c13a48e74ec89eafa9b529a87253af631ef02f2e2

Reported-by: Julien Cristau <jcristau@debian.org>
composite: Update borderClip in compAllocPixmap()

Previously the parent constrained borderClip was copied over when compRedirectWindow() is called. That is insufficient eg. in case the window was already redirected, but not yet realized. So copy the borderClip over in compAllocPixmap() instead.

Example:
Window 1 is below an automatically redirect window 2. Window 2 is unmapped and moved outside the extents of window 1. Window 2 is then mapped again, and MarkOverlappedWindows() uses the up to date borderSize of window 2 to mark windows, which leaves window 1 unmarked. Then exposures are calculated using the stale borderClip of window 2, which causes the window below window 2, to be exposed through an apparent hole in window 1.

Fix drain_console unregistration

Bug introduced by 9dca441670d261a9a9fb6108960ed48f3d58fb7f
xfree86: add a hook to replace the new console handler.

custom_handler was not being set, making the server eat up CPU spinning
in WaitForSomething selecting consoleFd over and over again, every time
trying to unregister drain_console without success due to
custom_handler being NULL.

Let's just fix the unregistration in xf86SetConsoleHandler() and use that.

But wait, there could be a catch: If some driver replaced the handler using
xf86SetConsoleHandler(), the unregistration in xf86CloseConsole will unregister
that one. I don't understand Xorg well enough to know whether this poses a
problem (could mess up driver deinit somehow or something like that). As it is,
xf86SetConsoleHandler() doesn't offer any way to prevent this (i.e. check which
handler is currently registered).

I had been using it for two days on my machine that previously hit 100% CPU
several times a day. That has now gone away without any new problems appearing.

dix: mark motion events as emulated if we're scrolling from button press

The protocol requires that the emulated event is marked as such. So if a
driver with smooth scrolling axis sends legacy button events, the motion
event must be marked as emulated.
Pass the real type to emulate_scroll_button_events and create the events accordingly. For real button press or release events, only that event must be generated since a release event will follow or a press event has already occurred, respectively. (This fixes a bug where we'd get two release events for each legacy button event)

xorg-server.pc.in: Remove libpciaccess and pixman-1 from Requires

Every module building against xorg-server does not *Require* pixman nor libpciaccess. If such modules need pixman or pciaccess, they should be depending on them directly rather than inheriting a dependency from xorg-server. To do this, they should use PKG_CHECK_MODULES in configure.ac to check for pixman-1 or pciaccess and include the appropriate _LIBS variable to the appropriate _LDFLAGS variable in Makefile.am

This also moves pixman-1 to Requires.private, so CPPFLAGS is set right to to satisfy include dependencies but avoid linking needlessly.

pci: Remove xf86MapDomainMemory

This is slightly draconian, but that API is just awful. In all but one case in the callers it's used to get a map of some legacy VGA memory, and it would be cleaner for the caller to just call pci_device_map_legacy.

The sole exception is in the vesa driver, which uses it to avoid having to look up which device the BAR belongs to. That's similarly trivial to fix.

Having done that, Linux's PCI layer is now very small indeed.

commit 858fbbb40d7c69540cd1f5315cebf811c6e7b3f
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Sep 16 13:33:04 2011 -0400

pci: Port xf86MapLegacyIO to pciaccess

Per-domain I/O is now something drivers must manually request, and must
keep track of within their own state rather than in the ScrnInfoRec.
It's not really possible to split that into two steps without an
additional intermediate ABI break, so don't even try. Drivers that want
source compatibility should ifdef on the presence of xf86UnmapLegacyIO.

As a fringe benefit, domain-aware I/O is now OS-independent, relying
only on support in pciaccess. Simplify OS PCI setup to reflect this.

The IOADDRESS type is kept around to help drivers through the API
transition and will be removed at some point in the future.

vgahw: Don't default to standard (port space) access routines

In fact, don't default to anything; drivers must explicitly say which kind they want, and they are strongly encouraged to do MMIO if possible. This is an ABI change in that drivers that don't will crash, but drivers that are explicit will work with both old and new servers.

input: change pointer screen crossing behaviour for multiple ScreenRecs

miPointerSetPosition traditionally took coordinates on a per-screen basis,
triggers a screen switch when these went out-of-bounds. For absolute devices, this prevented screen crossing in the negative x/y direction.

This patch changes the event generation patch to handle screen coordinates in a desktop range (i.e. all screens together). Screen switches are triggered when these coordinates are not on the current screen.

This unifies the pointer behaviour of single ScreenRec multihead and multiple ScreenRecs multihead in that the cursor by default moves about the whole screen rather than be confined to one single screen. The transformation matrix may then be used to actually confine the cursor to the screen again.

Note: fill_pointer_events has to deal with several different coordinate systems. Make sure you read the comment before trying to understand the code.

mi: switch miPointerSetPosition to take doubles

Don't switch between doubles and ints in the caller, instead take doubles in miPointerSetPosition and do the conversion there. For full feature we should change everything down from here for doubles too.

Functional change: previously we'd restore the remainder regardless of screen switching/confine ment (despite what the comment said). Now, screen changing or cursor constraints will cause the remainder be clipped off. This should happen for cursor constraints but arguably not for screen crossing.

This also corrects a currently wrong comment about miPointerSetPosition's input coordinates.

xf86/modes: Fix shadow rotation crashing when screen pixmap changes

Driver may change screen pixmaps after page flipping that would then make damage lose track of the root pixmap.

Using root window for shadow damages fixes the problem because SetWindowPixmap is implemented in shadow code.

xfree86/modes: Make cursor position transform a helper function

When the driver can handle the crtc transform in hardware, it sets crtc->driverIsPerformingTransform, which turns off both the shadow layer and the cursor's position-transforming code. However, some drivers actually do require the cursor position to still be transformed in these cases. Move the cursor position transform into a helper function that can be called by such drivers.

Author: Aaron Plattner <aplattner@nvidia.com>
Date:   Thu Aug 25 10:19:48 2011 -0700

xfree86/modes: Let the driver handle the transform

If a driver can use hardware to handle the crtc transform, then there's no need for the server's shadow layer to do it. Add a crtc flag that lets the driver indicate that it is handling the transform. If it's set, consider the transformed size of the screen but don't actually enable the shadow layer. Also stop adjusting the cursor image and position.

Merge branch 'smooth-scrolling' into next

commit 3304bbff9b4ed63f1a47410a5320a136420ba2c6
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue Feb 15 18:49:58 2011 +0000

Input: Add smooth-scrolling support to GetPointerEvents

For scroll wheel support, we used to send buttons 4/5 and 6/7 for horizontal/vertical positive/negative scroll events. For touchpads, we really want more fine-grained scroll values. GetPointerEvents now accepts both old-school scroll button presses, and new-style scroll axis events, while emitting both types of events to support both old and new clients.

This works with the new XIScrollClass to mark axes as scrolling axes. Drivers mark any valuators that send scroll events with SetScrollValuator. (Currently missing: the XIDeviceChangeEvent being sent when a driver changes a scroll axis at run-time. This can be added later.)

Note: the SCROLL_TYPE enums are intentionally different values to the XI2 proto values to avoid copy/overlapping range bugs.

Reviewed-by: Peter Hutterer <peter.hutterer@who-t.net>

Input: Make DeviceEvent use doubles internally

Change the DeviceEvent InternalEvent to use doubles for its valuators, instead of data and data_frac.

Signed-off-by: Daniel Stone <daniel@fooishbar.org>
Reviewed-by: Peter Hutterer <peter.hutterer@who-t.net>

Input: Make RawDeviceEvent use doubles internally

Change RawDeviceEvent to use doubles for valuators internally, rather than data(_raw) and data(_raw)_frac.
Input: Modify mask in-place in positionSprite

Instead of taking pointers to x and y values to modify in positionSprite, just modify the mask (as well as dev->last) in place.

Input: Convert positionSprite and GetPointerEvents to double

Use doubles internally in both of these functions, eliminating most of the remaining int co-ordinate usage.

Input: Don't call positionSprite for non-pointer devices

If the device doesn't have any valuators, or if it has less than two of them, don't bother calling positionSprite. Users with one-dimensional pointing devices may be upset.

Input: Convert rescaleValuatorAxis to double

Instead of passing fractional pointers around everywhere, just pass doubles instead. Much easier.
Input: Remove x and y from moveAbsolute/moveRelative

Both these functions modify the mask and pDev->last.{valuators,remainder} in-place now, so there's no need to pass in pointers to local x and y values.

Input: Convert acceleration code to using ValuatorMask

Instead of passing a set of int* to the acceleration code, pass it a mask instead, which avoids an unfortunate loss of precision.

Input: Widen pointer acceleration types to double

This widens almost all of the float-using code in ptrveloc.[ch] to doubles, other than values coming from properties which are specified to be floats by the property API.

Bumps input API to v14 as this changes the AccelScheme signature, as used by xf86-input-synaptics.
Input: Use trunc instead of lrintf in acceleration code

For compatibility with all the rest of the input code.

xfree86: .BI style: monitor section in xorg.conf man page

The xorg.conf manual uses the following convention in most of its sections:

bold = text to be copied literally to the config file,
italic = a symbolic name to be substituted by a true value.

Some configuration keywords seem to have been changed into generic options. Prepending Option to the manual entry swapped the bold-italic logic. This patch restores the convention in the monitor section and consists of

- .BI "Option " "\"qPreferredMode\" " \"qstring\"q
+ .BI "Option \"qPreferredMode\" \"q" name \"q

modifications.

Plus a few minor changes (Modes Mode) and a typo fix.

glamor-ddx: Reuse glamor_dix module to handle egl platform.

We already have a glamor egl module at glamor directory which
could initialize and create egl context and also can attach a
gbm buffer to a specified pixmap or to the screen pixmap. This
commit remove all the duplicated code here and use the glamor_dix
module directly.
As we don't want to handle egl stuffs in this layer, we have to change the way to handle hardware cursor. Previous method is to call egl functions to create a egl image and then bind the image to a texture then call gl functions to load texture image to the cursor bo. Now we can bind the cursor bo to a cursor pixmap and then use putimage to load new image to the cursor bo. Then we can completely avoid to call egl or gl functions directly in this ddx driver.

Signed-off-by: Zhigang Gong <zhigang.gong@gmail.com>

commit 67da52ec13a87846201a99d5a31db28668d9fdfd
Author: Zhigang Gong <zhigang.gong@gmail.com>
Date:   Tue Aug 16 00:21:09 2011 +0800

glamor: Add color conversion support by using new shader.

There are two places we need to do color conversion.

1. When upload a image data to a texture.
2. When download a texture to a memory buffer.

As the color format may not be supported in GLES2. We may need to do the following two operations to convert dat.

a. revert argb to bgra / abgr to rgba.
b. swap argb to abgr / bgra to rgba.

Signed-off-by: Zhigang Gong <zhigang.gong@gmail.com>

commit 0ef1698be22750fb14418bd418114fc63039db0c
Author: Zhigang Gong <zhigang.gong@linux.intel.com>
Date:   Thu Jul 21 16:18:48 2011 +0800

glamor: Fix one bug for Xephyr.

Xephyr doesn't has a bounded valid texture. It seems that we can't
load texture 0 directly sometimes. Especially in the copyarea, function
if that is the case, we prefer to use fbo blit to read the screen pixmap
rather than load the bound texture.

Signed-off-by: Zhigang Gong <zhigang.gong@linux.intel.com>

commit 9b667fffd564910ff7373547ce2f8d4a7c5d71137
Author: Zhigang Gong <zhigang.gong@linux.intel.com>
Date:   Wed Jul 20 14:33:00 2011 +0800

glamor: Use small internal texture format if possible.

Reduce some texture memory requirement and also save
some bandwidth.
glamor: Add simple introduction of how to setup glamor xserver.

Signed-off-by: Zhigang Gong <zhigang.gong@linux.intel.com>

commit 01489f9da9aa357c59799d4d41c7ca96b4cb1d8
Author: Zhigang Gong <zhigang.gong@linux.intel.com>
Date: Wed Jul 20 14:02:15 2011 +0800

glamor: Avoid 2D bitblit if possible.

It turns out that the use of fbo blit is one of the root cause which lead to slow drawing, especially slow filling rects.

We guess there should be a performance bug in the mesa driver or even in the kernel drm driver. Currently, the only thing glamor can do is to avoid calling those functions.

We check whether the copy source and destination has overlapped region, if it has, we have to call fbo blit function. If it has not, we can load the source texture directly and draw it to the target texture. We totally don't need the glCopyPixels here, so remove it.

By apply this patch, the rendering time of firefox-planet-gnome decrease to 10.4 seconds. At the same platform, uxa driver get 13 seconds. This is the first time we get better performance than uxa driver.

Signed-off-by: Zhigang Gong <zhigang.gong@linux.intel.com>

commit 1f3f3baf1469e74767474dddb383e92502384de80
Author: Zhigang Gong <zhigang.gong@linux.intel.com>
Date: Wed Jul 20 13:35:25 2011 +0800

glamor: Implement delayed solid filling.

When we need to solid fill an entire pixmap with a specific color, we do not need to draw it immediately. We can defer it to the following occasions:

1. The pixmap will be used as source, then we can just use a shader to instead of one copyarea.
2. The pixmap will be used as target, then we can do the filling just before drawing new pixel onto it. The filling and drawing will have the same target texture, we can save one time of fbo context switching.

Actually, for the 2nd case, we have opportunity to further optimize it. We can just fill the untouched region.

By applying this patch, the cairo-trace for the firefox-planet-gnome's rendering time decrease to 14seconds from 16 seconds.

Date: Tue Jun 28 14:37:29 2011 +0800
If the pixmap is write-only, then use a pbo mapping will not get too much benefit. And even worse, when the software rendering is access this mapped data range, it's much slower than just using a system memory. From the glamor_prepare_access glamor_finish_access view, we have two options here:

option 1:
1.0 create a pbo
1.1 copy texture to the pbo
1.2 map the pbo to va
1.3 access the va directly in software rendering.
1.4 bind the pbo as unpack buffer & draw it back to texture.

option 2:
2.0 allocate a block memory in system memory space.
2.1 read the texture memory to the system memory.
2.2 access the system memory and do rendering.
2.3 draw the system memory back to texture.

In general, 1.1 plus 1.2 is much faster than 2.1.
And 1.3 is slower than 2.2. 1.4 is faster than 2.3.

If the access mode is read only or read write, option 1 may be faster, but if the access mode is write only. Then most of the time option 1 is much faster.

Date: Tue Jun 21 18:31:11 2011 +0800

glamor: Add dynamic texture uploading feature.

Major refactoring.
1. Rewrite the pixmap texture uploading and downloading functions.
   Add some new functions for both the prepare/finish access and the new performance feature dynamic texture uploading, which could download and upload the current image to/from a private texture/fbo. In the uploading or downloading phase, we need to handle two things:
   The first is the yInverted option, If it set, then we don't need to flip y. If not set, if it is from a dynamic texture uploading then we don't need to flip either if the current drawing process will flip it latter. If it is from finish_access, then we must flip the y axis.
   The second thing is the alpha channel handling, if the pixmap's format is something like x8a8r8g8, x1r5g5b5 which means it doesn't has alpha channel, but it do has those extra bits. Then we need to wire those bits to 1.

2. Add almost all the required picture format support.
   This is not as trivial as it looks like. The previous implementation only support GL_a8, GL_a8r8g8b8, GL_x8r8g8b8. All the other format, we have to fallback to cpu. The reason why we can't simply add those other color format is because the exists of picture. one drawable pixmap may has one or even more container pictures. The drawable pixmap's depth can't map to a specified color format, for example depth 16 can mapped to r5g6b5, x1r5g5b5, a1r5g5b5, or even b5g6r5. So we can't get get the color format just from the depth value. But the pixmap do not has a pict_format element. We have to make a new one in the pixmap private data structure. Reroute the CreatePicture to glamor_create_picture
and then store the picture's format to the pixmap's private structure.

This is not an ideal solution, as there may be more than one pictures refer to the same pixmap. Then we will have trouble. There is an example in glamor_composite_with_shader. The source and mask often share the same pixmap, but use different picture format. Our current solution is to combine those two different picture formats to one which will not lose any data. Then change the source's format to this new format and then upload the pixmap to texture once. It works. If we fail to find a matched new format then we fallback.

There still is a potential problem, if two pictures refer to the same pixmap, and one of them destroy the picture, but the other still remained to be used latter. We don't handle that situation currently. To be fixed.

3. Dynamic texture uploading.
This is a performance feature. Although we don't like the client to hold a pixmap data to shared memory and we can't accelerate it. And even worse, we may need to fallback all the required pixmaps to cpu memory and then process them on CPU. This feature is to mitigate this penalty. When the target pixmap has a valid gl fbo attached to it. But the other pixmaps are not. Then it will be more efficient to upload the other pixmaps to GPU and then do the blitting or rendering on GPU than fallback all the pixmaps to CPU. To enable this feature, I experienced a significant performance improvement in the Game “Mines” :).

4. Debug facility.
Modify the debug output mechanism. Now add a new macro:
glamor_debug_output(_level_, _format_,...) to conditional output some messages according to the environment variable GLAMOR_DEBUG. We have the following levels currently.
exports GLAMOR_DEBUG to 3 will enable all the above messages.

5. Changes in pixmap private data structure.
Add some for the full color format supports and relate it to the pictures which already described. Also Add the following new elements:
gl_fbo - to indicates whether this pixmap is on gpu only.
gl_tex - to indicates whether the tex is valid and is containing the pixmap's image originally.
As we bring the dynamic pixmap uploading feature, so a cpu memory pixmap may also has a valid fbo or tex attached to it. So we will have to use the above new element to check it true type.

After this commit, we can pass the rendercheck testing for all the picture formats. And is much much fater than fallback to cpu when doing rendercheck testing.

glamor: Simplify fill acceleration for spans/polyfillrect by only clipping once.

This commit was borrowed from uxa driver contributed by Eric.
commit number is e0066e77e026b0dd0daa0c3765473c7d63aa6753. commit log paste as below:
We were clipping each span against the bounds of the clip, throwing out the span early if it was all clipped, and then walked the clip box clipping against each of the cliprects. We would expect spans to typically be clipped against one box, and not thrown out, so we were not saving any work there. For multiple cliprects, we were adding work. Only for many spans clipped entirely out of a complicated clip region would it have saved work, and it clearly didn't save bugs as evidenced by the many fix attempts here.

Date:   Fri Jun 10 15:46:23 2011 +0800

glamor: Silence compilation warnings.
glamor: Add render triangles support.

By default, fallback to frame buffer currently. This commit makes us pass the rendercheck's triangles testing.

glamor: Use software fb for 1bpp pixmap.

For 1bpp pixmap, software fb get better performance than GL surface. The main reason is that fbo doesn't support 1bpp texture as internal format, so we have to translate a 1bpp bitmap to a 8bit alpha format each time which is very inefficient. And the previous implementation is not supported by the latest OpenGL 4.0, the GL_BITMAP was deprecated.

glamor: Optimize composite when source/mask is xrgb.

Added a new shader aswizlle_prog to wired the alpha to 1 when the image color depth is 24 (xrgb). Then we don't need to fallback the xrgb source/mask to software composite in render phase. Also don't wire the alpha bit to 1 in the render phase. This can get about 2x performance gain with the cairo performance trace's firefox-planet case.
glamor: Don't print those fallback messages by default.

Author: Zhigang Gong <zhigang.gong@linux.intel.com>
Date: Wed Jun 1 17:54:01 2011 +0800

glamor: Don't use glamor_pixmap_type currently.

Added comments to glamor_pixmap_create. To be refined in the future.
We need to identify whether a pixmap is a CPU memory pixmap or a GPU pixmap. Current implementation is not correct. There are three cases:

1. Too large pixmap, we direct it to CPU memory pixmap.
2. w == 0 || h == 0 pixmap, this case has two possibilities:
   2.1 It will become a screen pixmap latter, then it should be GPU type.
   2.2 It's a scratch pixmap or created from a share memory, then it should belong to CPU memory.

XXX, need to be refined latter.

commit 28835be1b8a05e510aa7ffcc2f331771e3cf7dfec
Author: Zhigang Gong <zhigang.gong@gmail.com>
Date: Tue May 24 22:01:49 2011 +0800

glamor: improve glamor_finish_access.

When the platform's coordinate system is the same as X11's. We can load the texture to the fbo directly without one extra texture transformation.

commit 1edf0cc6ab340e98fde201328631ca61e9d871a1
Author: Zhigang Gong <zhigang.gong@gmail.com>
Date:   Sun May 22 23:45:51 2011 +0800

glamor: Don't write back read only pixmap to fbo.

For those pixmap which has valid fbo and opened as GLAMOR_ACCESS_RO
mode, we don't need to upload the texture back when calling the
glamor_finish_access(). This will get about 10% performance gain.

commit 1495ba9e6463476508febb01ec2e9594a7b466b
Author: Zhigang Gong <zhigang.gong@gmail.com>
Date:   Sun May 22 17:51:27 2011 +0800

glamor: Use buffer object as much as possible.

Change the row length of 1bit color depth pixmap to the actual stride.
The previous implementation use the width as its stride which is not
good. As it will waste 8 times of space and also bring some non-unify
code path. With this commit, we can merge those 1bit or other color
depth to almost one code path. And we will use pixel buffer object
as much as possible due to performance issue. By default, some mesa
hardware driver will fallback to software rasterization when use
glReadPixels on a non-buffer-object frame buffer. This change will
get about 4x times performance improvement when we use y-inverted
glamor or the driver support hardware y-flipped blitting.

Author: Eric Anholt <eric@anholt.net>
Date:   Fri Feb 19 07:36:28 2010 -0800

glamor: Reduce the noise from wide lines "fallback".

commit 955ccfbc34f370c80f7189ac5b0240e859e00b5f
Author: Eric Anholt <eric@anholt.net>
Date:   Fri Feb 19 07:52:50 2010 -0800

glamor: Fix the segfault at screen fini.

commit 003dee4c82f8a9e7749876c736018410f347440
Author: Eric Anholt <eric@anholt.net>
Date:   Fri Feb 19 06:10:11 2010 -0800

glamor: Replace the immediate mode in glamor_fill() with glDrawArrays().

commit 60775e21e3532452891e1b52589f7d5d7ef04b40
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 18 18:11:54 2010 -0800

glamor: Use a VBO to accumulate multiple glyph quads at once.

This increases us from 23000 to 27000/sec on rgb24text.

commit 8ce312e61952e9f2193c28ac6124e0f30f3a122c
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 18 14:49:06 2010 -0800
glamor: Use `glamor_composite_with_shader` once per group of glyphs.

This shaves CPU time in GL setup. Performance of `rgb24text` went from 18400/sec to 23500/sec.

Commit 6ce05e0b28052e5206694228218322f0dd3a6b00
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 18 14:44:20 2010 -0800

  glamor: Convert the shaders path to handling `glamor_composite_rect_t`.

Commit 858ce0c1928c199435c9c2627f84c37e7ca7a38a
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 18 14:02:48 2010 -0800

  glamor: Add support for component alpha rendering.

    Brings `x11perf -rgb24text` from 230/sec to 18400/sec

Commit d07fc66a056dd4eab2dac82b3784c482071d1915
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 18 09:23:22 2010 -0800

  glamor: Rework shader setup to make extending the IN types easier.

Commit 8cefa287ddb4ed4ad178e751b35bb93b4a44e0ab
Author: Eric Anholt <eric@anholt.net>
Date: Wed Feb 17 16:00:22 2010 -0800

  glamor: Add a little mechanism for only printing fallbacks when they happen.

    Sometimes we want to try a couple of different methods for accelerating. If one of them says "no" and the other says "yes", don't spam the log about the "no."

Commit 5f5c35b56d3568f72e2305e74ed8457e0a787a3b
Author: Eric Anholt <eric@anholt.net>
Date: Wed Feb 17 15:02:17 2010 -0800

  glamor: Fix up the fallback message for no texture present on compositing.

Commit 2fa95725d845e5bf8a41ac776267be0d55d58004
Author: Eric Anholt <eric@anholt.net>
Date: Wed Feb 17 13:33:48 2010 -0800

  glamor: Add support for a1 composite sources.
They're stored just like a8, but the values are set to either 0.0 or 1.0. Because they're a8 with only two legal values, we can't use them as destinations, but nobody's rendering to a1 dests anyway (we hope).

commit 9bc6cbb8c2e8945fa5c4f4ad1a772b787618455f
Author: Eric Anholt <eric@anholt.net>
Date:   Wed Feb 17 13:30:20 2010 -0800

glamor: Fix and enable ZPixmap PutImage acceleration.

commits 2ba634fab9b03995629497ef6bf5305394011e4a
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 11 17:32:27 2010 -0800

glamor: Fix render source transforms.

Fixes (except for small bit differences) cairo source-pattern.

commits b1f67a50f2420abb1f141733833905f8ac95fe983
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 11 17:15:05 2010 -0800

glamor: Fix and enable glamor_get_spans().

This makes running the cairo test suite almost tolerable.

commits f88d76cf7e05cf885d80c0b91f37f1b30675e928
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 11 16:51:13 2010 -0800

glamor: Enable glamor_fill_spans().

x11perf -wline100 performance goes from 8.8/sec to 111/sec.

commits a63df0c504be3be0e969f5080a6593a55cb87246
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 11 15:00:32 2010 -0800

glamor: Fix up the wide/non-solid lines fallback.

commits d61a13c0f0a3028bca41310a4f5ecca8546961
Author: Eric Anholt <eric@anholt.net>
Date:   Thu Feb 11 14:52:04 2010 -0800

glamor: Fix and enable tile fill acceleration (aka the root weave).

commits 86a206525350b7e82ab0e432ad0f8858960857d
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 11 13:40:28 2010 -0800

glamor: Fix off-by-one in CopyPixels CopyArea path.

Fixes window dragging in uncomposited metacity.

commit be82a0624207b5f367b97c25ac7d7dbd8a518597
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 11 13:21:47 2010 -0800

glamor: Fix screen_x/screen_y handling for compositing.

It's not an offset from pixmap coords to composited pixmap coords, it's an offset from screen-relative window drawable coords to composited pixmap coords.

commit 5360b1e8bbae571b1209999e7eeec7cd2826601497
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 11 09:47:38 2010 -0800

glamor: Implement glCopyPixels based src == dest CopyArea acceleration

commit 0565c1d789ed82c533f860713d66b4941c299f9c
Author: Eric Anholt <eric@anholt.net>
Date: Tue Feb 9 22:35:04 2010 -0800

glamor: Add support for accel of x8r8g8b8 source pictures.

There's a limitation still for RepeatNone, but this fixes a bunch of fallbacks for gnome-terminal.

commit e6bf50573650f03c8130b7783485b24e98e15c79
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 11 09:23:09 2010 -0800

glamor: Set active texture on glamor_copy_n_to_n setup.

Fixes failure in rendercheck -t blend -o src

commit be64167fe3a3c74447ed3c5116b97473676c25b29
Author: Eric Anholt <eric@anholt.net>
Date: Thu Feb 11 09:20:50 2010 -0800

glamor: Don't try to CopyArea from a Solid source picture.

