period it can be difficult to attribute
        behavior to a particular client based solely on its
        address. A ClientID may be assigned to provide a more
        stable handle for referencing that client. The entity that
        assigns the ClientID may use various implementation
        techniques to keep track of a client but if the assigning
        entity is unable to track client address mappings, it may map
        client identifiers to client addresses rather than to
        distinct client machines.

        This is named ClientID because it helps to solve a problem
        seen in network clients (servers usually have well-known,
        long-lived addresses). However, ClientID's may be assigned to
        any end-system regardless of its role on the network."
    SYNTAX       Unsigned32 (0..4294967295)

TransactionAggregationType ::= TEXTUAL-CONVENTION
    STATUS       current
    DESCRIPTION
```

"Specifies one of 4 different techniques
for aggregating
transactions.

The metrics for a single transaction are the responsiveness of
the transaction and whether the transaction succeeded (a
boolean). When such metrics are aggregated in this MIB Module,
these metrics are replaced by averages and distributions of
responsiveness and availability. The metrics describing
aggregates are constant no matter which type of aggregation is
being performed. These metrics may be found in the
apmReportTable.

The flows(1) aggregation is the simplest. All transactions
that share common application/server/client 3-tuples are
aggregated together, resulting in a set of metrics for all
such unique 3-tuples.

The clients(2) aggregation results in somewhat more
aggregation (i.e., fewer resulting records). All transactions
that share common application/client tuples are aggregated
together, resulting in a
set of metrics for all such unique
tuples.

The servers(3) aggregation usually results in still more
aggregation (i.e., fewer resulting records). All transactions
that share common application/server tuples are aggregated
together, resulting in a set of metrics for all such unique
tuples.

The applications(4) aggregation results in the most
aggregation (i.e., the fewest resulting records). All
transactions that share a common application are aggregated
together, resulting in a set of metrics for all such unique
applications.

Note that it is not meaningful to aggregate applications, as
different applications have widely varying characteristics. As a
result, this set of aggregations is complete."
SYNTAX INTEGER {
flows(1), -- Least Aggregation
clients(2),
servers(3),
applications(4) -- Most Aggregation
}

-- The APM Application Directory Group

```
-- The Application Directory Table contains a record for every

-- application monitored by this agent. This table is also used to
-- configure whether or not an application will be measured and which
-- bucket boundaries will be used for the application.
--
-- The bucket boundaries define the break-points between bins of a
-- histogram analysis for that application. As an example of how this
-- works, consider an entry representing response-time for http.
-- If the boundaries are set as follows:
-- Boundary1: 500 milliseconds
-- Boundary2: 1 second
-- Boundary3: 2 seconds
-- Boundary4: 5
-- Boundary5: 15
-- Boundary6: 60
--
-- If the following measurements are made (all in milliseconds):
-- 377, 8645, 1300, 487, 1405, 775, 1115, 850, 945, 1054, 7745, 9380
--
-- A report run during this interval would report the following
-- counts:
-- Bucket1: 2
-- Bucket2: 3
-- Bucket3: 4
-- Bucket4: 0
-- Bucket5: 3
-- Bucket6: 0
--
 Bucket7: 0

apmAppDirTable OBJECT-TYPE
  SYNTAX      SEQUENCE OF ApmAppDirEntry
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "The APM MIB directory of applications and application
     verbs. The agent will populate this table with all
     applications/verbs of any responsivenessType it has the
     capability to monitor. Since the agent populates this table
     with every entry it has the capability to monitor, the
     entries in this table are read-write, allowing the management
     station to modify parameters in this table but not to add new
     entries or delete entries (however, entries may be
     disabled). If new entries are added to the apmHttpFilterTable
```

or the apmUserDefinedAppTable, the agent will add the corresponding entries to this table.

It is an implementation-dependent matter as to how the agent sets these default parameters. For example, it may leave certain entries
in this table 'off(0)' if the agent developer

believes that combination will be infrequently used, allowing a manager that needs that capability to set it to 'on(1)'.

Some applications are registered in the RMON2 protocol directory and some are registered in other tables in this MIB Module. Regardless of where an application is originally registered, it is assigned an AppLocalIndex value that is the primary index for this table.

The contents of this table affect all reports and exceptions generated by this agent. Accordingly, modification of this table should be performed by a manager acting in the role of administrator. In particular, management software should not require or enforce particular configuration of this table - it should reflect the preferences of the site administrator, not the software author. As a practical matter, this requires management
software to allow the administrator to configure
the values it will use so that it can be adapted to the site policy."

                transactionOriented(1),
                throughputOriented(2),
                streamingOriented(3)
              }
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "This object describes and configures the agent's support for
     application performance measurement for this application.
     There are 3 types of measurements for different types of
     applications:

     Transaction-Oriented applications have a fairly constant
     workload to perform for all transactions. The responsiveness
     metric for transaction-oriented
 applications is application
     response time (from first request to final delivery of
     service) and is measured in milliseconds. This is
     commonly referred to as end-user response time.

     Throughput-Oriented applications have widely varying workloads
     based on the nature of the client request. In particular,
     throughput-oriented applications vary widely in the amount of
     data that must be transported to satisfy the request. The
     responsiveness metric for throughput-oriented applications is
```

kilobits per second.

Streaming-Oriented applications deliver data at a constant metered rate of speed regardless of the responsiveness of the networking and computing infrastructure. This constant rate of speed is generally specified to be below (sometimes well below) the nominal capability of the infrastructure. However, when the infrastructures cannot deliver data at this speed, interruption of service or degradation of service can result. The responsiveness metric for streaming-oriented applications is the ratio of time that the service is degraded or interrupted to the total service time. This metric is measured in parts per million.

Note that for some applications, measuring more than one responsiveness type may be interesting. For agents that wish

to support more than one measurement for a application, they will populate this table with multiple entries for that application, one for each type."

   ::= { apmMibObjects 2 }

apmAppDirID OBJECT-TYPE
```

SYNTAX OBJECT IDENTIFIER
MAX-ACCESS read-write
STATUS current
DESCRIPTION
"This object allows managers to avoid downloading application directory information when the directory is set to a known (usually fixed) configuration.

If the value of this object isn't 0.0, it signifies that the entire contents of the apmAppDirTable, apmHttpFilterTable, apmUserDefinedAppTable and protocolDirTable are equal to a known state identified by the value of this object. If a manager recognizes this value as identifying a directory configuration it has a local copy of, it may use this local copy rather than downloading these tables. Note that it may have downloaded this local copy (and the ID) from another agent and used this copy for all other agents that advertised the same ID.

If an agent recognizes that the entire contents of the apmAppDirTable, apmHttpFilterTable, apmUserDefinedAppTable and protocolDirTable are equal to a known state to which an ID has been assigned, it should set this object to that ID.

In many cases when this feature is used, the application directory information will be in read-only memory and thus the tables may not be modified via SNMP requests. In the event

that the tables are writable and a modification is made, the agent is responsible for setting this object to 0.0 if it cannot determine that the state is equal to a known state.

An agent is not obligated to recognize and advertise all such registered states as it may not have knowledge of all states. Thus, a manager may encounter agents whose DirectoryID value is 0.0 even though the contents of the directory were equal to a registered state.

Note that the contents of those tables includes the protocolDirLocalIndex and appLocalIndex values. In other words, these values can't be assigned randomly on each agent, but must be equal to values that are part of the known state. While it is possible for a manager to download application directory details using SNMP and to set the

appropriate directoryID, the manager would need to have some
scheme to ensure consistent values of LocalIndex variables
from agent to agent.
Such schemes are outside the scope of
this specification.

Application directory registrations are unique within an
administrative domain.

Typically these registrations will be made by an agent
software developer who will set the application directory
tables to a read-only state and assign a DirectoryID to that
state. Thus, all agents running this software would share the
same DirectoryID. As the application directory might change
from one software release to the next, the developer may
register different DirectoryID's for each software release.

A customer could also create a site-wide application directory
configuration and assign a DirectoryID to that configuration
as long as consistent values of LocalIndex variables can be
ensured.

The value of this object must persist across reboots."
::= { apmMibObjects 3 }

-- APM HTTP Filter Table

-- The HTTP Filter Table
creates virtual applications which measure the
-- performance of certain web pages or sets of web pages. Some
-- circumstances where this is particularly useful are:
--
-- - An Intranet or ASP scenario where a business application is
-- running on one or more web pages or scripts.

-- (i.e., /expense/submit.cgi?employeeID=3426&...)
-- - A web-hosting scenario where one wants to measure the
-- service level for a particular customer
-- - An e-commerce scenario where the performance of certain
-- pages needs to be monitored more closely.
-- (i.e., shopping cart, shipping, credit card authorization)

apmHttpFilterTable OBJECT-TYPE
SYNTAX SEQUENCE OF ApmHttpFilterEntry
MAX-ACCESS not-accessible
STATUS current

```
  DESCRIPTION
      "A table that creates virtual applications which measure the
      performance of certain web pages or sets of web pages.

      When an entry is added to this table, the agent
will
      automatically create one or more entries in the
      apmAppDirTable (one for each responsivenessType it is
      capable of measuring).

      Note that when entries exist in this table some HTTP
      transactions will be summarized twice: in applications
      represented here as well as the HTTP application. If entries
      in this table overlap, these transactions may be summarized
      additional times.

      The contents of this table affect all reports and exceptions
      generated by this agent. Accordingly, modification of this
      table should be performed by a manager acting in the role of
      administrator. In particular, management software should not
      require or enforce particular configuration of this table - it
      should reflect the preferences of the site administrator, not
      the software author."

      measure transactions relating to URLs that match a filter in
      the apmHttpFilterTable. Thus,
 measurements for the HTTP
      application will present aggregated statistics for
      URL-matching HTTP transactions and measurements for the HTTP
      GET application verb will present aggregated statistics for
      URL-matching HTTP GET transactions.

      This will be used in environments that wish to monitor only
      targeted URLs and to ignore large volumes of internet web
      browsing traffic.

      This object affects all APM reports and exceptions generated
      by this agent. Accordingly, modification of this object should
      be performed by a manager acting in the role of
      administrator. In particular, management software should not
      require or enforce particular configuration of this object -
      it should reflect the preferences of the site administrator,
      not the software author.

      The value of this object must persist across reboots."

-- The APM Name Table

apmNameTable OBJECT-TYPE
  SYNTAX      SEQUENCE OF ApmNameEntry
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "A client machine may have multiple addresses during a period
     of monitoring. The apmNameTable assigns a long-lived
     identifier to a client and records what addresses
```

were
assigned to that client for periods of time. Various implementation techniques exist for tracking this mapping but if an agent is unable to track client address mappings, it may map client identifiers to client addresses rather than to distinct client machines.

A particular apmNameClientID should be a constant attribute of a particular client. When available, the agent may also record the machine name and/or user name which may be valuable for displaying to humans. The apmNameMachineName and apmNameUserName are relatively constant, changing only if these attributes actually change on the client.

The agent will store a historical log of these entries, aging out old entries as the log becomes too large. Since this table contains information vital to the interpretation of other tables (e.g., the apmReportTable), the agent should ensure that

the log doesn't
age out entries that would be referenced by
data in those tables.

Note that an entry for a clientID is active from its StartTime until the StartTime of another entry (for the same clientID) that supersedes it, or 'now' if none supersede it. Therefore, if a clientID only has a single entry, it is by definition very new and should never be aged out. No entry for a clientID should be aged out unless it has been updated by a new entry for the client (i.e., with an updated address) and only if the new entry is 'old' enough.

To determine how old is old enough, compute the maximum value of Interval * (NumReports + 1) of all entries in the apmReportControlTable (the '+ 1' is to allow a reasonable period of time for the report to be downloaded). Then take the larger of this value and the age in seconds of the oldest entry in the current transaction table. If an entry for
a
clientID is superseded by another entry whose StartTime is more than this many seconds ago, then the older entry may be deleted."
::= { apmMibObjects 8 }

  SYNTAX      ProtocolDirNetworkAddress (SIZE(1..255))
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "The network client address for this client when this mapping
```

```
      was active.

      This is represented as an octet string with specific semantics
      and length as
 identified by the protocolDirLocalIndex
      component of the index. This object may not be the zero length
      string.

      Since this object is an index variable, it is encoded in the
      index according to the index encoding rules.  For example, if
      the protocolDirLocalIndex component of the index indicates an
      encapsulation of ip, this object is encoded as a length octet
      of 4, followed by the 4 octets of the ip address, in network
      byte order. Care should be taken to avoid values of this
      object that, in conjunction with the other index variables,
      would result in an index longer than SNMP's maximum of 128
      subidentifiers."

        --      flows(1),
        --      clients(2),
        --      servers(3),
        --      applications(4)
        --    }
    MAX-ACCESS  read-create
    STATUS      current
    DESCRIPTION
        "The type of aggregation being performed for this set of
        reports.

        The metrics for a single transaction are the responsiveness of
        the transaction and whether the transaction succeeded (a
        boolean). When such metrics are aggregated in this MIB Module,
        these metrics are replaced by averages and distributions of
        responsiveness and availability. The metrics describing
        aggregates are constant no matter which type of aggregation is
        being performed. These metrics may be found in the
        apmReportTable.

        The flows(1) aggregation is the simplest. All transactions
        that share common application/server/client 3-tuples are
        aggregated together, resulting in a set of metrics for all
        such unique 3-tuples.

        The clients(2) aggregation results in somewhat more
        aggregation (i.e., fewer resulting records). All transactions
        that share common application/client tuples are aggregated
        together, resulting in a set of metrics for all such unique
        tuples.

        The servers(3) aggregation usually results in still more
        aggregation (i.e., fewer resulting records). All transactions
        that share common application/server tuples are aggregated
        together, resulting in a set of metrics for all such unique
        tuples.

        The applications(4) aggregation results in the most
        aggregation (i.e., the fewest resulting records). All

        transactions that share a common application are aggregated
        together, resulting in a set of metrics for all such unique
        applications.

        Note that it is not meaningful to aggregate applications, as
        different applications have widely varying characteristics.
```

As
a result, this set of aggregations is complete.

This object may not be modified if the associated
apmReportControlStatus object is equal to active(1)."
::= { apmReportControlEntry 3 }

apmReportControlInterval OBJECT-TYPE
SYNTAX Unsigned32
UNITS "Seconds"
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"The interval in seconds over which data is accumulated before
being aggregated into a report in the apmReportTable. All
reports with the same apmReportControlIndex will be based on
the same interval. This object must be greater than zero.

Many users desire that these reports be synchronized to within
seconds of the beginning of the hour because the results may
be correlated more meaningfully to business behavior and so
that data from multiple agents is aggregated over the same
time periods. Thus management software may take extra effort
to synchronize
reports to the beginning of the hour and to one
another. However, the agent must not allow reports to 'drift'
over time as they will quickly become unsynchronized. In
particular, if there is any fixed processing delay between
reports, the reports should deduct this time from the interval
so that reports don't drift.

This object may not be modified if the associated
apmReportControlStatus object is equal to active(1)."

  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "The network server address for this apmReportEntry.

     This is represented as an octet string with
     specific semantics and length as identified
     by the protocolDirLocalIndex component of the index.

     Since this object is an index variable, it is encoded in the
     index according to the index encoding rules.  For example, if
     the protocolDirLocalIndex indicates an encapsulation of ip,
     this object is encoded as a length octet of 4, followed by the
     4 octets of the ip address, in network byte order. Care
     should be taken to avoid values of this object that, in
     conjunction with the other index variables, would result in an
     index longer than SNMP's maximum of 128 subidentifiers.

     If the associated apmReportControlAggregationType is equal to
     applications(4) or clients(2), then this object will
 be a null
     string and will be encoded simply as a length octet of 0."

  SYNTAX      ApmTransactionEntry

  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "A conceptual row in the apmTransactionTable.