Fixes failure with rendercheck.

commit 126fc09cb5bf8c388b73f1c2cd2a0ef588c3265e8

---

Open Source Used In Field Network Director for Virtual Machine Installation 4.7.1 34689
glamor: Rework the Render shader setup to be easily modified, like cairo-gl.

commit f4a3194837e640997c0e3a775f48a49800e213c6
Author: Eric Anholt <eric@anholt.net>
Date:   Tue Feb 9 22:35:04 2010 -0800

    glamor: Add the glyph cache from UXA (de-camelCased).

    This doesn't yet have an optimized glamor_composite_rects() implementation, but it does triple the speed of x11perf -aa10text.

commit 7e6432c7b94f7f99b257da8de53573108d30ae22
Author: Eric Anholt <eric@anholt.net>
Date:   Tue Feb 9 22:54:40 2010 -0600

    glamor: Fix up and enable accelerated composite.

commit a0b589e90a885cf20b349b95df31bb0823a1514b
Author: Eric Anholt <eric@anholt.net>
Date:   Tue Feb 9 22:49:27 2010 -0600

    glamor: Restore planemask to all-on when finishing a fill.

commit d8c2662bf452a82c8fcbdd1c95a40ee34d2c32ca
Author: Eric Anholt <eric@anholt.net>
Date:   Tue Feb 9 22:48:28 2010 -0600

    glamor: Set active texture in finishaccess drawing.

commit 4f398b29dd42260d2c02e8e795546fd062397b1
Author: Eric Anholt <eric@anholt.net>
Date:   Tue Feb 9 21:56:39 2010 -0600

    glamor: Align stride of fallback pixmap data to 32 bits.

    fb/pixman demand this alignment, and all sorts of things go badly otherwise.
    Fixes piglit x11-8bpp-7x8-draw.

commit 15e58b5ff8c47c6c6f5172cc72758047b98024a
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 22:05:51 2010 +0100

    glamor: Split the copy path out into its own function.

commit ad67299fa2afc8b42432d71d14163a36e013f7
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 21:52:35 2010 +0100

glamor: Provide more information about the operands to fallback composites.

commits:

commit 4811e428a9206ef59487fb0d3fab160a19845d46
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 21:46:49 2010 +0100

glamor: Pull in UXA code for dumping some composites down to copy_n_to_n.

Window dragging with metacity+gnome-terminal+xcompmgr is almost credible.

commits:

commit 35847c578e9c35a3c90da792c34c1cb0cc536261
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 21:24:15 2010 +0100

glamor: Add acceleration for copyarea not from the screen.

commits:

commit 647b9fb49a5bb636ec9b0da6b70808328238543a
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 20:12:44 2010 +0100

glamor: Add CopyWindow implementation so it doesn't crash.

commits:

commit 95d4a5a6ab58625d8205461157263bff635ccd1a
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 19:38:00 2010 +0100

glamor: Enable fill acceleration and flip opposite for pixmaps too.

Here's my theory for the flipping: It doesn't really matter which
orientation we store the pixmaps if we don't scan them out. We have
to flip coordinates for the window system framebuffer. Doing so for
everything else makes things consistent. I'm not sure how this will
interact with future GLX integration, though.

commits:

commit 5332547a0ac6ae6b9f1a6c642e6fd6bf303108f
Author: Eric Anholt <eric@anholt.net>
Date:   Mon Feb 8 17:14:34 2010 +0100

glamor: Fix prepare_access on 1bpp data.

Apparently I don't have anything hitting this path, so I'm not sure if
it's good or not.

commits:

commit c3c3a6349766b4fdee080ff203fb548725e42e50
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 15:34:45 2010 +0100

glamor: Use the pixmap stride in fallbacks instead of trying to guess it.

Mostly fixes gnome-terminal text.

commit 45de3d24b44aa3feabdda0e377d637f498e03eb0
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 14:40:06 2010 +0100

glamor: Replace the glDrawPixels in glamor_finish_access with GLSL.

Root weave displays. \o/

commit d8d3fa10346302384b8e62967c5a67893ed1c67b
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 14:53:41 2010 +0100

glamor: All the fallbacks in the world.

Bringup is really not flying when I can't see anything. So dump back
to all software so I can turn on a bit at a time.

commit 745502af962a2bb475c0c667c3091c2c080771dc
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 13:27:47 2010 +0100

glamor: Add check for EXT_bgra which we rely on.

commit 6ce378f11ff396f350cbaa280086f6f9600da29e
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 13:15:38 2010 +0100

glamor: Add fallback support for glamor_get_spans().

commit ec526eab8f02e0bcce859a1b7ebaf6c5bcc5e87
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 13:05:13 2010 +0100

ephyr: Hook the glamor into damage and draw into the backbuffer.

This should avoid a bunch of absurdity with GLX front buffer handling,
fix exposes, and improve performance. For now we're copying the whole
buffer while glamor is developed.

commit b5087ff9b1e5495c742e581f586c055de878dd4b
Author: Eric Anholt <eric@anholt.net>
Date:  Mon Feb 8 12:47:59 2010 +0100
glamor: Fix the row length of 1bpp prepare_access.

commit e93070affdf64c47be02684e7902a61e7ae9fa33
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 12:44:03 2010 +0100

glamor: Fix up the access flags for glamor_prepare_access().

commit 0e56c182c3b06f5b02d357e2b8e930a580bd0274
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 12:16:30 2010 +0100

glamor: Add fallback support to glamor_put_image().

commit 22cad98975091ed724a37ee940946cd2899ebcbf
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 12:13:15 2010 +0100

glamor: Add fallback support to glamor_set_spans().

commit 55dae9b42e18dce1586770d31ee265178e68b744
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 12:09:52 2010 +0100

glamor: Add glamor_prepare_access_gc() from UXA.

commit 72a757ba00232fe88b42b977f5210fa119495b05e
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 11:58:52 2010 +0100

glamor: Use GL_MESA_pack_invert to avoid complexity in prepare_access.

commit e9d4794cd0bc6c8790204405fe09f968edfa409d
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 11:23:14 2010 +0100

glamor: Add fallbacks for Render.

commit de675893b7ce2880289cece13be6190d55f4fc29c
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 10:16:21 2010 +0100

glamor: Add fallbacks for glamor_copy_area().

commit ca58607a44c310ef369a097a068e83aa2a9e1c5b
Author: Eric Anholt <eric@anholt.net>
Date: Mon Feb 8 09:58:55 2010 +0100
glamor: Move glamor_poly_lines to a separate file.

glamor: Fix the type for copyarea.

glamor: Add prepare/finishacess code based on UXA.

glamor: Add support for solid source pictures.

glamor: Add untested copyarea implementation

glamor: Accelerate PolyFillRect using glamor_fill instead of spans.

glamor: Add untested PutImage 1bpp XYPixmap support.
glamor: Add untested PutImage XYBitmap support.

commit 8a53566acb5870816807425dc805df888fa42792
Author: Eric Anholt <eric@anholt.net>
Date: Tue Aug 25 13:06:11 2009 -0700

  glamor: make the polylines complaint a little more useful.

commit aa133069745fe59bb2f212b0816add9bae40c376
Author: Eric Anholt <eric@anholt.net>
Date: Tue Aug 25 12:10:32 2009 -0700

  glamor: Start adding render acceleration support.
  
  This brings in idr's glu3 code. We'll probably want to move to linking to
  it as a library, once an ABI-stable release is out.

commit 4a51cc0440c8d026fd8c82b40cfb188c6ea4a9f0
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 09:14:20 2009 -0700

  glamor: Add clipping to setspans.

commit 5fad4a5d9c02670c35ddf3e0f12f9d355b412103
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 09:10:14 2009 -0700

  glamor: Fix some screen_xy offsets to be the right way around.

commit 44e4599b83cc330a7c9edd7e18266f222a69418a
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 08:59:52 2009 -0700

  glamor: Move planemask to a function in case I decide to fill it in.

commit 8824111bef1091f97f61a27a549970d87eef9cab
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 08:29:30 2009 -0700

  glamor: add alu support to setspans.

commit c70ce72fd74354a0b9731dc8d4451f6aaf951117
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 08:24:54 2009 -0700

  glamor: Give setspans the same format support as getspans.
commit d9ef95c74b7b04a33398b4cfc1a81b480838b25e
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 08:17:06 2009 -0700

  glamor: Fix bad fallthrough in getspans (accessing invalid memory).

commit 0360ba361a67f6cfa5e9c65590ed8440a153c16e
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 08:06:57 2009 -0700

  glamor: Fix memory leak in getspans.

commit cdb1fe6d9682616b1def52fa38b2dae623e2503f
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 08:03:17 2009 -0700

  glamor: Move setspans to a separate file.

commit cfb8dea815086b9aafdd7bd314e02739e04dfc7d
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 07:22:14 2009 -0700

  glamor: Hook up miGetImage to fix some invalid accesses.

commit e3c02c09c125bb5def1a70a1264ef34b18182afa
Author: Eric Anholt <eric@anholt.net>
Date: Mon Aug 24 07:00:32 2009 -0700

  glamor: Add ALU support to solid, tile, and putimage.

commit 2b657d91d80a0a4d9fa2e390255ff87f51426b7c
Author: Eric Anholt <eric@anholt.net>
Date: Sat Aug 22 15:54:24 2009 -0700

  glamor: Add untested putimage support.

commit f66e5c4145d003247447ac1bf93f9737c6eaa27c
Author: Eric Anholt <eric@anholt.net>
Date: Fri Aug 21 10:05:32 2009 -0700

  glamor: Add 8bpp to get/setspans.

commit 93ad09144213fe6b9ce8bea7ebfcc2d60887810b
Author: Eric Anholt <eric@anholt.net>
Date: Fri Aug 21 10:02:02 2009 -0700

  glamor: Add trapezoids code.
This fixes segfaults on starting gnome-terminal.

commit 60ca0260f23cac6577aa85aacb0e5644d5f1b349
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 17:17:43 2009 -0700

glamor: Add more solid_fail_regions for software fallbacks.

commit 7500ee2b0215932ecb6688f301fb4e6f080f8a66
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 17:05:00 2009 -0700

glamor: Fill in 1 and 24-bit getspans.

commit f6c4fbb2ba66948ad5cc1cbe20e12de204de175d
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 16:43:22 2009 -0700

glamor: Add stub Composite support.

commit 2fa26c4958168064da95361db78ccc518ce8f3ed8
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 16:43:03 2009 -0700

glamor: Free resources when destroying pixmaps.

commit 16c3b929dd4cae6b40e847256db6ff32e63e9029
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 16:06:42 2009 -0700

glamor: Add untested support for tile filling.

commit 8016135ec7616530e64d0019ce0401e62b25e483
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 15:37:22 2009 -0700

glamor: Fill out glamor_get_color_4f_from_pixel() a bit.

commit 519103565c1b182014de93c58917bf7e5a35fcb
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 15:28:13 2009 -0700

glamor: Create FBOs for pixmaps.

commit f92d1478e984d57806731886820f47e1258b5115
Author: Eric Anholt <eric@anholt.net>
Date: Thu Aug 20 14:45:47 2009 -0700
glamor: Maybe fix up the format/type for setspans.

Use internal temp variable for swap macros

Also, fix whitespace, mainly around

swaps(&rep.sequenceNumber)

Silence printf format warnings in helper_exec.c

Replace Fabs() macro with fabs() function

gcc generates better code with fabs() anyway.
The developer docs are generated from a subset of docbook.am which is sometimes updated.

The one difference for xserver is the embedded css style in the HEAD element.

This makes the whole html docs tree much more relocatable. In addition, it eliminates xorg.css as a runtime file which makes xorg-sgml-doctools a build time only package.

Adding support in libX11 for html chunking caused a reorg of docbook.am as well as the xorg-sgml-doctools masterdb for olinking.

The parameter img.src.path is added for pdf images.

A searchpath to the root builddir is added for local entities, if present.

This feature was initiated by xserver module and made available to all.
The docbook.am makefile hides all the details and is identical for all 22 modules having DocBook documentation. It is included by a thin Makefile.am which requires no docbook knowledge.

Add null-terminated list interface.

This is a set of macros to provide a struct list-alike interface for classic linked lists such as the XF86OptionRec or the DeviceIntRec. The typical format for these is to have a "struct foo *next" pointer in each struct foo and walk through those. These macros provide a few basic functions to add to, remove from and iterate through these lists.

While struct list is in some ways more flexible, switching legacy code to use struct list is not always viable. These macros at least reduce the amount of open-coded lists.

dix: use helper functions in EventIsDeliverable

Proximity events don't have an XI2 type and caused error messages in the log when trying to get the event filter. Use this opportunity to clean up the code, instead of manually setting the fields that GetEventFilter requires use EventTo(XI2[ XI|Core]) instead.

commit 799879797505a5e891ccaec2bea73fd838e94b7a
dix: abstract XI2 filter mask lookup

Don't access the xi2mask bytes directly or calculate the offsets manually, use a few helper functions instead. XI2 masks are a bit weird in the event handling code since they slot onto the legacy code. For core/XI 1.x events, the event mask is a CARD32. That mask is used together with the event filter (also 32 bit) to determine if event delivery should be attempted. XI2 masks are of arbitrary size and their mask is simply the byte of the mask that contains the event mask. Likewise, the filter is a single byte matching that mask. Provide helper functions get these bytes and masks in the right order instead of accessing them manually.

EventIsDeliverable should be part of this cleanup patch but it will be gutted with the next patch.

Revert "Attempt to add the 'mouse' driver in more situations."

This reverts commit 43d9edd31e31b33b9da4a50d8ab05004881c8d5a.

This commit was introduced in the 1.2 cycle when hotplugging was less than ideal (i.e. it didn't exist). From the commit message:

Always add a mouse driver instance configured to send core events, unless a core pointer already exists using either the mouse or void drivers. This handles the laptop case where the config file only specifies, say, synaptics, which causes the touchpad to work but not the pointing stick.

We don't double-instantiate the mouse driver to avoid the mouse moving twice as fast, and we skip this logic when the user asked for a void core pointer since that probably means they want to run with no pointer at all.

To get this case above, a user would need to disable hotplugging _and_ have a xorg.conf that only references one device. This is possible, but not a use-case
we should worry about too much now.

config: add udev/systemd multi-seat support

Add support for multi-seat-aware input device hotplugging. This implements the multi-seat scheme explained here:

http://www.freedesktop.org/wiki/Software/systemd/multiseat

This introduces a new X server switch "-seat" which allows configuration of the seat to enumerate hotplugging devices on. If specified the value of this parameter will also be exported as root window property Xorg_Seat.

To properly support input hotplugging devices need to be tagged in udev according to the seat they are on. Untagged devices are assumed to be on the default seat "seat0". If no "-seat" parameter is passed only devices on "seat0" are used. This means that the new scheme is perfectly compatible with existing setups which have no tagged input devices.

Note that the -seat switch takes a completely generic identifier, and that it has no effect on non-Linux systems. In fact, on other OSes a completely different identifier scheme for seats could be used but still be exposed with the Xorg_Seat and -seat.

I tried to follow the coding style of the surrounding code blocks if there was any one could follow.

xfree86: factor out adding/removing a device from the input device array

No functional changes, just readability improvements. This also gets rid of the count variable. Count was just used for resizing the null-terminated list. Since we're not in a time-critical path here at all we can afford to loop the list multiple times instead of keeping an extra variable around.

os/log: Add LogVHdrMessageVerb and friends

LogVHdrMessageVerb allows a custom header to be inserted in a log message, between the Log system’s MessageType string, and a formatted variable message body. The custom header can itself be a formatted variable string.

These functions can be used, for example, by driver abstraction layers to format specific driver messages in a standard format, but do it in a way that is efficient, obeys the log-layers verbosity settings, and is safe to use in signal handlers (because they don't call malloc), even for types besides X_NONE.

fb: Fix memcpy abuse

The memcpy fast path implicitly assumes that the copy walks left-to-right. That's not something memcpy guarantees, and newer glibc on some processors will indeed break that assumption. Since we walk a line at a time, check the source and destination against the width of the blit to determine whether we can be sloppy enough to allow memcpy. (Having done this, we can remove the check for reverse as well.)

On an Intel Core i7-2630QM with an NVIDIA GeForce GTX 460M running in NoAccel, the broken code and various fixes for -copywinwin{10,100,500} gives (edited to fit in 80 columns):

1: Disable the fastpath entirely
2: Replace memcpy with memmove
3: This fix
4: The code before this fix

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>258000</td>
<td>269000 (1.04)</td>
<td>544000 (2.11)</td>
<td>552000 (2.14)</td>
<td>Copy 10x10</td>
</tr>
<tr>
<td>21300</td>
<td>23000 (1.08)</td>
<td>43700 (2.05)</td>
<td>47100 (2.21)</td>
<td>Copy 100x100</td>
</tr>
<tr>
<td>960</td>
<td>962 (1.00)</td>
<td>1990 (2.09)</td>
<td>1990 (2.07)</td>
<td>Copy 500x500</td>
</tr>
</tbody>
</table>

So it's a modest performance hit, but correctness demands it, and it's probably worth keeping the 2x speedup from having the fast path in the first place.

randr: Compare all the bytes in RRPostPendingProperties

RRPostPendingProperties tries to compare the pending and current property values to decide whether they're actually changing. However, it does this using a memcmp that passes in pending_value->size as the number of bytes. This is actually the number of elements, where each element is (pending_value->format / 8) bytes long. This causes the pending value to not be propagated if the first pending_value->size bytes are the same and only the end of it is changing.

Fix this by computing the total number of bytes to compare in the memcmp.

Terminate the log with one last message.

Instead of just closing the log when everything is done, put one more message in stating that we're actually terminating. Users or scripts that look at the Xorg.log will then know that a) the server has terminated properly and b) why the server terminated (to some degree, given that most real-world errors will be caused by AbortServer()).
configure: set default xkb rules to evdev on Linux

If config/udev was enabled, this would default to base, which means that after regen the devices would get the wrong rules, and hilarity would ensue.

It's probably safe to default to evdev unconditionally on Linux by now.

Reviewed-by: Daniel Stone <daniel@fooishbar.org>

config: don't fail if a device vanished by the time we managed to look at it

The nature of hotplug is that a device we enumerated might already be gone by the time we look at it, so don't assume otherwise.
config: limit the kernel subsystems we look for devices in

Don't enumerate/monitor all devices of the system (since that can be quite a few), but limit our search to devices from the "input" subsystem, as well as the "tty" subsystem (to cover Wacom tablets).

This should make X start up a bit faster and reduce the number of unnecessary wake-ups of the X server.

config: process udev "changed" and "add" events in the same code paths

udev gives no guarantee that before each "changed" event for a device there's an "add" event, or that before each "remove" is an "add", or that before each "add" there was no "add" already and so on. Users can trigger these events at any time with "udevadm trigger", and netlink is a lossy transport, hence the events can come in unexpected ordering.

With other words: regardless which event is generated, the X server must not choke on it and make the best of it, hence make sure that if we get an "add" event for an existing device we don't add the device a second time.

XQuartz: Fix a memory leak with surfaces that a new test found.

xp_destroy_surface was called with a surface id of 0, due to some premature cleanup that set it to 0. This means the surfaces weren't being destroyed until the window was.

The code that did that was: pDRIDrawablePriv->sid = 0;

In long running applications this leak may or may not have been harmful. With the old libGL the surfaces weren't destroyed until the context was destroyed or a new context created. In the new libGL they are reference counted, and released much sooner, so we ran into a resource leak more noticeably with some tests.

Make the Apple DRI code dispatch events to the client(s) for destroyed surfaces, when a resource is destroyed. This seems to work in my tests, however this clearly wasn't working for a while, so bugs may result in the future if it enables some new (unexpected) side effects.

Also add a few helpful comments to aid in understanding the code in the future.

Tested with the test suite, Pymol, and various Mesa demos.

XKB: Work around broken interps from old xkbcomp

Bugfix for broken xkbcomp: if we encounter an XFree86Private action with
Any+AnyOfOrNone(All), then we skip the interp as broken. Versions of
xkbcomp below 1.2.2 had a bug where they would interpret a symbol that
couldn't be found in an interpret as Any. So, an
XF86LogWindowTree+AnyOfOrNone(All) interp that triggered the PrWins
action would make every key without an action trigger PrWins if libX11
didn't yet know about the XF86LogWindowTree keysym. None too useful.

We only do this for XFree86 actions, as the current XKB dataset relies
on Any+AnyOfOrNone(All) -> SetMods for Ctrl in particular.

See xkbcomp commits 2a473b906943fffd807ad81960c47530ee7ae9a60 and

Test: Input: Only ever set up to MAX_VALUATORS valuators

Previously, the input tests were working up to sizeof(mask) * 8, which
could be more than the arrays; the latter only being sized as
MAX_VALUATORS.

Hypothetically, if you were switching the stored valuator values to
double instead of uint32_t, and you attempted to set the 39th member of
a MAX_VALUATORS-sized (36) array, you’d probably end up smashing
ev->key_repeat into oblivion and then tripping the check for invalid flags because you haven't yet put XIPointerEmulated into the valid flags for XI_Motion. Probably.

XKB: Add debug key actions for grabs & window tree

Add four new private XKB actions for debugging:
* PrGrbs: print active grabs to the log file
* Ungrab: ungrab all currently active grabs
* ClsGrb: kill clients with active grabs
* PrWins: dump the current window tree to the log file

To use these, you need to modify your XKB maps, e.g. the following to have Ctrl+Alt+(F9-F12) mapped to the above:
- compat/xfree86:
  interpret XF86LogGrabInfo {
    action = Private(type=0x86, data="PrGrbs");
  };
  interpret XF86Ungrab {
    action = Private(type=0x86, data="Ungrab");
  }
  interpret XF86ClearGrab {
    action = Private(type=0x86, data="ClsGrb");
  }
  interpret XF86LogWindowTree {
    action = Private(type=0x86, data="PrWins");
  }

- symbols/pc:
  key <FK09> { type="CTRL+ALT", [ Return, XF86LogGrabInfo ] };
  key <FK10> { type="CTRL+ALT", [ Return, XF86Ungrab ] };
  key <FK11> { type="CTRL+ALT", [ Return, XF86ClearGrab ] };
  key <FK12> { type="CTRL+ALT", [ Return, XF86LogWindowTree ] };

At the moment, this only works if the grabbing client continues to call
AllowEvents, as the server does no event processing at all when a device
is frozen.

Cygwin/X: Preserve client area size and position on Windows window style change

When the style changes, adjust the window size so the client area remains the same.

Otherwise the window size may change when sizing is reflected from Windows to X, and
some windows are drawn expecting them to be exactly the requested size (e.g. the
gmplayer control window)

Use DeferWindowPos to delay the resize to preserve client area on WM_STYLECHANGING
until after the style change has actually happened in WM_STYLECHANGED

As a consequence of this, we need to be more careful to create windows with exactly
the requested placement and client area initially, so the client area matches what
the X client requested

Also synchronize the X windows idea of the placement of a window which Windows is allowed to place

glx: Fix fbconfigs with no corresponding visual

There are, in general, more fbconfig depths than visual depths. fbconfigs need not support Window rendering, however any that do must have an associated visual ID (which we got right), and any that do not must not claim GLX_WINDOW_BIT in GLX_DRAWABLE_TYPE (which we got wrong).

Fixes piglit/glx-fbconfig-sanity, assuming you have a sufficiently recent piglit, as that test formerly wrongly required pixmap-capable fbconfigs to have a visual.

v2: Additional check for fbconfigs that didn't have GLX_WINDOW_BIT in the first place, from previous patch by Jon TURNLEY; also, also clear ->visualID.

XQuartz: Fix Makefile dependencies

automake generates _DEPENDENCIES from _LIBADD, but it strips out variables. This resulted in not relinking if some components were rebuilt (like libdix, libos, etc).
XQuartz: Make a call to activateIgnoringOtherApps in our NSApplicationActivatedEventType handler

In addition, this change will not call into the X11 activation unless an X11 window was active when we deactivated. We can't rely on the event and current key windows because the key window will be nil until activated, and the event will only reference the window if the window was clicked (whereas it will be nil if we activated via dock or cmd-tab).

Create sdksyms.dep in the right place at configure time

sdksyms moved from hw/xfree86/loader to hw/xfree86, so the configure-time create of sdksyms.dep needs to reflect that change. Otherwise, make might be confused by a missing file and (more importantly to me) hw/xfree86/loader/sdksyms.dep will be left around after 'make clean' causing 'make distcheck' to fail.

xfree86: Remove libxorg convenience library to speed up build

libxorg.la served to collect all the Xorg convenience libraries into one
massive archive to link into Xorg. This made things easy for symbol
resolution, but it tremendously slowed down the build since each change
caused libxorg.la to be rebuilt. This is an extremely slow process of
extracting all the objects from the sub-libraries and recombining them.

Instead, the archives are linked directly into Xorg. The order of the
libraries had to be tweaked a bit to make symbols resolve correctly with
the lower level code moving later in the link command.

As a side effect, since the dtrace objects are now being linked
directly into Xorg, we don't need the SPECIAL_DTRACE_OBJECTS hack to
add them twice.

Install target dbs alongside generated documents

This matches a change in xorg-sgml-docs whereby the masterdb will look for
the target dbs into the same location as the generated documents.

The target dbs are now installed alongside the generated documents.
Previously they are installed in $prefix/sgml/X11/dbs alongside masterdb which
has the potential of installing outside the package prefix and cause
distcheck to fail when user does not have write permission in this package.

Requires XORG_CHECK_SGML_DOCTOOLS(1.8) which was released 2011-06-11

dmx/examples: Fix missing key_click_percent assignment.

Thanks to gcc's -Wunused-but-set-variable, stop ignoring the percent
parameter, and add it to the XKeyboardControl structure before the
XChangeKeyboardControl call.

This warning goes away accordingly:

| CC xbell-xbell.o |
| xbell.c: In function ‘main’: |
| xbell.c:74:22: warning: variable ‘percent’ set but not used [-Wunused-but-set-variable]|
hw/dmx: Stop using variables for text widgets.

They are unused in the sense they're not getting any callback set up, so there's no point in storing them into variables. Keep the initial alignment of the parameters to try and reduce the diff noise.

Those warnings go away accordingly:

|   CC     xdmxconfig-xdmxconfig.o
| xdmxconfig.c: In function ‘main’:
| xdmxconfig.c:881:29: warning: variable ‘quittext’ set but not used [-Wunused-but-set-variable]
| xdmxconfig.c:880:53: warning: variable ‘abouttext’ set but not used [-Wunused-but-set-variable]

xfixes: Remove unused variable.

The last use of pScreen in ProcXFixesSetPictureClipRegion was removed in aa7096ca6f108e399d9916639cf20c57f9776305 so remove it entirely.

xfixes: Mark some variables as unused.

Calling Unwrap() is just a way of performing an assignment while keeping a backup of the original value. In the CursorCloseScreen function, the backup value doesn't seem to be useful, but Unwrap() is used anyway (probably to stay in line with other functions). As a consequence, mark those variables as unused.

The following warnings go away accordingly:

|   CC     cursor.lo

commit 408ed1576dbcf93f4bd27bd3b66917b1bbab2226b
xkb: Fix case checks for Latin 8.