     The apmAppDirAppLocalIndex value in the index identifies
```

the application of the transaction represented by this entry.
The apmAppDirResponsivenessType value in the index
identifies the type of responsiveness metric reported by
this entry and uniquely identifies this entry when more
than one responsiveness metric is measured for a flow.
Entries will only exist in this table for those
combinations of AppLocalIndex and ResponsivenessType
that are configured 'on(1)'.
The protocolDirLocalIndex value in the index identifies
the network layer protocol of the apmTransactionServerAddress.
The apmTransactionServerAddress
value in the index identifies
the network layer address of the server in the transaction
represented by this entry.
The apmNameClientID value in the index identifies the
client in the transaction represented by this entry.

An example of the indexing of this entry is
apmTransactionCount.3.1.8.4.192.168.1.2.3232235788.2987

Note that some combinations of index values may result in an
index that exceeds 128 sub-identifiers in length which exceeds
the maximum for the SNMP protocol. Implementations should take
care to avoid such combinations."

-- The APM Exception table
-- The APM Exception Table creates filters so that a management
-- station can get immediate notification of a transaction that has
-- had poor availability or responsiveness.
--
-- This function is particularly helpful in unaggregated situations
-- where the numbers of agents is relatively high and the transaction
-- rate per agent is relatively low (such as agents for desktops or
-- dedicated to small workgroups). Polling agents in such an
-- environment would either cause scalability problems (high rate) or
-- lead to long notification delays (low rate).

apmExceptionTable

```
 OBJECT-TYPE
   SYNTAX      SEQUENCE OF ApmExceptionEntry
   MAX-ACCESS  not-accessible
   STATUS      current
   DESCRIPTION
      "This table creates filters so that a management station can
      get immediate notification of a transaction that has had poor

      availability or responsiveness.

      Each apmExceptionEntry is associated with a particular type of
      transaction and is applied to all transactions of that
      type. Multiple apmExceptionEntries may be associated with a
      particular type of transaction. A transaction type is
      identified by the value of the apmAppDirAppLocalIndex
      component of the index.

      Because the quality of a transaction is not known until it is
      completed, these thresholds are only applied after the

apmThroughputExceptionMinTime OBJECT-TYPE
  SYNTAX      Unsigned32
  UNITS       "seconds"
  MAX-ACCESS  read-write
  STATUS      current
  DESCRIPTION
     "Because the responsiveness for throughput-oriented
     transactions is divided by the elapsed time, it can be very
     sensitive to short-term performance variations for
     transactions that take a short period of time. For example,
     when downloading
 a very short file, a single dropped packet
     could double or triple the total response time.

     Further, throughput is usually examined for applications that
     transfer a lot of data, and when doing so it is helpful to
     conceptualize transaction costs that are proportional to the
     amount of data separately from those costs that are relatively
     fixed (i.e., independent of the amount of data).  For very
     short transactions, these fixed transaction costs (handshake,
     setup time, authentication, round-trip time) may dominate the
     total response time for the transaction, resulting in
     throughput measurements that aren't really proportional to the
     network's, server's and client's combined data throughput
     capability.
```

```
      This object controls the minimum number of seconds that an
      throughput-based transaction must exceed before an exception
      can be generated for it. If this object is set
 to zero, then
      all throughput-based transactions are candidates for
      exceptions.

      The value of this object must persist across reboots."

    DESCRIPTION
        "This is the MIB Module for DOCSIS 2.0-compliant Radio

     Frequency (RF) interfaces in Cable Modems and
        Cable Modem Termination Systems.

        Copyright (C) The Internet Society (2006).  This
        version of this MIB module is part of RFC 4546; see
```

```
        the RFC itself for full legal notices."

    REVISION        "200605240000Z"
    DESCRIPTION
       "Revision of the IETF RF MIB module for DOCSIS 2.0.
        This version published as RFC 4546.
        This MIB module revision includes the following
        among others:
        Usage of ifType (205) for upstream logical channels.
        Addition of downstream and upstream utilization
        counters.
        Additional statistics per upstream interface.
        Upstream channel offline configuration mechanism.
        Added MIB support for new DOCSIS 2.0 modulation
        attributes.
        Euro-DOCSIS downstream interleave values.
        Adjustments to RFC 2670 definitions based on
        the MIB review guidelines from the IETF

         Operations and Management Area (OPS)."

    REVISION "199908190000Z"
    DESCRIPTION
       "Initial version, published as RFC 2670.
        Modified by Mike St. Johns to fix problems identified by
        the first pass of the MIB doctor.  Of special note,
        docsIfRangingResp and docsIfCmtsInsertionInterval were
        obsoleted and replaced by other objects with the same
        functionality, but with more appropriate syntax."

DocsEqualizerData ::= TEXTUAL-CONVENTION
    STATUS       current
    DESCRIPTION
        "This data type represents the equalizer data
         as measured at the receiver interface.
         The format of the equalizer follows the structure of the
         Transmit Equalization Adjust RNG-RSP TLV of DOCSIS RFI
         v2.0 :
         1 byte Main tap location 1..(n + m)
          1 byte Number of forward taps per symbol
         1 byte Number of forward taps: n
         1 byte Number of reverse taps: m

         Following are the equalizer coefficients:
         First, forward taps coefficients:
         2 bytes F1 (real),  2 bytes  F1 (imag)

         ...
         2 bytes Fn (real),  2 bytes  Fn (imag)

         Then, reverse taps coefficients:
         2 bytes D1 (real),  2 bytes  D1 (imag)
         ...

         2 bytes Dm (real),  2 bytes  Dm (imag)

         The equalizer coefficients are considered signed 16-bit
         integers in the range from -32768 (0x8000) to 32767
         (0x7FFF).

         DOCSIS specifications require up to a maximum of
         64 equalizer taps (n + m); therefore, this object size
          can get up 260 bytes (4 + 4x64).
         The minimum object size (other than zero) for a t-spaced
         tap with a minimum of 8 symbols will be 36 (4 + 4x8)."

docsIfUpstreamChannelTable OBJECT-TYPE
    SYNTAX      SEQUENCE OF DocsIfUpstreamChannelEntry
    MAX-ACCESS  not-accessible
    STATUS      current
    DESCRIPTION
        "This table describes the attributes of attached upstream
         channels."
    ::= { docsIfBaseObjects 2 }

docsIfUpstreamChannelEntry OBJECT-TYPE
    SYNTAX      DocsIfUpstreamChannelEntry
    MAX-ACCESS  not-accessible
    STATUS      current
    DESCRIPTION
        "List of attributes for a single upstream channel.  For
         DOCSIS 2.0 CMTSs, an entry in this table exists for
         each ifEntry with an ifType of docsCableUpstreamChannel
         (205).
         For DOCSIS 1.x CM/CMTSs and DOCSIS 2.0 CMs, an entry in
         this table exists for each ifEntry with an ifType of
         docsCableUpstream (129).

         For DOCSIS 2.0 CMTSs, two classes of interfaces can be
         defined for this table:
           o Upstream Physical Interfaces: The traditional DOCSIS
             1.x CMTS upstream interface ifType 129 and the DOCSIS
             2.0 ifType 205 that are functional.  In other words,
             interfaces that represent upstream receivers within
             an RF MAC interface.
             Entries of physical interfaces are exposed to the
```

management interface with their corresponding
ifStack hierarchy and are not administratively
created by this table.

o Upstream Temporary Interfaces: A fictitious
interface created for the purpose of manipulating
physical interface parameters offline, then
validating prior to updating the target physical
interface.

In case of a reinitialization of the managed system,
physical interfaces values persist while the temporary
interfaces are not recreated.

This mechanism helps to minimize
service disruptions
originating in situations where a group of interface
parameter values need to be consistent with each other
in SET operations. A temporary buffer
(temporary interface) is provided to allow the CMTS
to validate the parameters offline."
INDEX { ifIndex }

docsIfUpChannelScdmaCodesPerSlot,
docsIfUpChannelScdmaFrameSize,
docsIfUpChannelScdmaHoppingSeed,
docsIfUpChannelType, and
docsIfUpChannelPreEqEnable
Setting this object to the value of a non-existent or
a temporary upstream interface returns the error
'wrongValue'.
This object MUST contain a value of zero for physical
interfaces entries.
Setting this object in row entries that correspond to
physical interfaces returns the error 'wrongValue'."
::= { docsIfUpstreamChannelEntry 16 }

docsIfUpChannelUpdate OBJECT-TYPE
SYNTAX TruthValue
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"Used to perform the copy of adjusted parameters from the
temporary interface entry to the physical interface
indicated by the docsIfUpChannelCloneFrom
object. The
transfer is initiated through an SNMP SET to 'true' of

this object.
A SET to 'true' fails and returns error 'commitFailed'
if docsIfUpChannelStatus value is 'notInService', which
means that the interface parameters values are not
compatible with each other or have not been validated yet.
Reading this object always returns 'false'."
::= { docsIfUpstreamChannelEntry 17 }

docsIfUpChannelStatus OBJECT-TYPE

SYNTAX RowStatus
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"This object is only used for the creation of a temporary upstream row with the purpose of updating the parameters of a physical upstream channel entry.

The following restrictions apply to this object:
1. This object is not writable for physical interfaces.
2. Temporary interface entries are only created by a SET

of this object to createandWait(5).
3. ifAdminStatus from the Interface MIB RFC 2863 is used to take a physical upstream channel offline, to be consistent with DOCSIS 1.x operation, as indicated in RFC 2670.
In addition,
o ifAdminStatus 'down' is reflected in this object as 'notInService'.
o ifOperStatus 'down' while ifAdminStatus 'up' is reflected in this object as 'notInservice'.
4. Temporary created rows MUST be set to 'active' with the purpose of validating upstream parameter consistency prior to transferring the parameters to the physical interface.

Below is a mandatory procedure for adjusting the values of a physical interface:
1. Create a temporary interface entry through an SNMP SET using 'createAndWait'. At this point, the RowStatus reports 'notReady'.
The Manager entity uses an ifIndex value outside the operational range of the physical interfaces for the creation of a temporary interface.
2. Set the docsIfUpChannelCloneFrom object to the ifIndex value of the physical row to update. Now docsIfUpChannelStatus reports 'notInService'.
3. Change the upstream parameters to the desired values in the temporary row.

4. Validate that all parameters are consistent by setting docsIfUpChannelStatus to 'active'. A failure to set the RowStatus to 'active' returns the error 'commitFailed', which means the parameters are not compatible with the target physical interface.

```
        5. With docsIfUpChannelStatus 'active', transfer the
           parameters to the target physical interface by setting
           the object docsIfUpChannelUpdate to 'true'.
        6. Delete the temporary
 row by setting
           docsIfUpChannelStatus to 'destroy'."

```

```
    MAX-ACCESS  not-accessible
    STATUS      current
    DESCRIPTION
        "Describes the attributes for a single class of service.
        If implemented as read-create in the Cable Modem
        Termination System, creation of entries in this table is
        controlled by the value of
        docsIfCmtsQosProfilePermissions.

        If implemented as read-only, entries are created based
        on information in REG-REQ
  MAC messages received from
        cable modems (for Cable Modem Termination System), or
        based on information extracted from the TFTP option file
        (for Cable Modem).
        In the Cable Modem Termination System, read-only entries
        are removed if no longer referenced by
        docsIfCmtsServiceTable.

        An entry in this table MUST not be removed while it is
        referenced by an entry in docsIfCmServiceTable (Cable
        Modem) or docsIfCmtsServiceTable (Cable Modem Termination
        System).

        An entry in this table SHOULD NOT be changeable while
        it is referenced by an entry in docsIfCmtsServiceTable.

        If this table is created automatically, there SHOULD only
        be a single entry for each Class of Service.  Multiple
        entries with the same Class of Service parameters are NOT
        RECOMMENDED."

    STATUS      current
    DESCRIPTION
        "Current cable modem connectivity state, as specified
        in the RF Interface Specification.  Returned status
        information is the CM status, as assumed by the CMTS,
        and indicates
 the following events:
        other(1)
           Any state other than below.
        ranging(2)
```

The CMTS has received an Initial Ranging Request
message from the CM, and the ranging process is not
yet complete.
rangingAborted(3)
The CMTS has sent a Ranging Abort message to the CM.

rangingComplete(4)
The CMTS has sent a Ranging Complete message to the CM.
ipComplete(5)
The CMTS has received a DHCP reply message and
forwarded it to the CM.
registrationComplete(6)
The CMTS has sent a Registration Response message to
the CM.
accessDenied(7)
The CMTS has sent a Registration Aborted message
to the CM.
operational(8)
Value 8 is considered reserved and should not be defined
in future revisions of this MIB module to avoid conflict
with documented
implementations that support value 8 to
indicate operational state after completing the BPI
initialization process.
registeredBPIInitializing(9)
Baseline Privacy (BPI) is enabled and the CMTS is in the
process of completing BPI initialization. This state
MAY last for a significant length of time if failures
occur during the initialization process. After
completion of BPI initialization, the CMTS will report
registrationComplete(6).
The CMTS only needs to report states it is able to
detect."

   SYNTAX       Integer32 (0..100)
   UNITS        "percent"
   MAX-ACCESS   read-only
   STATUS       current
   DESCRIPTION
      "The calculated and truncated utilization index for this
       physical upstream or downstream channel, accurate as of
       the most recent docsIfCmtsChannelUtilizationInterval.

       Upstream Channel Utilization Index:

       The upstream channel utilization index is expressed as a
       percentage of mini-slots utilized on the physical channel,
       regardless of burst type.  For an Initial Maintenance
        region, the mini-slots for the complete region are
       considered utilized if the CMTS received an upstream
       burst within the region from any CM on the physical
       channel.  For contention REQ and REQ/DATA regions, the
       mini-slots for a transmission opportunity within the
       region are considered utilized if the CMTS received an
       upstream burst within the opportunity from any CM on the
       physical channel.  For all other regions, utilized
       mini-slots are those in which the CMTS granted
       bandwidth to any unicast SID on the physical channel.

       For an upstream interface that has multiple logical
       upstream channels enabled, the utilization index is a
       weighted sum of utilization indices for the logical
       channels.  The weight for each utilization index is the
       percentage of upstream mini-slots allocated for the
       corresponding logical channel.

     Example:
       If 75% of bandwidth is allocated to the first logical
       channel and 25% to the second, and the utilization
       indices for each are 60 and 40, respectively, the
```

utilization index for the upstream physical channel is
(60 * 0.75) + (40 * 0.25) = 55. This figure
applies to the most recent utilization interval.

Downstream Channel Utilization Index:

The downstream channel utilization index is a percentage
expressing the ratio between bytes used to transmit data
versus the total number of bytes transmitted in the raw
bandwidth of the MPEG channel. As with the upstream
utilization index, the calculated value represents
the most recent utilization interval.
Formula:
Downstream utilization index =
(100 * (data bytes / raw bytes))

Definitions:
Data bytes: Number of bytes transmitted as data in the

docsIfCmtsChannelUtilizationInterval.
Identical to docsIfCmtsDownChannelCtrUsed
Bytes measured over the utilization
interval.
Raw bandwidth: Total number of bytes available for
transmitting data, not including bytes
used for headers and other overhead.
Raw bytes: (raw bandwidth *
docsIfCmtsChannelUtilizationInterval).
Identical to docsIfCmtsDownChannelCtrTotal
Bytes measured over the utilization
interval."

                 "

    REVISION     "200210140000Z"        -- 14 October 2002
    DESCRIPTION  "Changes in this revision:
                  - Updated various administrative information.
                  - Corrected some typos.
                  - Corrected typo in description of SnmpEngineID
                    that led to range overlap for 127.
                  - Changed '255a' to '255t' in definition of
                    SnmpAdminString to align with current SMI.
                  - Reworded 'reserved' for value zero in
                    DESCRIPTION of SnmpSecurityModel.
                  - The algorithm for allocating security models
                    should give
 256 per enterprise block, rather
                    than 255.
                  - The example engine ID of 'abcd' is not
                    legal. Replaced with '800002b804616263'H based
                    on example enterprise 696, string 'abc'.
                  - Added clarification that engineID should
                    persist across re-initializations.
                  This revision published as RFC 3411.
                 "

    ::= { snmpModules 10 }

  -- Textual Conventions used in the SNMP Management Architecture ***

 SnmpEngineID ::= TEXTUAL-CONVENTION
   STATUS       current
   DESCRIPTION "An SNMP engine's
```

administratively-unique identifier.

Objects of this type are for identification, not for addressing, even though it is possible that an address may have been used in the generation of a specific value.

The value for this object may not be all zeros or all 'ff'H or the empty (zero length) string.

The initial value for this object may be configured via an operator console entry or via an algorithmic function. In the latter case, the following example algorithm is recommended.

In cases where there are multiple engines on the same system, the use of this algorithm is NOT appropriate, as it would result in all of those engines ending up with the same ID value.

1) The very first bit is used to indicate how the

rest of the data is composed.

0 - as defined by enterprise using former methods that existed before SNMPv3. See item 2 below.

1 - as defined by this architecture, see item 3 below.

Note that this allows existing uses of the engineID (also known as AgentID [RFC1910]) to co-exist with any new uses.

2) The snmpEngineID has a length of 12 octets.

The first four octets are set to the binary equivalent of the agent's SNMP management private enterprise number as assigned by the Internet Assigned Numbers Authority (IANA). For example, if Acme Networks has been assigned { enterprises 696 }, the first four octets would be assigned '000002b8'H.

The remaining eight octets

are determined via

one or more enterprise-specific methods. Such

methods must be designed so as to maximize the
possibility that the value of this object will
be unique in the agent's administrative domain.
For example, it may be the IP address of the SNMP
entity, or the MAC address of one of the
interfaces, with each address suitably padded
with random octets. If multiple methods are
defined, then it is recommended that the first
octet indicate the method being used and the
remaining octets be a function of the method.

3) The length of the octet string varies.

The first four octets are set to the binary
equivalent of the agent's SNMP management
private enterprise number as assigned by the
Internet Assigned Numbers Authority (IANA).
For example, if Acme Networks has been assigned
{ enterprises 696 }, the first four octets would
be assigned '000002b8'H.

The very first bit is set to 1. For example, the
above value for Acme Networks now changes to be
'800002b8'H.

The fifth octet indicates how the rest (6th and
following octets) are formatted. The values for
the fifth octet are:

0 - reserved, unused.

1 - IPv4 address (4 octets)
lowest non-special IP address

2 - IPv6 address (16 octets)
lowest non-special IP address

3 - MAC address (6 octets)
lowest IEEE MAC address, canonical

order

4 - Text, administratively assigned
Maximum remaining length 27

5 - Octets, administratively assigned

Maximum remaining length 27

6-127 - reserved, unused

128-255 - as defined by the enterprise
Maximum remaining length 27
"
SYNTAX OCTET STRING (SIZE(5..32))

SnmpSecurityModel ::= TEXTUAL-CONVENTION
STATUS current
DESCRIPTION "An identifier that uniquely identifies a
Security Model of the Security Subsystem within
this SNMP Management Architecture.

The values for securityModel are allocated as
follows:

- The zero value does not identify any particular
security model.

- Values between 1 and 255, inclusive,
are reserved
for standards-track Security Models and are
managed by the Internet Assigned Numbers Authority
(IANA).
- Values greater than 255 are allocated to
enterprise-specific Security Models. An
enterprise-specific securityModel value is defined
to be:

enterpriseID * 256 + security model within
enterprise

For example, the fourth Security Model defined by
the enterprise whose enterpriseID is 1 would be
259.

This scheme for allocation of securityModel
values allows for a maximum of 255 standards-

based Security Models, and for a maximum of
256 Security Models per enterprise.

It is believed that the assignment of new
securityModel values will be rare in
practice
because the larger the number of simultaneously
utilized Security Models, the larger the
chance that interoperability will suffer.
Consequently, it is believed that such a range
will be sufficient. In the unlikely event that
the standards committee finds this number to be
insufficient over time, an enterprise number
can be allocated to obtain an additional 256
possible values.

Note that the most significant bit must be zero;
hence, there are 23 bits allocated for various
organizations to design and define non-standard

securityModels. This limits the ability to
define new proprietary implementations of Security
Models to the first 8,388,608 enterprises.

It is worthwhile to note that, in its encoded

form, the securityModel value will normally
require only a single byte since, in practice,
the leftmost bits will be zero for most messages
and sign extension is suppressed by the encoding
rules.

As of this writing, there are several values
of securityModel defined for use with SNMP or
reserved for use with supporting MIB objects.
They are as follows:

0 reserved for 'any'
1 reserved for SNMPv1
2 reserved for SNMPv2c
3 User-Based Security Model (USM)
"
SYNTAX INTEGER(0 .. 2147483647)

SnmpMessageProcessingModel ::= TEXTUAL-CONVENTION

STATUS current
DESCRIPTION "An identifier that uniquely identifies a Message
Processing Model of the Message Processing
Subsystem within this SNMP Management
Architecture.

The values for messageProcessingModel are
allocated as follows:

- Values between 0 and 255, inclusive, are
reserved for standards-track Message Processing
Models and are managed by the Internet Assigned
Numbers Authority (IANA).

- Values greater than 255 are allocated to
enterprise-specific Message Processing Models.
An enterprise messageProcessingModel value is
defined to be:

enterpriseID * 256 +
messageProcessingModel within enterprise

For example, the fourth Message Processing Model
defined by the enterprise whose enterpriseID

is 1 would be 259.

This scheme for allocating messageProcessingModel
values allows for a maximum of 255 standards-
based Message Processing Models, and for a
maximum of 256 Message Processing Models per
enterprise.

It is believed that the assignment of new
messageProcessingModel values will be rare
in practice because the larger the number of
simultaneously utilized Message Processing Models,
the larger the chance that interoperability
will suffer. It is believed that such a range
will be sufficient. In the unlikely event that
the standards committee finds this number to be
insufficient over time, an enterprise number
can be allocated to obtain an additional 256
possible values.

Note that the most significant bit must be zero;

hence, there are 23 bits allocated for various
organizations to design and define non-standard
messageProcessingModels. This limits the ability
to define new proprietary implementations of
Message Processing Models to the first 8,388,608
enterprises.

It is worthwhile to note that, in its encoded
form, the messageProcessingModel value will
normally require only a single byte since, in
practice, the leftmost bits will be zero for
most messages and sign extension is suppressed
by the encoding rules.

As of this writing, there are several values of
messageProcessingModel defined for use with SNMP.
They are as follows:

0 reserved for SNMPv1
1 reserved for SNMPv2c
2 reserved for SNMPv2u and SNMPv2*
3 reserved for SNMPv3
"
SYNTAX INTEGER(0 .. 2147483647)

SnmpSecurityLevel
::= TEXTUAL-CONVENTION
STATUS current
DESCRIPTION "A Level of Security at which SNMP messages can be
sent or with which operations are being processed;
in particular, one of:

noAuthNoPriv - without authentication and
without privacy,
authNoPriv - with authentication but
without privacy,
authPriv - with authentication and
with privacy.

These three values are ordered such that
noAuthNoPriv is less than authNoPriv and
authNoPriv is less than authPriv.
"

```
  SYNTAX      INTEGER { noAuthNoPriv(1),
                        authNoPriv(2),
                        authPriv(3)
                      }

SnmpAdminString ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "255t"
  STATUS
    current
  DESCRIPTION "An octet string containing administrative
          information, preferably in human-readable form.

          To facilitate internationalization, this
          information is represented using the ISO/IEC
          IS 10646-1 character set, encoded as an octet
          string using the UTF-8 transformation format
          described in [RFC2279].

          Since additional code points are added by
          amendments to the 10646 standard from time
          to time, implementations must be prepared to
          encounter any code point from 0x00000000 to
          0x7fffffff.  Byte sequences that do not
          correspond to the valid UTF-8 encoding of a
          code point or are outside this range are
          prohibited.

          The use of control codes should be avoided.

          When it is necessary to represent a newline,

         the control code sequence CR LF should be used.

          The use of leading or trailing white space should
          be avoided.

          For code points not directly supported by user
          interface hardware or software, an alternative
          means of entry and display, such as hexadecimal,
          may be provided.

          For information encoded in 7-bit US-ASCII,
          the UTF-8 encoding is identical to the
          US-ASCII encoding.
```

```
            UTF-8 may require multiple bytes to represent a
            single character / code point; thus the length
            of this object in octets may be different from
            the number of characters encoded.  Similarly,
            size constraints refer to the number of encoded
            octets, not the number of characters represented
            by an encoding.

            Note that when this
 TC is used for an object that
            is used or envisioned to be used as an index, then
            a SIZE restriction MUST be specified so that the
            number of sub-identifiers for any object instance
            does not exceed the limit of 128, as defined by
            [RFC3416].

            Note that the size of an SnmpAdminString object is
            measured in octets, not characters.
           "

  DESCRIPTION
   "This MIB module defines configuration objects for managing
    IPsec Security Policies.  In general, this MIB can be
    implemented anywhere IPsec security services exist (e.g.,
    bump-in-the-wire, host, gateway, firewall, router, etc.).

    Copyright (C) The IETF Trust (2007).  This version of
    this MIB module is part of RFC 4807; see the RFC itself for
    full legal notices."
```

```
-- Revision History

SpdBooleanOperator ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
      "The SpdBooleanOperator operator is used to specify
       whether sub-components in a decision-making process are

       ANDed or ORed together to decide if the resulting
       expression is true or false."
  SYNTAX      INTEGER { or(1), and(2) }

SpdAdminStatus ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
      "The SpdAdminStatus is used to specify the administrative
       status of an object.  Objects that are disabled MUST NOT
       be used by the packet processing engine."
  SYNTAX      INTEGER { enabled(1), disabled(2) }

SpdIPPacketLogging ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "d"
  STATUS   current
```

DESCRIPTION
"SpdIPPacketLogging specifies
whether an audit message
SHOULD be logged if a packet is passed through a Security
Association (SA) and if some of that packet is included in
the log event. A value of '-1' indicates no logging. A
value of '0' or greater indicates that logging SHOULD be
done and indicates the number of bytes starting at the
beginning of the packet to place in the log. Values greater
than the size of the packet being processed indicate that
the entire packet SHOULD be sent.

Examples:
'-1' no logging
'0' log but do not include any of the packet in the log
'20' log and include the first 20 bytes of the packet
in the log."

SYNTAX Integer32 (-1..65535)

SpdTimePeriod ::= TEXTUAL-CONVENTION
DISPLAY-HINT "31t"
STATUS current
DESCRIPTION
"This property identifies an overall range of calendar dates
and time. In a boolean context, a value
within this time
range, inclusive, is considered true.

This information is encoded as an octet string using
the UTF-8 transformation format described in STD 63,
RFC 3629.

It uses the format suggested in RFC 3060. An octet string

represents a start date and time and an end date and time.
For example:

yyyymmddThhmmss/yyyymmddThhmmss

Where: yyyy = year mm = month dd = day
hh = hour mm = minute ss = second

The first 'yyyymmddThhmmss' sub-string indicates the start
date and time. The second 'yyyymmddThhmmss' sub-string

```
        indicates the end date and time.  The character 'T' within
        these sub-strings indicates the beginning of the time
        portion of each sub-string.  The solidus character '/'
        separates the start from the end date and time.  The end
        date and time MUST be subsequent to the start date and

 time.

        There are also two allowed substitutes for a
        'yyyymmddThhmmss' sub-string: one for the start date and
        time, and one for the end date and time.

        If the start date and time are replaced with the string
        'THISANDPRIOR', this sub-string would indicate the current
        date and time and the previous dates and time.

        If the end date and time are replaced with the string
        'THISANDFUTURE', this sub-string would indicate the current
        date and time and the subsequent dates and time.

        Any of the following SHOULD be considered a
        'wrongValue' error:
        - Setting a value with the end date and time earlier than
          or equal to the start date and time.
        - Setting the start date and time to 'THISANDFUTURE'.
        - Setting the end date and time to 'THISANDPRIOR'."
    REFERENCE "RFC 3060, 3269"

spdLocalConfigObjects
 OBJECT IDENTIFIER
    ::= { spdConfigObjects 1 }

spdIngressPolicyGroupName OBJECT-TYPE
    SYNTAX      SnmpAdminString (SIZE(0..32))
    MAX-ACCESS  read-write
    STATUS      current

    DESCRIPTION
        "This object indicates the global system policy group that
        is to be applied on ingress packets (i.e., arriving at an
        interface from a network) when a given endpoint does not
        contain a policy definition in the spdEndpointToGroupTable.
```

Its value can be used as an index into the
spdGroupContentsTable to retrieve a list of policies. A
zero length string indicates that no system-wide policy exists
and the default policy of 'drop' SHOULD be executed for
ingress packets until one is imposed by either this object
or by the endpoint processing a given packet.

This object MUST be persistent"
DEFVAL { "" }
::= { spdLocalConfigObjects 1 }

spdEgressPolicyGroupName OBJECT-TYPE
SYNTAX
SnmpAdminString (SIZE(0..32))
MAX-ACCESS read-write
STATUS current
DESCRIPTION
"This object indicates the policy group containing the
global system policy that is to be applied on egress
packets (i.e., packets leaving an interface and entering a
network) when a given endpoint does not contain a policy
definition in the spdEndpointToGroupTable. Its value can
be used as an index into the spdGroupContentsTable to
retrieve a list of policies. A zero length string
indicates that no system-wide policy exists and the default
policy of 'drop' SHOULD be executed for egress packets
until one is imposed by either this object or by the
endpoint processing a given packet.

This object MUST be persistent"

spdEndpointToGroupTable OBJECT-TYPE
SYNTAX SEQUENCE OF SpdEndpointToGroupEntry
MAX-ACCESS not-accessible
STATUS current
DESCRIPTION
"This table maps policies (groupings) onto an endpoint
(interface). A policy group assigned to an endpoint is then
used to control access to the network traffic passing
through that endpoint.

If an endpoint has been configured with a policy group and

```
        no rule within that policy group matches that packet, the
        default action in this case SHALL be to drop the packet.

        If no policy group has been assigned to an endpoint, then
        the policy group specified by spdIngressPolicyGroupName MUST
        be used on traffic inbound from the network through that
        endpoint, and the policy group specified by
        spdEgressPolicyGroupName MUST be used for traffic outbound
        to the network through that endpoint."
    ::= { spdConfigObjects 2 }

spdGroupContentsTable OBJECT-TYPE
SYNTAX SEQUENCE OF SpdGroupContentsEntry
MAX-ACCESS not-accessible
STATUS current
DESCRIPTION
"This table contains a list of rules and/or subgroups
contained within a given policy group. For a given value
of spdGroupContName, the set of rows sharing that value
forms a 'group'. The rows in a group MUST be processed
according to the value of the spdGroupContPriority
object
in each row. The processing MUST be executed starting with
the lowest value of spdGroupContPriority and in ascending
order thereafter.

If an action is executed as the result of the processing of
a row in a group, the processing of further rows in that
group MUST stop. Iterating to the next policy group row by
finding the next largest spdGroupContPriority object SHALL
only be done if no actions were run while processing the
current row for a given packet."
::= { spdConfigObjects 3 }

```
spdGroupContentsEntry OBJECT-TYPE
  SYNTAX      SpdGroupContentsEntry
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "Defines a given sub-component within a policy group.  A
      sub-component is either a rule or another group as
      indicated by spdGroupContComponentType and referenced by
      spdGroupContComponentName."

  INDEX   { spdGroupContName,
 spdGroupContPriority }
  ::= { spdGroupContentsTable 1 }

SpdGroupContentsEntry ::= SEQUENCE {
  spdGroupContName                  SnmpAdminString,

}

spdGroupContName OBJECT-TYPE
  SYNTAX      SnmpAdminString (SIZE(1..32))
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "The administrative name of the group associated with this
     row.  A 'group' is formed by all the rows in this table that
     have the same value of this object."
  ::= { spdGroupContentsEntry 1 }

spdGroupContPriority OBJECT-TYPE
  SYNTAX      Integer32 (0..65535)

 MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "The priority (sequence number) of the sub-component in
      a group that this row represents.  This value indicates
      the order that each row of this table MUST be processed
      from low to high.  For example, a row with a priority of 0
      is processed before a row with a priority of 1, a 1 before
```

a 2, etc."
::= { spdGroupContentsEntry 2 }

spdGroupContFilter OBJECT-TYPE
SYNTAX VariablePointer
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"spdGroupContFilter points to a filter that is evaluated
to determine whether the spdGroupContComponentName within
this row is exercised. Managers can use this object to
classify groups of rules, or subgroups, together in order to
achieve a greater degree of control and optimization over
the execution order of the items within the group. If the

filter evaluates to false, the rule or subgroup will be
skipped and the next rule or subgroup will be evaluated
instead. This value can be used to indicate a scalar or
row in a table. When indicating a row in a table, this
value MUST point to the first column instance in that row.

An example usage of this object would be to limit a
group of rules to executing only when the IP packet
being processed is designated to be processed by IKE.
This effectively creates a group of IKE-specific rules.

The following tables and scalars can be pointed to by this
column. All but diffServMultiFieldClfrTable are defined in
this MIB:

diffServMultiFieldClfrTable
spdIpOffsetFilterTable
spdTimeFilterTable
spdCompoundFilterTable
spdTrueFilter
spdIpsoHeaderFilterTable

Implementations MAY choose to provide
support for other
filter tables or scalars.