Spotted by -Wlogical-op:
| CC     xkbfmisc.lo
| xkbfmisc.c: In function '_XkbKSCheckCase':
| xkbfmisc.c:104:3: warning: logical 'and' of mutually exclusive tests is always false [-Wlogical-op]
| xkbfmisc.c:118:3: warning: logical 'and' of mutually exclusive tests is always false [-Wlogical-op]

A quick look at the keysymdef.h file (from xproto) suggests the implementor chose to use interval checks to determine the case, but since lines weren't sorted by codepoints, checks were quite wrong.

Implement _XkbKSUpper/_XkbKSLower checks based on a grep for CAPITAL/SMALL (respectively) on the Latin 8 part of the said file.

dix: drop x/y back into the right valuators after transformation.

If the matrix is used for rotation, the coordinates affected may change.
e.g. a valuator mask of (x, nil) becomes [x, lasty] and is rotated to
[lasty, x]. Since the second value was unset, we would not drop x back into
the mask, resulting in a loss of movement.

Thus, drop any value that changed after applying the matrix into the
valuators. Thus, the example above becomes
(x, nil) [x, lasty] [lasty, x] (lasty, x)

Date: Tue May 24 16:02:42 2011 -0700

randr: check rotated virtual size limits correctly

Commit d1107918d4626268803b54033a07405122278e7f introduced checks to
the RandR path that cause RRSetScreenConfig requests to fail if the
size is too large. Unfortunately, when RandR 1.1 rotation is enabled
it compares the rotated screen dimensions to the unrotated limits,
which causes 90- and 270-degree rotation to fail unless your screen
happens to be square:

X Error of failed request:  BadValue (integer parameter out of range for operation)
  Major opcode of failed request:  153 (RANDR)
  Minor opcode of failed request:  2 (RRSetScreenConfig)
  Value in failed request:  0x780
  Serial number of failed request:  14
  Current serial number in output stream:  14

Fix this by moving the check above the code that swaps the dimensions
based on the rotation.

commit c05c8640f13708384e77579e7714ca846fa93f5c
Author: Oleh Nykyforchyn <oleh.nyk@gmail.com>
Date:   Thu May 19 09:39:52 2011 +0300

xfree86: Allow "MatchLayout" statements in config files

Usage example (tested on a dual-seat PC):
Section "InputClass"
    Identifier "keyboard-all"
    MatchIsKeyboard "on"
    MatchDevicePath "/dev/input/event*"
    MatchLayout "!GeForce!Matrox"
    Driver "evdev"
    Option "XkbLayout" "us"
Option "XkbOptions" "terminate:ctrl_alt_bksp"
EndSection

It disables auto keyboard configuration for layouts "GeForce" and "Matrox". Note that "" in patterns means "no Layout sections found", e.g.

MatchLayout "GeForce|"
is "in layout GeForce or without explicit layout at all".

Date:   Fri Apr 15 10:07:10 2011 +1000

input: remove DDX event list handling

The current approach to event posting required the DDX to request the event list (allocated by the DIX) and then pass that list into QueuePointerEvent and friends.

Remove this step and use the DIX event list directly. This means that QueuePointerEvent is not reentrant but it wasn't before anyway.

XKB: Fix sense inversion for core MapNotify events

Due to an unfortunate sense inversion incident while switching from a if (foo) { ... } to if (!foo) continue; style in f06a9d, we punished any client who attempted to use XKB to restrict the MapNotify events they wanted by sending them exactly the events they _didn't_ want, and nothing else.

NewKeyboardNotifies (coming from a client setting the map with an XKB request, when switching between master devices, etc) weren't affected, but this would impact anyone using xmodmap-style core requests. Could explain a fair bit.

Clarified the comments while I was at it.

Author: Daniel Stone <daniel@fooishbar.org>
Date:   Tue May 3 03:07:50 2011 +0100

XKB: Send XKB events for all devices to all clients

We were using XIShouldNotify(client, device) as a test for whether or not to send XKB map/state/etc changed events, which limits it to only sending events for the current ClientPointer/ClientKeyboard for that client. While this makes perfect sense for core events (e.g. MappingNotify), XKB events carry a device ID, so are safe to send to all clients for all devices.

XKB: Remove duplicate keymap-copying loop

Previously we had:
   foreach (device + slaves of device) {
      XkbCopyDeviceKeymap(i, device);
      [...] 
   }
   if (device was last slave of its MD) {
      XkbCopyDeviceKeymap(master, device);
   }
and now:
   foreach (device + slaves of device + MD if device was last slave) {
      XkbCopyDeviceKeymap(i, device);
      [...] 
   }

As an extra bonus, when changing the keymap on a slave device, we now ensure the LED info on the master is kept in sync.

Date:   Sat Mar 5 17:34:42 2011 +0000

Cygwin/X: Handle failure during winScreenInit()

Handle failure during winScreenInit() a bit more cleanly, rather than crashing

This avoids a crash with 'XWin -fullscreen -screen 0 @2 -screen 1 @1'

Also document that fullscreen may only be applied to one screen.

Cygwin/X: Make winOverrideStyle() thread-safe

Make winOverrideStyle() thread-safe

winOverrideStyle() is called from the internal WM client thread.

Accessing server-internal data structures to get window name and
class is not safe, as there is no lock to ensure we do not collide
with these data structures being updated in the server thread.

Rewrite so the internal client thread uses X client calls to
obtain this data safely

Cygwin/X: Internal WM workaround for Java AWT bug

Java applications using AWT on JRE 1.6.0 break with non-reparenting WM's AWT
doesn't explicitly know about (See sun bug #6434227)

XDecoratedPeer.handleConfigureNotifyEvent() only processes non-synthetic
ConfigureNotify events to update window location if it's identified the
WM as a non-reparenting WM it knows about (compiz or lookingglass)

Rather than tell all sorts of lies to get XWM to recognize us as one of
those, simply send a synthetic ConfigureNotify for every non-synthetic one

configure: Let configure --enable/disable-aiglx control building of AIGLX for all DDXs

Let configure --enable/disable-aiglx control building of AIGLX for all DDXs. Currently
we can't use --enable/disable-aiglx to control if Xwin DDX is built with AIGLX enabled,
as at the moment it's forced off if we aren't building the X.Org DDX DRI or DRI2 loader

Rearrange things a bit, introducing a new automake conditional, AIGLX_DRI_LOADER to
specifically indicate if the X.Org DDX DRI/DRI2 loader convenience library should be
built, and replace the previous X.Org DDX-specific uses of the AIGLX conditional with that

As before, AIGLX_DRI_LOADER is only enabled if --enable-glx, --enable-aiglx and at least one
of --enable-dri or --enable-dri2 are enabled

This allows the general conditional AIGLX to control if AIGLX is built for the XWin DDX as
well

The C #define AIGLX set by AC_DEFINE(AIGLX) seems to be obsolete, I can't find anything
which checks it
Updated for ajax's "glx: Make --disable-dri not disable AIGLX" patch, which allows DRI2 to be enabled independently of DRI1

Fix trapezoid and triangle rendering to windows

For fbAdd{Traps,Triangles}() and fbRasterizeTrapezoid() this is just a matter of adding the image offsets to the trap offsets.

For fbShapes, the story is more complicated:

The recently added pixman API did not allow offsetting trapezoids. Instead, it would use x_dst and y_dst in such a way that the effect was to only offset the source image.

In pixman 0.21.8, this API has changed such that all the traps are conceptually rendered to an infinitely big image, and the source and destination coordinates are then aligned with (0, 0) of that image. This means offsetting dst_x and dst_y will now offset the entire drawing, which is similar to how other composite functions work.

This patch then changes fbComposite{Trapezoid,Triangles} such that the source image is aligned with the shapes, and the destination coordinates offset according to drawable->{x, y}.

Add RegionInitBoxes(), and fix some buggy callers of RegionInit().

The interface to RegionInit():

RegionInit (RegionPtr pReg, BoxPtr rect, int size);

is very confusing because it doesn't take a list of boxes, it takes *one* box, but if that box is NULL, it initializes an empty region with 'size' rectangles preallocated.

Most callers of this function were correctly passing either NULL or just one box, but there were three confused cases, where the code seems to expect a region to be created from a list of boxes.

This patch adds a new function RegionInitBoxes() and fixes those instances to call that instead.

And yes, the pixman function to initialize a region from a list of boxes is called init_rects() because pixman is also awesome.

V2: Make RegionInitBoxes() return a Bool indicating whether the call succeeded, and fix the callers to check this return value.

Track damage for fbTrapezoids() and fbTriangles().

These calls no longer go through the CompositePicture() hook, so damage was no longer generated for them. This patch simply damages the entire destination clip region.

It would be possible to generate tighter damage for certain operators such as Over and Add, where blank source pixels have no effect on the destination, but given that virtually all trapezoid rendering takes place on pixmaps, it's unlikely that anybody would actually benefit from this optimization, and the miTrapezoidBounds function did sometimes show up on profiles, probably because it does several divisions per trapezoid.

V2: Call DamageRegionProcessPending() - pointed out by Michel Dänzer.
V3: Call DamageRegionProcessPending() *after* rendering - pointed out by Maarten Maathuis

linux: Retry VT ioctls while errno == EINTR

When the smart scheduler is enabled, the VT ioctls (particularly
VT_WAITACTIVE) can be interrupted by the smart scheduler's SIGALRM.
Previously, this caused the server to immediately continue on to
ScreenInit, almost certainly causing a crash or failure because the X
server that owned the VT hadn't finished cleaning up. As of commit
7e965a300c9eddcc1acacf9414cfe3e589222a8, it causes a FatalError
instead.

Retrying the ioctl as long as it fails with errno == EINTR fixes the
problem and allows server regenerations to trigger VT switches that
actually succeed.

by 0x4E8190: XISendDeviceHierarchyEvent (xichangehierarchy.c:61)

Conditional jump or move depends on uninitialised value(s)

by 0x4E8190: XISendDeviceHierarchyEvent (xichangehierarchy.c:61)

Set the type of dummyDev to SLAVE. The jump listed above comes from a check
to IsMaster() in GetEventMask() that would then set the
XIAllMasterDevices mask.
Hierarchy events can only be set for XIAllDevices so the above IsMaster()
check had no effect and the device type doesn't really matter anyway beyond
shutting up valgrind.

Also initialize dummyDev to 0 to ease future debugging.

damage: use DamageReportDamage for the initial borderClip damage report

Instead of using DamageDamageRegion for reporting the first (virtual) damage in ProcDamageCreate that covers the borderClip of the drawable window, use a function DamageReportDamage directly (previously called damageReportDamage). This avoids sending all other damage listeners a full window update when a new damage object is created.

As this patch makes DamageReportDamage a public interface, the function has been moved into the part of the file that contains all the other public functions. The function has not been otherwise modified.

xfree86: xv: set pointers to NULL in xf86XVFreeAdaptor

As a good practice and for eventual double frees.

The reason of this patch is due the resilience of xf86XVInitAdaptors, where
for any adaptor failure it's able to keep trying registering the following
ones.

I discussed briefly with Pauli and Ville about a bigger refactoring of such
function, doing it in a way to return instantly when a failure happens; after
all that's how mostly of the other driver functions work. Instead, we just
thought that xf86XVInitAdaptors is wise and cool, and eventually other driver
functions should be even following the main idea of resilience.

xfree86: xv: fix double free in xf86XVFreeAdaptor

When xf86XVFreeAdaptor is called more than once in xf86XVInitAdaptors (it may,
but not often), the conditional being changed in this patch will always take
true path and will keep freeing pAdaptor->pAttributes, thus letting the system
error-prone.

This patch fixes a problem by checking for a pointer instead of the number of attributes. Such a pointer will be deallocated when `xf86XVFreeAdaptor` is called first and will not let the code re-run in the following calls. This is a bit similar to how the surrounding code is already doing.

xkb: Introduce helper function to handle similar reallocations.

This is preparation for a memory leak fix and doesn't contain any functional changes.
Note that two variables are generally used for reallocation and clearing of arrays: geom->sz_elems (reallocating) and geom->num_elems (clearing). The interface of XkbGeomRealloc is deliberately kept simple and it only accepts geom->sz_elems as argument, because that is needed to determine whether the array needs to be resized. When the array is cleared, we just assume that either geom->sz_elems and geom->num_elems are synchronized to be equal or that unused elements are cleared whenever geom->num_elems is set to be less than geom->sz_elems without reallocation.

glx: Remove ->forceCurrent from the context vtable

All the implementations of makeCurrent and forceCurrent are identical, so just use makeCurrent everywhere.

Reviewed-by: Eric Anholt <eric@anholt.net>
glx: Reimplement context tags

This would let you do a constant-time context lookup, but if that's your performance problem you have two problems. Just use the context's XID as the tag value instead.

In order to do this, we have to defer destroying a context until it actually goes unreferenced, as you're allowed to mention a context tag after you've (ostensibly) destroyed the context, as long as it's still your current context. Thus, change DestroyContext to merely mark the context as dead if it's a current context, and call down to actual resource destruction (and XID reclamation) in StopUsingContext.

Also, stop trying to delete context state from DrawableGone. This was always broken, as GLX does not say that contexts are destroyed when their drawables are destroyed. But with the above change to defer context destruction, this would trigger a server crash on client exit as we'd free the context state twice.

commit 30d6947cee714385cf62a40ea6fa6d2e68388c78
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Mar 7 14:53:28 2011 -0500

glx: Fix _glapi_add_dispatch

We never need to generate stubs, because those conditions can't happen in the server. Yank that code out, but keep the bookkeeping for which extension functions are registered so the DRI driver doesn't get confused.

As a pleasant bonus, we're now friendlier for environments like selinux that make runtime code generation difficult, and we're portable to more arches since we don't have to port the assembly stubs.

Fixes the following clutter conformance tests (indirect rendering, llvmpipe driver):

    test-cogl-backface-culling
    test-cogl-materials
test-cogl-readpixels
test-cogl-texture-mipmaps
test-cogl-texture-get-set-data
test-cogl-viewport

Author: Adam Jackson <ajax@redhat.com>
Date: Wed Mar 2 12:30:22 2011 -0500
glx: Remove noop dispatch table

We can never hit this, because the indirect GLX dispatch code always forces a current context and checks that it's non-NULL before calling into the dispatch table. If it's _not_ null, then _glapi_set_context will call into the driver, which is responsible for calling _glapi_set_dispatch to make sure the dispatch table is non-NULL.

Also remove _glapi_set_warning_func and friends, since we can no longer call them even from dead code.

Merge remote-tracking branch 'airlied/xinerama-cleanup'

Add generalized unit test support using util-macros.

A handful of modules have begun adding unit test programs. These macros will help providing a consistent interface which will help package builders and developers to manage the functionality.

XORG_ENABLE_UNIT_TESTS will turn on/off unit testing, regardless of how it is implemented. The default (yes/no) can be specified by each module. It can be used by itself if glib or -wrap support is not needed.

XORG_WITH_GLIB will probe the system for glib-2.0. A different version can be specified in each module. It will consult XORG_ENABLE_UNIT_TESTS but can be used by itself in contexts other then unit testing. The default (yes/no) can be specified by each module.

XORG_LD_WRAP will probe the linker for -wrap support. It will consult XORG_ENABLE_UNIT_TESTS but can be used by itself in contexts other then unit testing.

configure options:
--enable-unit-tests Enable building unit test cases (default: auto)

Revert "dix: Remove usage_hint from pixmaps, store it in ->drawable.class"

This reverts commit 1564c82417d201de5b9a5ec5e7aa4ef14c45fbad.

The drivers used the top bits of the usage_hint to store driver private flags (intel, radeon, nouveau).

With EXA we need to get at this data so if we migrate the pixmap we can create the correct type of pixmap in the driver, however this commit truncates the usage_hint into 8-bit class and loses all the good stuff.

When XDMCP -from is specified, only register the requested address

When XDMCP -from is specified, only register the requested address, rather than the requested address, and any others we have of different address families to the requested address.

e.g. if we have 4 interfaces with both IPv4 and IPv6 addresses (which are not IPv6 mapped IPv4 addresses), using -from with one of those IPv4 addresses currently means only that IPv4 address, and all IPv6 addresses are used in the connection data in XDMCP REQUEST packet.

Removing TriStrip and TriFan from the picture screen

These functions no longer go through the screen vtable, so remove them and fix up the various wrappers.

Absorbing miTriStrip() into CompositeTriStrip()

There is no need to virtualize this function that nobody cares about.

Absorbing miTriFan() into CompositeTriFan()

There is no need to virtualize this function that nobody cares about.
mi/misprite: use memory management provided by dixRegisterPrivateKey

The record allocated by miSpriteDeviceCursorInitialize was not being released.

This patch makes misprite use dixRegisterPrivateKey with the record size argument, which handles the memory management issues. miSpriteDeviceCursorInitialize is restructured to initialize pCursorInfo only if miDCDeviceInitialize succeeds. The record itself is zeroed on cleanup to ensure that the assumptions in the code still hold.

commit 57b35adaed112520c3b3b2fbad13cf5a91cd6652
Author: Søren Sandmann Pedersen <ssp@redhat.com>
Date:   Wed Mar 9 13:57:25 2011 -0500

Remove geometry arguments from miSourceValidate()

The only user of the geometry coordinates is the software sprite code, which uses them to remove the pointer whenever the window beneath is being used as a source. However, using Window pictures as a source is
extremely rare (let alone *partial* windows), so there is no harm done in just validating all of the drawable.

Additionally, the miSourceValidate() function was buggy in at least three respects:

(a) It added drawable->{x,y} before calling down, which is wrong since the misprite code already adds them in its check. (Alternatively, the misprite code is wrong, but there are actual users who would notice if that code was broken).

(b) It didn't account for the width of the interpolation filter, so if the Picture had a bilinear or convolution filter, the edges surrounding the source area would not be validated.

(c) It didn't validate alpha maps.

Finally, computing the bounding box of the transform on every composite request was a real performance issue in pixman, so presumably it could be one here as well.

This patch changes miSourceValidate() to simply validate all of the underlying drawable.

loader: Don't distribute sdksyms.c and make it depend on the config

sdksyms.c is constructed by processing header files with the C
preprocessor. Its contents will vary depending on the precise
configuration options, and so must depend on the config header
files.
We have one header file which is always changed when any config option is modified called do-not-use-config.h (which may want a different name at some point), so make sdsyms.c depend on that file.

Also, we don't want to ship this file; it always needs to be built. So, include it in the nodist_libloader_la_SOURCES list to prevent it from being added to the tarball.

Move miTrapezoids() into fb as fbTrapezoids()

The main consumer of trapezoids, cairo, is using the Trapezoids request, which is currently implemented in the miTrapezoids() function. That function splits the request into smaller bits and calls lower level functions such as AddTrap.

By moving the implementation of the whole request into fb, we can instead call pixman_composite_trapezoids() to do the whole request in one step.

There are no callers of miTrapezoids in any of the open source drivers, although exa and uxa have their own copies of the function.

hw/dmx/doc: Add explicit dependency for all doxygen output files

Instead of listing one of the doxygen output files and depending on sequential execution to ensure that the other files were present before make checked for them, create explicit dependencies so that make will not check for the additional files until after doxygen has been run.

This allows parallel make to work correctly in this directory.

Signed-off-by: Keith Packard <keithp@keithp.com>
hw/xwin: Look for gl spec files in $(srcdir) or 

Tarballs include the downloaded gl spec files, which will end up in $(srcdir). But, git-based builds will not have them at all and will need to download them from opengl.org. They'll land in the build directory instead of $(srcdir), and so we need to allow them to be in either place.

This change checks for the files in $(srcdir), linking them to . if present. Otherwise, it downloads them from opengl.org.

A suggested better solution is to have Mesa install these files somewhere.

record: avoid crash when calling RecordFlushReplyBuffer recursively

RecordFlushReplyBuffer can call itself recursively through
WriteClient->CallCallbacks->_CallCallbacks->RecordFlushAllContexts
when the recording client's buffer cannot be completely emptied in one
WriteClient. When a such a recursion occurs, it will not be broken out
of which results in segmentation fault when the stack is exhausted.

This patch adds a counter (a flag, really) that guards against this
situation, to break out of the recursion.

One alternative to this change would be to change _CallCallbacks to
check the corresponding counter before the callback loop, but that
might affect existing behavior, which may be relied upon.

commit b636893137da1695e235e3a9354bf9243fdddc2
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Tue Feb 22 13:43:28 2011 +0000

Input: Don't freeze unrelated devices in DeliverGrabbedEvent

When delivering an event to a device grabbed with SyncBoth, DeliverGrabbedEvent walks the device tree looking for associated devices to freeze them. Unfortunately, it froze all devices instead of just the paired device, and the previous fix in 4fbadc8b17237f3c would still break if the same client had a non-SyncBoth grab on another unrelated master device.

Fix this by completely ignoring devices that aren't our paired device.

Move master/lastSlave out of the union into separate fields.

The removal of the double-use will cause some subtle bugs as some conditions to check for the dev->u.master case were broken and also evaluated as true if lastSlave was set (instead of master).

Also breaks the input ABI.

dix: add MASTER_ATTACHED as allowed type for GetMaster().

In some cases, we don't know/care whether we want the master pointer or keyboard for a device. Add a new type MASTER_ATTACHED to return the master this device is attached to.
Switch to use IsFloating()

This is not a straightforward search/replacement due to a long-standing issue.

dev->u.master is the same field as dev->u.lastSlave. Thus, if dev is a master device, a check for dev->u.master may give us false positives and false negatives. The switch to IsFloating() spells out these cases and modifies the conditions accordingly to cover both cases.

commit a73c28f0bdaaf1c5cb8129179188a99c0ca052e2
Author: Justin Dou <Justin.Dou@intel.com>
Date:   Thu Feb 10 16:27:29 2011 -0500

Replace malloc with calloc to initialize the buffers[] as NULL in do_get_buffers function
The calling for allocate_or_reuse_buffer may fail due to some reason, e.g. out of memory. If the buffers[] were not initialized to be NULL, the following err_out may try to access an illegal memory, which will cause X crash afterward.

xkb: if the keymap failed to compile, load the default keymap instead.

We really need symbols, compat, keynames, vmods and types for a sensible keymap.

Try this in your xorg.conf.d snippets for all keyboards:
us(nodeadkeys) doesn't exist so xkbcomp provides everything but the symbols
map. We say we want everything but don't _need_ anything, the server happily
gives us a keymap with every key mapped to NoSymbol. This in turn isn't what
we want after all.

So instead, require symbols, compat, keynames, vmods and types from the
keymap and if that fails, load the default keymap instead. If that fails
too, all bets are off.

commit 5678a41f6bc0ef8965bd50a88c5ef01ba7eb8b24
Author: Pauli Nieminen <ext-pauli.nieminen@nokia.com>
Date: Mon Jan 17 16:58:00 2011 +0200
xf86/xv: Fill color key on expose

If window gets exposed but clipboxes doesn't change drivers would avoid color key fill. This makes XResizeWindo&co to lose colorkey if background is painted.

To help drivers to avoid filling colorkey for each put server can provide helper function if there is exposed areas. Server can subtract exposed areas from filled region.

As a side effect we can avoid useless color key fills if window only moves in screen without background fills.

v3:
* Change tracking to filled area to account for client initiated clip changes
* Make overlaid XvPutImage behavior like textured XvPutImage or PutImage
* Make region dynamically allocated only when required.

v4:
* Simplify new driver interface to reduce duplicate code

dr/xfree86/modes: Be sure to only use new EDID for physical output dimensions

The EDID processing regards physical dimensions of 0mm x 0mm as
invalid. Previously the old values for height and width would be
preserved if none of the physical dimension specifications in the new
EDID were considered valid.

This will come up in particular if first a monitor is connected to an
output, and then a projector is connected. Since projectors generally
report physical dimensions of 0mm x 0mm, this would result in the
projector claiming to have the physical dimensions of the monitor.

exa/mixed: Exclude frontbuffer from deferred pixmap handling.

- Apps like xterm can trigger a lot of fallback rendering.
- This can lead to (annoyingly) high latencies, because you have to wait for the block handler.
- You need a driver that doesn't directly access the front buffer to trigger this (NV50+ nouveau for example).
- Repeatedly doing dmesg on an xterm with a bitmap font will reveal that you never see part of the text.
- I have received at least one complaint in the past of slow terminal performance, which was related to core font rendering.
- This does sacrifice some throughput, roughly 33% slower.

resource: Remove expectID hack

This is clearly meant to short-circuit the (modestly) expensive resource lookup in LegalNewID. The problem is that long-lived clients will eventually run completely through their XID space and start asking XC-MISC for IDs to reuse. Once that happens, the comparison against expectID will always be true, and we'll no longer catch XID collisions at all.

xkb: after making changes to the xkb ctrls, copy them back into kbdfeed.

enabledCtrlsChanges nowhere near the usual event or config paths. So this condition always evaluated to false and the memcpy would thus never been hit. As a result, any modification to the XKB struct during XkbUpdateDescActions was not reflected in the kbdfeed ctrls. The flag that is set by XkbUpdateDescActions() if ctrls were changed are in enabledCtrls.

This mainly affected keyboard repeat control as XKB uses the kbdfeed ctrls, not XKB's perKeyRepeats, to determine if a key needs to be repeated. Thus, adding a "repeat= False" to the XKB map of any action did not have any effect.

Test case:
assign Mode_switch to any key that by default repeats, e.g. the menu key.

    key <COMP> {         [     Mode_switch ] };  

Then modify the Mode_switch action to not repeat the key.

    interpret Mode_switch+AnyOrNone(all) { 
        virtualModifier= AltGr;  
        useModMapMods=level1;  
        action= SetGroup(group=+1);  
        // Add this line  
        repeat= False;  
    };  

Though the flags are correctly reflected in the description loaded in the server, the change is not handed back to the kbdfeed struct and XKB will trigger softrepeats of this key.

This patch also adds two explanatory comments and an extra check, as this path may be hit before the CtrlProc for the kbdfeed struct is set.
Red Hat Bug 537708 <https://bugzilla.redhat.com/show_bug.cgi?id=537708>

Also fixes broken auto-repeat of the backspace key in the colemak layout (mapped to CapsLock).

Cygwin/X: DirectDraw engines shouldn't try to blit if the surface wasn't allocated

Fix winShadowUpdateDD(|NL) so we don't try to blit to primary surface if it didn't get allocated

(Intel drivers, in particular, seem to like to issue a WM_DISPLAYCHANGE during a suspend/resume cycle, but not allow surface to be allocated right then)

Also:
Use winReleasePrimarySurfaceShadowDD(|NL) in winFreeFBShadowDD(|NL) rather than open coding it
Don't mess about recreating surface if we're going to resize it anyhow

Cygwin/X: Deal with RANDR depth changes correctly in ShadowGDI drawing engine
Make ShadowGDI drawing engine only change the size of the screen pixmap/shadow framebuffer on an RANDR change, not the bpp/depth as well.

The server requires the screen pixmap's depth to be invariant.

Other drawing engines aren't quite as affected by this issue as they won't draw to the display, if it has changed colour depth, but probably still need some attention.

Cygwin/X: Generate RANDR change on WM_DISPLAYCHANGE for rootless modes

When RANDR resizing is enabled, generate an internal RANDR change when WM_DISPLAYCHANGE occurs in rootless modes for screens which occupy an entire monitor or the virtual desktop.

Store the monitor number and use that to handle WM_DISPLAYCHANGE for a
screen specified with '-screen @monitor'

In rooted mode, WM_DISPLAYCHANGE isn't relevant (except where display depth changes may cause problems). (A maximized screen window will get WM_SIZE to adjust it to the new monitor size)

In rooted fullscreen mode, WM_DISPLAYCHANGE shouldn't be seen, as we have the resolution we have selected for the fullscreen session)
(Could client randr requests be handled in fullscreen to cause a change of the fullscreen resolution?)

Don't bother do a RANDR resize if the dimensions aren't actually changing when WM_DISPLAYCHANGE is sent (should handle WM_DISPLAYCHANGE to size 0x0 that the intel driver seems to like to send)

Various debug output improvements

Also, remove the note that XWin can't handle display mode changes from the man page

Cygwin/X: Move QueryMonitor() out of windprocarg.c

Move QueryMonitor() out of windprocarg.c into a new file, winmonitors.c, as we use to use it from other places as well.
Cygwin/X: Remove an attempt at detecting if WM_DISPLAYCHANGE affects the X screen

Remove an attempt at the rather difficult optimization of detecting if WM_DISPLAYCHANGE affects any of the monitors which intersect the native window for the X screen.

We'll always act as if it does, which it probably usually the case.

Cygwin/X: Rather than storing calculated physical display sizes, calculate them when needed

(This stored calculation was wrong if -dpi came after -screen on the command line, anyhow)

Cygwin/X: Refactor framebuffer allocation/release in drawing engines

Refactor the drawing engines so we can explicitly allocate and release the framebuffer for a screen

Move the setting of dwPaddedWidth into the DDNL engine, so it is updated when the framebuffer changes size
Cygwin/X: Enable building of nativegdi and primaryfb engines to avoid further rusting

Some trivial build fixes required

Also fill out all function pointers for primaryfb engine

Also tidy up the man page section describing drawing engines.

Input: Prevent MD grabs from wandering on to other MDs

The code to set sync.other in DeliverGrabbedEvents is supposed to reset
sync.other for a paired MD to the grab under consideration, but was
rather optimistic in resetting sync.other for _all_ devices.

This would fall apart given two sets of MDs (A paired with B, Y paired
with Z), where both MDs were in FREEZE_BOTH_NEXT_EVENT due to being
called with SyncBoth, where no event had yet triggered the grab. An
event being processed on MD A would result in B, Y and Z all having
sync.other set to A's grab, rather than just B.

composite: Support updating an arbitrary subtree

Rename compUpdateWindow to compPaintWindowToParent and split the child walk to compPaintChildrenToWindow. Calling compPaintChildrenToWindow allows an arbitrary subtree to be updated, instead of having to update all the windows. This will be used to make sure all the descendants are copied to the parent when the parent window contents need to be accessed in IncludeInferios sub-window mode.

WindowRec has a new member 'damagedDescendants' that is used to keep track of which subtrees need updating. When a window is damaged, 'damagedDescendants' will be set for all the ancestors, and when a subtree is updated, the tree walk can be stopped early if no damaged descendants are present.

CompScreenRec no longer needs the 'damaged' member since the root
window's 'damagedDescendants' provides the same information.

Revert "composite: Convert compWindowUpdate to use TraverseTree"

TraverseTree visits the parent before the children. When performing the automatic redirection updates, the children must be visited before the parent.

If there are automatically redirected windows on multiple levels of the tree, updating the parents before the children would cause the parent
updates to use stale data for areas covered by the children. Also
updating the damaged children would re-damage the parent, which would
cause additional walks over the tree.

In the worst case with an unbroken chain of automatically redirected
subwindows, all of which are damaged, only the leaf window would be
properly updated on the first round. Then its parent would be properly
updated on the second round, and so on. And on every round all of the
ancestor windows would be updated as well, but with stale data.
So with N damaged windows you would end up with (N^2+N)/2 updates,
instead of the expected N.

This reverts commit 648c8871c92727d7b6b16859f27f12266a06a16e.

X Sync Cleanups

Various cleanups identified during review of the X Sync Fence Object patches.

- Correctly handle failure of AddResource()

- Don't assert when data structures are corrupt. Instead, use a new helper function to check for counter sync objects when they're expected, and warn if the type is wrong.

- Use the default switch label rather than reimplementing it.

- Re-introduce cast of result of dixAllocateObjectWithPrivate() to kill an incompatible pointer type warning.

- Remove comments claiming protocol updates are needed. One wasn't true and the other was addressed with a xextproto change.

- Return BadFence, not BadCounter from XSyncAwaitFence()

Author: Pauli Nieminen <ext-pauli.nieminen@nokia.com>
Date: Thu Dec 30 19:19:34 2010 +0200

composite: Only register the block handler when it is required

Even calling block handler that doesn't do much is costly in arm. It takes a few microseconds each time which adds up to relative high CPU time because it is done 500+ times per second.

Simple optimization is to register the block handler only when it is required.

dri2: Don't page flip when the window size doesn't match the pixmap size

If the drawable size doesn't match the pixmap size page flipping should
not be allowed.

If the window is larger than the pixmap, page flipping might need to
reposition the CRTC somewhere in the middle of the pixmap. I didn't
spot any code that would handle that at least in the intel driver.

Also the root pixmap could then move to some negative screen
coordinates. Not sure if all bits of code could handle that. Perhaps
when composite is enabled screen_x/y would make it work, but without
composite there's no way that it would work AFAICS.

docs: replace BUILD_DOCS with existing ENABLE-devel_DOCS

Use the util-macros AM Conditionals to control generation of developers documents. This is used throughout xorg modules.

The doxygen generated docs are now also managed by --enable-devel-docs.

Remove --enable-build-docs as this was last use for BUILD_DOCS

*** From the RELEASE NOTES ***

New configure options for documentation in modules

As many more modules now contain documentation to be converted from DocBook XML to text, HTML, PostScript, and/or PDF formats, new standard options have been added to the configure macros to control the build of these in the modules.

--with-xmlto=yes|no
   Enables or disables use of the xmlto [https://fedorahosted.org/xmlto/] command to translate DocBook XML to other formats. All DocBook XML conversions require use of this command.

--with-fop=yes|no
   Enables or disables use of the Apache fop [http://xmlgraphics.apache.org/fop/] command to translate DocBook XML to PostScript and PDF formats.

--enable-docs=yes|no
   Enables or disables the build and installation of all documentation except traditional man pages or those covered by the --enable-devel-docs and --enable-specs options.

--enable-devel-docs=yes|no
   Enables or disables the build and installation of documentation for developers of the X.Org software modules.

--enable-specs=yes|no
   Enables or disables the build and installation of the formal specification documents for protocols and APIs.

xfree86: always report the input options before initialising the device.

After collecting the driver's default options, report the list of options
set for the device before calling PreInit(). This helps with debugging those
cases where options are not merged correctly.

xf86OptionListReport reports with verbosity 5, higher than the default
verbosity so this won't generate logspam in the default case.

Add asprintf() implementation for platforms without it

Provides a portable implementation of this common allocating sprintf() API found in many, but not yet all, of the platforms we support.
If the platform provides vasprintf() we simply wrap it, otherwise we implement it - either way callers can use it regardless of platform.

Since not all platforms guarantee to NULL out the return pointer on failure, we don't either, and require callers to check the return value for -1.
The old Xprintf() API is deprecated, but left for compatibility for now.

The new API is added in a new header so that it can be used in parts of the server such as hw/xfree86/parser that don't include all the server headers.

Set sprite transforms from RRSetCrtcConfigs

These were getting ignored.
DIX is responsible for ref counting scanout pixmaps.

Remove some extra ref counting inside hw/xfree86/modes

randr: Hook up the new RandR 1.4 functionality

This bumps the supported RandR protocol version and adds the dispatch hooks needed to call the new functions

randr: Add per-crtc pixmaps

This adds new driver hooks to allocate scanout pixmaps and changes the mode setting APIs to pass the new scanout pixmaps along from DIX. DIX is responsible for reference counting the pixmaps by tracking them through RRCrtcNotify.

hw/xfree86/modes: Add optional driver API for RRSetCrtcConfigs

This provides a driver hook which can either completely replace, or just validate the parameters for, the RRSetCrtcConfigs request.
randr: Implement RRSetCrtcConfigs

This provides a driver-independent implementation of the RRSetCrtcConfigs API by simply using the existing interfaces.

randr: Add sprite position transforms

This implements sprite position transformations. Sprite image transforms are passed all the way to the DDX layer, but the images are not yet manipulated before being passed to the drivers.

Require RandR protocol version 1.4 or newer

Replace huge argument list in xf86CrtcSetModeTransform with struct

xf86CrtcSetModeTransform was starting to get ridiculous with 6 arguments, this change has it take a single structure that contains all of those values along with a set of flags that says which have changed.

Create/Destroy/Trigger/Reset/Query Fence Sync objs

Initial server side implementation of fence sync objects. Allows creation, management, and state queries of binary state objects. Currently they are not very useful as there is no way to wait for them efficiently.

The basic trigger operation added here triggers relative to a given X screen's rendering operations. To perform this operation, fence sync objects must be tied to a screen. As Aaron Plattner pointed out, screens are identified but a drawable in X protocol, so a drawable argument is included in XSyncCreateFence(). The screen also could have been specified as part of the trigger operation. However, it is also desireable to associate a screen with fence sync objects at creation time so that the associated screen's driver can allocate any HW-
specific resources needed by the fence object up front.

Add fence sync driver interface

-Add fence sync objects

-Add fence sync devPrivates

-Add a X sync module screen private

-Add wrappable functions to create and destroy fence sync objects

-Give fence sync objects wrappable functions to trigger, test, and reset their 'triggered' value.

-Give fence sync objects wrappable functions to notify driver when adding/removing triggers to/from the sync object.

Xi: Fix master button update when slave buttons are mapped. #24887

It is currently assumed that an event button delivered to a master device corresponds to the slave button states. However, the event button is a logical (mapped) slave button and slave button states correspond to physical (unmapped) slave buttons. This leads to incorrect update of the master button state and incorrect events delivered to clients. Fix the situation by taking the slave button map into account when querying a slave button state.
mi: handle DGA subtypes when determining the master device.

The subtype in the DGA event is the core type and all ET_ event types (where applicable) are identical to the core types. Thus the switch statement below will work as required and assign the right master device.

Fixes a crasher bug on keyboard devices with valuators. If a device sends a motion event while grabbed and a DGA client is active (but has not selected input through DGA), the valuator event is posted through the VCK and eventually results in a NULL-pointer dereference on dev->valuator.

xfree86: Fix rotation of 2-color non-interleaved cursor images

When RandR 1.2's transformation code is enabled, it rotates the cursor
image so that it appears upright on a rotated screen. This code
completely mangles 2-color cursors on hardware where the the mask and
source images are not interleaved due to two problems:

1. stride is calculated as (width / 4) rather than (width / 8), so the
expression (y * stride) skips two lines instead of one for every
time y is incremented.
2. cursor_bitpos ignores the `mask` parameter if the hardware doesn't
    specify any of the HARDWARE_CURSOR_SOURCE_MASK_INTERLEAVE_* flags.

To fix this, refactor the code to pass the whole xf86CursorInfoPtr
through to cursor_bitpos and compute the correct stride there based on
the flags. If none of the SOURCE_MASK_INTERLEAVE flags are set, use
the total cursor size to move the `image` variable into the mask part
of the image before computing the desired byte pointer.

Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Wed Nov 24 14:20:30 2010 +1000
include: let BitIsOn() return a boolean value.

Simply returning the mask bit breaks checks like
   BitIsOn(mask, 0) != BitIsOn(mask, 1);
as used in 048e93593e3f7a99a7d2a219e1ce2bde9d407807.

The naming of this macro suggests that it should return boolean values anyway. This patch also adds a few simple tests for these macros to make sure they don't accidentally break in the future.

xfree86: rename allowEmptyInput to forceInputDevices.

This is a more accurate name for the actual functionality than allowEmptyInput. Historically, allowEmptyInput has allowed the server to start with no input devices. Since 1.4 and the introduction of VCP and VCK, there are always two input devices present.

allowEmptyInput was changed in behaviour to essentially "ignore xorg.conf devices or not", auto-adding the built-in devices if disabled.

Rename to forceInputDevices, because that's essentially what it does. When disabled (i.e. when hotplugging is enabled), it disables all mouse/kbd/vmmouse devices configured in the xorg.conf file. When enabled, it forces the traditional behaviour for input devices:
- use input devices configured in the server layout
- if none are configured, use the first pointer and the first keyboard device in the xorg.conf
- if none are configured, create the default pointer/keyboard devices.

commit 8976e9766edfb33f5cf3f6d54f09e46d29bc4ec5
dix: adds support for none root window background

It lets the driver notify the server whether it can draw a background when
'background none' option is used by the system platform. Use cases for that
could be video drivers performing mode-setting in kernel time, before X is up,
so a seamless transition would happen until X clients start to show up.

If the driver can copy the framebuffer cleanly then it can set the flag
canDoBGNoneRoot), otherwise the server will fallback to the normal behaviour.
The system must explicit indicate willingness of doing so through
'background none'. We could do this option as default; in such case,
malicious users would be able to steal the framebuffer with a bit of tricks.

For instance, I can see the content of my nVidia Quadro FX 580 framebuffer
old X session modifying a bit nV driver:

    xf86DPMSInit(pScreen, xf86DPMSSet, 0);

    /* Clear the screen */
    if(pNv->xaa) {
      /* Use the acceleration engine */
      pNv->xaa->SetupForSolidFill(pScrn, 0, GXcopy, ~0);
      pNv->xaa->SubsequentSolidFillRect(pScrn,
          0, 0, pScrn->displayWidth, pNv->offscreenHeight);
      G80DmaKickoff(pNv);
    } else {
      /* Use a slow software clear path */
      memset(pNv->mem, 0, pitch * pNv->offscreenHeight);
    }
    pScreen->canDoBGNoneRoot = TRUE;

The commit is originally based on discussions happened on xorg-devel:

Set DamageSetReportAfterOp to true for the damage extension

Change the damage extension reporter to queue up events after we chain to the wrapped functions. Damage events are typically sent out after the rendering happens anyway, since we submit batch buffers from the flush callback chain and then flush client io buffers. Compositing managers rely on this order, and there is no way we could reliably provide damage events to clients before the rendering happens anyway.

By queueing up the damage events before the rendering happens, there's a risk that the client io buffer may overflow and send the damage events to the client before the driver has even seen the rendering request. Reporting damage events after the rendering fixes this corner case and better corresponds with how we expect this to work.

(cherry picked from commit 8d7b7a0d71e0b89321b3341b781bc8845386def6)
[anholt: re-applied to revert the revert, now that the cause of the revert is fixed]
Replace usage of DamageRegionAppend with DamageDamageRegion to fix reportAfter.

In all these cases, any rendering implied by this damage has already occurred, and we want to get the damage out to the client. Some of the DamageRegionAppend calls were explicitly telling damage to flush the reportAfter damage out, but not all.

Bug #30260. Fixes the compiz wallpaper plugin with client damage changed to reportAfter.

os: Fix BigReq ignoring when another request is pending

Handle the long read case by subtracting the smaller of 'needed' and 'gotnow' from oci->ignoreBytes. If needed < gotnow, simply subtract the two, leaving gotnow equal to the number of extra bytes read. Since the code immediately following the (oci->ignoreBytes > 0) block tries to handle the next request, advance oci->bufptr immediately instead of setting oci->lenLastReq and letting the next call to ReadRequestFromClient do it.

Fixes the XTS pChangeKeyboardMapping-3 test.

x86emu: fix jump_near_IMM to handle DATA: flag correctly.

Fixes: https://bugs.freedesktop.org/show_bug.cgi?id=24348

Before (data flag ignored -> broken):
  66  DATA:
  e944f1  JMP  1ff6

After (fixed):
  66  DATA:
  e944f1ffff  JMP  00001ff8

This subtle difference in the length of decoded instruction meant
that the VBE call jumped to the routine setting AX=0x14F (VBE Failed)
instead of the routine that set AX=0x4F (VBE success).

The ability to run the same code in vm86 significantly aided the
debugging of this issue. Those X.org developers who would like to drop
vm86 better take special care towards _all_ vesa bugs, as those will
expose further issues.

Patch applies easily to even xservr 1.4.2.

Xi: if XTEST device creation fails, fail the master devices.

When getting close to the MAXDEVICES limit, the creation of XTEST devices
may fail due to device id exhaustion. In that case, fail the creation of
master devices too and return an error to the client.

Theoretically, we could alloc the MDs without the XTEST devices but that
will get interesting when a client starts sending XTEST events through those
devices.

Add support for per-axis valuator modes (Relative/Absolute)

The XI2 protocol supports per-axis modes, but the server so far does not. This change adds support in the server.

A complication is the fact that XI1 does not support per-axis modes. The solution provided here is to set a per-device mode that defines the mode of at least the first two valuators (X and Y). Note that initializing the first two axes to a different mode than the device mode will fail.

For XI1 events, any axes following the first two that have the same mode will be sent to clients, up to the first axis that has a different mode. Thus, if a device has relative, then absolute, then relative mode axes, only the first block of relative axes will be sent over XI1.

Since the XI2 protocol supports per-axis modes, all axes are sent to the client.

Date:   Tue Oct 19 13:37:46 2010 +1000

Abstract valuator masks through a set of APIs.

This commit introduces an abstraction API for handling masked valuators. The intent is that drivers just allocate a mask, set the data and pass the mask to the server. The actual storage type of the mask is hidden from the drivers.

The new calls for drivers are:

valuator_mask_new() /* to allocate a valuator mask */
valuator_mask_zero() /* to reset a mask to zero */
valuator_mask_set() /* to set a valuator value */

The new interface to the server is

xf86PostMotionEventM()
xf86PostButtonEventM()
xf86PostKeyboardEventM()
xf86PostProximityEventM()

all taking a mask instead of the valuator array.

The ValuatorMask is currently defined for MAX_VALUATORS fixed size due to memory allocation restrictions in SIGIO handlers.

For easier review, a lot of the code still uses separate valuator arrays. This will be fixed in a later patch.

This patch was initially written by Chase Douglas.

xkb: always fill the symsPerKey array, regardless of client flags (#30527)

Even if a client does not modify the symbols, symsPerKey and mapWidths must
be filled from the current configuration. Both arrays are then passed into
other functions (pending the right flag), thus they must contain valid
values regardless of the XkbKeySymMask flag in req->present.

kdrive: Fix tslib check fallback to set TSLIB_LIBS. #30599
If pkg-config is unable to find tslib but the fallback check does find it, the compilation continues with tslib support enabled though TSLIB_LIBS are unset. Thus, the compilation fails with a linking error on tslib functions.

This patch sets TSLIB_LIBS to `-lts' whenever the tslib fallback check succeeds.

Cygwin/X: Move duplicate extern variable declarations from various .c files to a new header file

For the global variables defined in winglobals.c, remove duplicate extern declarations from the beginning of various .c files, and move most of them into a new header file, winglobals.h

Leave some clipboard related variables alone for the moment, they need treating more carefully, to avoid mixing client and server type definitions.

modes: improve aspect ratio match for classic drivers

After we infer the aspect ratio for the screen, we pick the largest mode matching that aspect ratio from the best mode pool available. We then clamp virtual size to that mode, and run the resulting mode list through the driver's ValidMode hook. In doing so we might filter away our initial guess. If this happens we shrink the default mode to the next largest mode from _any_ mode pool. This is usually wrong, and we should instead pick the next aspect-matched mode from the best available mode pool (as always, user then driver then default).

fix a sign problem with valuator data.

Without this patch, any negative valuator value is wrong when returned from XQueryDeviceState(). This is a regression from at least xserver 1.4.

Valuator data is set in dix/getevents.c:set_valuators() by copying signed int values into an unsigned int field DeviceEvent.valuators.data.

That data is converted into a double with an implicit cast by assignment to axisVal[i] in Xi/exevents.c:UpdateDeviceState().

That double is converted back to a signed int in queryst.c:ProcXQueryDeviceState(). If the original value in set_valuators() is negative, the double value will be > 2^31 and the conversion back to a signed int is undefined. (Although I consistently see the value -2^31.)

Fix this by changing the definition of DeviceEvent.valuators.data from uint32_t to int32_t.

All these now generate InternalEvents, point this out. Remove XKB/XI references, that's just confusing. This comment referred to the old-style event generation code from server 1.4 to including 1.6 but is now just confusing to newcomers.

Remove comment about SwitchCoreKeyboard() for the same reason.

Reviewed-by: Peter Hutterer <peter.hutterer@who-t.net>
Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

Let CheckPassiveGrabsOnWindow callers check if device is already grabbed.

CheckDeviceGrabs checked all the ancestors of the window containing this device's pointer even if no new grabs could possibly apply due to the device already being grabbed.

ActivateFocusInGrab and ActivateEnterGrab already checked whether they should break an existing grab, and then set up an event that was completely ignored if they didn't actually break the grab.

In both cases, just do what we would have done eventually anyway--return FALSE from CheckPassiveGrabsOnWindow's caller--but do it sooner.

randr: set error numbers of resource types in RRExtensionInit() (V2)

Fixes: https://bugs.freedesktop.org/show_bug.cgi?id=30367

Currently the ddx calls xf86RandR12Init()
(-> RRScreenInit()
 - -> RRInit()
    - -> RModeInit()
    -> RROutputInit()
    -> RCRtcInit()

before RRExtensionInit() is called. This causes RRErrorBase
being 0 while setting resource type error values (resource types:
RROutput, RMode and RRCrte). The fix moves the setting of error
values to own functions which are called in RRExtensionInit()
to get the right RRErrorBase.

V2: With header file

loader: Remove unused module serial number
loader: Merge dlloader directly into the loader

This lets us drop some double-tracking of loaded modules too. If your OS is too lame to have libdl, fix that first.

xfree86: add xf86OptionListDuplicate()

Does what it says on the box.

Some drivers need to duplicate option lists from the original device to ensure that devices created by the driver (driver-internal hotplugging) have the same list of options as the original device.
Xserver need not be compatible with old versions of xserver.

Delete time-traveling multiple personality disorder from the server.

Gaetan notes:

There were a couple of drivers containing an unknown version of the modes/parser code. This was done in server 1.2 time frame because it was released without mode code. It was barely or not maintained afterwards. There are currently no video drivers with a copy of the modes code.

Most of these ifdefs were introduced in commit a8d760f567b1926839c468249f5ca591f08a854, where Aaron wrote,

This change uses XORG_VERSION_CURRENT < 7.0 to mean "server newer than 1.2" since XORG_VERSION current went backwards at some point.

Alan explains that:

In Xorg 1.3, when we first released an Xorg server release decoupled from the katamari release schedule. (1.0 through 1.2 were released as part of X11R7.0 through 7.2, while 1.3 came out between X11R7.2 & 7.3.)

Author: Jamey Sharp <jamey@minilop.net>
Date:   Wed Jul 14 13:14:28 2010 -0700

rootless: Delete dead remnants of rootless acceleration.

Jeremy deleted rootlessAccelInit's implementation in 2008 in commit 587e010a1cd733fded4d49dc339df0634bda8be6. Delete its prototype and the remaining commented-out call to it.
It still makes sense for the rootless GC ops to relax the planemask, but that's independent of the size of the operation, so quit checking the thresholds there.

FillBytes and CompositePixels are not called anywhere, so delete everything related to both.

glxdriswrast: Use CreateGC, not CreateScratchGC.

Since this code was using CreateScratchGC and not GetScratchGC,
FreeScratchGC would always call FreeGC, so just call it directly.

As long as the drawable provided to CreateGC has the same screen and
depth as were passed to CreateScratchGC, these functions are basically
identical. There are two differences:

- CreateGC gives you a non-null stipple. You probably don't care.

- CreateGC passes the gcid and client to XACE. There are several
  internal GCs allocated in the server, and they all pass 0 and
  serverClient. I expect XACE will never reject that combination.

The callers of createDrawable all verify that pDraw has the same screen
that driScreen does. In short, this should have no behavioral change.

os: add -sigstop option for Upstart (or equivalent) startup

This is very similar to the RunFromSmartParent (implicit) option, except we do not send the signal to our parent process, but our own process instead, and that signal is SIGSTOP, not SIGUSR1.

Upstart or a similar equivalent program will detect this, realize that we are ready to accept clients now, send us SIGCONT and move our job status from SPAWNED to RUNNING.

    os: Return BadLength instead of disconnecting BigReq clients (#4565)

    If a client sends a big request that's too big (i.e. bigger than maxBigRequestSize << 2 bytes), the server just disconnects it. This makes the client receive SIGPIPE the next time it tries to send something.

    The X Test Suite sends requests that are too big when the test specifies the TOO_LONG test type. When the client receives SIGPIPE, XTS marks it as
UNRESOLVED, which counts as a failure.

Instead, remember how long the request is supposed to be and then return that size. Dispatch() checks the length and sends BadLength to the client. Then, whenever oci->ignoreBytes is nonzero, ignore the data read instead of trying to process it as a request.

xfree86: add a hook to replace the new console handler.
This hook is only necessary for the keyboard driver to remove the race condition between drain_console() and the driver's ReadInput (Bug 29969).

The idea is that a driver that needs to handle events from the console calls xf86ReplaceConsoleHandler() with its own ReadInput (or NULL) and thus removes the drain_console call. It's the driver's responsibility to restore the previous behaviour when the driver is unloaded.

xfree86: remove IDevRec, replace with InputInfoRec.

This struct is superfluous, maintaining the same info as the InputInfoRec
(with the exception of the driver name).

This is a rather large commit with the majority of changes being a rename
from the fields of the IDevRec (idev, commonOptions) to the InputInfoRec
(pInfo, options).

The actual changes affect the initialization process of the input device:
In NewInputDeviceRequest, the InputInfoRec is now always allocated and just
added to the internal list in xf86NewInputDevice() if the init process
succeeded.

dix: fix crash when removing devices on a buttonless MD pointer (#29669)

If the master does not have a button class, recalculating the number of buttons required for this master dereferences a NULL pointer. Guard against this, if the master pointer doesn’t have a button class, it doesn’t need to update it’s number of buttons.

Reproducible:
Two devices on the same master, device NB with axes but no buttons, device A+B with axes and button .
If NB was the last one to send an event through the master when A+B is removed from the server, master->button is NULL and leads to the above NULL-pointer dereference.

Instead of shoving it in rather unrelated places, move acceleration init
into xf86NewInputDevice.

Caveat: It's not clear atm how relevant other callers of ActivateDevice
(like OpenDevice) actually are.

xfree86: add xf86IDrvMsg and friends for input driver logging.

Input driver messages are only standardised by convention, with the drivers
prefixing the device name to most messages. This makes it rather hard to
grep on "evdev" for example when looking for the evdev output.

This patch adds three new logging functions, modeled after xf86DrvMsg(), the
logging function for output drivers. New functions are
xf86IDrvMsg() - input driver log message in default verbosity.

xf86IDrvMsgVerb() - input driver log message in specified verbosity.
xf86VIDrvMsgVerb() - same as xf86IDrvMsgVerb() but takes a varargs argument.