If this column is set to a VariablePointer value, which
references a non-existent row in an otherwise supported
table, the inconsistentName exception MUST be returned. If
the table or scalar pointed to by the VariablePointer is

```
        not supported at all, then an inconsistentValue exception
        MUST be returned.

        If, during packet processing, a row in this table is applied
        to a packet and the value of this column in that row
        references a non-existent or non-supported object, the
        packet MUST be dropped."

  DESCRIPTION
     "This defines the
 various tests that are used when
      evaluating a given filter.

      The various tests definable in this table are as follows:

      equal:
        - Tests if the OCTET STRING, 'spdIpOffFiltValue', matches

          a value in the packet starting at the given offset in
          the packet and comparing the entire OCTET STRING of
          'spdIpOffFiltValue'.  Any values compared this way are
          assumed to be unsigned integer values in network byte
          order of the same length as 'spdIpOffFiltValue'.

      notEqual:
        - Tests if the OCTET STRING, 'spdIpOffFiltValue', does
          not match a value in the packet starting at the given
          offset in the packet and comparing to the entire OCTET
          STRING of 'spdIpOffFiltValue'.  Any values compared
          this way are assumed to be unsigned integer values in
          network byte order of the same length as
          'spdIpOffFiltValue'.
```

arithmeticLess:
- Tests if the OCTET STRING, 'spdIpOffFiltValue', is arithmetically less than ('<') the value starting at the given offset within the packet. The value in the packet is assumed to be an unsigned integer in network byte order of the same length as 'spdIpOffFiltValue'.

arithmeticGreaterOrEqual:
- Tests if the OCTET STRING, 'spdIpOffFiltValue', is arithmetically greater than or equal to ('>=') the value starting at the given offset within the packet. The value in the packet is assumed to be an unsigned integer in network byte order of the same length as 'spdIpOffFiltValue'.

arithmeticGreater:
- Tests if the OCTET STRING, 'spdIpOffFiltValue', is arithmetically greater than ('>') the value starting at the given offset within the packet. The value in the packet is
assumed to be an unsigned integer in network
byte order of the same length as 'spdIpOffFiltValue'.

arithmeticLessOrEqual:

DESCRIPTION
"This is the MIB Module for DOCSIS-compliant cable modems

and cable-modem
termination systems.

Copyright (C) The IETF Trust (2006). This version
of this MIB module was published in RFC 4639; for full
legal notices see the RFC itself."

REVISION "200612200000Z" -- December 20, 2006
DESCRIPTION
"Second version, published as RFC 4639.

Modifications to this MIB module since RFC 2669 include:
- Deprecation of the docsDevFilter group in favor of the
DiffServ MIB groups, to enable support for IPv6
filtering and DiffServ Code Point (DSCP) marking.
- Deprecation of the docsDevCpeGroup in favor of the
docsDevCpeInetGroup, to enable support of IPv6.
- Addition of various InetAddress objects to enable
support of IPv6.
- Deprecation of docsDevNmAccessTable in favor of SNMP
Coexistence and SNMPv3 -- yet adding
docsDevNmAccessTrapVersion and clarifying
docsDevNmAccessIp for current use of this table,
- Addition of docsDevIgmpModeControl for management and
control of the IGMP mode of operation,
- Addition of docsDevMaxCpe for management of the
maxmium number of CPEs permitted access through a
cable modem,
- Addition of docsDevSwServerTransportProtocol, and
modifications to docsDevSoftware object DESCRIPTIONS,
to enable software downloads via either TFTP or HTTP,
- Replacement of docsDevEvThrottleInhibited with
docsDevEvThrottleThresholdExceeded to simplify
event threshold management,
- Modification of docsDevEvReporting to enable local
logging to the internal volatile log, and not to the
internal non-volatile log,
- Modification of the compliance statement to make the
docsDevCpe objects optional
- Created placeholders for two OIDs in the
docsDevFilterPolicyTable that were never used

- Modified the DESCRIPTION of
  docsDevSwServerTransportProtocol and
  docsDevSwServerAddressType to address the
  dependence between each object
- Added a reference to docsDevServerConfigTftpAddress
- Clarified the scope of notifications that are covered
  by docsDevEvThrottleThreshold
- Clarified an error condition that could occur when

  doing a SET to docsDevEvReporting
- Defined each of the enumerated types for both
  docsDevEvLevel and docsDevEvPriority
- Added UNITS clause to docsDevFilterLLCMatches,
  docsDevFilterIpMatches, docsDevMaxCpe,
  docsDevEvThrottleThreshold and docsDevEvCounts.
- Added REFERENCE clause to docsDevFilterIpProtocol
- Modified DESCRIPTION
of docsDevCpeInetAddr to be
  more protocol-neutral
- Removed the enumerated value (1) from both
  docsDevCpeInetSource and docsDevCpeSource
- Covered additional read-write and read-create objects
  in the Security Considerations section
- Modified the default value of docsDevNmAccessIpMask
  to be consistent with OSSI specification
- Modified the SYNTAX of docsDevNmAccessCommunity and
  docsDevNmAccessInterfaces in the Conformance
  Statement section
- Added SYNTAX clause to docsDevEvReporting in the
  Conformance Statement section
- Modified SYNTAX clause of docsDevEvReporting to
  move new enumerated type to byte boundary
- Added references to DOCSIS 2.0 specifications to
  multiple objects
- Clarified non-persistency across reboots for
  all
tables
- Clarified functionality of docsDevSw objects as
  they relate to docsDevSwOperStatus
- Clarified enumerated types (9) and (10) for
  docsDevServerBootState
- Defined the state of unknown(0) for the following
  objects: docsDevServerDhcpAddressType,
  docsDevServerTimeAddressType,
  docsDevServerConfigTftpAddressType and
  docsDevServerConfigTftpAddressType

- Modified the value in docsDevFilterIpDaddr to be
  consistent with the SYNTAX
- Specified which rows could be modified in an
  active row for docsDevFilterPolicyStatus
- Defined the term 'manually' in docsDevCpeEnroll
- Clarified the description for
  docsDevFilterTosOrMask
- Covered the case of a non-existent row for
  docsDevFilterPolicyPtr
- Added DEFVAL clauses for multiple
objects
- Replaced docsDevNotification OBJECT IDENTIFIER
  with docsDevNotifications to address possible
  compatibility issues

- Added support for the usage of RFC 3413 and RFC 3014
  as event notification mechanisms
- Removed docsDevFilterPolicyObsoleteGroup
- Added stdInterface(9) type to docsDevEvReporting to
  support the usage of RFC3413 and RFC3014
- Modified DESCRIPTION for docsDevMaxCpe"

    REVISION "199908190000Z"
    DESCRIPTION

docsDevBase OBJECT IDENTIFIER ::= { docsDevMIBObjects 1 }

--
-- For the following object, there is no concept in the
-- RFI specification corresponding to a backup CMTS. The
-- enumeration is provided here in case someone is able
-- to define such a role or device.
--

docsDevRole OBJECT-TYPE
     SYNTAX INTEGER {
       cm(1),
       cmtsActive(2),
       cmtsBackup(3)
     }
     MAX-ACCESS read-only

STATUS current
DESCRIPTION
"Defines the current role of this device. cm(1) is a
Cable Modem, cmtsActive(2) is a Cable Modem Termination
System that is controlling the system of cable modems,
and cmtsBackup(3) is a CMTS that is currently connected
but is not controlling the system (not currently used).

In general, if this device is a 'cm', its role will not
change during operation or between reboots. If the
device is a 'cmts' it may change between cmtsActive and
cmtsBackup and back again during normal operation. NB:
At this time, the DOCSIS standards do not support the
concept of a backup CMTS, but cmtsBackup is included for
completeness."

docsDevNmAccessInterfaces OBJECT-TYPE
       SYNTAX      OCTET STRING (SIZE (1..32))
       MAX-ACCESS  read-create
       STATUS      deprecated
       DESCRIPTION
          "Specifies the set of interfaces from which requests from
           this NMS will be accepted.  Each octet within
           the value of this object specifies a set of eight

           interfaces, the first octet specifying ports 1
           through 8, the second octet specifying interfaces 9
           through 16, etc.  Within each octet, the most
           significant bit represents the lowest numbered
```

```
            interface, and the least significant bit represents the
            highest numbered
 interface.  Thus, each interface is
            represented by a single bit within the value of this
            object.  If that bit has a value of '1' then that
            interface is included in the set.

            Note that entries in this table apply only to link-layer
            interfaces (e.g., Ethernet and CATV MAC).  Bits
            representing upstream and downstream channel interfaces
            MUST NOT be set to '1'.

            Note that if bits corresponding to non-existing
            interfaces are set, the result is implementation
            specific.

            Note that according to the DOCSIS OSSIv1.1
            specification, when ifIndex '1' is included in the
            set, then this row applies to all CPE
            (customer-facing) interfaces.

            The size of this object is the minimum required to
            represent all configured interfaces for this device."

allowProvisioningUpgrade(2),
ignoreProvisioningUpgrade(3)
}
MAX-ACCESS read-write
STATUS current
DESCRIPTION
"If set to upgradeFromMgt(1), the device will initiate a
TFTP or HTTP software image download. After
successfully receiving an image, the device will set
its state to ignoreProvisioningUpgrade(3) and reboot.
If the download process is interrupted (e.g., by a reset
or power failure), the device will load the previous
image and, after re-initialization, continue to attempt
loading the image specified in docsDevSwFilename.

If set to allowProvisioningUpgrade(2), the device will
use the software version information supplied by the
provisioning server when next rebooting (this does not
cause a reboot).

When set to ignoreProvisioningUpgrade(3), the device
will disregard software image upgrade information
from the provisioning server.

Note that reading this object can return
upgradeFromMgt(1). This indicates that a software
download is currently in progress, and that the device
will reboot after successfully receiving an image."

DESCRIPTION
"If operational(1), the device has completed loading and
processing of configuration parameters, and the CMTS has
completed the Registration exchange.

If disabled(2), then the device was administratively
disabled, possibly by being refused network access
in
the configuration file.

If waitingForDhcpOffer(3), then a Dynamic Host
Configuration Protocol (DHCP) Discover has been
transmitted, and no offer has yet been received.

If waitingForDhcpResponse(4), then a DHCP Request has
been transmitted, and no response has yet been received.

If waitingForTimeServer(5), then a Time Request has been
transmitted, and no response has yet been received.

If waitingForTftp(6), then a request to the TFTP
parameter server has been made, and no response
received.

If refusedByCmts(7), then the Registration
Request/Response exchange with the CMTS failed.

If forwardingDenied(8), then the registration process
was completed, but the network access option in the
received configuration file prohibits forwarding.

If other(9), then the registration
process reached a
point that does not fall into one of the above
categories.

If unknown(10), then the device has not yet begun the
registration process or is in some other indeterminate
state."

        STATUS      current
```

```
    DESCRIPTION
       "The Internet address of the RFC 868 Time server,
        as provided by DHCP option 4.

        Note that if multiple values are provided to the
        CM in DHCP option 4, the value of this MIB object
        MUST be the Time server address from which the Time
        of Day reference was acquired as based on the DOCSIS
        RFI specification.
 During the period of time where
        the Time of Day have not been acquired, the Time
        server address reported by the CM may report the
        first address value in the DHCP option value or the
        last server address the CM attempted to get the Time
        of day value.

        Returns the zero-length octet string if the time server
        IP address is not provisioned."

       unconstrained(1),
       maintainBelowThreshold(2),
       stopAtThreshold(3),
       inhibited(4)
    }
```

MAX-ACCESS read-write
STATUS current
DESCRIPTION
"Controls the transmission of traps and syslog messages
with respect
to the trap pacing threshold.

unconstrained(1) causes traps and syslog messages to be
transmitted without regard to the threshold settings.

maintainBelowThreshold(2) causes trap transmission and
syslog messages to be suppressed if the number of traps
would otherwise exceed the threshold.

stopAtThreshold(3) causes trap transmission to cease at
the threshold and not to resume until directed to do so.

inhibited(4) causes all trap transmission and syslog
messages to be suppressed.

A single event is always treated as a single event for
threshold counting. That is, an event causing both a
trap and a syslog message is still treated as a single
event.

Writing to this object resets the thresholding state."

        DESCRIPTION
            "The priority level that is controlled by this
            entry.  These are ordered from most (emergency) to least
            (debug) critical.  Each event with a CM or CMTS has a
            particular priority level associated with it (as defined
            by the vendor).
```

```
            emergency(1) events indicate vendor-specific fatal
            hardware or software errors that prevent normal system
             operation.

            alert(2) events indicate a serious failure that causes
            the reporting system to reboot but is not caused by
            hardware or software malfunctioning.

            critical(3) events indicate a serious failure that
            requires attention and prevents the device from
            transmitting data but that could be recovered without
            rebooting the system.

            error(4) and warning(5) events indicate that a failure
            occurred that could interrupt the normal data flow but
            that does not cause the device to re-register.

            notice(6) and information(7) events indicate a
            milestone or checkpoint in normal operation that could
            be of particular importance for troubleshooting.

            debug(8) events are reserved for vendor-specific
            events.

            During normal operation, no event more
            critical than notice(6)
 should be generated.  Events
            between warning and emergency should be generated at
            appropriate levels of problems (e.g., emergency when the
            box is about to crash)."

            syslog(2),
            -- The following are extensions to the original set of
            -- labels.  The extensions start at an octet boundary.
            -- So for bits 3 - 7, one MUST set them to zero on send
            -- and one MUST ignore them on receipt.
            localVolatile(8),
            stdInterface(9)
        }
        MAX-ACCESS  read-write
```

```
        STATUS      current
        DESCRIPTION
            "Defines the action to be taken on occurrence of this
             event class.  Implementations may not necessarily
             support all options for all event classes but at
             minimum must allow traps and
    syslogging to be
             disabled.

             If the local(0) bit is set, then log to the internal
             log and update non-volatile store, for backward
             compatibility with the original RFC 2669 definition.
             If the traps(1) bit is set, then generate
             an SNMP trap; if the syslog(2) bit is set, then
             send a syslog message (assuming that the syslog address
             is set).  If the localVolatile(8) bit is set, then
             log to the internal log without updating non-volatile
             store.  If the stdInterface(9) bit is set, then the
             agent ignores all other bits except the local(0),
             syslog(2), and localVolatile(8) bits.  Setting the
             stdInterface(9) bit indicates that RFC3413 and
             RFC3014 are being used to control event reporting
             mechanisms."

       accept(2)
    }
    MAX-ACCESS
 read-write
    STATUS      current
    DESCRIPTION
       "LLC (Link Level Control) filters can be defined on an
        inclusive or exclusive basis: CMs can be configured to
        forward only packets matching a set of layer three
        protocols, or to drop packets matching a set of layer
        three protocols.  Typical use of these filters is to

        filter out possibly harmful (given the context of a
        large metropolitan LAN) protocols.

        If set to discard(1), any L2 packet that does not match
        at least one filter in the docsDevFilterLLCTable will be
        discarded.  If set to accept(2), any L2 packet that
        does not match at least one filter in the
        docsDevFilterLLCTable will be accepted for further
        processing (e.g., bridging).  In other words, if the
        packet does not match an entry in the table, it takes
        this action;
 if it does match an entry in the table, it
        takes the opposite of this action."

             match IP filters (or Internet filters, if implemented)
             is defined by docsDevFilterIpDefault.

             If set to discard(1), all packets not matching an IP
             filter in docsDevFilterIpTable will be discarded.  If
             set to accept(2), all packets not matching an IP filter
             or an Internet filter will be accepted for further
             processing (e.g., bridging)."
        DEFVAL { accept }
        ::= { docsDevFilter 3 }

    docsDevFilterIpTable OBJECT-TYPE
        SYNTAX      SEQUENCE OF DocsDevFilterIpEntry
        MAX-ACCESS
     not-accessible
        STATUS      deprecated
        DESCRIPTION
            "An ordered list of filters or classifiers to apply to
             IP traffic.  Filter application is ordered by the filter
             index, rather than by a best match algorithm (note that
             this implies that the filter table may have gaps in the
             index values).  Packets that match no filters will have
             policy 0 in the docsDevFilterPolicyTable applied to
             them, if it exists.  Otherwise, Packets that match no
             filters are discarded or forwarded according to the
             setting of docsDevFilterIpDefault.

             Any IP packet can theoretically match multiple rows of
             this table.  When considering a packet, the table is
             scanned in row index order (e.g., filter 10 is checked
             before filter 20).  If the packet matches that filter
             (which means that it matches ALL criteria for that
    row),
             actions appropriate to docsDevFilterIpControl and
             docsDevFilterPolicyId are taken.  If the packet was
             discarded processing is complete.  If
             docsDevFilterIpContinue is set to true, the filter
             comparison continues with the next row in the table,
             looking for additional matches.

             If the packet matches no filter in the table, the packet
             is accepted or dropped for further processing
             according to the setting of docsDevFilterIpDefault.
             If the packet is accepted, the actions specified by
```

policy group 0 (e.g., the rows in
docsDevFilterPolicyTable that have a value of 0 for
docsDevFilterPolicyId) are taken, if that policy

group exists.