Default log format is <driver name>: <device name>: <message>.

config: expose config_info as an input option.

config_info is the only reliable indicator we have in the server for duplicate devices (drivers can test for maj/min on fds as well). Don't set this after the device has been initialized but assume it's important enough to set during NIDR.
This makes the option "config_info" available to the drivers as well.

tfree86: rework driver PreInit API - XInput ABI 12

The main change introduced in this patch is the removal of the
back-and-forth between DDX and the driver.
The DDX now allocates the InputInfoRec and fills it with default values. The
DDX processes common options (and module-specific default options, if
appropriate) before passing the initialised struct to the driver.

The driver may do module-specific initializations and return Success or an
error code in the case of a failure.

Fix udev population of Bluetooth input device product IDs

The udev device_added function takes the vendor and model IDs of added
devices and converts them into an attribute that can be matched for by
an InputClass configuration using MatchUSBID. Currently, the udev
mechanism works for USB devices, but fails to work properly for
Bluetooth devices. The product IDs of the event node are actually the
IDs of the Bluetooth receiver instead of the device.

This patch reads the product ID from the PRODUCT property of the parent
of the added device. This tag is set correctly for both USB and
Bluetooth input devices. The following devices have been tested by
specifying individual InputClass sections in xorg.conf:

* Apple Keyboard (Bluetooth)
* Apple Magic Trackpad (Bluetooth)
* Apple Magic Mouse (Bluetooth)
* Microsoft Bluetooth Notebook Mouse 5000 (Bluetooth)

Author: Keith Packard <keithp@keithp.com>
fb: make isClipped always reject negative coordinates (bug 11503)

A window with either dimension > 32767 can be positioned such that coordinates > 32767 are visible on the screen. Attempts to draw to those pixels will generate coordinates wrapped around to negative values.

The optimized clipping macro, 'isClipped', in fbbits.h, computes clipping in window space rather than screen space using int16 values, and so it too has coordinates wrapped around to negative values and hence ends up accepting the wrapped drawing coordinates.

Two possible fixes for this problem

1) Detect wrapped region coordinates and clip those to 32767.
2) Detect negative incoming coordinates and reject those

This patch takes the second approach as it is much shorter, simply detecting when either X or Y incoming coordinate is negative, which can never be 'within' any drawable.

Date:   Fri Aug 20 13:51:04 2010 +0100

edid: Adjust rounding of max_clock

A simple hack to accommodate various EDID who have detailed modes that exceed the EDID's max pixel clock. The pixel clock is only defined in units of 10MHz and often appears as the maximum pixel code of the detailed modes, rounded to the nearest 10MHz. Adjusting the max_clock to include an extra 5MHz prevents the parser from rejecting the detailed modes.

The kernel uses the same fuzz and by including it in X we can use the same modes in X as for the console.

Fixes:

Bug 23833 - X uses different refresh rate to that set by kernel module
https://bugs.freedesktop.org/show_bug.cgi?id=23833

In the future, we will want to try harder to keep the KMS modes but at
the same time we need to apply the restrictions as specified by the
user's configuration, and need to fill in modes for fullscreen games on
fixed-mode panels.

xkb: post-fix PointerKeys button events with a DeviceChangedEvent.

commit 14327858391ebe929b806efb53ad79e789361883
xkb: release XTEST pointer buttons on physical releases. (#28808)
revealed a bug with the XTEST/PointerKeys interaction.

Events resulting from PointerKeys are injected into the event processing stream, not appended to the event queue. The events generated for the fake button press include a DeviceChangedEvent (DCE), a raw button event and the button event itself. The DCE causes the master to switch classes to the attached XTEST pointer device.

Once the fake button is processed, normal event processing continues with events in the EQ. The master still contains the XTEST classes, causing some events to be dropped if e.g. the number of valuators of the event in the queue exceeds the XTEST device's number of valuators.

Example: the EQ contains the following events, processed one-by-one, left to right.

[DCE (dev)][Btn down][Btn up][Motion][Motion][...]
^ XkbFakeDeviceButton injects [DCE (XTEST)][Btn up]

Thus the event sequence processed looks like this:
The first DCE causes the master to switch to the device. The button up event injects a DCE to the XTEST device, causing the following Motion events to be processed with the master still being on XTEST classes.

This patch post-fixes the injected event sequence with a DCE to restore the classes of the original slave device, resulting in an event sequence like this:

[DCE (dev)][Btn down][Btn up][DCE (XTEST)][Btn up][DCE (dev)][Motion]

Note that this is a simplified description. The event sequence injected by the PointerKeys code is injected for the master device only and the matching slave device that caused the injection has already finished processing on the slave. Furthermore, the injection happens as part of the the XKB layer, before the unwrapping of the processInputProc takes us into the DIX where the DCE is actually handled.

Bug reproducible with a device that reports more than 2 valuators. Simply cause button releases on the device and wait for a "too many valuators" warning message.

Commit ff70848e623920779d20f35d47e9e1f34157de47
Abstract: Don't let alpha maps recurse in fb. Bug 23581.

Recursive alpha maps (where one picture's alpha map is set to a picture with an external alpha map) would be all fine and dandy, except for the case where the client constructs a loop. Detecting this case when setting the alpha map values would be difficult as any time an alpha map is set, the server would have to check for the looping case.

Instead, a far simpler fix is to simply disallow recursive alpha maps in the rendering code, the Render spec is ambiguous in this area and allows us to to ignore the recursive case.

Commit 70a94c5b7a42adc0995bf774c44587a0778be0d0
Abstract: rootless: fix uninitialized private key assert in non-rootless modes in Cygwin/X

IsFramedWindow() is called from miPaintWindow() if the server has been built with ROOTLESS defined, irrespective of if RootlessInit() has ever been called, or not.
Add a check to IsFramedWindow() to check if rootlessWindowPrivateKey has been registered (as a proxy for checking if the rootless extension has been initialized) so we don't go on to try to use that key, triggering an assert.

This bug exposes what appears to be a difference in opinion about the rootless extension between XQuartz and XWin. XQuartz always initializes the rootless extension, whereas XWin offers several modes of operation, and the rootless extension is only used for one of them.

That probably means that the all code under compile time guard for ROOTLESS should be carefully checked that it doesn't also need to be under a run-time guard.

(I've reviewed the other ROOTLESS blocks in dix/events.c and dix/window.c and they look ok -- keithp)

Set DamageSetReportAfterOp to true for the damage extension

Change the damage extension reporter to queue up events after we chain to the wrapped functions. Damage events are typically sent out after
the rendering happens anyway, since we submit batch buffers from the
flush callback chain and then flush client io buffers. Compositing
managers relieve on this order, and there is no way we could reliably
provide damage events to clients before the rendering happens anyway.

By queueing up the damage events before the rendering happens, there's
a risk that the client io buffer may overflow and send the damage
events to the client before the driver has even seen the rendering
request. Reporting damage events after the rendering fixes this
corner case and better corresponds with how we expect this to work.

commit 95756f410c65a6510a797e94a792b959d45cdb9e
rootless: Adjust the frame size of the native root window in RootlessResizeWindow

If the native root window isn't resized as well, we will likely crash the next time we draw to the root. On OS X, this can be seen by:

1) Put the display preferences in the menu bar and set X11’s preferences so you can access the menu bar in fullscreen mode
2) Set the resolution of your screen lower than normal.
3) Start X11 in fullscreen mode. The root window will cover the screen as expected.
4) Use the menu bar to increase the resolution of the display. The root window will now cover the old area and not the full screen, but 'xwininfo -root' will report the full width.
5) Run 'xsetroot -solid red', and we have the crash you mention above.

Leaving/entering fullscreen after #4 will fix the problem. This is because the WINREC is erased when we leave fullscreen mode and it is recreated upon re-entry:

RootlessUpdateRooted(FALSE)
   RootlessDisableRoot(screenInfo.screens[0])
   RootlessDestroyFrame (pRoot, winRec);
RootlessUpdateRooted(TRUE)
   RootlessEnableRoot(screenInfo.screens[0])
   RootlessEnsureFrame(screenInfo.screens[0]->pRoot)
creates a new WINREC...

Update the sprite immediately when moving it with MouseKeys

Fix for OpenSolaris bug 6949755: Mouse Keys are unusable
and possibly https://bugs.freedesktop.org/show_bug.cgi?id=24856

Ensures waitForUpdate is False before calling SetCursorPosition.
Normally waitForUpdate is False when SilkenMouse is active, True
when it's not. When it's True, the mouse cursor position on
screen is not updated immediately.

This is more critical on Solaris, since we disabled SigIO, thus in turn
disable SilkenMouse, due to the SSE2 vs. signal handler issues described in
Sun bugs 6849925, 6859428, and 6879897.
Add API to update setting of waitForUpdate screen private in miPointer

xkb: release XTEST pointer buttons on physical releases. (#28808)

If a button release event is posted for the MD pointer, post a release event through the matching XTEST device. This way, a client who posts a button press through the XTEST extension cannot inadvertently lock the button.

This behaviour is required for historical reasons, until server 1.7 the core pointer would release a button press on physical events, regardless of the XTEST state. Clients seem to rely on this behaviour, causing seemingly stuck grabs.

The merged behaviour is kept for multiple keyboard PointerKey events, if two physical keyboards hold the button down as a result of PointerKey actions, the button is not released until the last keyboard releases the button.

xfree86: configure: remove vendor and card name matching rules

Although vendor and board naming are used to create the configure file, the server doesn't actually use it when fetching such file and probing devices.
xfree86: pci: remove superfluous vendor and card name logging

X server suffers in startup time when relying on the pciaccess's linear search to fetch vendor and video device name from PCI ID file (when existent). Such names are only used to write the log, which may be superfluous. This information often is provided by the drivers or likewise users can get the it using external tools like lspci or scanpci.

This patch remove the references of those functions from X start up.

xkb: emulate PointerKeys events only on the master device.

This patch replicates the behaviour for button events. Only generate a PointerKeys motion event on the master device, not on the slave device. Fixes the current issue of PointerKey motion events generating key events as well.

xkb: merge lockedPtrButtons state from all attached SDs.
Problem:
lockedPtrButtons keeps the state of the buttons locked by a PointerKeys button press. Unconditionally clearing the bits may cause stuck buttons in this sequence of events:

1. type Shift + NumLock to enable PointerKeys
2. type 0/Ins on keypad to emulate Button 1 press
   button1 press event to client
3. press and release button 1 on physical mouse
   button1 release event to client

Button 1 on the MD is now stuck and cannot be released.

Cause:
XKB PointerKeys button events are posted through the XTEST pointer device. Once a press is generated, the XTEST device's button is down. The DIX merges the button state of all attached SDs, hence the MD will have a button down while the XTEST device has a button down.

PointerKey button events are only generated on the master device to avoid duplicate events (see XkbFakeDeviceButton()). If the MD has the lockedPtrButtons bit cleared by a release event on a physical device, no such event is generated when a keyboard device triggers the PointerKey ButtonRelease trigger. Since the event - if generated - is posted through the XTEST pointer device, lack of a generated ButtonRelease event on the XTEST pointer device means the button is never released, resulting in the stuck button observed above.

Solution:
This patch merges the MD's lockedPtrButtons with the one of all attached slave devices on release events. Thus, as long as one attached keyboard has a lockedPtrButtons bit set, this bit is kept in the MD. Once a PointerKey button is released on all keyboards, the matching release event is emulated from the MD through the XTEST pointer device, thus also releasing the button in the DIX.

OS support: fix writeable client vs IgnoreClient behavior

When ResetCurrentRequest is called, or IgnoreClient is called when a client has input pending, IgnoredClientsWithInput will be set. However, a subsequent IgnoreClient request will clear the client fd from that fd set, potentially causing the client to hang.

So add an Ignore/Attend count, and only apply the ignore logic on the first ignore and the attend logic on the last attend. This is consistent with the comments for these functions; callers must pair them.

Fixes https://bugs.freedesktop.org/show_bug.cgi?id=27035.
Revert "dix: use the event mask of the grab for TryClientEvents."

Behaviour of earlier X servers was to deliver the ButtonPress event unconditionally, regardless of the actual event mask being set. Thus, a GrabButton event will always deliver the button press event, a GrabKey always the key press event, etc. Same goes for XI and XI2.

Reproducible with a simple client requesting a button grab in the form of:

```
XGrabButton(dpy, AnyButton, AnyModifier, win, True, ButtonReleaseMask, GrabModeAsync, GrabModeAsync, None, None);
```

On servers before MPX/XI2, the client will receive a button press and release event. On current servers, the client receives only the release. Clients that expect the press event to be delivered unconditionally may leave the user with a stuck grab.

XTS test results for XGrabButton are identical with and without this patch.

This reverts commit 48585bd1e3e98db0f3f1ecc68022510216e00cc.

Conflicts:

dix/events.c

Revert "dix: use the event mask of the grab for TryClientEvents."

Behaviour of earlier X servers was to deliver the ButtonPress event unconditionally, regardless of the actual event mask being set. This is documented in the protocol:

"This request establishes a passive grab. In the future, the pointer is actively grabbed as described in GrabPointer, the last-pointer-grab time is
set to the time at which the button was pressed (as transmitted in the
ButtonPress event), and the ButtonPress event is reported if all of the
following conditions are true:

    <list of conditions, event mask is not one of them>"

Thus, a GrabButton event will always deliver the button press event, a
GrabKey always the key press event, etc. Same goes for XI and XI2.

Reproducible with a simple client requesting a button grab in the form of:

    XGrabButton(dpy, AnyButton, AnyModifier, win, True, ButtonReleaseMask,
                GrabModeAsync, GrabModeAsync, None, None);

On servers before MPX/XI2, the client will receive a button press and
release event. On current servers, the client receives only the release.
Clients that expect the press event to be delivered unconditionally.

XTS Xlib13 XGrabButton 5/39 now passes.

This reverts commit 48585bd1e3e98db0f3df1ecc68022510216e00cc.
Effectively reverts commit 1c612acca8568fdff9761d23f112ada4d496f1b as well,
the code introduced with 1c612 is not needed anymore.

commit e2918b67395a48397bf7db545584cc2d4f4e7ccf
Author: Keith Packard <keithp@keithp.com>
Date:   Tue Jun 22 12:11:20 2010 -0700

Revert "mi: Remove unused overlay support"

This reverts commit 9120e58556014e514eef9dfe43cdea4b74dc66ae.

Whoops, please revert this patch -- overlay is in use in nvidia drivers, and it's too late in release cycle to remove it.

I feel really sorry that I kept this patch in my tree. I will submit another one, removing only XAA overlay hooks which are not used at all.
Bump to 1.8.99.902 -- 1.9 RC2

record: Prevent a crash on recording client disconnect.

Execute the following steps to reproduce the issue.

1. Run at least two recording clients simultaneously.
   $ cnee --record --request-range 1-127 &
   $ cnee --record --request-range 1-127 &
2. Kill the recording clients.
   $ killall cnee
3. Give X server something to do so that the clients are closed.
   $ xinput list
   $ xinput list

As a result RecordUninstallHooks accesses NullClient, because
RecordAClientStateChange doesn't clean the recording clients up
properly.

Fix RecordUninstallHooks to fail locally on an assertion instead of
much later in privates code, if NullClient is still accessed because
of some other bug. Fix RecordAClientStateChange to iterate through all
contexts so that modifications of the iterated array during iteration
don't cause contexts to be skipped.

Don't crash when asked if a client that has disconnected was local

ProcDRI2Dispatch uses LocalClient to determine if it's safe to respond
to a client that has made DRI2 requests which aren't sensible for
remote clients (anything but version). When the client has disappeared
mid-request stream (e.g. as a result of a kill -9, or a client-side
bug), LocalClient causes the X server to follow suit, as
((OsCommPtr)client->osPrivate)->trans_conn is NULL at this point.

The simple and obvious fix is to just return "not local" when
trans_conn is NULL, which fixes the crash I was seeing; however Keith
Packard pointed out that just checking trans_conn isn't enough;
quoting Keith:

"This looks almost right to me -- I reviewed the os code to see when
_XSERVTransClose is called (which is what frees the trans_conn data) and
found that every place which called that immediately set trans_conn to
NULL, except for the call in CloseDownFileDescriptor which is only
called from CloseDownConnection and which is immediately followed by
freeing the OsCommRec and setting client->osPrivate to NULL. So, I'd
suggest checking client->osPrivate in addition to the above check."

composite: fix freeing of old pixmap until after move/resize/cbw (bug 28345)

The fixes for the composite reallocation failure, were freeing the old pixmap
straight after reallocating the new one, however this led to some weird
effects in e16 compositing, and I think in a few other places. This patch
moves the freeing of the pixmap into the post wrapped stage. I'm not sure if
we are actually better off breaking ABI and adding another callback from the
ConfigureWindow to composite to make sure the old pixmap is always freed,
but this should be satisfactory as we should always hit one of the freeing
paths or else its a bug in the DIX.

rotation: fix cursor and overlap of one pixel.

Commit 77c7a64e888569665556c9fbb3cfff552e367a was introduced to fix a cursor off by one on Intel hw, however it also move the whole crtc into an off by one position and you could see gnom-eshell overlapping.

This commit reverts that and instead fixes the cursor hotspot translation to work like pixman does. We add 0.5 to the cursor vector before translating, and floor the value afterwards.

Thanks to Soeren (ssp) for pointing out where the real problem was after explaining how pixman translates points.

Date:   Sun Jun 20 20:37:26 2010 -0400

config: declare xserver private dependencies in xorg-server.pc

Any module (drivers) depending on xserver also depends on some of the server private dependencies. Any driver including xf86.h depends on xext, kbproto, inputproto and randr.

These dependencies are in separate packages, so anything can happen, removal, wrong version, etc... and the driver fails during compilation. Having the private dependencies declared will ensure all packages the server depends on are present and at the correct version.

Currently each module attempts to check for server dependencies with various degrees of accuracy. With this patch, the driver will only need
to check for its own explicit dependencies.

Now that xproto is included in Requires.private it is removed from Requires. All the cflags from both Requires and Requires.private are returned to caller to pkg-config.

mi: Remove unused overlay support

The only reference to it in server and drivers is in XAA overlay code which
would segfault as no miInitOverlay is called ever. No segfaults were observed
"in wild", so XAA overlay is probably also unused.

XAA code is modified to act as if miOverlayCopyUnderlay always returned false,
because XAACopyWindow8_32 could only set doUnderlay to true if it's called from
miOverlayMoveWindow or miOverlayResizeWindow, which can only be called if
miInitOverlay has hooked those functions, and no driver (on fd.o) or server code
calls that.

DRI2/xserver: Don't hang in glXSwapBuffers if drawable moves between crtc's (bug 28383)

Detect if a drawable has been moved from an original crtc to a new crtc with a lower current vblank count than the original crtc in between glXSwapBuffers() calls. Reinitialize drawable's last_swap_target before scheduling next swap if such a move has taken place.

last_swap_target defines the baseline for scheduling the next swap. If a movement between crtc's is not taken into account, the swap may schedule for a vblank count on the new crtc far in the future, resulting in a apparent "hang" of the drawable for a long time.

exa: fix ExaCheckCopyNtoN for exa_classic when source = dest

In case you want to copy a region with source = dest, you have the same pixmap as source and dest.

At the end of `exaPixmapIsOffscreen_classic()` the `devPrivate.ptr` is reset to NULL (look at the sources).

Now this is what happens in ExaCheckCopyNtoN:

```c
exaPrepareAccess( pDst );

Calls IsOffscreen()
    sets devPrivate.ptr to NULL
    sets up devPrivate.ptr to real pointer
    Everything OK

exaPrepareAccess( pSrc );

Calls IsOffscreen()
    sets devPrivate.ptr to NULL

BAILS OUT CAUSE OF NESTED OPERATION SINCE DST EQUALS SRC
```

We end up with devPrivate.ptr as NULL, and that is clearly wrong.
In particular this fixes a segfault when using the psb driver (bug 28077)

Xi: don't copy the modifier key count when copying device classes (#25480)

The modifier key count is maintained by the XKB layer and increased/decreased for all modifiers that set state.

Test case, MD/SD modifier key count in comment:
1. keyboard 1: press and hold Shift_L   # SD:1   MD:1
2. keyboard 2: press and release Shift_L # SD:1.0 MD:1.0
   <class copy happens>                 # SD:1   MD:1
3. keyboard 1: release Shift_L         # SD:0   MD:1
4. keyboard 1: press and release Shift_L # SD:1.0 MD:2.1

The modifier is now logically down on the MD but not on keyboard 1 or keyboard 2.

XKB is layered in before the DIX, it increases/decreases the modifier key count accordingly. In the above example, during (2), the MD gets the key release and thus clears the modifier bit. (3) doesn't forward the release to the MD because it is already cleared. The copy of modifierKeysDown when the lastSlave changes however increases the counter for the held key. On (4), the press and release are both forwarded to the MD, causing an offset by 1 and thus do not clear the logical modifier state.

xfree86: Allow multiple InputClass Match* entries for && matching

Currently when there multiple InputClass entries of the same type, only
the last entry is used and the previous ones are ignored. Instead,
multiple entries are used to create multiple matching conditions.

For instance, an InputClass with

    MatchProduct "foo"
    MatchProduct "bar"

will require that the device's product name contain both foo and bar.
This provides a complement to the || style matching when an entry is
split using the "[]" token.

The xorg.conf man page has added an example to hopefully clarify the two
types of compound matches.

xfree86: Match devices based on PnP ID

Serial input devices lack properties such as product or vendor name. This makes matching InputClass sections difficult. Add a MatchPnPID entry to test against the PnP ID of the device. The entry supports a shell pattern match on platforms that support fnmatch(3). For example:

    MatchPnPID "WACf*"
A match type for non-path pattern matching, `match_pattern`, has been added. The difference between this and `match_path_pattern` is the `FNMPATHNAME` flag in `fnmatch(3)`.

dri2: Only deal with output windows and pixmaps.

This reverts commit fd0b081b430ddffb495aa5b05bcc4cf10882ff4b2
"dri2: Deal with input-only windows by using WindowDrawable()"
and replaces it as follows:

Reject the creation of a DRI2 drawable for UNDRAWABLE_WINDOW (input-only windows) and DRAWABLE_BUFFER (whatever those are) drawables and only look up privates for the supported drawable types.

The rest of the the code can continue pretending there's only output windows and pixmaps, which are the only kinds of drawables relevant for DRI2.

Fixes server crash with GLX compositing managers such as compiz or kwin, due to looking up a window private for a pixmap and getting a bogus pointer.

commit 353e32d3712f3a883a796ba562ec9f5a8354837
Author: Jamey Sharp <jamey@minilop.net>
Date: Sun Jun 6 06:42:11 2010 -0700

`glxdriswrast` bugfix: configure `swapgc`, not `gc`.

I got this wrong in e2929db7b737413cf93fbebdf4d15abdfb0f05c.
DRI2: Don't return junk reply instead of blocking in glXWaitForSbcOML()

DRI2WaitSBC() didn't block if requested targetSBC wasn't yet reached.

Instead it returned a xreply with uninitialized junk return values, then
blocked the connection until targetSBC was reached.

Therefore the client didn't block, but continued with bogus return
values from glXWaitForSbcOML.

This patch fixes the problem by implementing DRI2WaitSBC similar
to the clean and proven DRI2WaitMSC implementation.

Remove unnecessary parentheses around return values in functions

This patch was generated by the following Perl code:

perl -i -pe 's/([^_]*)return\s*[^s]*)\s*([^s]*)\s*;([^s]*)/\1return \2;\4/g;'

Allow InputClass sections to match against the running operating system
to narrow the application of rules. An example where this could be used is to specify that the default input driver on Linux is evdev while it's mouse/kbd everywhere else.

The operating system name is the same as `uname -s`, and matching is case-insensitive.

Damage pixmap private key was being mis-registered as a picture key

This would cause all kinds of fun, in particular Xnest would crash at startup.
Register Xnest colormap screen private key

This key is used to store the currently installed colormap and must be registered before we can use it.

Make GetPictureScreenIfSet check if Render is running

This macro originally checked to see if the Render screen private index had been allocated. When the privates were changed the first time, there wasn't any need to check as dixLookupPrivate would simply return NULL in that case. Now that we care, check to see if the key has been initialized before asking for the value.

Move the shadow screen private key initialization to shadowSetup

Some users of the shadow code don't call shadowInit, just shadowSetup and so make sure the key is initialized there.

Fix exa_priv.h declarations of privates
exa_priv.h exposes the privates to the rest of the exa code, and yet
the declarations of the privates wasn't fixed when the exa.c versions were.

Remove dixRegisterPrivateOffset; hard-code devPrivates offsets instead

For predefined resource types, the offset of the devPrivates field was already kept in a constant table. The only non-predefined type needing this treatment was dbeDrawableResType, which is just a magic alias for RT_PIXMAP.

This patch special-cases looking up RC_DRAWABLE offsets and uses the table directly for everything else.

Add REGION_ macros for source compatibility with existing drivers.

This makes the region code changes source compatible with existing code, although none of them are used within the server source itself.

Change region implementation from macros to inline functions.

This makes all of the previous macros into inline functions and also turns all of the direct calls to pixman region code into inline functions as well.

Rename region macros to eliminate screen argument
This is a combination of a huge mechanical patch and a few small fixups required to finish the job. They were reviewed separately, but because the server does not build without both pieces, I've merged them together at this time.

The mechanical changes were performed by running the included 'fix-region' script over the whole tree:

$ git ls-files | grep -v '^fix-' | xargs ./fix-region

And then, the white space errors in the resulting patch were fixed using the provided fix-patch-whitespace script.

$ sh ./fix-patch-whitespace

Thanks to Jamey Sharp for the mighty fine sed-generating sed script.

The hand-done changes involve removing functions from dix/region.c that duplicate inline functions in include/regionstr.h, along with their declarations in regionstr.h, mi.h and mispans.h.

Date:   Fri Jun 4 11:09:46 2010 +1000

composite: use config notify hook to do pixmap resize.
Since reallocating the backing pixmap can fail, we need to try and do it before any other side effects of reconfiguring the window happen.

This changes the ConfigNotify hook to return status, and moves the composite window reconfiguration wrappers to ConfigNotify. They all basically did the same thing, so we can drop the MoveWindow, ResizeWindow, ChangeBorderWidth wrappers, and allow ConfigNotify to do all the work. If reallocation fails we fail before we send any configureNotify events, or enter the area we can't recover from.

The only place we now enforce 32k limits are in EXA/UXA/xb, so drivers that don't use this should probably deal with it in their pixmap allocate if they don't already.

This also breaks ABI, so we need an alternate fix for older servers, working on the X server makes me realise why I'm a kernel hacker.

Delete XineramaScreenRegions cache.

Every screen region consists of a single rectangle, so initializing a
stack-allocated region for each screen on-demand does no heap allocation
and is fast.

This eliminates a MAXSCREENS-sized array.

The REGION_UNINIT calls are no-ops since no boxes are actually allocated
for a single-rectangle region, but it seemed wiser to include them.