Logically, this table is consulted twice during the
processing of any IP packet: once upon its acceptance
from the L2 entity, and once upon
its transmission to
the L2 entity. In actuality, for cable modems, IP
filtering is generally the only IP processing done for
transit traffic. This means that inbound and outbound
filtering can generally be done at the same time with
one pass through the filter table.

The objects in this table are only accessible from cable
devices that are not operating in DiffServ MIB mode
(RFC 3289). See the conformance section for details.

Note that some devices are required by other
specifications (e.g., the DOCSIS OSSIv1.1 specification)
to support the legacy SNMPv1/v2c docsDevFilter mode
for backward compatibility.

Table entries MUST NOT persist across reboots for any
device.

This table is deprecated. Instead, use the DiffServ MIB
from RFC 3289."

-- Policy Mapping Table
--

docsDevFilterPolicyTable OBJECT-TYPE
    SYNTAX      SEQUENCE OF DocsDevFilterPolicyEntry
    MAX-ACCESS  not-accessible
    STATUS      deprecated
    DESCRIPTION
        "A Table that maps between a policy group ID and a set
        of pointers to policies to be applied.  All rows with
        the same docsDevFilterPolicyId are part of the same
        group of policy pointers and are applied in the order
        in this table.  docsDevFilterPolicyTable exists to
        allow multiple policy actions (referenced by policy
        pointers) to be applied to any given classified packet.
        The policy actions are applied in index order.
        For example:

        Index   ID    Type    Action
         1      1     TOS     1
         9      5     TOS     1
         12     1     IPSEC   3

    This says that a packet that matches a filter with
        policy id 1 first has TOS policy 1 applied (which might
        set the TOS bits to enable a higher priority) and next
        has the IPSEC policy 3 applied (which may result in the
        packets being dumped into a secure VPN to a remote
        encryptor).

        Policy ID 0 is reserved for default actions and is
        applied only to packets that match no filters in
        docsDevFilterIpTable.

        Table entries MUST NOT persist across reboots for any
        device.

        This table is deprecated.  Instead, use the DiffServ MIB

        from RFC 3289."

            object can be set to active:  docsDevFilterPolicyPtr."
        ::= { docsDevFilterPolicyEntry 5 }

docsDevFilterPolicyPtr OBJECT-TYPE
        SYNTAX      RowPointer
        MAX-ACCESS  read-create
        STATUS      deprecated
        DESCRIPTION
           "This object points to a row in an applicable filter
            policy table.  Currently, the only standard policy
            table is docsDevFilterTosTable.

            Per the textual convention, this object points to the
            first accessible object in the row; e.g., to point to a
            row in docsDevFilterTosTable with an index of 21, the
            value of this object would be the object identifier
            docsDevTosStatus.21.

            Vendors are recommended to adhere to the same convention
            when adding vendor-specific policy table extensions.

            If this pointer references an empty or non-existent

           row, then no policy action is taken.

            The default upon row creation is a null pointer that
            results in no policy action being taken."
        DEFVAL { zeroDotZero }

--
-- TOS Policy action table
--

docsDevFilterTosTable OBJECT-TYPE
        SYNTAX      SEQUENCE OF DocsDevFilterTosEntry
        MAX-ACCESS  not-accessible
        STATUS      deprecated
        DESCRIPTION
```

```
        "Table used to describe Type of Service (TOS) bits

        processing.

        This table is an adjunct to the docsDevFilterIpTable
        and the docsDevFilterPolicy table.  Entries in the
        latter table can point to specific rows in this (and
        other) tables and cause specific actions to be taken.
        This table permits the manipulation of the value of the
        Type of Service bits in the IP header of the matched
        packet as follows:

        Set the tosBits
 of the packet to
          (tosBits & docsDevFilterTosAndMask) |
          docsDevFilterTosOrMask

        This construct allows you to do a clear and set of all
        the TOS bits in a flexible manner.

        Table entries MUST NOT persist across reboots for any
        device.

        This table is deprecated.  Instead, use the DiffServ MIB
        from RFC 3289."

  SYNTAX   Unsigned32 (1..4294967295)

IndexIntegerNextFree ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "d"
  STATUS   current
  DESCRIPTION
    "An integer which may be used as a new Index in a table.

    The special value of 0 indicates that no more new entries can be
    created in the relevant table.
```

```
      When a MIB is used for configuration, an object with this SYNTAX
      always contains a legal value (if non-zero) for an index that is
      not currently used in the relevant table. The Command Generator
      (Network Management Application) reads this variable and uses the
      (non-zero) value read when creating a new row with an SNMP SET.
      When the SET is performed, the Command Responder (agent) must
      determine whether the value is indeed
 still unused; Two Network
      Management Applications may attempt to create a row
      (configuration entry) simultaneously and use the same value. If
      it is currently unused, the SET succeeds and the Command
      Responder (agent) changes the value of this object, according to
      an implementation-specific algorithm.  If the value is in use,

      however, the SET fails.  The Network Management Application must
      then re-read this variable to obtain a new usable value.

      An OBJECT-TYPE definition using this SYNTAX MUST specify the
      relevant table for which the object is providing this
      functionality."
   SYNTAX   Unsigned32 (0..4294967295)

IfDirection ::= TEXTUAL-CONVENTION
   STATUS current
   DESCRIPTION
      "IfDirection specifies a direction of data travel on an
      interface. 'inbound' traffic is operated on during reception from
      the interface, while 'outbound' traffic is operated on prior to
      transmission on
 the interface."
   SYNTAX  INTEGER {

diffServDataPath       OBJECT IDENTIFIER ::= { diffServMIBObjects 1 }

--
-- Data Path Table
--
-- The Data Path Table enumerates the Differentiated Services
-- Functional Data Paths within this device.  Each entry in this table
```

```
-- is indexed by ifIndex and ifDirection.  Each entry provides the
-- first Differentiated Services Functional Data Path Element to
-- process data flowing along specific data path.  This table should
-- have at most two entries for each interface capable of
-- Differentiated Services processing on this device: ingress and
-- egress.

-- Note that Differentiated Services Functional Data Path Elements
-- linked together using their individual next pointers and anchored by
-- an entry of the diffServDataPathTable constitute a functional data
-- path.
--

diffServDataPathTable OBJECT-TYPE
  SYNTAX
    SEQUENCE OF DiffServDataPathEntry
  MAX-ACCESS   not-accessible
  STATUS       current

  DESCRIPTION
    "The data path table contains RowPointers indicating the start of
    the functional data path for each interface and traffic direction
    in this device. These may merge, or be separated into parallel
    data paths."
  ::= { diffServDataPath 1 }

diffServDataPathEntry OBJECT-TYPE
  SYNTAX       DiffServDataPathEntry
  MAX-ACCESS   not-accessible
  STATUS       current
  DESCRIPTION
    "An entry in the data path table indicates the start of a single
    Differentiated Services Functional Data Path in this device.

    These are associated with individual interfaces, logical or
    physical, and therefore are instantiated by ifIndex. Therefore,
    the interface index must have been assigned, according to the
    procedures applicable to that, before it can be meaningfully
    used. Generally, this means that the interface must
 exist.

    When diffServDataPathStorage is of type nonVolatile, however,
    this may reflect the configuration for an interface whose ifIndex
    has been assigned but for which the supporting implementation is
    not currently present."
  INDEX { ifIndex, diffServDataPathIfDirection }
```

        row may be modified at any time."
    ::= { diffServDataPathEntry 4 }

--
-- Classifiers
--

diffServClassifier     OBJECT IDENTIFIER ::= { diffServMIBObjects 2 }

--

-- Classifier Table
--
-- The Classifier Table allows multiple classifier elements, of same or
-- different types, to be used together. A classifier must completely
-- classify all packets presented to it. This means that all traffic
-- presented to a classifier must match at least one classifier element
-- within the classifier, with the classifier element parameters
--
 specified by a filter.

-- If there is ambiguity between classifier elements of different
-- classifier, classifier linkage order indicates their precedence; the
-- first classifier in the link is applied to the traffic first.

-- Entries in the classifier element table serves as the anchor for
-- each classification pattern, defined in filter table entries.  Each
-- classifier element table entry also specifies the subsequent
-- downstream Differentiated Services Functional Data Path Element when
-- the classification pattern is satisfied. Each entry in the
-- classifier element table describes one branch of the fan-out
```

```
-- characteristic of a classifier indicated in the Informal
-- Differentiated Services Model section 4.1.  A classifier is composed
-- of one or more classifier elements.

diffServClfrNextFree OBJECT-TYPE
  SYNTAX       IndexIntegerNextFree
  MAX-ACCESS   read-only
  STATUS       current
  DESCRIPTION
    "This object contains an unused value for diffServClfrId,
 or a
    zero to indicate that none exist."
  ::= { diffServClassifier 1 }

diffServClfrTable OBJECT-TYPE
  SYNTAX       SEQUENCE OF DiffServClfrEntry
  MAX-ACCESS   not-accessible
  STATUS       current
  DESCRIPTION
    "This table enumerates all the diffserv classifier functional
    data path elements of this device.  The actual classification
    definitions are defined in diffServClfrElementTable entries
    belonging to each classifier.

    An entry in this table, pointed to by a RowPointer specifying an
    instance of diffServClfrStatus, is frequently used as the name
    for a set of classifier elements, which all use the index
    diffServClfrId. Per the semantics of the classifier element
    table, these entries constitute one or more unordered sets of
    tests which may be simultaneously applied to a message to

    classify it.

    The primary function of this table is to ensure that the value of
    diffServClfrId
 is unique before attempting to use it in creating
    a diffServClfrElementEntry. Therefore, the diffServClfrEntry must
    be created on the same SET as the diffServClfrElementEntry, or
    before the diffServClfrElementEntry is created."

diffServClfrElementTable OBJECT-TYPE
  SYNTAX       SEQUENCE OF DiffServClfrElementEntry
  MAX-ACCESS   not-accessible
  STATUS       current
  DESCRIPTION
    "The classifier element table enumerates the relationship between
    classification patterns and subsequent downstream Differentiated
    Services Functional Data Path elements.
    diffServClfrElementSpecific points to a filter that specifies the
    classification parameters. A classifier may use filter tables of
    different types together.

    One example of a filter table defined in this MIB is
    diffServMultiFieldClfrTable, for
 IP Multi-Field Classifiers
    (MFCs). Such an entry might identify anything from a single
    micro-flow (an identifiable sub-session packet stream directed
    from one sending transport to the receiving transport or
    transports), or aggregates of those such as the traffic from a
    host, traffic for an application, or traffic between two hosts
    using an application and a given DSCP. The standard Behavior
    Aggregate used in the Differentiated Services Architecture is
    encoded as a degenerate case of such an aggregate - the traffic
    using a particular DSCP value.

    Filter tables for other filter types may be defined elsewhere."

    Managers obtain new values for row creation in this table by
    reading diffServClfrElementNextFree."
  ::= { diffServClfrElementEntry 1 }

diffServClfrElementPrecedence OBJECT-TYPE
  SYNTAX       Unsigned32  (1..4294967295)
  MAX-ACCESS   read-create
  STATUS       current
  DESCRIPTION
    "The relative order in which classifier elements are applied:
    higher numbers
 represent classifier element with higher
    precedence.  Classifier elements with the same order must be
    unambiguous i.e. they must define non-overlapping patterns, and
    are considered to be applied simultaneously to the traffic
    stream. Classifier elements with different order may overlap in
    their filters:  the classifier element with the highest order
    that matches is taken.

    On a given interface, there must be a complete classifier in
    place at all times in the ingress direction.  This means one or
    more filters must match any possible pattern. There is no such
```

requirement in the egress direction."
::= { diffServClfrElementEntry 2 }

diffServClfrElementNext OBJECT-TYPE
SYNTAX RowPointer
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"This attribute provides one branch of the fan-out functionality
of a classifier described in the Informal Differentiated Services

Model section 4.1.

This selects the next Differentiated Services Functional Data
Path Element to handle traffic for this data path. This
RowPointer should point to an instance of one of:
diffServClfrEntry
diffServMeterEntry
diffServActionEntry
diffServAlgDropEntry
diffServQEntry

A value of zeroDotZero in this attribute indicates no further
Differentiated Services treatment is performed on traffic of this
data path. The use of zeroDotZero is the normal usage for the
last functional data path element of the current data path.

Setting this to point to a target that does not exist results in
an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."

  ::= { diffServMultiFieldClfrEntry 15 }

--
-- Meters
--

diffServMeter         OBJECT IDENTIFIER ::= { diffServMIBObjects 3 }

--
-- This MIB supports a variety of Meters.  It includes a specific
-- definition for Token Bucket Meter, which are but one type of
```

```
-- specification. Other metering parameter sets can be defined in other
-- MIBs.

-- Multiple meter elements may be logically cascaded using their
-- diffServMeterSucceedNext and diffServMeterFailNext pointers if
-- required. One example of this might be for an AF PHB implementation
-- that uses multiple level conformance meters.

-- Cascading of individual meter elements in the MIB is intended to be
-- functionally equivalent to multiple level conformance determination
-- of a packet.
 The sequential nature of the representation is merely
-- a notational convenience for this MIB.

-- srTCM meters (RFC 2697) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Information Rate and Committed Burst Size
-- token-bucket.  The second set specifies the Excess Burst Size
-- token-bucket.

-- trTCM meters (RFC 2698) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Information Rate and Committed Burst Size
-- token-bucket.  The second set specifies the Peak Information Rate
-- and Peak Burst Size token-bucket.

-- tswTCM meters (RFC 2859) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Target Rate token-bucket.  The second set specifies

-- the Peak Target Rate token-bucket. diffServTBParamInterval in each
-- token bucket reflects the Average Interval.

    "The DSCP that this Action will store into
 the DSCP field of the
    subject. It is quite possible that the only packets subject to
    this Action are already marked with this DSCP. Note also that
    Differentiated Services processing may result in packet being
    marked on both ingress to a network and on egress from it, and
    that ingress and egress can occur in the same router."
  ::= { diffServDscpMarkActEntry 1 }

--
-- Count Action Table
--
-- Because the MIB structure allows multiple cascading
-- diffServActionEntry be used to describe multiple actions for a data
-- path, the counter became an optional action type.  In normal
-- implementation, either a data path has counters or it does not, as
-- opposed to being configurable. The management entity may choose to

-- read the counter or not.  Hence it is recommended for implementation
-- that have counters to always configure the count action as the first
-- of multiple actions.

                headDrop(3),
                randomDrop(4),
                alwaysDrop(5)
}
  MAX-ACCESS  read-create
  STATUS      current
  DESCRIPTION
    "The type of algorithm used by this dropper. The value other(1)
    requires further specification in some other MIB module.

    In the tailDrop(2) algorithm, diffServAlgDropQThreshold
    represents the maximum depth of the queue, pointed to by
    diffServAlgDropQMeasure, beyond which all newly arriving packets

 will be dropped.

    In the headDrop(3) algorithm, if a packet arrives when the
    current depth of the queue, pointed to by
    diffServAlgDropQMeasure, is at diffServAlgDropQThreshold, packets
    currently at the head of the queue are dropped to make room for
    the new packet to be enqueued at the tail of the queue.

    In the randomDrop(4) algorithm, on packet arrival, an Active
    Queue Management algorithm is executed which may randomly drop a
    packet. This algorithm may be proprietary, and it may drop either
```

the arriving packet or another packet in the queue.
diffServAlgDropSpecific points to a diffServRandomDropEntry that
describes the algorithm. For this algorithm,

diffServAlgDropQThreshold is understood to be the absolute
maximum size of the queue and additional parameters are described
in diffServRandomDropTable.

The alwaysDrop(5) algorithm is as its name specifies; always
drop. In
this case, the other configuration values in this Entry
are not meaningful; There is no useful 'next' processing step,
there is no queue, and parameters describing the queue are not
useful. Therefore, diffServAlgDropNext, diffServAlgDropMeasure,
and diffServAlgDropSpecific are all zeroDotZero."
::= { diffServAlgDropEntry 2 }

diffServAlgDropNext OBJECT-TYPE
SYNTAX RowPointer
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"This selects the next Differentiated Services Functional Data
Path Element to handle traffic for this data path. This
RowPointer should point to an instance of one of:
diffServClfrEntry
diffServMeterEntry
diffServActionEntry
diffServQEntry

A value of zeroDotZero in this attribute indicates no further
Differentiated Services treatment is performed on traffic of this
data path. The use of zeroDotZero is the normal usage for the
last functional data path element of the current data path.

When diffServAlgDropType is alwaysDrop(5), this object is
ignored.

Setting this to point to a target that does not exist results in
an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."
::= { diffServAlgDropEntry 3 }

diffServAlgDropQMeasure OBJECT-TYPE
SYNTAX RowPointer

```
    MAX-ACCESS   read-create
    STATUS       current
    DESCRIPTION
      "Points to an entry in the diffServQTable to indicate the queue
      that a drop algorithm is to monitor when deciding whether to drop
      a packet. If the row pointed to does not exist, the algorithmic
      dropper element is considered inactive.

      Setting this to point to a target that does not exist results in
      an inconsistentValue error.  If the row pointed to is removed or
      becomes
   inactive by other means, the treatment is as if this
      attribute contains a value of zeroDotZero."
    ::= { diffServAlgDropEntry 4 }

  diffServAlgDropQThreshold OBJECT-TYPE

    UNITS        "Bytes"
    MAX-ACCESS   read-create
    STATUS       current
    DESCRIPTION
      "A threshold on the depth in bytes of the queue being measured at
      which a trigger is generated to the dropping algorithm, unless
      diffServAlgDropType is alwaysDrop(5) where this object is
      ignored.

      For the tailDrop(2) or headDrop(3) algorithms, this represents
      the depth of the queue, pointed to by diffServAlgDropQMeasure, at
      which the drop action will take place. Other algorithms will need
      to define their own semantics for this threshold."
    ::= { diffServAlgDropEntry 5 }

  diffServAlgDropSpecific OBJECT-TYPE
    SYNTAX       RowPointer
    MAX-ACCESS   read-create
    STATUS       current
    DESCRIPTION

    "Points to a table entry that provides further detail regarding a
      drop algorithm.

      Entries with diffServAlgDropType equal to other(1) may have this
      point to a table defined in another MIB module.

      Entries with diffServAlgDropType equal to randomDrop(4) must have
      this point to an entry in diffServRandomDropTable.
```

For all other algorithms specified in this MIB, this should take
the value zeroDotZero.

The diffServAlgDropType is authoritative for the type of the drop
algorithm and the specific parameters for the drop algorithm
needs to be evaluated based on the diffServAlgDropType.

Setting this to point to a target that does not exist results in
an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."

   "The status of this conceptual row. All writable objects in this
      row may be modified at any time. Setting this variable to
      'destroy' when the MIB contains one or more RowPointers pointing
      to it results in destruction being delayed until the row is no
      longer used."
    ::= { diffServQEntry 6 }

--
-- Scheduler Table
--

diffServScheduler      OBJECT IDENTIFIER ::= { diffServMIBObjects 8 }

--
-- A Scheduler Entry represents a packet scheduler, such as a priority
-- scheduler or a WFQ scheduler. It provides flexibility for multiple
-- scheduling algorithms, each servicing multiple queues, to be used on
-- the same logical/physical interface.
--
-- Note that upstream queues or schedulers specify several of the
```

```
-- scheduler's parameters. These must be properly specified if the
-- scheduler is to behave as expected.
--
-- The diffServSchedulerMaxRate attribute specifies the parameters when
-- a scheduler's output is sent to another scheduler. This is used in
-- building
 hierarchical queues or schedulers.

--
-- More discussion of the scheduler functional data path element is in
-- the Informal Differentiated Services Model section 7.1.2.
--

  STATUS       current
  DESCRIPTION
    "This selects the next Differentiated Services Functional Data
    Path Element to handle traffic for this data path. This normally
    is null (zeroDotZero), or points to a diffServSchedulerEntry or a
    diffServQEntry.

    However, this RowPointer may also point to an instance of:
      diffServClfrEntry,
      diffServMeterEntry,
      diffServActionEntry,
      diffServAlgDropEntry.

    It would point another diffServSchedulerEntry when implementing
    multiple scheduler methods for the same data path, such as having
    one set of queues scheduled by WRR and that group participating
    in a priority scheduling system in which other queues compete
    with it in that way.  It might also point to a second scheduler
    in a hierarchical scheduling system.

    If the row pointed to is zeroDotZero, no further Differentiated
    Services
 treatment is performed on traffic of this data path.

    Setting this to point to a target that does not exist results in
```

an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."

    scheduler are used when determining the next packet to schedule."
  ::= { diffServSchedulers 3 }

--
-- Minimum Rate Parameters Table
--
-- The parameters used by a scheduler for its inputs or outputs are
-- maintained separately from the Queue or Scheduler table entries for
-- reusability reasons and so that they may be used by both queues and
```

```
-- schedulers.  This follows the approach for separation of data path
-- elements from parameterization that is used throughout this MIB.
-- Use of these Minimum Rate Parameter Table entries by Queues and
-- Schedulers allows the modeling of hierarchical scheduling systems.
--
-- Specifically, a Scheduler has one or more inputs and one output.
-- Any queue feeding a scheduler, or any scheduler which feeds a second
-- scheduler,
 might specify a minimum transfer rate by pointing to an
-- Minimum Rate Parameter Table entry.
--
-- The diffServMinRatePriority/Abs/Rel attributes are used as
-- parameters to the work-conserving portion of a scheduler:
-- "work-conserving" implies that the scheduler can continue to emit
-- data as long as there is data available at its input(s).  This has
-- the effect of guaranteeing a certain priority relative to other
-- scheduler inputs and/or a certain minimum proportion of the
-- available output bandwidth. Properly configured, this means a
-- certain minimum rate, which may be exceeded should traffic be
-- available should there be spare bandwidth after all other classes
-- have had opportunities to consume their own minimum rates.

  DESCRIPTION
    "When this MIB is implemented without support for read-create
    (i.e. in read-only mode), then such an implementation can claim
    read-only compliance. Such a device can then be monitored but can
    not be configured
 with this MIB."

mioxPleEnAddrToX121LkupFlrs OBJECT-TYPE
        SYNTAX  Counter
        ACCESS  read-only
```

```
        STATUS  mandatory
        DESCRIPTION
                "The number of times a translation from an
                Encapsulated Address to an X.121 address
                failed to find a corresponding X.121
                address.  Encapsulated addresses can be
                looked up in the mioxPeerTable or translated
                via an algorithm as for the DDN.  Addresses

                that are successfully recognized do not
                increment this counter.  Addresses that are
                not recognized (reflecting an abnormal
                packet delivery condition) increment this
                counter.

                If an address translation fails, it may be
                difficult to determine which PLE entry
                should count the failure.  In such cases the
                first likely entry in this table should be
                selected.  Agents should record the failure
                even if they are unsure which PLE should be
                associated with the failure."
        ::= { mioxPleEntry 3 }

    mioxPleLastFailedEnAddr OBJECT-TYPE

mioxPeerStatus OBJECT-TYPE
      SYNTAX  INTEGER {
                  valid (1),
                  createRequest (2),
                  underCreation (3),
                  invalid (4),
                  clearCall (5),
```

makeCall (6)
}
ACCESS read-write
STATUS mandatory
DESCRIPTION
"This reports the status of a peer entry.
A value of valid indicates a normal entry
that is in use by the agent. A value of

underCreation indicates a newly created
entry which isn't yet in use because the
creating management station is still setting
values.

The value of invalid indicates the entry is
no longer in use and the agent is free to
delete the entry at any time. A management
station is also free to use an entry in the
invalid state.

Entries are created by setting a value of
createRequest. Only non-existent or invalid
entries can be set to createRequest. Upon
receiving a valid createRequest, the agent
will create an entry in the underCreation
state. This object can not be set to a
value of underCreation directly, entries can
only be created by setting a value of
createRequest. Entries that exist in other

than the invalid state can not be set to
createRequest.

Entries with a value of underCreation are
not used by the system and the management
station can change the values of other
objects in the table entry. Management
stations should also remember to configure
values in the mioxPeerEncTable with the same
peer index value as this peer entry.

An entry in the underCreation state can be
set to valid or invalid. Entries in the
underCreation state will stay in that state
until 1) the agent times them out, 2) they
are set to valid, 3) they are set to
invalid. If an agent notices an entry has
been in the underCreation state for an

abnormally long time, it may decide the
management station has failed and invalidate

the entry. A prudent agent will understand
that the management station may need to wait
for human input and will allow for that
possibility in its determination of this
abnormally long period.

Once a management station has completed all
fields of an entry, it will set a value of
valid. This causes the entry to be
activated.

Entries in the valid state may also be set
to makeCall or clearCall to make or clear
X.25 calls to the peer. After such a set
request the entry will still be in the valid
state. Setting a value of makeCall causes
the agent to initiate an X.25 call request
to the peer specified by the entry. Setting
a value of clearCall causes the agent to
initiate clearing one X.25 call present
to

the peer. Each set request will initiate
another call or clear request (up to the
maximum allowed); this means that management
stations that fail to get a response to a
set request should query to see if a call
was in fact placed or cleared before
retrying the request. Entries not in the
valid state can not be set to makeCall or
clearCall.

The values of makeCall and clearCall provide
for circuit control on devices which perform
Ethernet Bridging using static circuit
assignment without address recognition;
other devices which dynamically place calls
based on destination addresses may reject
such requests.

An agent that (re)creates a new entry
because of a set with createRequest, should

also (re)create a mioxPeerEncTable entry
with a mioxPeerEncIndex of 1, and a
mioxPeerEncType of 204 (hex CC)."

-- ###########################################################

mioxPeerEncTable OBJECT-TYPE
        SYNTAX  SEQUENCE OF MioxPeerEncEntry
        ACCESS  not-accessible
        STATUS
  mandatory
        DESCRIPTION
            "This table contains the list of
            encapsulations used to communicate with a
            peer.  This table has two indexes, the first
            identifies the peer, the second
            distinguishes encapsulation types.

            The first index identifies the corresponding
            entry in the mioxPeerTable.  The second
```

index gives the priority of the different
encapsulations.

The encapsulation types are ordered in
priority order. For calling a peer, the
first entry (mioxPeerEncIndex of 1) is tried
first. If the call doesn't succeed because
the remote host clears the call due to
incompatible call user data, the next entry
in the list is tried. Each entry is tried
until the list is exhausted.

For answering a call, the
encapsulation type
requested by the peer must be found the list
or the call will be refused. If there are
no entries in this table for a peer, all
call requests from the peer will be refused.

Objects in this table can only be set when
the mioxPeerStatus object with the same
index has a value of underCreation. When
that status object is set to invalid and
deleted, the entry in this table with that
peer index must also be deleted."
::= { mioxPeer 2 }

mioxPeerEncEntry OBJECT-TYPE
SYNTAX MioxPeerEncEntry
ACCESS not-accessible
STATUS mandatory
DESCRIPTION
"Per connection information."
INDEX { mioxPeerIndex, mioxPeerEncIndex}
::= { mioxPeerEncTable 1 }

MioxPeerEncEntry ::= SEQUENCE {
mioxPeerEncIndex
PositiveInteger,
mioxPeerEncType
INTEGER
}

mioxPeerEncIndex OBJECT-TYPE
SYNTAX PositiveInteger
ACCESS read-only
STATUS mandatory
DESCRIPTION

```
            "The second index in the table which
            distinguishes different encapsulation
            types."
        ::= { mioxPeerEncEntry 1 }

    mioxPeerEncType OBJECT-TYPE
        SYNTAX  INTEGER (0..256)
        ACCESS  read-write
        STATUS  mandatory
        DESCRIPTION
            "The value of the encapsulation type.  For
            IP encapsulation this will have a value of
            204 (hex CC).  For SNAP encapsulated
            packets, this will have a value of 128 (hex
            80).  For CLNP, ISO 8473, this will have a
            value of 129 (hex 81).  For ES-ES, ISO 9542,
            this will have a value of 130 (hex 82).  A
            value of 197 (hex C5) identifies the Blacker
            X.25 encapsulation.  A value
     of 0,
            identifies the Null encapsulation.

            This value can only be written when the
            mioxPeerStatus object with the same
            mioxPeerIndex has a value of underCreation.
            Setting this object to a value of 256
            deletes the entry.  When deleting an entry,
            all other entries in the mioxPeerEncTable
            with the same mioxPeerIndex and with an
            mioxPeerEncIndex higher then the deleted
            entry, will all have their mioxPeerEncIndex
            values decremented by one."

-- ---------------------------------------------------------------
dlswNodeStdPacingSupport  OBJECT-TYPE
    SYNTAX     INTEGER  {
      none            (1),  -- does not support DLSw
                            -- Standard pacing scheme
      adaptiveRcvWindow (2),  -- the receive window size
                            -- varies
      fixedRcvWindow
     (3)   -- the receive window size
                            -- remains constant
    }
    MAX-ACCESS read-only
    STATUS     current
    DESCRIPTION
      "Circuit pacing, as defined in the DLSw Standard, allows each
       of the two DLSw nodes on a circuit to control the amount
       of data the other is permitted to send to them.  This object
       reflects the level of support the DLSw node has for this
       protocol.  (1) means the node has no support for the standard
       circuit pacing flows;  it may use RFC 1434+ methods only, or
       a proprietary flow control scheme.  (2) means the node supports
       the standard scheme and can vary the window sizes it grants as
       a data receiver.  (3) means the node supports the standard
       scheme but never varies its receive window size."
    ::= { dlswNode 4 }

dlswNodeStatus
   OBJECT-TYPE
    SYNTAX     INTEGER  {
       active       (1),
       inactive      (2)
    }
    MAX-ACCESS read-write
    STATUS     current
    DESCRIPTION
      "The status of the DLSw part of the system.  Changing the
       value from active to inactive causes DLSw to take
```

```
        the following actions - (1) it disconnects all circuits
        through all DLSw partners, (2) it disconnects all
        transport connections to all DLSw partners, (3) it
        disconnects all local DLC connections, and (4) it stops
        processing all DLC connection set-up traffic.
        Since these are destructive actions, the user should
        query the circuit and transport connection tables in
        advance to understand the effect this action will have.
        Changing the value from inactive to active causes DLSw
        to come up in its initial state, i.e., transport
        connections established and ready to bring up circuits."
    ::= { dlswNode 5 }

dlswNodeUpTime  OBJECT-TYPE
    SYNTAX     TimeTicks
    UNITS      "hundredths of a second"
    MAX-ACCESS read-only
    STATUS     current
    DESCRIPTION
        "The amount of time (in hundredths of a second) since
        the DLSw portion of the system was last re-initialized.
        That is, if dlswState is in the active state,
        the time the dlswState entered the active state.
        It will remain zero if dlswState is in the
        inactive state."
    ::= { dlswNode 6 }

dlswNodeVirtualSegmentLFSize  OBJECT-TYPE
    SYNTAX     LFSize
    MAX-ACCESS read-write
    STATUS     current
    DESCRIPTION
        "The largest frame size (including DLC header and info field
        but not any MAC-level or framing octets) this DLSw can forward
        on any path through itself.  This object can represent any box-
        level frame size forwarding restriction (e.g., from the use
        of fixed-size buffers).  Some DLSw implementations will have
         no such restriction.

        This value will affect the LF size of circuits during circuit
        creation.  The LF size of an existing circuit can be found in
        the RIF (Routing Information Field)."

    STATUS     current
    DESCRIPTION
      "This value of the instance of a conceptual row
      identifies the behavior of the collection of
```

transport
connections that this conceptual row
defines. The value of activePersistent, activeOnDemand
and passive means this DLSw will accept any transport
connections, initiated by partner DLSw nodes, which
are defined by this conceptual row. The value of
activePersistent means this DLSw will also initiate
the transport connections of this conceptual row and
retry periodically if necessary. The value of
activeOnDemand means this DLSw will initiate a
transport connection of this conceptual row, if
there is a directory cache hits. The value of
other is implementation specific. The value of exclude
means that the specified node is not allowed to be
a partner to this DLSw node. To take a certain
conceptual row definition out of service, a value of
notInService for dlswTConnConfigRowStatus should be
used."
DEFVAL { passive }

dlswTConnConfigSapList OBJECT-TYPE
SYNTAX OCTET STRING (SIZE(16))
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"The SAP list indicates which SAPs are advertised to
the transport connection defined by this conceptual
row. Only SAPs with even numbers are represented,
in the form of the most significant bit of the first
octet representing the SAP 0, the next most significant
bit representing the SAP 2, to the least significant
bit of the last octet representing the SAP 254. Data
link switching is allowed for those SAPs which have
one in its corresponding bit, not allowed otherwise.
The whole SAP list has to be changed together. Changing
the SAP list affects only new circuit establishments
and has no effect on established circuits.