The move of the PCI device id probing into a separate file neglected to
return the number of found devices, and so the PCI devices were being
overwritten by the default entries for vesa and fbdev.

Fix pixmap validation in miDbePositionWindow.

miDbePositionWindow allocates two pixmaps: a front buffer, and a back buffer.
If the buffers are supposed to be initialized, it validates a GC against
the front buffer, then uses it to fill and/or copy both the front buffer *and* the
back buffer, without revalidating. If the acceleration architecture needs
different GC funcs for the two pixmaps -- for example if allocation of the front
buffer exhausted video memory -- then this can cause crashes because the GC is
not validated for the back buffer pixmap.

Fix this by performing the rendering for the front buffer first, then
revalidating against the back buffer before performing the back buffer
rendering.

dix: add 3x3 transformation matrix xinput property for multi-head handling
For absolute input devices (E.G. touchscreens) in multi-head setups, we need a way to bind the device to an randr output. This adds the infrastructure to the server to allow us to do so.

positionSprite() scales input coordinates to the dimensions of the shared (total) screen frame buffer, so to restrict motion to an output we need to scale/rotate/translate device coordinates to a subset of the frame buffer before passing them on to positionSprite.

This is done here using a 3x3 transformation matrix, which is applied to the device coordinates using homogeneous coordinates, E.G.:

\[
\begin{bmatrix}
  c0 & c1 & c2 \\
  c3 & c4 & c5 \\
  c6 & c7 & c8 \\
\end{bmatrix}\begin{bmatrix}
  x \\
  y \\
  1
\end{bmatrix}
\]

Notice: As input devices have varying input ranges, the coordinates are first scaled to the [0..1] range for generality, and afterwards scaled back up.

E.G. for a dual head setup (using same resolution) next to each other, you would want to scale the X coordinates of the touchscreen connected to the both heads by 50%, and translate (offset) the coordinates of the rightmost head by 50%, or in matrix form:

left: \[
\begin{bmatrix}
  0.5 & 0 & 0 \\
  0 & 1 & 0 \\
  0 & 0 & 1
\end{bmatrix}
\]

right: \[
\begin{bmatrix}
  0.5 & 0 & 0.5 \\
  0 & 1 & 0 \\
  0 & 0 & 1
\end{bmatrix}
\]

Which can be done using xinput:

xinput set-prop <left> --type=float "Coordinate Transformation Matrix" \ 0.5 0 0 1 0 0 0 1

xinput set-prop <right> --type=float "Coordinate Transformation Matrix" \ 0.5 0.5 0 1 0 0 0 1

Likewise more complication setups involving more heads, rotation or different resolution can be handled.

Revert "Add a "flags" field to DeleteInputDeviceRequest."

Peter wants to get a larger patch sequence put together and I didn't read past the commit message to see the 'don't take this patch please'.

This reverts commit 531ff40301975519af7b20109ec17d296312d3f2b.

commit 531ff40301975519af7b20109ec17d296312d3f2b
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu May 20 18:07:12 2010 +1000

Add a "flags" field to DeleteInputDeviceRequest.

Some input drivers need to implement an internal hotplugging scheme for dependent devices to provide multiple X devices off one kernel device file. Such dependent devices can be added with NewInputDeviceRequest() but they are not removed when the config backend calls DeleteInputDeviceRequest(), leaving the original device to clean up.

Example of the wacom driver:

config/udev calls NewInputDeviceRequest("stylus")

wacom PreInit calls
   NewInputDeviceRequest("eraser")
   NewInputDeviceRequest("pad")
   NewInputDeviceRequest("cursor")
PreInit finishes.

When the device is removed, the config backend only calls DeleteInputDeviceRequest for "stylus". The driver needs to call DeleteInputDeviceRequest for the dependent devices eraser, pad and cursor to clean up properly. However, when the server terminates, DeleteInputDeviceRequest is called for all devices - the driver must not remove the dependent devices to avoid double-frees. There is no method for the driver to detect why a device is
being removed, leading to elaborate guesswork and some amount of wishful thinking.

Though the input driver's UnInit already supports flags, they are unused. This patch uses the flags to supply information where the DeleteInputDeviceRequest request originates from, allowing a driver to selectively call DeleteInputDeviceRequest when necessary.

Also bumps XINPUT ABI.

xfree86: store the InputAttributes in the input device.

InputAttributes largely decide which configuration values get merged from the xorg.conf.d snippets. While they are available in the config backend, they are not available for any other callers of NewInputDeviceRequest().

Drivers implementing driver-side hotplugging do not have access to these attributes and cannot have xorg.conf.d snippets specific to dependent devices. For example, the following case cannot work right now:

Section "InputClass"
  MatchProduct "Wacom"
  Option "PressCurve" "0 0 100 100"
  ...
EndSection

Section "InputClass"
  MatchProduct "Wacom"
  MatchProduct "eraser"
  Option "PressCurve" "10 10 50 50"
  ...
EndSection

The second section is not triggered, as the wacom driver cannot supply the InputAttributes to NewInputDeviceRequest().

Add the attributes to the IDevRec and merge them into the InputInfoRec to make them accessible in the driver. This changes the ABI for input drivers.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>
No special memory handling is used to give drivers the maximum flexibility with the data. Drivers should be able to call realloc on the product string if needed and perform similar operations.

midispcur: Construct Picture objects lazily in case Render is disabled.

I noticed crashes in Xnest, which doesn't support the RENDER extension, but I suspect other DDXes that support disabling that extension would have had issues as well.

xnest: Don't ignore errors from DeviceCursorInitialize.
xfixes: Remove the invisible cursor sprite, using NullCursor instead.

Oliver McFadden reports that the invisible cursor sprite caused damage events and thus unnecessary redrawing, so removing it improves performance when using software cursor sprites, especially on those devices where you do not want a visible cursor: touchscreen tablets, embedded devices, etc.

For the xfree86 DDX, if hardware cursors are used, the driver is required to provide a HideCursor function, which will be called instead of trying to set a null cursor. I think software cursors are already safe. The other DDXes also look safe.

As far as I can tell, there's no reason to realize a null cursor. I think everything that handles null cursors doesn't rely on any setup in RealizeCursor, and treats them as empty cursors.

Xnest assumes that if a cursor is created, it will be realized before it is freed, which didn't happen if the invisible cursor was never used in a server generation. So this fixes a segfault in Xnest as well.

Device init: Don't crash when CreateGC fails.

ActivateDevice was ignoring errors from DeviceCursorInitialize, so cursor-related calls failed later. Jeremy Huddleston saw that crash in miPointerConstrainCursor, while with Xvfb I saw it in miSpriteRealizeCursor.

miDCDeviceCleanup frees any non-NULL GCs. miDCDeviceInitialize calls Cleanup on any failure, but if it failed early then some of the pointers in the miDCBufferPtr were garbage. Switch from malloc to calloc to ensure everything's initialized safely first.

With these two fixes, if CreateGC fails then the server gracefully fails in FatalError instead of segfaulting.

commit c51534961e1bb4e68ff881758862d2f85f572ce7

---
Since the headers we export in the SDK use the _X_NORETURN #define introduced in xproto 7.0.17, drivers built with the SDK will also need to have at least that version of xproto installed.

I considered exporting the version from configure.ac, but decided not to since the minimum required to build the X server may not always be the same as the minimum required to build drivers (for instance, if the X server used a new #define in its .c files or internal headers, but didn't export it in any of the SDK headers).

Author: Jamey Sharp <jamey@minilop.net>
Date: Sat Apr 24 23:26:40 2010 -0700

Return an appropriately-typed error from dixLookupResourceByType.

Rather than always returning BadValue, associate an error status like
BadWindow with a resource type like RT_WINDOW, and return the
appropriate one for the requested type.

This patch only touches the core protocol resource types. Others still
return BadValue and need to be mapped appropriately.

dixLookupResourceByType can now return BadImplementation, if the caller
asked for a resource type that has not been allocated in the server.

commit 4b9600a4167427a8fe88bca9b738c9a99cac9469
Author: Jamey Sharp <jamey@minilop.net>
Date:   Sat May 15 12:31:34 2010 -0700

Make WriteEventsToClient/WriteToClient no-op on fake or dead clients.

This matches the test in TryClientEvents, and is a superset of tests done by the callers of these functions. The consequence of forgetting these tests is a server crash, so they're always desirable. In my opinion, it's better to not require the callers to remember to do these checks.

For callers that don't do very much work before calling WriteToClient or WriteEventsToClient, I've removed the redundant checks.

hw/xquartz/xpr/appledri.c has an interesting case: While its check for "client == NULL" appears redundant with the test in WriteEventsToClient, it dereferences client to get the sequence number.

Update list of supported platforms in configure.ac error message

Adds DragonFly BSD, OpenSolaris, & GNU Hurd.
Drops MacOS X, since this is in the section specific to the Xorg/XFree86 DDX.
(Matches the OS patterns the configure script checks for.)

Also uses m4 macros to fix the spacing/formatting of the resulting message.
Fix compiler issues with getifaddrs() call on OpenSolaris

OpenSolaris recently added support for the getifaddrs() API.

Building with that uncovered two compiler issues (one warning, one error) in the code that was now being built for the first time in our builds:

"access.c", line 768: warning: argument #1 is incompatible with prototype:
    prototype: pointer to struct sockaddr {unsigned short sa_family, array[14] of char sa_data} : "access.c", line 213
    argument : pointer to struct sockaddr_storage {unsigned short ss_family, array[6] of char _ss_pad1, double _ss_align, array[240] of char _ss_pad2}

"access.c", line 838: assignment type mismatch:

...
in send_buffers_reply.

Solution is to handle the allocation failure and return BadAlloc to client.

Pre-validate ChangeGC XIDs.

In order to execute a wire-level ChangeGC request, we need to look up the resources named by any XIDs in the value-list. Various places in the server already have pointers to the resources they want to set into the GC, though, so over time the interface has evolved to accept either XIDs or pointers, with several different function call signatures used in different eras.

This patch makes the existing code require pointers to resources rather than XIDs, and adds a simple wrapper that looks up any XIDs. The old dixChangeGC API is preserved by delegating to whichever implementation is appropriate.

This affects error-handling: If any of the XIDs are invalid, then the GC is unchanged, and its ChangeGC callback is not invoked. This change is allowed by the protocol spec, which says, "The order in which components are verified and altered is server-dependent. If an error is generated, a subset of the components may have been altered."

Simplify miFillPolyHelper and miLineArc.

Both functions compute a set of spans and either fill them immediately
or accumulate them into a caller-provided buffer.

Computing the spans used only the miTranslate and lineWidth fields of
pGC, and neither could have been changed by the initial
ChangeGC/ValidateGC pair, so it's safe to compute the spans first.

Then both functions consume the spans the same way, so factor that into
a new fillSpans function.

Remember drawable ID used to find damage target for use in events. Bug 5730.

Using Composite, window pixmaps are given names in the client resource
namespace and yet may not have any XID recorded in the drawable
structure. As such, we need to remember the XID used to lookup the
pixmap in the resource database so that we can report the correct XID
back to the client in damage events.

commit 9de0e31746d5f0d9d39d11c94ec3cbc04a9935fc
dri2: Take an XID for tracking the DRI2 drawable

Some pixmaps (window pixmaps and scratch pixmaps) don't have the drawable->id set and thus DRI2 gets confused when using that field for looking up the DRI2 drawable. Go back to using privates for getting at the DRI2 drawable from a DrawablePtr. We need to keep the resource tracking in place so we can remove the DRI2 drawable when the X resource it was created for goes away. Additionally, we also now track the DRI2 drawable using a client XID so we can reclaim the DRI2 drawable even if the client goes before the drawable and doesn't destroy the DRI2 drawable.

glxdri2: Hard-code the extension version we need

If we use the #define'd version from dri_interface.h, the server will require at least that version of the extension. If we're compiling against a dri_interface.h with a newer version we don't really require, glxdri2 will require a too high version of the extension.

The right approach is to just hard-code the version we need instead of using the #defines.

FreeResource() keeps clientTable[cid].elements up to date with the number of resources allocated to the client. The other free resource functions (FreeResourceByType(), FreeClientNeverRetainResources() and FreeClientResources()) don't maintain this invariant.

Typically, the only consequence is that the element count is too high and we end up allocating the hash table bigger than necessary. However, FreeResource() also relies on the element count to restart the search if the list of resources has been changed during a resource destruction callback. Since FreeResourceByType() doesn't update the count, if we call that from a resource destruction callback from FreeResource(), the loop isn't restarted and we end up following an invalid next pointer.

Furthermore, LookupClientResourceComplex() and FreeClientNeverRetainResources() don't use the element count to detect if a callback deleted a resource and may end up following an invalid next pointer if the resource system is called into recursively.

Remove mibank support

Banked framebuffers are so 1990. As of 7.4 the only drivers remaining that used this were chips, neomagic, trident, and vesa. vesa only used it when not using shadowfb, which is broadly undesirable anyway, and no longer uses it at all as of 2.3.0. neomagic never used it by default, and support for it is gone in git master. The other two effectively
only ever used it for ISA chips; since ISA support is now gone from
the server, they have been modified to only compile mibank support when
ISA support is available.

Kill unused/useless macros in panoramiX.h: BREAK_IF, IF_RETURN, FORCE_ROOT

This header doesn't seem to be used outside the server tree, so I don't think anything was depending on these except what I've fixed in this patch.

FORCE_ROOT is not used anywhere, and never has been in all the history that's in git. ajax removed its FORCE_WIN and FORCE_CMAP companions three years ago, in 04b87d6dfae02e4ecdb5216d12c6c6d9f1e8c2b.4.

BREAK_IF and IF_RETURN expanded to exactly the keywords in their names, which is silly. They were rarely used and served only to make callers inconsistent with the idioms used elsewhere in the server.

Boolean-or short-circuits, so (a || (!a && ...)) is redundant. Simplify.

Exa screen private has SavedSourceValidate, not SourceValidate

Need to check the right field to see if there is a wrapped SourceValidate function.

xkb: purge unneeded includes from ddxDevBtn.c
GLX pbuffers are implemented using a pixmap allocated by the server. With the change to DRI2 to track DRI2 drawables as resources, we need to make sure that every drawable we create a DRI2 drawable for has an XID. By using the XID of the pbuffer, the resource system will automatically reclaim the hidden pixmap and the DRI2 drawable when the pbuffer is
destroyed or the client exits.

xkb: use GPE for XKB fake motion events.

Section 4.6.1 of the XKB spec says that "the initial event always moves the cursor the distance specified in the action [...]", so skip the POINTER_ACCELERATE flag for GPE, it would cause double-acceleration.

Potential regression - GPE expects the coordinates to be either relative or both. XKB in theory allows for x to be relative and y to be absolute (or vice versa). Let's pretend that scenario has no users.

dix: Fix crash in DeliverGrabbedEvents.

If both devices are synchronously grabbed, first with a GrabPointer, then
with a GrabKeyboard (GrabModeSync on both), sync.other of each device points
to the grab of the respective other device.

If the keyboard is then thawed through a AllowSome request, the VCK's
sync.other is reset to NULL. Subsequently, an event on the VCP would crash
the server when dereferencing sync.other on the VCP.

The check's purpose is to compare if the other device is grabbed by the same
client, which should be checked by accessing (dev->deviceGrab->grab->resource).
A check of the server-1.3 sources confirms that.

commit 95f01bdfee8241371675f0089170fa6b2908d815
Author: Dan Nicholson <dbn.lists@gmail.com>
Date:   Sat Apr 3 10:08:25 2010 -0700

  xfree86: Search for a system xorg.conf.d

  In addition to the conf files found in /etc/X11 or $sysconfdir/X11 used
  for local administration, we also reserve a system directory for vendor
  and package usage. The simple search path is:

    /usr/share/X11/xorg.conf.d
    $datadir/X11/xorg.conf.d

  Files from these directories will have the lowest config priority. The
directory $datadir/X11/xorg.conf.d is exported from xorg-server.pc in
the variable "sysconfigdir". Packages should install their .conf files
to the directory specified by:

    `pkg-config --variable=sysconfigdir xorg-server`

  Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>
xfree86: Set a saner search path for xorg.conf.d

There's no reason to carry all the oddities from xorg.conf like appended hostname to the search path for xorg.conf.d. This changes it to something very simple:

```
/etc/X11/<cmdline>
$sysconfdir/X11/<cmdline>
/etc/X11/xorg.conf.d
$sysconfdir/X11/xorg.conf.d
```

Author: Alan Coopersmith <alan.coopersmith@oracle.com>
Date: Tue Apr 6 15:52:18 2010 -0700

Convert x86emu fixed size int typedefs to use stdint types

Fixes x86emu builds when using non-gnu compilers now that u64 is required

Before this fix, the u64 type would not be defined, causing x86emu/sys.c to fail to build:
"sys.c", line 102: syntax error before or at: ldq_u
"sys.c", line 102: syntax error before or at: *

Since Keith requested using <stdint.h>, converted all the x86emu typedefs to use the stdint types.

DRI2: drawable lifetime fixes

Handle drawable destruction and lifetime correctly.

Check whether the drawable priv is valid in DRI2SwapInterval(),
DRI2WaitSBC() and DRI2WaitMSC(); it may have gone away, so be sure to
check it before using it.

If more than 1 outstanding swap is queued, we may complete several after
an app has exited. If we free it after the first one completes and the
refcount reaches 0, we'll crash the server on subsequent completions.
So delay freeing until all swaps complete and remove the error message
as this is a normal occurrence. To do this properly, we must also avoid
destroying drawables in DRI2DestroyDrawable() if a swap or wait event is pending.

And finally, make sure we free drawables in DRI2WaitMSCComplete() if necessary (i.e. if the refcount has reached 0 and this MSC was the last pending event on the object).

DRI2: fix swapbuffers handling of SBC and target MSC

Returns expected SBC after completion of swap to caller, as required by OML_sync_control spec, instead of the last_swap_target value.

Passes target_msc, divisor, remainder, correctly for glXSwapBuffersMscOML() call, while retaining old behaviour for simple glXSwapBuffers() call.

An OML swap can have a 0 target_msc, which just means it needs to satisfy the divisor/remainder equation. Pass this down to the driver as needed so we can support it.

DRI2WaitSbc(): Fixes for correct semantic of glXWaitForSbcOML()

Added implementation for case target_sbc == 0. In that case, the function shall schedule a wait until all pending swaps for the drawable have completed.

Fix for non-blocking case. Old implementation returned random, uninitialized values for (ust,msc,sbc) if it returned immediately without scheduling a wait due to sbc >= target_sbc.

Now if function doesn't schedule a wait, but returns immediately, it returns the (ust,msc,sbc) of the most recently completed swap, i.e., the UST and MSC corresponding to the time when the returned
current SBC was reached.

Date:   Tue Mar 23 12:13:56 2010 +1000

xfree86: merge driver from the input class into the options.

A driver that is assigned by an input class is only present as idev->driver. The driver itself has no access to this information once PreInit is called. For devices that rely on chain-hotplugging (wacom), this means that for the second device the driver information is lost and the second device cannot be initialized through NewInputDeviceRequest. Although this could be worked around by hardcoding the driver name in the wacom driver, having the assigned driver in the options seems like the better solution.

This issue only manifests itself with the udev backend. With HAL, the driver is assigned by HAL and the option is duplicated in config/hal.c.

Author: Rami Ylimaki <ext-rami.ylimaki@nokia.com>
Date:   Wed Mar 17 12:16:57 2010 +0200

os: Prevent backtrace from being stopped in noreturn functions.

There are two noreturn functions in the X server: FatalError and AbortServer. Having any of those two functions in the middle of a call stack will prevent unwinding the program properly and stops the backtrace at those functions in gdb.

The file containing FatalError and AbortServer, os/log.c, has to be compiled with the -mapcs-frame option on ARM to get proper
backtraces. Automake imposes its own restrictions on compiling individual source files with different options. The recommended way to do this is to put os/log.c into a convenience library and add this library inside os/libos.la. See the documentation of GNU Automake manual, version 1.11.1, section 27.8 Per-Object Flags Emulation, for details.

commit 185185eeb44a277c324be0f58a4b4a469b56b69b
Author: Peter Harris <pharris@opentext.com>
Date: Tue Mar 23 12:08:19 2010 -0400

Fix crash when all glyphs of a given depth are freed, but not all glyphsets

This is how the crash can be triggered with only two clients on the system:
Client A: (already running)
Client B: Connect
Client B: CreateGlyphSet(depthN)
Client A: Disconnect
Server: free globalGlyphs(depthN)
Client B: AddGlyphs(depthN)
Server: SEGV

This crash was introduced with the FindGlyphsByHash function in 516b96387b0e57b524a37a96da22dbee041712. Before that revision, ResizeGlyphSet was always called before FindGlyphRef, which would re-create globalGlyphs(depthN) if necessary.

hw/xfree86: move reference counting out of the UseHWCursor[ARGB] functions

The problem is that the xf86_use_hw_cursor(_argb) functions may get this correctly now, some drivers will replace these generic versions with their own functions. It is pretty insane to expect them to do reference counting of the cursor (as an example, look at driver/xf86-video-vmware to see how that looks like as a workaround). There are even places in xserver itself which replace these two functions.

The segfaults if no reference counting is done are caused because the reference count of the cursor reached zero, hence the cursor was freed, however xf86CursorEnableDisableFBAccess() brought it back to life from the dead (from the SavedCursor).

This patch hence adds reference counting in xf86CursorSetCursor. As per Michel Daenzer's suggestion, also free the cursor upon xf86CursorCloseScreen.

In theory with this it should be possible to remove the reference counting in the UseHWCursor functions I think, though it should also be safe to keep them.

Record: Avoid duplicates from replaying frozen events

Reintroduce a check which used to be there in the old ProcessKeyboardEvent/ProcessPointerEvent codepath, which avoids us recording events subject to a grab twice: once when it's first processed in EnqueueEvent, and then again when it's thawed and being replayed.

This required a tiny amount of code motion to expose syncEvents.

dix: Clip only into axis ranges if we're in absolute mode. (#26543)

An absolute device in relative mode may provide valuators outside of the axis range. Clipping back into the range prevents screen crossings in a multi-screen (Xinerama) setup as the required screen edge for crossing is never met: miPointerSetPosition crosses the screen conditional to the X coordinate being equal to the screen width or _less than_ 0. While the former can be met when clipping into the coordinate range and scaling, the latter cannot, resulting in a mouse pointer that gets stuck on the rightmost screen.

This patch only applies axis clipping for valuators in mode Absolute. If relative, we allow the values to get above/below the axis ranges. Doesn't matter, miPointerSetPosition will reset the values to the allowed range even if no screen was crossed.
This leads to interesting values provided to clients, the valuator range of the device resets once a screen is crossed and essentially reflects the position of the cursor on the screen - scaled into the valuator range.
The values themselves are valid given the range though.

In theory, the XI1 specs require that a relative device has a min/max range of 0/0. This doesn't really go well with devices that actually can switch mode between relative and absolute since they would have to reset their axis range when switching. If multiple XI clients are in use, we have no method of notifying them about the changes, so other clients may continue to use the wrong axis ranges (note: XI1 wasn't really designed to have multiple clients use a device). Expecting all relative devices to have this min/max of 0 is unrealistic at this point.

So pick what is possibly the lesser of all evils, pass the beer and despair.

dix: Use DeliverGrabbedEvent for implicit passive grabs (#25400)

A client requesting a GrabModeSync button grab, owner-events true, with only
the ButtonRelease mask set would never receive the press event even if the
grab window had the ButtonPress mask set.

The protocol requires that if owner-events is true, then the delivery mask
is the combination of the grab mask + the window event mask.

DeliverGrabbedEvents does this already for us, checking first the delivery
based on owner_events and then based on the grab mask. AFAICT, the device
cannot enter the states FREEZE_BOTH_NEXT_EVENT or FREEZE_NEXT_EVENT that
would be handled by DGE in any possible path here.

Bonus point - CheckPassiveGrabsOnWindows suddenly becomes a lot less
complicated.

dix: try to ring the bell even if the current device doesn't have one. (#24503)

Evdev devices do not have the bell proc set, but XTEST devices do. By exiting early, the bell only rings if the last keyboard used was the XTEST keyboard and hence the bell proc is still set on the master but not if an evdev keyboard was used last.

The better approach here is to try to ring the bell on all devices attached to this master device in case one or more actually do produce an audible sound. That's also XKB's behaviour if XkbUseCoreKbd is specified as device identifier.

Re-enable RECORD extension.

RECORD was disabled during the switch to internal events. This patch modifies the record callback to work with internal events instead of xEvents. The InternalEvents are converted to core/Xi events as needed.

Since record is a loadable extension, the EventTo* calls must be externed.

Commit 5b9a52be7e975e59e0bb6b43539ecaf96b2ecd
Author: Rami Ylimaki <ext-rami.ylimaki@nokia.com>
Date: Thu Jan 28 11:08:34 2010 +0200

Os: Prevent core dump from being truncated.

The problem fixed by this patch can be reproduced on Linux with the following steps.
- Access NULL pointer intentionally in ProcessOtherEvent on key press.
- Instead of saving core dump to a file, write it into a pipe.
  `echo "/usr/sbin/my-core-dumper" > /proc/sys/kernel/core_pattern`
- Dump the core by pressing a key.

While the core is being dumped into the pipe, the smart schedule timer will cause a pending SIGALRM. Linux kernel stops writing data to the pipe when there are pending signals. This causes the core dump to be truncated. On my system I'm expecting a 6 MB dump but the size will be 60 KB instead. The problem is solved if we block the SIGALRM caused by expired smart schedule timer.

I haven't been able to reproduce this problem in the following cases.
- Save core dump to a file instead of a pipe.
- Kill -SEGV `pidof Xorg`
- Press a key to dump core while gdb is attached to Xorg.
- Give option -dumbSched to Xorg.

Also note that the fix works only when NoTrapSignals has the default value FALSE. The problem can still be reproduced if error signals aren't trapped. In addition to pending SIGALRM, there is a similar problem with pending SIGIO from the keyboard driver during core dump.

xfree86: Reorder InputClass option priorities

Currently the config and InputClasses are merged together so that the options from the config backend have the highest priority. This is bad since it means options such as a default XKB layout set by the backend cannot be changed by the user.

This patch changes order of precedence to be:

1. xorg.conf
2. xorg.conf.d (later files have higher priority)
3. config backend

In order to allow this ordering, the config parsing has been changed to read the xorg.conf.d files before xorg.conf. This has the consequence that the core device picking which looks for the first InputDevice may not find it in xorg.conf.

Xi: reset the sli pointers after copying device classes. (#25640)

If the indicator flags have the XkbSLI_IsDefault bit set, the indicator map and names aren't their own bit of memory but rather point into the device->key->xkbInfo->desc structure. XkbCopySrvLedInfo knows about this and leaves the pointers alone.

When copying the classes from the slave to the master, these pointers are copied and still point to the dev->key class of the slave device. If the slave device is removed, the memory becomes invalid and a call to modify this data (e.g. XkbSetIndicators) may cause a deadlock.

The copying of dev->key relies on dev->kbdfeed to be already set up. Hence the pointers need to be reset once _both_ kbdfeed and key have been copied into the master device.

Date:   Wed Feb 10 15:36:50 2010 +1000

  Add tag matching to input attributes.