This list can be used to restrict specific partners
from knowing about all the SAPs used by DLSw on all its

interfaces (these are represented in dlswIfSapList for
each interface). For instance, one may want to run NetBIOS
with some partners but not others.

If a node supports sending run-time capabilities exchange

```
      messages, changes to this object should cause that action.
      When to start the run-time capabilities exchange is
      implementation-specific.
      The DEFVAL below indicates support for SAPs 0, 4, 8, and C."

      quiescing         (4),
      disconnecting      (5),
      disconnected       (6)
  }
  MAX-ACCESS read-write
  STATUS     current
  DESCRIPTION
     "The state of this transport connection.  The transport
      connection enters `connecting' state when DLSw makes
      a connection request to the transport layer.  Once initial
      Capabilities Exchange is sent, the transport connection
      enters enters `initCapExchange' state.  When partner
      capabilities have been determined and the transport
      connection is ready for sending CanUReach (CUR) messages,
      it moves
 to the `connected' state.  When DLSw is in the
      process of bringing down the connection, it is in the
      `disconnecting' state.  When the transport layer
      indicates one of its connections is disconnected, the
      transport connection moves to the `disconnected' state.

      Whereas all of the values will be returned in response
      to a management protocol retrieval operation, only two
      values may be specified in a management protocol set
      operation: `quiescing' and `disconnecting'.  Changing
```

```
      the value to `quiescing' prevents new circuits from being
      established, and will cause a transport disconnect when
      the last circuit on the connection goes away.  Changing
      the value to `disconnecting' will force off all circuits
      immediately and bring the connection to `disconnected'
      state."

-- from LLC-2 Link Station Table.
-- ----------------------------------------------------------------
dlswCircuitTable  OBJECT-TYPE
   SYNTAX     SEQUENCE OF DlswCircuitEntry
   MAX-ACCESS not-accessible
   STATUS
```

```
    current
  DESCRIPTION
    "This table is the circuit representation in the DLSw
     entity. Virtual data links are used to represent any internal
     end stations.  There is a conceptual row associated with
     each data link.  Thus, for circuits without an intervening
     transport connection, there are two conceptual rows
     for each circuit.

     The table consists of the circuits being established,
     established, and as an implementation option, circuits that
     have been disconnected.  For circuits carried over
     transport connections, an entry is created after
     the CUR_cs was sent or received.  For circuits between
     two locally attached devices, or internal virtual MAC
     addresses, an entry is created when the equivalent of
     CUR_cs sent/received status is reached.

     End station 1 (S1) and End station 2 (S2) are used to
     represent the two end stations of the circuit.
     S1 is always
an end station which is locally attached.
     S2 may be locally attached or remote.  If it is locally
     attached, the circuit will be represented by two rows indexed
     by (A, B) and (B, A) where A & B are the relevant MACs/SAPs.

     The table may be used to store the causes of disconnection of
     circuits.  It is recommended that the oldest disconnected
     circuit entry be removed from this table when the memory
     space of disconnected circuits is needed."

  MAX-ACCESS read-write
  STATUS     current
  DESCRIPTION
     "The current state of this circuit.  The agent, implementation
      specific, may choose to keep entries for some period of time
      after circuit disconnect, so the manager can gather the time
      and cause of disconnection.

       While all of the specified values may be returned from a GET
      operation, the only SETable value is `disconnectPending'.
      When this value is set, DLSw should perform the appropriate
      action given its previous state (e.g., send HALT_DL if the
      state was `connected') to bring the circuit down to the
      `disconnected' state.  Both the partner DLSw and local end
```

```
      station(s) should be notified as appropriate.

      This MIB provides no facility to re-establish a disconnected
      circuit, because in DLSw this should be an end station-driven
      function."

DESCRIPTION
"Session Initiation Protocol (SIP) Common MIB module. This
module defines objects that may be common to all SIP entities.

SIP is an application-layer signaling protocol for creating,
modifying and terminating multimedia sessions with one or more
participants. These sessions include Internet multimedia
conferences and Internet telephone calls. SIP is defined in
RFC 3261 (June 2002).

This MIB is defined for managing objects that are common to
SIP User Agents (UAs), Proxy, Redirect, and Registrar servers.
Objects specific to each of these entities MAY be managed using
entity specific MIBs defined in other modules.

Copyright (C) The IETF Trust (2007). This version of
this MIB module is part of RFC 4780; see the RFC itself for
full legal notices."

              }
  MAX-ACCESS  read-only
  STATUS      current
  DESCRIPTION
    "This object contains the current operational state of
     the SIP application.

     unknown    : The operational status cannot be determined
                  for some reason.
     up         : The application is operating normally and is
                  processing (receiving and possibly issuing) SIP
                  requests and responses.
     down       : The application is currently unable to process
                  SIP messages.
     congested  : The application is operational but no additional

                  inbound transactions can be accommodated at the
                   moment.
     restarting : The application is currently unavailable, but it
                  is in the process of restarting and will
                  presumably, soon be able to process SIP messages.
     quiescing  : The application is currently operational
                  but has been administratively put into
                  quiescence mode.  Additional inbound
                  transactions MAY be rejected.
     testing    : The application is currently in test mode
                  and MAY not be able to process SIP messages.

     The operational status values defined for this object are not
     based on any specific information contained in the SIP
     standard."

-- Support for SIP option tags (SIP extensions).
-- SIP extensions MAY be supported or required by SIP entities.
--

sipCommonOptionTagTable OBJECT-TYPE
   SYNTAX      SEQUENCE OF SipCommonOptionTagEntry
   MAX-ACCESS  not-accessible
   STATUS      current
   DESCRIPTION
     "This table contains a list of the SIP option tags (SIP
      extensions) that are either required, supported, or
      unsupported by the SIP entity.  These option tags are
       used in the Require, Proxy-Require, Supported, and
      Unsupported header fields.

      Example: If a user agent client supports, and requires the
      server to support, reliability of provisional responses
      (RFC 3262), this table contains a row with the option tag string
      '100rel' in sipCommonOptionTag and the OCTET STRING value of
      '1010 0000' or '0xA0' in sipCommonOptionTagHeaderField.

      If a server does not support the required feature (indicated in
      a Require header to a UAS, or in a Proxy-Require to a Proxy
      Server), the server returns a 420 Bad Extension listing the
      feature in an Unsupported header.

      Normally, the list of such features supported by an entity is
      static (i.e., will not change over time)."

re-initialization of the SIP entity or service. A Management
Station can detect discontinuities in this counter by
monitoring the sipCommonSummaryDisconTime object in the same
row."
::= { sipCommonSummaryStatsEntry 4 }

sipCommonSummaryTotalTransactions OBJECT-TYPE
SYNTAX Counter32
MAX-ACCESS read-only
STATUS current
DESCRIPTION
"This object contains a count of the number of transactions that
are in progress and transactions that have reached the
'Terminated' state. It is not applicable to stateless SIP Proxy
Servers.

A SIP transaction occurs between a client and a server, and
comprises all messages from the first request sent from the
client to the server, up to a final (non-1xx) response sent
from the server to the client.

If the request is INVITE and the final response is a non-2xx,
the transaction also include an ACK to the response. The ACK
for a 2xx response to an INVITE request is a separate
transaction.

The branch ID parameter in the Via header field values serves
as a transaction identifier.

A transaction is identified by the CSeq sequence number within
a single call leg. The ACK request has the same CSeq number as
the corresponding INVITE request, but comprises a transaction
of its own.

In the case of a forked request, each branch counts as a single
transaction.

For a transaction stateless Proxy Server, this counter is
always 0.

Discontinuities in the value of this counter can occur at
re-initialization of the SIP entity or service. A Management

```
    Station can detect discontinuities in this counter by
        monitoring the sipCommonSummaryDisconTime object in the same
        row."

  }

sipCommonStatusCodeNotifSend OBJECT-TYPE
  SYNTAX      TruthValue
  MAX-ACCESS  read-write
  STATUS      current
  DESCRIPTION
    "This object controls whether a sipCommonStatusCodeNotif is
     emitted when the status code value specified by
     sipCommonStatusCodeValue is sent or received.  If the value of
     this object is 'true', then a notification
```

```
 is sent.  If it is
      'false', no notification is sent.
      Note well that a notification MAY be emitted for every message
      sent or received that contains the particular status code.
      Depending on the status code involved, this can cause a
      significant number of notification emissions that could be
      detrimental to network performance.  Managers are forewarned to
      be prudent in the use of this object to enable notifications.
      Look to sipCommonStatusCodeNotifEmitMode for alternative
      controls for sipCommonStatusCodeNotif emissions."
   DEFVAL { false }
   ::= { sipCommonStatusCodeNotifEntry 1 }

sipCommonStatusCodeNotifEmitMode OBJECT-TYPE
   SYNTAX      INTEGER {
                 normal(1),
                 oneShot(2),
                 triggered(3)  -- read-only
               }
   MAX-ACCESS  read-write
   STATUS      current
   DESCRIPTION

      "The object sipCommonStatusCodeNotifSend MUST be set to 'true'
       for the values of this object to have any effect.  It is
      RECOMMENDED that the desired emit mode be established by this
      object prior to setting sipCommonStatusCodeNotifSend to 'true'.
      This object and the sipCommonStatusCodeNotifSend object can
      obviously be set independently, but their respective values
      will have a dependency on each other and the resulting
      notifications.

      This object specifies the mode for emissions of
      sipCommonStatusCodeNotif notifications.

      normal    : sipCommonStatusCodeNotif notifications will be
                  emitted by the system for each SIP response
                  message sent or received that contains the
                  desired status code.

      oneShot   : Only one sipCommonStatusCodeNotif notification
                  will be emitted.  It will be the next SIP response
                  message sent or received that contains the
                  desired
 status code.
```

No more notifications are emitted until this
object is set to 'oneShot' again or set to
'normal'. This option is provided as a means of
quelling the potential promiscuous behavior that
can be associated with the
sipCommonStatusCodeNotif.

triggered : This value is only readable and cannot be set. It
reflects that the 'oneShot' case has occurred,
and indicates that the mode needs to be reset to
get further notifications. The mode is reset by
setting this object to 'oneShot' or 'normal'."

DESCRIPTION
"The MIB module for managing remote monitoring
device implementations. This MIB module
extends the architecture introduced in the original
RMON MIB as specified in RFC 2819.

Copyright (C) The Internet Society (2006). This version of
this MIB module is part of RFC 4502; see the RFC itself for
full legal notices."

REVISION "200605020000Z" -- May 2, 2006
DESCRIPTION
"This version updates the proposed-standard version of the
RMON2 MIB (published
as RFC 2021) by adding 2 new
enumerations to the nlMatrixTopNControlRateBase object and
4 new enumerations to the alMatrixTopNControlRateBase object.
These new enumerations support the creation of high-capacity
topN reports in the High Capacity RMON MIB [RFC3273].

Additionally, the following objects have been deprecated, as
they have not had enough independent implementations to
demonstrate interoperability to meet the requirements of a
Draft Standard:

probeDownloadFile
probeDownloadTFTPServer
probeDownloadAction
probeDownloadStatus

serialMode
serialProtocol
serialTimeout
serialModemInitString
serialModemHangUpString
serialModemConnectResp
serialModemNoConnectResp
serialDialoutTimeout
serialStatus
serialConnectDestIpAddress
serialConnectType
serialConnectDialString
serialConnectSwitchConnectSeq
serialConnectSwitchDisconnectSeq
serialConnectSwitchResetSeq
serialConnectOwner

serialConnectStatus
netConfigIPAddress
netConfigSubnetMask
netConfigStatus
netDefaultGateway
tokenRingMLStats2DroppedFrames
tokenRingMLStats2CreateTime
tokenRingPStats2DroppedFrames
tokenRingPStats2CreateTime
ringStationControl2DroppedFrames
ringStationControl2CreateTime
sourceRoutingStats2DroppedFrames
sourceRoutingStats2CreateTime
trapDestIndex
trapDestCommunity
trapDestProtocol
trapDestAddress
trapDestOwner
trapDestStatus

In addition, two corrections were made. The LastCreateTime Textual Convention had been defined with a base type of another textual convention, which isn't allowed in SMIv2. The definition has been modified to use TimeTicks as the base type.

Further,
the SerialConfigEntry SEQUENCE definition included sub-typing information that is not allowed in SMIv2. This information has been deleted. Ranges were added to a number of objects and textual-conventions to constrain their maximum (and sometimes minimum) sizes. The addition of these ranges documents existing practice for these objects. These objects

are:
ControlString
protocolDirID
protocolDirParameters
addressMapNetworkAddress
nlHostAddress
nlMatrixSDSourceAddress
nlMatrixSDDestAddress
nlMatrixDSSourceAddress
nlMatrixDSDestAddress
nlMatrixTopNSourceAddress
nlMatrixTopNDestAddress

```
            alHostEntry
            alMatrixSDEntry
            alMatrixDSEntry
            alMatrixTopNSourceAddress
            alMatrixTopNDestAddress

        Finally, the TimeFilter TC has been updated to encourage agent
         implementations that allow a MIB walk to behave well even when
        performed by an application that is not aware of the special
        TimeFilter semantics."

    REVISION "200207080000Z"        -- 08 July, 2002
    DESCRIPTION
        "Added new enumerations to support the High-Capacity RMON
        MIB as defined in RFC 3273.  Also fixed some typos and
        added clarifications."

    REVISION "199605270000Z"    -- 27 May, 1996

-- Textual Conventions

ZeroBasedCounter32 ::= TEXTUAL-CONVENTION
    STATUS current
    DESCRIPTION
        "This TC describes an object that counts events with the
        following semantics: objects of this type will be set to
        zero(0) on creation and will thereafter count appropriate
```

events, wrapping back to zero(0) when the value 2^32 is
reached.

Provided that an application discovers the new object within
the minimum time to wrap, it can use the initial value as a
delta since it last polled the table of which this object is
part. It is important for a management station to be aware of
this minimum time and the actual time between polls, and to
discard data if the actual time is too long or there is no
defined minimum time.

Typically, this TC is used in tables where the INDEX space is
constantly changing and/or the TimeFilter mechanism is in use."
SYNTAX Gauge32

LastCreateTime ::= TEXTUAL-CONVENTION
STATUS current
DESCRIPTION
"This TC describes an object that stores the value of the
sysUpTime object at the last time its entry was created.

This can be used for polling applications to determine that an
entry has been deleted and re-created between polls, causing
an otherwise undetectable discontinuity in the data.

If sysUpTime is reset to zero as a result of a re-
initialization of the network management (sub)system, then
the values of all LastCreateTime objects are also reset.
However, after approximately 497 days without a re-
initialization, the sysUpTime object will reach 2^^32-1 and
then increment to zero; in this case, existing values
of TimeStamp objects do not change.
This can lead to
ambiguities in the value of TimeStamp objects."
SYNTAX TimeTicks

TimeFilter ::= TEXTUAL-CONVENTION
STATUS current
DESCRIPTION
"To be used for the index to a table. Allows an application
to download only those rows changed since a particular time.

Note that this is not a history mechanism. Only current values
of underlying objects are returned; saved instance values
associated with particular values of sysUpTime are not.

An entry is considered changed if the value of any object in the
entry changes, if the row is created, or if any object in the
entry is created or deleted. Note that deleted entries cannot
be detected or downloaded.

A time-filtered conceptual table is created by inserting a
single object of SYNTAX TimeFilter as the first INDEX component
in a copy of an existing basic conceptual table (i.e., any
SEQUENCE without a TimeFilter INDEX component). Thus,
for
each conceptual entry 'I' in the basic table, there exists N
conceptual entries in the time-filtered version, indexed N.I,
where 'N' is equal to the value of sysUpTime.

When an application retrieves conceptual instances from a
time-filtered table, and an INDEX value is provided for the
TimeFilter INDEX component 'N', the agent will only consider
returning basic conceptual entries (e.g., 'fooColumn.N.I') if
any column within the basic conceptual entry has changed since
sysUpTime 'N'. If not, the basic conceptual entry will
be ignored for the particular retrieval operation.

When sysUpTime is equal to zero, this table shall be empty.

One conceptual entry exists for each past value of sysUpTime,
except that the whole table is purged should sysUpTime wrap.

As an entry in a time-filtered table is updated (i.e., one of
the columns in the basic conceptual table is changed), new
conceptual
entries are also created in the time-filtered version
(which still shares the now updated object values with all other
instances). The number of unique time-filtered instances that
are created is determined by the value of sysUpTime at which the
basic entry was last updated. One unique instance will exist
for each value of sysUpTime at the last update time for the row.
However, a new TimeFilter index instance is created for each new
sysUpTime value. The TimeFilter index values not associated
with entry updates are called duplicate time-filtered instances.

After some deployment experience, it has been determined that
a time-filtered table is more efficient if the agent
stops a MIB walk operation by skipping over rows with a
TimeFilter index value higher than the value in the received
GetNext/GetBulk request. That is, instead of incrementing a
TimeFilter index value, the agent will continue to the
next

object or table. As a consequence, GetNext or GetBulk operations will provide only one pass through a time-filtered table.

It is suggested that an agent implement a time-filtered table in this manner to improve performance and avoid a MIB walk getting stuck in time-filtered tables. It is, however, still acceptable for an agent to implement a time-filtered table in the traditional manner (i.e., every conceptual time-filtered instance is returned in GetNext and GetBulk PDU responses), and management applications must be able to deal with such traditional implementations.

See the appendix for further discussion of this textual convention.

The following example is provided to demonstrate TimeFilter behavior:

Consider the following basic conceptual table, basicFooTable. (Note that the basic version of a time-filtered table may not actually be defined.)

```
   basicFooTable:

    basicFooTable ...
   INDEX { fooIndex }

   BasicFooEntry {
     fooIndex     Integer32,
     fooCounts    Counter32
   }
```

For this example, the basicFooTable contains two static conceptual entries (fooIndex equals '1' and '2'), created at time zero. It also contains one dynamic conceptual entry (fooIndex equals '3'), which is created at time '3' and deleted at time '7'.

The time-filtered version of the basicFooTable could be defined as follows:

```
   FooTable:

   fooTable ...
   INDEX { fooTimeMark, fooIndex }
```

```
    FooEntry {

      fooTimeMark  TimeFilter,
      fooIndex     Integer32,
      fooCounts    Counter32
    }
```

Note that entries exist in the time-filtered conceptual table only if they actually exist in the underlying (basic) table.

For this example, the fooTable will have three underlying basic entries (fooIndex == 1, 2, and 3), with the following activity (for sysUpTime equal 0 to 9):

- fooEntry.N.1 is created at time '0' and most recently updated at time '6' to the value '5'.
- fooEntry.N.2 is created at time '0' and most recently updated at time '8' to the value '9'.
- fooEntry.N.3 is created at time '3', updated at time '5' to the value '17', and deleted at time '7'.

The following tables show the values that would be returned for MIB walk operations with various TimeFilter values, done at different times. An application issues a retrieval request at time 'T', with a TimeFilter value, 'N' (typically set to a lower value, such as the value of sysUpTime at the last polling cycle).

The following values would be returned in a MIB walk of fooCounts.N if T equals '0' and N equals '0':

fooCounts.N.I	Value
fooCounts.0.1	0
fooCounts.0.2	0

Note that nothing is returned for fooCounts.0.3, since that entry does not exist at sysUpTime equals '0'.

The following values would be returned in a full (traditional) MIB walk of fooCounts.N if T equals '3' and N equals '0':

fooCounts.N.I	Value

```
======================
fooCounts.0.1    0
fooCounts.0.2    0
fooCounts.0.3    0
fooCounts.1.3    0
fooCounts.2.3    0
fooCounts.3.3    0
```

Note that there are no instances for T equals 1 or 2 for the first two values of N, as these entries did not change since they were created at time '0'.

Note that the current value for 'fooCounts.N.3' is returned here, even for values of N less than '3' (when the entry was created). The agent only considers the current existence of an entry in the TimeFilter algorithm, not the time when the entry

was created.

Note that the instances 'fooCounts.0.3', 'fooCounts.1.3', and 'fooCounts.2.3' are duplicates and can be suppressed by the agent in a MIB walk.

The following values would be returned in a full (traditional) MIB walk of fooCounts.N if T equals '6' and N equals '3':

```
fooCounts.N.I    Value
======================
fooCounts.3.1    5
fooCounts.3.3    17
fooCounts.4.1    5
fooCounts.4.3    17
fooCounts.5.1    5
fooCounts.5.3    17
fooCounts.6.1    5
```

Note that no instances for entry 'fooCounts.N.2' are returned, since it has not changed since time '3'.

Note that all instances except 'fooCounts.5.3' and 'fooCounts.6.1' are duplicates and can be suppressed by the agent in a MIB walk.

The following values would be returned in a full (traditional) MIB walk of fooCounts.N if T equals '9' and N equals

'6':

fooCounts.N.I Value
==========
fooCounts.6.1 5
fooCounts.6.2 9
fooCounts.7.2 9
fooCounts.8.2 9

Note that no instances for entry 'fooCounts.N.3' are returned,
since it was deleted at time '7'.

Note that instances 'fooCounts.6.2' and 'fooCounts.7.2'

are duplicates and can be suppressed by the agent in a MIB
walk."

}

protocolDirID OBJECT-TYPE
  SYNTAX     OCTET STRING  (SIZE (4..128))
  MAX-ACCESS  not-accessible
  STATUS     current
  DESCRIPTION
      "A unique identifier for a particular protocol.  Standard
      identifiers will be defined in such a manner that they

      can often be used as specifications for new protocols - i.e.,
      a tree-structured assignment mechanism that matches the
      protocol encapsulation 'tree' and that has algorithmic
      assignment mechanisms for certain subtrees.  See RFC 2074 for
      more details.

      Despite the algorithmic mechanism, the probe will only place
      entries in here for those protocols it chooses to collect.  In
      other words, it need not populate this table with all
      possible ethernet protocol types, nor need it create them on
      the fly when it sees them.  Whether it does these
      things is a matter of product definition (cost/benefit,
      usability) and is up to the designer of the product.

      If an entry is written to this table with a protocolDirID that
      the agent doesn't understand, either
 directly or
      algorithmically, the SET request will be rejected with an
      inconsistentName or badValue (for SNMPv1) error."

  STATUS      current
  DESCRIPTION
     "A textual description of the protocol encapsulation.
     A probe may choose to describe only a subset of the
     entire encapsulation (e.g., only the highest layer).

     This object is intended for human consumption only.

     This object may not be modified if the associated
     protocolDirStatus object is equal to active(1)."
  ::= { protocolDirEntry 4 }

protocolDirType OBJECT-TYPE
  SYNTAX      BITS {
                 extensible(0),
                 addressRecognitionCapable(1)
              }
  MAX-ACCESS  read-only
  STATUS      current
  DESCRIPTION
     "This object describes 2 attributes of this protocol
      directory entry.

 The presence or absence of the 'extensible' bit describes
       whether this protocol directory entry can be extended
       by the user by creating protocol directory entries that are
       children of this protocol.

       An example of an entry that will often allow extensibility is

       'ip.udp'.  The probe may automatically populate some children
       of this node, such as 'ip.udp.snmp' and 'ip.udp.dns'.
       A probe administrator or user may also populate additional
       children via remote SNMP requests that create entries in this
       table.  When a child node is added for a protocol for which the
       probe has no built-in support extending a parent node (for
       which the probe does have built-in support),
       that child node is not extendable.  This is termed 'limited
       extensibility'.

       When a child node is added through this extensibility
       mechanism, the values of protocolDirLocalIndex and
       protocolDirType
```

shall be assigned by the agent.

The other objects in the entry will be assigned by the manager who is creating the new entry.

This object also describes whether this agent can recognize addresses for this protocol, should it be a network-level protocol. That is, while a probe may be able to recognize packets of a particular network-layer protocol and count them, it takes additional logic to be able to recognize the addresses in this protocol and to populate network-layer or application-layer tables with the addresses in this protocol. If this bit is set, the agent will recognize network-layer addresses for this protocol and populate the network- and application-layer host and matrix tables with these protocols.

Note that when an entry is created, the agent will supply values for the bits that match the capabilities of the agent

with respect to this protocol. Note that since row creations usually exercise the limited extensibility feature, these bits will usually be set to zero."
::= { protocolDirEntry 5 }

protocolDirAddressMapConfig OBJECT-TYPE
SYNTAX INTEGER {
notSupported(1),
supportedOff(2),
supportedOn(3)
}
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"This object describes and configures the probe's support for address mapping for this protocol. When the probe creates entries in this table for all protocols that it understands,

it will set the entry to notSupported(1) if it doesn't have the capability to perform address mapping for the protocol or if this protocol is not a network-layer protocol. When an entry is created in this table by a management operation as part of the limited extensibility feature,
the probe must set
this value to notSupported(1), because limited extensibility of the protocolDirTable does not extend to interpreting

addresses of the extended protocols.

If the value of this object is notSupported(1), the probe
will not perform address mapping for this protocol and
shall not allow this object to be changed to any other value.
If the value of this object is supportedOn(3), the probe
supports address mapping for this protocol and is configured
to perform address mapping for this protocol for all
addressMappingControlEntries and all interfaces.
If the value of this object is supportedOff(2), the probe
supports address mapping for this protocol but is configured
to not perform address mapping for this protocol for any
addressMappingControlEntries and all interfaces.
Whenever this value changes from supportedOn(3) to
supportedOff(2), the probe
shall delete all related entries in
the addressMappingTable."
::= { protocolDirEntry 6 }

protocolDirHostConfig OBJECT-TYPE
SYNTAX INTEGER {
notSupported(1),
supportedOff(2),
supportedOn(3)
}
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"This object describes and configures the probe's support for
the network-layer and application-layer host tables for this
protocol. When the probe creates entries in this table for
all protocols that it understands, it will set the entry to
notSupported(1) if it doesn't have the capability to track the
nlHostTable for this protocol or if the alHostTable is
implemented but doesn't have the capability to track this
protocol. Note that if the alHostTable is implemented, the
probe may only support a protocol if it is supported in both
the nlHostTable and the
alHostTable.

If the associated protocolDirType object has the
addressRecognitionCapable bit set, then this is a network-
layer protocol for which the probe recognizes addresses, and

thus the probe will populate the nlHostTable and alHostTable
with addresses it discovers for this protocol.

```
      If the value of this object is notSupported(1), the probe
      will not track the nlHostTable or alHostTable for this
      protocol and shall not allow this object to be changed to any
      other value.  If the value of this object is supportedOn(3),
      the probe supports tracking of the nlHostTable and alHostTable
      for this protocol and is configured to track both tables
      for this protocol for all control entries and all interfaces.
      If the value of this object is supportedOff(2), the probe
      supports tracking of the nlHostTable and alHostTable for this
      protocol but is configured to not track these
 tables
      for any control entries or interfaces.
      Whenever this value changes from supportedOn(3) to
      supportedOff(2), the probe shall delete all related entries in
      the nlHostTable and alHostTable.

      Note that since each alHostEntry references 2 protocol
      directory entries, one for the network address and one for the
      type of the highest protocol recognized, an entry will
      only be created in that table if this value is supportedOn(3)
      for both protocols."
   ::= { protocolDirEntry 7 }

protocolDirMatrixConfig OBJECT-TYPE
   SYNTAX      INTEGER {

               }
   MAX-ACCESS  read-create
   STATUS      current
   DESCRIPTION
      "This object describes and configures the probe's support for
      the network-layer and application-layer matrix tables for this
      protocol.  When the probe creates entries
 in this table for
      all protocols that it understands, it will set the entry to
      notSupported(1) if it doesn't have the capability to track the
      nlMatrixTables for this protocol or if the alMatrixTables are
      implemented but don't have the capability to track this
      protocol.  Note that if the alMatrix tables are implemented,
      the probe may only support a protocol if it is supported in
      both of the nlMatrixTables and both of the
      alMatrixTables.

      If the associated protocolDirType object has the
      addressRecognitionCapable bit set, then this is a network-
```

layer protocol for which the probe recognizes addresses, and
thus the probe will populate both of the nlMatrixTables and
both of the alMatrixTables with addresses it discovers for
this protocol.

If the value of this object is notSupported(1), the probe
will not track either of the nlMatrixTables or the
alMatrixTables
for this protocol and shall not allow this
object to be changed to any other value. If the value of this
object is supportedOn(3), the probe supports tracking of both
of the nlMatrixTables and (if implemented) both of the
alMatrixTables for this protocol and is configured to track
these tables for this protocol for all control entries and all
interfaces. If the value of this object is supportedOff(2),
the probe supports tracking of both of the nlMatrixTables and
(if implemented) both of the alMatrixTables for this protocol
but is configured to not track these tables for this
protocol for any control entries or interfaces.
Whenever this value changes from supportedOn(3) to
supportedOff(2), the probe shall delete all related entries in
the nlMatrixTables and the alMatrixTables.

Note that since each alMatrixEntry references 2 protocol
directory entries, one for
the network address and one for the
type of the highest protocol recognized, an entry will
only be created in that table if this value is supportedOn(3)
for both protocols."

nlMatrixTopNControlTimeRemaining OBJECT-TYPE
  SYNTAX     Integer32 (0..2147483647)
  MAX-ACCESS read-create
  STATUS     current
  DESCRIPTION
     "The number of seconds left
 in the report currently
     being collected.  When this object is modified by
     the management station, a new collection is started,
     possibly aborting a currently running report.  The
     new value is used as the requested duration of this

     report and is immediately loaded into the associated
     nlMatrixTopNControlDuration object.

     When the report finishes, the probe will automatically
     start another collection with the same initial value
     of nlMatrixTopNControlTimeRemaining.  Thus, the management
     station may simply read the resulting reports repeatedly,
     checking the startTime and duration each time to ensure that a
     report was not missed or that the report parameters were not
     changed.

     While the value of this object is non-zero, it decrements
     by one per second until it reaches zero.  At the time
     that this object decrements to zero, the report is made
     accessible
 in the nlMatrixTopNTable, overwriting any report
     that may be there.

     When this object is modified by the management station, any
     associated entries in the nlMatrixTopNTable shall be deleted.

     (Note that this is a different algorithm than the one used
     in the hostTopNTable)."

     available resources.  The probe must not lower this
```

value except as a side-effect of a set to the associated
nlMatrixTopNControlRequestedSize object.

If the value of nlMatrixTopNControlRateBase is equal to
nlMatrixTopNPkts, when the next topN report is generated,
matrix entries with the highest value of nlMatrixTopNPktRate
shall be placed in this table in decreasing order of this rate
until there is no more room or until there are no more
matrix entries.

If the value of nlMatrixTopNControlRateBase is equal to
nlMatrixTopNOctets, when the next topN report is generated,
matrix entries with the highest value of nlMatrixTopNOctetRate
shall be placed in this table in decreasing
order of this rate
until there is no more room or until there are no more
matrix entries.

It is an implementation-specific matter how entries with the
same value of nlMatrixTopNPktRate or nlMatrixTopNOctetRate are
sorted. It is also an implementation-specific matter as to

whether zero-valued entries are available."

-- Application Layer Functions
--
-- The application layer host, matrix, and matrixTopN functions report
-- on protocol usage at the network layer or higher. Note that the
-- use of the term application layer does not imply that only
-- application-layer protocols are counted, rather it means that
-- protocols up to and including the application layer are supported.

--
-- Application Layer Host Group
--
-- Counts the amount of traffic, by protocol, sent from and to each
-- network address discovered by the probe.
-- Implementation of this group requires implementation of the Network
-- Layer Host Group.

alHostTable OBJECT-TYPE
SYNTAX SEQUENCE OF AlHostEntry
MAX-ACCESS not-accessible
STATUS current
DESCRIPTION
"A collection of statistics for a particular
protocol from a
particular network address that has been discovered on an
interface of this device.

The probe will populate this table for all protocols in the
protocol directory table whose value of
protocolDirHostConfig is equal to supportedOn(3), and
will delete any entries whose protocolDirEntry is deleted or
has a protocolDirHostConfig value of supportedOff(2).

The probe will add to this table all addresses

```
      seen as the source or destination address in all packets with
      no MAC errors and will increment octet and packet counts in
      the table for all packets with no MAC errors.  Further,
      entries will only be added to this table if their address
      exists in the nlHostTable and will be deleted from this table
      if their address is deleted from the nlHostTable."