  Tags may be a list of comma-separated strings that match against a MatchTag
InputClass section. If any of the tags specified for a device match against
the MatchTag of the section, this match is evaluated true and passed on to
the next match condition.

  Tags are specified as "input.tags" (hal) or "ID_INPUT.tags" (udev), the
value of the tags is case-sensitive and require an exact match (not a
substring match).

  i.e. "quirk" will not match "QUIRK", "need_quirk" or "quirk_needed".

Example configuration:
udev:
   ENV[ID_INPUT.tags]="foo,bar"

hal:
   <merge key="input.tags" type="string">foo,bar</merge>

xorg.conf:
   Section "InputClass"
      Identifier "foobar quirks"
      MatchTag "foo|foobar"
      Option "Foobar" "on"
   EndSection

Where the xorg.conf section matches against any device with the tag "foo" or tag "foobar" set.

xfree86: Allow multiple arguments to InputClass matches

In order to keep the number of InputClass sections manageable, allow matches to contain multiple arguments. The arguments will be separated by the '|' character. This allows a policy to apply to multiple types of devices. For example:

```
Section "InputClass"
  Identifier "Inverted Mice"
  MatchProduct "Crazy Mouse|Silly Mouse"
  Option "InvertX" "yes"
EndSection
```

This applies to the MatchProduct, MatchVendor and MatchDevicePath entries. Currently there is no way to escape characters, so names or patterns cannot contain '|'.

Cygwin/X: Copy the state of the Windows keyboard device to the Virtual Core Keyboard at startup.

Otherwise, this happens lazily after the first keypress, which can lead to applications which are started from a shell window and inspect the keyboard state before a character is typed getting the wrong idea about the desired keymap (e.g. xemacs shows this behaviour)

commit 08b22c7fa97217ea4d497ee6624fc3dd916d9b
Author: Oldich Jedlika <oldium.pro@seznam.cz>
Date:   Sun Jan 17 17:59:03 2010 +0100

Allow driver to call DeleteInputDeviceRequest during UnInit

When the input driver (like xf86-input-wacom) removes it's devices
during a call to UnInit, the CloseDownDevices() cannot handle it. The
"next" variable can become a pointer to freed memory.

The patch introduces order-independent device freeing mechanism by
remembering the already freed device ids. The devices can reorder any
time during freeing. No device will be double-freed - if the removing
failed for any reason; some implementations of DeleteInputDeviceRequest
don't free the devices already.

Author: Jeremy Huddleston <jeremyhu@apple.com>
Date:   Sat Jan 30 14:49:02 2010 -0800

XQuartz: Attatch a stub display when CoreGraphics reports no displays.

This is half of the required changes to address the "stuck mouse pointer" bug that occurs when X11 launches while the displays are asleep. The remainder of the fix is part of libXplugin which needs to be updated to send XP_EVENT_DISPLAY_CHANGED when the display wakes up. If you don't have a recent enough libXplugin (expected in 2.5.0_beta2 or later), you can cause this event to be sent by changing your display resolution (or you could just start X11.app with your screens awake).

DRI2: Bump the dri2 module version to 1.2.0 to reflect recent API changes.
The default behavior of the server is to start with an invisible root cursor. Be such cursor invisible or inexistent (null), in the end it doesn't matter - for the user. The content on screen will be the same. Besides, there's no difference, in terms of performance, whether such cursor is invisible or simply null. The paths that both take inside the server are roughly the same.

Therefore create a null root cursor becomes irrelevant.

This value isn't actually set for normal events but it saves us some work for the record extension support.

Revert "dix: EventToCore needs to copy the root window too."

This reverts commit 0f2d297dedeff8bd227df4c498cc668b0e902344.

Peter provided an updated patch which fixes the tests.
Simon reported an issue with kwin that turned out to be a general problem. If a drawable goes away before its swap completes, we’ll try to free it up. However, we free it improperly, which causes a server crash in DRI2DestroyDrawable. Fix that up by splitting the free code out and calling it from DRI2SwapComplete.

config: replace custom code with reusable macro XORG_WITH_DOXYGEN
XORG\_WITH\_DOXYGEN provides additional functions like a configure option which allow platform builders to control the usage of the doxygen program.

This is a requirement from platforms that do not have such a tool. A platform with a back level doxygen may use --without-doxygen to get the rest of the documentation built.

commit 326429badfc76885e4652ddc72860810c0e8d102
modes: Remove the ClockRanges type

ba2d39dd5428cb5922b797a1d4ea45b859412b40 introduced warnings:

xf86Mode.c: In function ‘xf86CheckModeForDriver’:
xf86Mode.c:986: warning: passing argument 1 of ‘modeInClockRange’ from incompatible pointer type
xf86Mode.c:253: note: expected ‘ClockRangePtr’ but argument is of type ‘ClockRangesPtr’
xf86Mode.c:1002: warning: passing argument 1 of ‘modeInClockRange’ from incompatible pointer type
xf86Mode.c:253: note: expected ‘ClockRangePtr’ but argument is of type ‘ClockRangesPtr’

Because I foolishly didn't notice that we had types with nearly identical members named ClockRange and ClockRanges. The latter contained an extra 'strategy' member at the end, which claimed to be needed by the vidmode extension. Of course, this was a lie: the only time we'd use it was in mode validation, for drivers using LOOKUP_CLKDIV2 with non-programmable clocks. The only driver using LOOKUP_CLKDIV2 is rendition, which has a programmable clock. The only driver using the ClockRanges type was smi, which did not use it for its 'strategy' member, so has been fixed to use ClockRange instead.

dix: add smooth limited pointer acceleration profile

This profile is inspired by the accel code removed from the wacom driver. It ascends from zero to acceleration, maxing out at threshold. This means you can control the slope using threshold, which wasn't possible in wacom. For sanity's sake, threshold should grow with acceleration.

Works best with adaptive deceleration, since otherwise it only generates acceleration above 1, causing seldom pixel skips.

xfree86: Introduce InputClass configuration

Currently Xorg uses hal's fdi files to decide what configuration options are applied to automatically added input devices. This is sub-optimal since it requires users to use a new and different configuration store than xorg.conf.

The InputClass section attempts to provide a system similar to hal where configuration can be applied to all devices with certain attributes. For now, devices can be matched to:

* A substring of the product name via a MatchProduct entry
* A substring of the vendor name via a MatchVendor entry
* A pathname pattern of the device file via a MatchDevicePath entry
* A device type via boolean entries for MatchIsKeyboard, MatchIsPointer, MatchIsJoystick, MatchIsTablet, MatchIsTouchpad and MatchIsTouchscreen

See the INPUTCLASS section in xorg.conf(5) for more details.

xfree86: Support non-Option boolean entries in configuration

Refactored code into the parser to allow the freeform boolean types used in Option entries to be used in other configuration entries. This isn't as powerful as allowing "No" to precede the option names, but it atleast gives a common handling of "yes", "no", etc.
A type xf86TriState has been added to support an optional boolean. This allows the boolean sense of the value to be kept while providing a means to signal that it is unset.

taxe86: Use xorg.conf.d directory for multiple config files

Currently there is a single file, xorg.conf, for configuring the server. This works fine most of the time, but it becomes a problem when packages or system services need to adjust the configuration. Instead, allow multiple configuration files to live in a directory. Typically this will be /etc/X11/xorg.conf.d.

Files with a suffix of .conf will be read and added to the server configuration after xorg.conf. The server won't fall back to using the auto configuration unless there is no config file and there are no files in the config directory.

Right now this uses a simpler search template than the config file search path by not using the command line or environment variable parameters. The matching code was refactored a bit to make this more coherent. Any DDX wanting to read the config files will need to call xf86initConfigFiles before opening/reading them. This is to allow xf86openConfigFile without xf86openConfigDirFiles and vice-versa.

xfree86: reword InputDevice man sections, deprecate CorePointer/CoreKeyboard

Reshuffle and reword - InputDevice sections are only necessary if hotplugging is disabled. Put more emphasis on hotplugging and less on HAL since we'll switch backends eventually.

CorePointer, CoreKeyboard, and AlwaysCore should be listed as deprecated since they don't do what they used to since 1.4. These days, only SendCoreEvents matters and it's enabled for any driver calling xf86ProcessCommonOptions (== every driver).
It only controls the startup behavior too, so document this.

Subject: [PATCH] xfree86: if only one screen was found, disable Xinerama (#24627)

Xorg +xinerama crashes immediately due to whacky dependency between Xinerama
and RandR12. The latter doesn't initialize if Xinerama is enabled, but if
only one screen is found, Xinerama is disabled again and RandR12 tries to
access data it never initialized.

Dependency chain is:
- ProcessCommandLine sets noPanoramiXExtension to FALSE
- xf86RandR12Init() is a noop
- PanoramiXExtensionInit sets noPanoramiXExtension to TRUE
- xf86RandR12CreateScreenResources tries to use the devPrivates key it never initialized.

This hack checks if there's only one screen at the time RandR12 is initialized. If so, we expect Xinerama to fail anyhow so we disable it ourselves and proceed as planned.

fb: Adjust transform or composite coordinates for pixman operations

Windows (or even pixmaps, in some cases) may not sit at the origin of the containing pixmap, so any coordinates relative to the drawable must be adjusted. For destinations and untransformed sources, the operation coordinates are adjusted. For transformed sources, the transform matrix is adjusted.

EXA/mixed: Don't consider devKind for detecting dimension change.

Fixes http://bugs.freedesktop.org/show_bug.cgi?id=25536.

There should be no reason for the pitch to actually change when none of the
other dimensions do, and this could lead to incorrectly freeing the system
memory copy when allocating a GPU copy, resulting in loss of valid pixmap
contents.

xfree86: tell users to disable AutoAddDevices, not AllowEmptyInput.

Technically, disabling AEI is the right suggestion. AEI off forces the server to init the built-in defaults for input devices (or pick the first one from the config file). At the same time, hotplugging is still available with AEI off.

Unfortunately, in the vast majority of cases users want to simply disable hotplugging or have a working server while the local HAL configuration is broken or missing. Disabling AEI will lead to duplicate events, triple keystrokes, etc. once the configuration works again.
It's not actually required to remove AEI once hotplugging works again, though it will in many cases lead to a setup that appears broken.

Asking users to disable AutoAddDevices instead means those users disable hotplugging, can then fix the HAL setup and they _must_ remove the config line again to test if hotplugging works again. Which doesn't leave them with a broken config once everything is working nice and dandy. Less bugreports, everybody wins.

EXA: Don't defragment offscreen memory at allocation time.
Fixes http://bugs.freedesktop.org/show_bug.cgi?id=24300.

Offscreen memory allocation can occur from various places, and apparently doing defragmentation from at least some of them can confuse some driver acceleration code.

There's still the regular background defragmentation in the WakeupHandler, which should manage to keep fragmentation at a reasonable level.

dix: increase default number of buttons to 10.

Currently the XTEST device is limited to the same number of buttons the core
device has. This breaks if a user has a mouse with more than 3 buttons
connected and is using a core client to fake button 8+ presses.

Rather than expecting all clients to fix themselves, just increase the
default number of buttons to 10, which is somewhat a compromise. Ideally,
the XTEST devices should adjust themselves to the highest number of buttons
available on the slave devices (like the master pointers already do), but
that's a taks for another day.

Date:   Wed Nov 4 15:33:53 2009 +0000

Xming: Add FORCEEXIT option to configuration file

Add a new option to configuration file: FORCEEXIT, like SILENTEEXIT but ignores the client count. Unsaved client work may be lost with this option but it is useful if you want no dialogs.

Add description of this new keyword to XWinrc man page

Also fix grammar of the exit confirmation dialog warning to be correct when there is only one(1) client connected.

Also rearrange yacc tokens to one per line to make future merges easier

Also amend default system.XWinrc so that SILENTEEXIT is on by default

commit 56658fc06cb773ed20ef1b23a3f9e918c0d3b36bb
Author: Yaakov Selkowitz <yselkowitz@users.sourceforge.net>
Date:   Thu Oct 15 22:40:02 2009 -0500

Set default font path with fontutil 1.1 and fontpath.d

Look for $sysconfdir/X11/fontpath.d and, if it exists, set it to the
default font path as a catalogue: entry. Based on app/xfs commit
c66a46e35ae40a23ad9ace838ab42300eddbd67.

Otherwise, use the font-util 1.1 macros to determine the system
fontrootdir and standard subdirectories, or let the user configure it
and the subdirectories themselves.

This adds a build-time (or at least an autoconf/autogen time) dependency
on font-util, and changes the --with-fontdir argument to --with-fontrootdir.

Date:   Tue Oct 13 10:15:00 2009 +1000

loader: actually stat something that has some chance of existing. (v2)

FindModuleInSubdir seems to expect a / at the end of the subdir its
finding for, so we add the / early, the stat will fail if its
not a subdir, I'm leaving the S_ISDIR in just in case there is another
reason it could return 0. This does look a bit silly in strace
but it seems to work fine.

I have a very intermittent issue where drivers loses its / that
I've been seeing on/off for a while, this may or may not fix it.

    Bump to 1.7.99.2 (unreleased)

commit 909df9beb3ddd02632f36ae682537280a6a8e5b4
Author: Jon TURNER <jon.turner@dronecode.org.uk>
Date:   Tue Oct 20 12:57:05 2009 +0100

    Resolve an inconsistency between libX11 and Xserver over GetModifierMapping

    libX11 ModMap.c believes that GetModifierMapping can never return an error

    Xserver devices.c believes that GetModifierMapping can return an error if
    the ModMap couldn't be generated

    According to the protocol document I have, libX11 is right, so adjust the
server to send back an empty modmap if one couldn't be made...

Make sure dmx docs are built for distribution.

Ok, dmx docs are driving me slightly nuts. We probably shouldn't include the built versions in the tarball, but we do, so this is an attempt to make that work by having both the 'all' and 'dist' targets depends on the doxygen output.

Fix 'distcheck' to use host xkb files but install to build dir

'make distcheck' needs to read xkb files and write out compiled versions as a part of the 'make check' phase. This patch passes suitable options to the configure stage of the distcheck process to read xkb files from the system location and write them to the distcheck _inst directory.

dmxDestroyWindow() - must call the X's native DestroyWindow()

Don't really know why this section was disabled, but without it, certain picture resources do not get free'd until later in the FreeClientResources() process after the screen has been free'd - resulting in seg fault.

With this patch, all resources normally free'd using vanilla X are now also being freed correctly by Xdmx.

kdrive: fix Xfake build by removing the old keysym stuff

Remove CopyISOLatin1Lowered

This function was moved verbatim into libXfont-1.4, and it is not used by the server or any drivers. Exporting it in both places leads to multiple definition linking errors on Cygwin, where we need to use a static libXfont due to poor weak-symbol handling.

Define ddxBeforeReset stubs in platform-neutral DDXs
XWin uses ddxBeforeReset, which is called in DIX. Other DDXs need to define these in order to avoid an undefined symbol error at link time when building alongside XWin. Xnest and Xvfb already provide empty stubs; this does the same for Xdmx and the platform-neutral KDrive servers.

Also add a prototype to avoid a warning in all DDXs.

commit 8502c06e19a4c00bf1311f54f9a365ee9e026e97
Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date:   Tue Sep 15 19:29:34 2009 -0400

xselinux: Fake return values on denials in input polling requests.

Instead of returning BadAccess when "read" permission is denied on a device, falsify the device state (buttons down, keys pressed). This is nicer to applications, but may still have undesired side effects. The long-term solution is not to use these requests in event-driven code!

Requests affected: QueryPointer, QueryKeymap, XiQueryDevice.

Rootless: Abstract some of the Xplugin specific stuff which has crept into rootlessWindow.c

The rootless extension now directly calls some Xplugin functions, and relies
on types defined in Xplugin.h, which isn't very abstracted :-)

This patch is a start at abstracting some of the Xplugin specific stuff which
has crept into rootlessWindow.c. This has been done in a pretty mindless fashion,
without much thought as to if the additions to the generic rootless interface are
the correct ones

There is some confusion as to if RootlesscolormapCallback() returns a Bool or
xp_error_enum value (not so abstact), but I have no way of checking, of finding
out if Xplugin actually checks the result :-) 

Based on patches from Colin Harrison, Jon Turney and Yaakov Selkowitz

dix: extend IsPointerDevice check to valuator-only devices.

A device with valuators but no keys is definitely a pointer device and needs
to be attached to the VCP. Otherwise, the class copying happens on the VCK
and the VCP isn't updated with the events that are to be sent through it.
This addresses the trigger for #24441, not the actual issue.
Jury is still out on valuator+key devices.

Date:   Thu Oct 8 13:38:44 2009 +1100

Cast small-int values through intptr_t when passed as pointers

On 64-bit systems, int and pointers don't have the same size, so GCC gives
warnings about casts between int and pointer types. However, in the cases
covered by this patch, it's always a value that fits in int being stored
temporarily as a pointer and then converted back later, which is safe.
Casting through the pointer-sized integer type intptr_t convinces the
compiler that this is OK.

render: Fix crash in RenderAddGlyphs (#23645)

This patch fixes two bugs:
size is calculated as glyph height * padded_width. If the client submits
garbage, this may get above INT_MAX, resulting in a negative size if size is
unsigned. The sanity checks don't trigger for negative sizes and the server
goes and writes into random memory locations.

If the client submits glyphs with a width or height 0, the destination
 pixmap is NULL, causing a null-pointer dereference. Since there's nothing to
 composite if the width/height is 0, we might as well skip the whole thing
 anyway.

Tested with Xvfb, Xephyr and Xorg.

ephyr: if -parent is given, check for a trailing -screen. (#24144)
If -parent is given, don't open up a new window if -screen is given as well.
The commandline option -screen allows to set the depth of the embedded
Xephyr instance, even though width and height are autoscaled on -parent.

This patch checks for a -screen parameter after -parent and - if one is
found - delays initializing the screen. The parent window id is stored
temporarily but re-set after a -screen argument.
The following command is thus valid:

Xephyr -parent 1234 -screen 640x480@8 -screen 1024x768
It embeds the first 8-bit screen into window 1234 and opens up a new window
for the second screen. Multiple parent arguments are possible, the screens
are embedded in-order.

EXA: Fix mixed pixmaps crash with missing / failing UploadToScreen hook.

For the recent mixed pixmaps changes, I failed to realize (or hit in my
testing) a problem which can occur if the driver doesn't provide an
UploadToScreen hook or provides one which can fail: There can be a crash
in exaMemcpyBox() because exaCopyDirtyToFb() passes pExaPixmap->fb_ptr to
exaCopyDirty(), but that's normally NULL with driver allocated pixmaps.
The solution is to make exaCopyDirty*() no longer rely on pExaPixmap->fb_ptr but use pPixmap->devPrivate.ptr after PrepareAccess instead.

Fixes http://bugs.freedesktop.org/show_bug.cgi?id=24167.

EXA: Try to minimize UploadToScreen calls for mixed pixmaps.

If there are several software fallbacks affecting the system memory copy of the
same pixmap, only copy the results back to the driver pixmap when it's used for
acceleration again, or in the BlockHandler, whichever happens first.

commit 1818cbd70fc1f2e1487b4c678e67e28f1265c0ef
Author: Michel Dänzer <daenzer@vmware.com>
Date:   Sat Sep 26 01:59:39 2009 +0200

EXA: Extend mixed pixmaps scheme to allow driver PrepareAccess hook to fail.

If the PrepareAccess hook fails, use the DownloadFromScreen hook to retrieve
driver pixmap contents to a system RAM copy, perform software rendering on that
and copy the results back using the UploadToScreen hook. Use the classic
migration logic to minimize transfers (which as a bonus allows slightly cleaning up some of the existing mixed pixmap code).

This enables things that weren't possible before with driver-allocated pixmap storage: If some (or all) GPU pixmap storage can't be mapped directly by the CPU, this can be handled between the PrepareAccess and DownloadFrom/UploadToScreen hooks, e.g.:

* Radeon KMS on big endian machines can fail PrepareAccess if the pixmap requires byte-swapping and swap bytes in DownloadFrom/UploadToScreen.
* Environments where GPU and CPU don't have a shared address space at all. Here the driver PrepareAccess hook will always fail and leave all transfers between GPU / CPU storage to the DownloadFrom/UploadToScreen hooks.

Drivers which can handle all pixmaps in the PrepareAccess hook should notice little if any difference.

configure: fix up tslib check once again.

This patch addresses two issues:
The check for HAVE_TSLIB = xauto can never be true, the check has been
corrected to TSLIB = xauto.

Pre-pkgconfig versions of tslib fail to be found, this patch restores the
additional AC_CHECK_LIB. However, the pgk-config check must happen before
AC_CHECK_LIB, as AC_CHECK_LIB does not seem to honour the LD_LIBRARY_PATH.
Thus, if tslib is installed outside of the default paths, AC_CHECK_LIB
fails.

xfree86/modes: Remove all framebuffer support from DGA

This removes all rendering and mapping code from xf86DiDGA, leaving
just mode setting and raw input device access. The mapping code didn't
have the offset within /dev/mem for the frame buffer and the pixmap
support assumed that the framebuffer was never reallocated.

LoaderSortExtensions: free graph nodes
Free libpciaccess iterator in xf86PciProbe

xf86Xinput.c: get DIX event queue pointer once at InitInput time

The DIX event queue is allocated before InitInput is called, so fetch
the pointer there and not randomly at other times. This avoids failing
to fetch the pointer sometimes during server regen and then smashing
memory through the stale pointer from the previous server generation.

probe_devices_from_device_sections: don't leak list of devices

xf86MatchDevice returned malloc'd storage containing the list of
devices to look at; make sure that gets freed.

Eliminate bogus event resizing.

Now that all event queues hold internal events only, they never need
to be resized. Resizing them led to memory corruption as they would
get sized for an appropriate xEvent, not an internal event.

commit e2c64551808988657069006f74c6780973ec0557
Author: Alan Coopersmith <alan.coopersmith@sun.com>
Date:   Tue Sep 15 21:13:48 2009 -0700

Add configuration option for use of SIGIO handlers for input events

Boolean option to enable/disable SIGIO handlers is set by the first of these found:

- UseSIGIO option is set in xorg.conf ServerFlags
- Default set at build time by ./configure --enable-use-sigio-by-default
- Platform default value: Solaris = no, all others = yes

This matches the current settings on all platforms except Solaris.
This reverts Solaris (for now) to the settings used in Xorg 1.6, before SIGIO support for Solaris was added, due to some system level bugs that won't be resolved in time for Xorg 1.7 release, but allows us to enable when those are resolved (or when we need to test if they're resolved).
See http://bugs.opensolaris.org/bugdatabase/view_bug.do?bug_id=6879897

Date:   Mon Sep 14 12:00:18 2009 +1000

xb: drop key presses for already repeating keys. (#23889)

The event sequence for continuously pressed keys with the keyboard driver is PRESS - PRESS - PRESS - ... - RELEASE. The first press sets the repeatKey to the keycode and the matching timer. The second press (on the same keycode) can be silently dropped instead of overwriting the timer again.

Xnest: set the default pointer accel to the host's values (#10013)

The defaultPointerControl holds compile-time defaults for pointer acceleration. If an Xnest instance is started, it resets the hosts pointer accel values to these built-in defaults instead of using the host values.

This patch queries the host for the values before initializing the device, thus leaving the host values untouched.

Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue Sep 8 09:55:22 2009 +1000

dix: auto-float SD's with SendCoreEvents "false"

AlwaysCore and SendCoreEvents specify whether a device is to send core events. A device that has either disabled is not supposed to send core events.

With MPX/XI2, a device that is attached automatically sends core events when the event is routed through the master device. Floating a slave device disables core events by breaking the route.

This patch automatically floats devices that have coreEvents disabled in the xorg.conf/HAL. This replicates the behaviour of a SendCoreEvents "false" device in server 1.6 and earlier.

The devices may still be reattached to a master at runtime.

Date:   Mon Sep 7 15:04:33 2009 +1000

dix: remove unused and half-broken code to restore original classes.

In theory, the MD should change back to its old, original classes when the
last SD is detached. Thanks to the XTEST devices, we'll always have an SD
attached until the MD is removed. So let's not worry about that and do
nothing instead of having some code that's essentially untested.

xkb: xkbGetKbdByName on the lastSlave needs to change the master (#21859)

If the layout is changed on a master's lastSlave, the master needs to change layout immediately. Otherwise, the master stays on the same layout until the lastSlave changes - which may not happen if only a single keyboard is available.

X.Org Bug 21859 <http://bugs.freedesktop.org/show_bug.cgi?id=21859>

Further explained what the Geode PCI ID is all about as comments.

commit afd800dae4f7491baee08509094a30160bb9c849
Author: Martin-Éric Racine <q-funk@iki.fi>
Date: Fri Sep 4 03:41:08 2009 +0300

Removed unnecessary curly braces for Geode LX PCI ID.

commit 842b7a47d583a77290999de3031ae209777dddf774
Author: Martin-Éric Racine <q-funk@iki.fi>
Date: Fri Sep 4 03:25:32 2009 +0300

Updated the PCI Vendor and Device IDs for all Geode variants.

In practice, some of the native drivers for older Geode products have become deprecated due to lack of e.g. libpciaccess upgrade, but that's OK, since most distributions don't ship them anymore. In that case, we'll let X server fall back to good old VESA.

commit 8e873185f4cbfb2a36e1f43fe7da47fd9fd5aeaa
Author: Michel Dänzer <daenzer@vmware.com>
Date: Thu Sep 3 19:11:02 2009 +0200

Otherwise we may incorrectly clobber it to NULL on repeated PrepareAccess calls.

Make sys.c use compiler.h unaligned access functions

Signed-off-by: Matt Turner <mattst88@gmail.com>
Remove unused Delay.c

Signed-off-by: Matt Turner <mattst88@gmail.com>

Remove unused BUSmemcpy.c

BUSmemcpy.c provides xf86BusToMem and xf86MemToBus, which are memcpy wrappers written to avoid glibc's memcpy on Alpha. glibc's memcpy on Alpha has improved much since this was written, so it's no longer needed. Neither function is used inside the xserver, and no module on my machine uses either as well.

Signed-off-by: Matt Turner <mattst88@gmail.com>

Remove unused ia64_flush_cache function

Signed-off-by: Matt Turner <mattst88@gmail.com>

Simplify unaligned access code

All architectures should be able to use the same unaligned access code, regardless of whether they need special unaligned access instructions. Let's let gcc do the heavy lifting.

In the case that we're not using a gcc-compatible compiler, use memmove.

The xserver already requires pixman, so include pixman.h for its uint*_t types.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 903c3db1d1685bd855dceed9e7b92890743663e1
Xext: rename Xtst* to XTest*

This patch corrects a misnaming of XTest-related functions.

The extension itself announces itself as XTEST. Xtst is the library name itself, but all library functions are prefixed by XTest. Same with the naming in the server.

- Rename all *Xtst* functions to *XTest* for consistency with the library and in-server API.
- Rename the "Xtst device" property to "XTEST device" for consistency with the extension naming.
- Rename the device naming to "<master device name> XTEST device". The default xtest devices become "Virtual core XTEST pointer" and "Virtual core XTEST keyboard".

CheckWindowOptionalNeed: Ensure w->optional is set to avoid SEGFAULT

If CheckWindowOptionalNeed is called consecutively (and the first removes optional), then we will SEGFAULT. This can happen in XQuartz because ReparentWindow will call pScreen->ReparentWindow which can DeleteProperty which will CheckWindowOptionalNeed... then ReparentWindow will call it again later indiscriminantly.

Ensure that rotation updates happen frequently

The smart scheduler is designed to minimize scheduler overhead by increasing the interval between WaitForSomething calls when a single client is running. However, the software rotation code depends on its BlockHandler being invoked for screen updates; the long delays caused by the smart scheduler optimizations means that screen updates can be delayed a long time as well.

The change is simple -- prevent the smart scheduler from increasing the scheduling interval while any screen is using software rotation.
Perform rotation redisplay before calling driver block handler (which may flush rendering)

The rotation block handler uses regular driver rendering functions to repaint the screen, if those functions queue commands in the driver, it's important that the driver block handler be invoked after the rotated image is drawn.

xf86_reload.Cursors: fix cursor position to eliminate jumping after mode set

xf86_reload.Cursors restores the cursor to the correct position, but that must adjust for cursor hot spot and frame before calling down to the hardware function, otherwise the cursor jumps to the wrong position until it is repositioned by the user.

Xi: fix XIWarpPointer up for FP3232 as input coordinates.

linux: Yet more malloc() avoidance for backtrace()
Turns out, there's an initializer at the top of backtrace() that (on some arches) calls dlopen(). dlopen(), unsurprisingly, calls malloc(). So, call backtrace() early in signal handler setup so we can later safely call it from the signal handler itself.

commit 792dec3854cbede64e17fd4736831edad295706
Author: Tiago Vignatti <tiago.vignatti@nokia.com>
Date:   Wed Aug 19 18:20:54 2009 +0300

xfree86: remove bus state change notification callback

No one is using bus notifications now. We hope that the kernel take care of this properly.

For other not-so-urgent-notifications (ACPI wakeups, etc) we can just register a handler on server's scheduler (using xf86AddGeneralHandler). And for external applications, the "trend" is to use HAL to kick notifications. So we're already provided of enough notification schemes.

Date:   Tue Aug 18 21:13:40 2009 -0700

xserver doesn't stop all connections to localhost

X.Org Bugzilla #23329: http://bugs.freedesktop.org/show_bug.cgi?id=23329
Patch #28648: http://bugs.freedesktop.org/attachment.cgi?id=28648

I noticed in xserver at os/access.c that xorg tries to stop connections to localhost by checking against the address 127.0.0.1. However, RFC 3330 defines the localhost network as 127.0.0.0/8. This means that any IPv4 address that starts with 127 is just another name for localhost.

commit 2d34eace13c2016048c627c4e96c3b2399901078
Author: Alan Coopersmith <alan.coopersmith@sun.com>
Date: Tue Aug 18 20:11:23 2009 -0700

Sun bug 6872917: Xorg not querying /dev/fb when no xorg.conf exists

commit 48ee5558333bd324463b6994735cab23de262cc (OpenSolaris VT support)
broke the autoconfiguration code in xf86AutoConfig.c that uses the
Solaris-specific VIS_GETIDENTIFIER ioctl on a frame buffer device like
/dev/fb by changing xf86Info.consoleFd from /dev/fb to a /dev/vt/*
device.

This fixes it by reworking the code to split the console device
(/dev/vt/*, the vtXX CLI option) from the frame buffer device
(/dev/fb, -dev option) to allow both VT and autoconfig to work.

It also fixes the console device to use /dev/fb when VT's are not
supported instead of throwing a Fatal Error because it can't open
/dev/vt/0.

configure: fix help string after Xnest default build was changed

Signed-off-by: Rémi Cardona <remi@gentoo.org>

dix: rework DeviceChangedEvents a bit.

DCEs are now processed when sent through the master device, not when sent through the slave device. This includes a removal of some un-used (or partly used) fields in the DCE itself to something more self-explanatory.

TODO: if a device has events queued and its attachment is changed, the DCE is silently dropped now. Instead, it should be generated as soon as the first event after the attachment is sent.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

Don't reset the lastDeviceEventTime when doing DPMS actions
When we change the DPMS mode, don't play games with the last event time as
this breaks applications using IDLETIME to turn the backlight off after a
preset time.

XQuartz: Use mouseLocation rather than locationInWindow when setting lastpt

I don't understand the *why* ... I just see that it works better this way for games like Quake2 through wine. It *should* be better the other way, but somehow it's not.

I guess this will go in my list of puzzles to unravel.

Date: Mon Aug 3 23:49:56 2009 -0700

Correct modifier map built when ProcSetModifierMapping is called

Fixes xmodmap changes to modifiers to stop corrupting modifier maps

Previous code had two bugs:
- the code to increment mod was after the code to continue if no modifier was set, so mod wouldn't be incremented for modifiers with no keys mapped to them (such as if you called xmodmap -e 'clear Lock')
- the value it set in the modifier map was the raw modifier number, not the bitmask value for that modifier

commit 664ac92d8bbe956dd6fd80fac5dc3161028803b2
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Fri Jul 31 14:38:35 2009 +1000

xfixes: backup the DisplayCursor/CloseScreen proc before restoring it (#23034)

The screen's DisplayCursor func is wrapped as
AnimCurDisplayCursor -> CursorDisplayCursor -> miPointerDisplayCursor.

Calling CursorDisplayCursor while an animated cursor was currently displayed would remove AnimCurDisplayCursor from the wrap stack. Thus, the next call to ChangeToCursor wouldn't update the animated cursor state. The block handler for animated cursors would then continuously overwrite the actual cursor, leaving an animated cursor everywhere on the screen.
X.Org Bug 23034 <http://bugs.freedesktop.org/show_bug.cgi?id=23034>

commit f48dfcc1b772a09428e328c72124ea0d46a73416
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Jul 31 10:44:28 2009 +1000

xfixes: allocate CurrentCursor for all devices.

XFixes requires cursor notifies to clients when the cursor changes. This
should work on the ClientPointer and then on all master pointers. Hence
change CurrentCursor to a MAXDEVICES array.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit d3e5629fac224d53a972df5e2a87db025349b17
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Jul 30 16:36:56 2009 +1000

dix: call SetFocusOut and LeaveWindow when disabling a device.

PointerWindows[x] would be set after removing a master pointer. Destroying
this window then crashed the server.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 0565f4ed4519962bed40a0b9cf0b409471f4de40
Xi: set the sourceid for focus devices to the device id.

Unlike Enter/Leave events generated by a device pushing the pointer around, a device doesn't change focus all by itself. It's a result of a SetInputFocus call, a window becoming unviewable or a grab activating. As such, the sourceid for focus events is always the deviceid itself.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit de4dd5848cab90b0f8b8243ca0b49985ef047124

xkb: restore XKB PtrBtn actions.

Ifdef’d out since the switch to internal events. PtrBtn actions now work again. Instead of generating the event directly, GPE generates the event and it is then posted through the usual event processing routines (mieqProcessDeviceEvent).

commit 3d3b8babd1a5407082f1a40875ed69f62ba2153f
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue Jul 28 16:51:14 2009 +1000

mi: update master event copying to InternalEvents.

This is long overdue. The device events are InternalEvents now (and only one
at a time), diminishing the need for an EventList for the master event. Furthermore, don't make masterEvent a static since this will interfere if miegProcessDeviceEvent is called from somewhere else (e.g. XKB actions).

Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue Jul 28 14:54:30 2009 +1000

record: ifdef out RecordExtensionInit and print a warning to the log.

The RECORD extension is currently broken. By ifdef'ing out the content of RecordExtensionInit the extension isn't added to the server's internal list and it does not get advertised to the client. Clients can thus fail gracefully with a "extension not supported" instead of waiting forever for events that never arrive.

Date:   Mon Jul 27 16:54:33 2009 +1000

include: untangle events.h from the SDK headers.

InternalEvents shouldn't be used anywhere outside the X server itself. Split up into events.h for opaque typedefs for the events needed by various headers and eventstr.h for the actual struct definitions.

eventstr.h must only be included by code that requires internal events and is not part of the SDK.

Bug #22804: Reject out of bounds XGetImage requests

The XGetImage man page states:

If the drawable is a window, the window must be viewable, and it must be the case that if there were no inferiors or overlapping windows, the specified rectangle of the window would be fully visible on the screen and wholly contained within the outside edges of the window, or a BadMatch error results. Note that the borders of the window can be included and read with this request.

However, the server was only checking the requested region against the screen
bounds, allowing XGetImage requests to read pixels outside the bounds of a window's ancestors. Normally, this would just read other pixels from the screen, but if one of the ancestor windows is redirected, the window's backing pixmap may be smaller than the window itself.

This change checks the region against the window's bounding drawable, which is either the screen pixmap, a redirected window's backing pixmap, or the root window for servers that don't support GetWindowPixmap.

Author: Pierre Willenbrock <pierre@pirsoft.de>
Date:   Tue Jul 21 17:21:28 2009 +0200

Check if new space was actually allocated before freeing.

There will be no new space allocated, if mode != PropModeReplace and len == 0, or if mode is not one of the handled modes. This fixes freeing data that is still in use, leading to double frees and other memory corruption.
input: remove XI2 keysym grabs, use keycode grabs instead.

Keysym grabs are tricky in the details, keycode grabs are known to work. So for now, provide keycode grabs only.

Requires inputproto 1.9.99.15.

Cygwin/X: winInitMultiWindowClass() should be static

randr12: Add compatibility for XF86VidMode gamma ramps.

Fixes screensaver fadeout effects.

Also make all RandR 1.2 compatibility code for XF86VidMode operate only on the CRTC associated with the compatibility output, not all CRTCs at once.

EXA: Make Prepare/FinishAccess tracking resilient to repeated / nested calls.

Use reference counting and do nothing unless the reference count transitions to/from 0.

Fixes https://bugs.freedesktop.org/show_bug.cgi?id=22822.

As a bonus, this avoids calling the driver Prepare/FinishAccess hooks more than once per pixmap and operation.
Also update the Doxygen documentation for the PrepareAccess driver hook to better match current reality.

xfree86: Fix some misleading comments

commit 2c57a7aa07fd52be315ecb498341776268c1a10
Author: Adam Jackson <ajax@redhat.com>
Date: Thu Jul 16 10:32:53 2009 -0400

xfree86: Remove some #if 0

This code all lives in xf86Modes.c now anyway

commit 1a8c89683ff40cdd1d33da89ab47e7bd240b9bb7
Author: Adam Jackson <ajax@redhat.com>
Date: Thu Jul 16 10:15:41 2009 -0400

xfree86: Remove TargetRefresh option

This was a vestige from the days before we'd make the mode list from the EDID data, and from CRT technology when you could reasonably assume that higher refresh rates were better. Also it did not function as advertised, acting as a high-pass filter instead of a band-pass.

commit b4ee3bf700e04ae1b3c4ec021373424ed6e5338f
Author: Adam Jackson <ajax@redhat.com>

Update to xextproto 7.0.99.1.

exproto had Xlib client headers moved into libXext.
Protocol header files are named fooproto.h, header files with constants
foo.h or fooconst.h where foo.h was already in use for client-side headers.

commit 693babbf12cc7969c3e211c40373c7af0d41c13e9
Author: Peter Hutterer <peter.hutterer@who-t.net>
xkb: Remove XKMformat.h include from xkbsrv.h into the files that need it.

xkbsrv.h is used by drivers, they don't need the XKM format and shouldn't require it.

commit 4b93413b2a490a74de2e27b37268332b609ac872
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Tue Jul 14 11:20:01 2009 +1000

Add test subdir to base Makefile.am

If unitests are enabled, make will build those as well - spotting potential build errors in the tests faster. Furthermore, this allows for the tests to be run from the top-level directory. This patch removes the "run make check to build the test suite" message since that'd pop up after every build now.

If unitests are disabled, this change has no effect.

commit 912402fd71144bcee255141efe12a78ab439240
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Mon Jun 29 13:09:57 2009 +1000

include: introduce byte counting functions.

This patch adds the following three functions:
bits_to_bytes(bits) - the number of bytes needed to hold 'bits'
bytes_to_int32(bytes) - the number of 4-byte units to hold 'bytes'
pad_to_int32(bytes) - the closest multiple of 4 equal to or larger than 'bytes'.

All three operations are common in protocol processing and currently the server has (((foo + 7)/8 + 3)/4) operations all over the place. A common set of functions reduce the error rate of these (albeit simple) calculations and improve readability of the code.

The functions do not check for overflow.
dix: don't send presence events for attaching/detaching slave devices.

The code that didn't list attached slave devices for X11 clients doesn't exist anymore, so there's no need for these presence events.

commit 0c0ef42292f4c910c73b308cd75d77637312da53
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Sun Jul 12 21:43:06 2009 +1000

dix: Remove temporary detachment of slave devices.

Previously, an active grab on an attached slave device would send the device floating for the duration of the grab. This breaks existing XI applications (e.g. the GIMP) since they grab all devices automatically - resulting in the loss of control over the VCP.

The behaviour of extended input devices during a grab in relation to the core pointer is not specified in the XI protocol specification. The removal of the temporary detachment restores the behaviour of extended input devices as present in currently released servers - even if a device is grabbed, an event from this device will result in an event from the core pointer.

Revert "XKB: Sanitise * actions" commits (#19602)

Reverts the following four patches:

feb757f384382c7782ceac55 "XKB: Sanitise vmods for redirected keys"
b5f49382fe48f0a762d9a15f "XKB: Sanitise ctrls action"
1bd7fd195d856f8ef722161f8 "XKB: Sanitise pointer actions"
61c508f78aa08ea2666fde9 "XKB: Sanitise vmods in actions"

 Strictly speaking, the structs used in the server are not part of the client ABI. Practically, they are as we copy from the wire straight into the structs. Changing the struct sizes breaks various wire/server conversions.

Even when the structs have the same size, some internal magic causes conversions to fail. Visible by diffing the output files of:
setxkbmap -layout de; xkbcomp -xkb :0 busted.xkb
setxkbmap -layout de -print | xkbcomp -xkb - correct.xkb

Interestingly enough, busted.xkb is the working one although the output is incorrect. Revert the four offending patches until the exact cause of this breakage can be determined.

This patch restores functionality to Level3 modifiers.

commit 08df24555eb432eb0d90a3f63275e9485e777c4c
Author: Soren Sandmann Pedersen <ssp@redhat.com>
Date: Thu Jul 9 17:23:04 2009 -0400

Reserve space for two GC values in copy_drawable().

Pointed out by Pierre Willenbrock.
Since font modules are dead, don't mention them in xorg-server.pc

The driver assuredly no longer builds against 1.7. Please don't feel compelled to fix it.

The way XaceHook() mixes struct initializers and va_arg() is not portable and gives bogus data on sparc and probably others leading to a crash.

Don't use initializers, instead set each member directly to enforce order.

Cygwin/X: Window positioning improvements for multiwindow mode

* Don't allow window decoration to disappear off to top or left edge of the
display as a result of adjustments to add decoration for the window style

* Honour the position requested by window geometry for the client area (so windows which save their position don't get moved by the decoration width every time they are created) (unless we need to bump it away from top or left edges)

* Fix an issue with initial window placement being offscreen on multimonitor systems when some monitors have negative coordinates (are to the left of or above the primary monitor)

Export symbols needed by the RandR implementation in fglrx

GIT change
http://cgit.freedesktop.org/xorg/xserver/commit/?id=45c8bd0fe54273039fd3e14eaf81b5774f2c75
changed the default symbol visibility of the Xserver. As a result 2 symbols that are needed by the RandR 1.2/1.3 implementation in the fglrx driver are no longer visible:

xf86configptr
xf86CursorScreenKey

We would like to get these two symbols _X_EXPORT'ed before Xserver 1.7 is released. Otherwise it will be problematic for fglrx to support RandR 1.3 on Xserver 1.7.

In the future, we may want to sync our RandR implementation to later versions of the RandR implementation in hw/xfree86/modes. Therefore it would be nice if all symbols used by the Xserver RandR implementation were _X_EXPORT'ed in the future.

commit e13605ea40cfe671314a0086c75b917564298b55

commit 0814f511d56a89c7b1868b17e6a7a89f990b9ab1
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Tue Jun 23 10:50:52 2009 +1000

input: store the master device's ID in the devPrivate for XTest devices.

Rather than storing a simple boolean in the devPrivate for XTest devices, store the actual master device's id (since it is constant for the life of the device anyway).

Callers should use GetXtstDevice now instead of digging around in the devPrivates themselves.

This patch allows for a cleanup in the creation of new master devices since GetMaster and GetXtstDevice spare the need for loops, IsPointer checks and similar.

Date: Mon May 18 18:13:08 2009 +0100

Cygwin/X: Improve mouse tracking for moving/resizing undecorated windows

In -multiwindow mode, tell Windows we wish to capture the mouse when a button
is down. This causes Windows to continue to send movement events for the mouse even if the mouse pointer moves outside the window frame.

This helps greatly with undecorated windows which have regions you can grab to move (e.g. gmplayer, xine control panels) or resize (e.g. Songbird) the window, as it means the window continues to receive the mouse motion even if the mouse pointer moves out of the window (which presumably happens if we don't manage to update the window fast enough to track the mouse pointer)

Consolidate the multiple instances of the code to start the mouse position polling timer into a new function winStartMousePolling(), and use that to restart the polling timer when we release the mouse.

Also, start the timer on WM_SHOW, so that xeyes will track the mouse position when it is first shown, even if the mouse doesn't enter it's window (You probably need focus-stealing turned off to see this problem)

commit 31166c2ae0ce898c96995a8b16b58b127dc85a2f
Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date: Fri Jun 26 16:51:22 2009 -0400

xace: add a new hook for checking property content after it has been set.

Allows security modules to enforce what property contents can be set by clients. Uses the new DixPostAccess bit to distinguish between the existing call made during the lookup (with the old property data) and this new call. Note that this only applies to writes, prepends, or appends to existing properties; for new properties the existing DixCreateAccess hook call may be used since it includes the new data.

Refer to the XACE-Spec document in xorg-docs, section "Property Access."

Signed-off-by: Eamon Walsh <ewalsh@tycho.nsa.gov>

dxselinux: ignore property hook calls with the new Post access mode bit set.

Signed-off-by: Eamon Walsh <ewalsh@tycho.nsa.gov>

dix: add a new DixAccess bit, "DixPostAccess".

This will be used for follow-up checks after a client has written something, for security modules that enforce a set of valid values a client can set.

Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date: Thu Jun 18 23:19:21 2009 -0400

Xi: check for GetAttr permission when listing or querying devices.

If the check fails, leave the device off the returned list of info
structures. Under XI2, this may cause inconsistent views of the device
topology after a change (for example, devices disappearing from view,
or showing as attached to a master that cannot be seen). More work is
needed to deal with topology changes and device relabeling.

dix/resource: fix use after free in resource code with DRI

LookupClientResourceComplex is used by DRII code to find and free a DRI drawable in a callback, however when the DRI code returns this->value is now pointing at freed memory. It seemed easiest to store the value to a temporary and return it afterwards.

Another option might be a new FreeClientResourceComplex or one that also returns the id, so we can free it using an alternative means.

found using valgrind.

commit 14581afb474552716c02ca15220ca7050123c375
Author: Benjamin Close <Benjamin.Close@clearchain.com>
Date: Thu Feb 26 17:32:10 2009 +1030

xfree86: correctly define barriers for FreeBSD amd64

Previously when compiling on freebsd amd64 we'd end up at xi86 block (line 1315) which would define mem_barrier and write_mem_barrier to be NOP's. Instead they should be valid, as per the linux amd64 setup.

This stops the hangs experienced by many when using the nv driver which would hang due to out of order dma requests as noticed in http://bugs.freedesktop.org/show_bug.cgi?id=3168

Signed-off-by: Benjamin Close <Benjamin.Close@clearchain.com>

commit e92dcb6ce07aa3cfb53e8bad5701481e106c4094
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Jun 18 14:40:20 2009 +1000

input: unify button numbers on master devices.

Master devices provide the union of all attached slave devices' buttons, i.e. the number of buttons on the master device is always the number of buttons of the slave device with the highest number of buttons. When slaves are attached or detached, the master device adjusts the button number to reflect the new buttons.

On a slave switch, this slave's button labels are copied into the master (up to slave->num_buttons). The remaining button labels (if any) stay as they are. Thus, if any of the higher buttons is still pressed, it reflects the label of the last pressed device that provided this button.

If two devices press the same button and it is differently labelled the last pressed one will be reflected in the master device.

Date:   Fri Jun 5 16:38:46 2009 +1000

Add check for GNU ld in the test suite.

The GNU linker supports a -wrap option to wrap function calls at link-time.
This allows for easy overriding of functions in the X server with stubs in
the test suite. This functionality is only supported on the GNU linker and
will be used extensively in the tests. Disable the tests if GNU ld is not
available.

commit 5e0ca6fabd12401de6bd6039484be2079e28851e
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Jun 11 16:26:23 2009 +1000

input: remove un-used "setter" argument from SetClientPointer.

It's obsolete, not likely to come back, let's drop it.
Xi: fix XISetClientPointer return values.

If SetClientPointer fails, the only reason may be that the device is not a pointer or that the device is an SD. Return BadDevice instead of BadAccess. (BadAccess is a leftover from the early times of the ClientPointer implementation when only one client was allowed to set it).

If the window parameter doesn't name a valid window or client, return BadWindow.

Finally, allow both master keyboards and master pointers as deviceid.

Xi: Fix XISetClientPointer swapping.

Xi: sanitize ProcXIGetClientPointer.

This was quite old code and can be streamlined a bit. The new code is essentially the same as in ProcXISetClientPointer.

Xi: fix reply swapping in XIGetClientPointer.
commit 76f25086a9ab6f0c27d9e2cd745f8463c6b3df5f
Author: Adam Jackson <ajax@redhat.com>

commit 7868956b0f50a9d77506f01413612e429f540a3
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Wed Jun 10 17:09:39 2009 +1000

Xi: ProcXIGetSelectedEvents must use WriteToClient for swapped data.

The data is already swapped before, so we just post it to the client as-is, without attempting to swap it again.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit aa2babf11c30be4d289b58212dc330b84efb4053
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Wed Jun 10 14:41:11 2009 +1000

input: remove dependency on XI2 protocol for XI_LASTEVENT.

inputstr includes XI2proto.h for the sole purpose of XI_LASTEVENT. However, using XI_LASTEVENT in the server is prone to errors, if the server is recompiled against a newer version of the protocol it would bump this variable and associates bits, including potential ABI.

This patch defines an XI2LASTEVENT for use in the server and removes the XI2proto.h require. XI2LASTEVENT is the current value of XI_LASTEVENT.

This patch is required by components that require access to inputInfo (currently xf86-video-geode and xf86-video-cirrus) but should not have a require for the XI2 protocol.

Date: Mon Jun 8 21:45:42 2009 -0700

hw/xf86/modes: Set crtc mode/rotation/transform before calling set_mode_major

This moves code out of each implementation of set_mode_major and back into the X server. The real feature here is that the transform is now available in the crtc for use by either xf86CrtcRotate or whatever the driver wants to do. Without this change, the transform was lost for drivers providing the set_mode_major interface.

Note that users of this API will want to stop smashing the transformPresent field, and could also stop setting mode/x/y/rotation for new enough X servers, but there's no reason to make that change as it will break things when running against older X servers.

commit 7525085777aa7f0a1d80c8b7fd3fe2b098e5e5fa
Author: Jon TURNLEY <jon.turney@dronecode.org.uk>
Date: Tue Jun 2 21:19:46 2009 +0100

Cygwin/X: Tidy up a bodge to avoid collision between X header and native Win32 API definitions of ATOM

Remove a bodge to avoid collision between X header and the native Win32 API definitions of ATOM, use X11/Xwindows.h which exists to address these issues

Consequently, include misc.h in winclipboardthread.c, to provide the max() macro, as previously we were using the the one from windows.h
Revert "test: check from INT_MIN to INT_MAX for core type conversion"

This patch requires extra special casing to check if the linker supports the -wrap option. Patches to do so will follow, in the meantime, revert this commit. It shouldn't have been pushed in the first place anyway.

This reverts commit d979f443946011158b6a183582728a6899c33b85.

Xi: fix XIQueryVersion major/minor swapping.

Xi: add XIQueryVersion reply swapping hook.

Xi: return BadImplementation for deviceids 256 and above

The protocol allows for 16 bit device ids, but the implementation doesn't yet. We need to break the input ABI once more to shift the DeviceIntRec's CARD8 to a CARD16, along with some changes in the privates.

Once that is done, revert this patch.
Xi: fix flawed logic in XIXQueryVersion return value.

The server returned the minimum of major/minor each instead of the lower of the combined major.minor version. As a result, a client reporting 3.0 and a server supporting 2.7, the return value would be 2.0 (the minimum of both).

Fix alpha map computation in miComputeCompositeRegion()

According to the RENDER spec, the origin of the alpha map is
interpreted relative to the origin of the drawable of the image, not
the origin of the drawable of the alpha map.

This commit fixes that and adds an alpha-test.c test program.

The only use of alpha maps I have been able to find is in Qt and they
don't use a non-zero alpha origin.

Cygwin/X: Consolidate dialog initialization in winInitDialog()
Changed windialogs.c to set icons via window properties rather than class properties, and use LoadImage() for small icons, because LoadIcon() can only open large icons. Since this code is redundant across the dialogs, I put it in the winCenterDialog function, along with a few other redundant instructions, and renamed in winInitDialog().

Also, don't bogusly put our dialogs at the center of the virtual desktop if we are on a multimonitor system (this causes the dialog to end up split across two monitors in a dual-monitor side-by-side setup)

Corrections to use HWND_TOPMOST instead of HWND_TOP and not to use SWP_NOZORDER from Colin Harrison

Date:   Tue May 26 14:42:25 2009 +1000

Xi: Add support for Enter and FocusIn grabs.

Enter grabs are checked for in CheckMotion(), each time the sprite window
changes the current grab is deactivated (if applicable) and the new grab is
activated (if applicable). Exception - if the grab is on a parent window of
the current window since we keep the grab across descendants.

Since CheckMotion() may change the grab status of a device, we mustn't get
"dev->deviceGrab.grab" in ProcessOtherEvents until after CheckMotion().
FocusIn grabs are checked in much the same manner.

The event delivery for grabs replaces the NotifyNormal on window change with
a NotifyGrab on window change. Note that this happens before the grab
activates, so the EnterNotify(NotifyGrab) is still delivered to the window,
not to the grabbing client. This is in line with the core protocol semantics
for NotifyGrab events.

Date:   Tue May 26 11:12:08 2009 +1000

dix: take grabs into account for XI_Enter/Leave events.
Xi: only deactivate passive grabs if the event type matches.

This didn't use to be a problem when devices could only be pointers or keyboards, not both. Nowadays, slave devices may have both buttons and keyboards, and in this case we don't want to deactivate a passive keyboard grab when a button release is detected.

Xi: advance by the right number of bytes when trawling XI2 event masks.

The wire layout is `[struct xXIEventMask][mask bytes]`. So the pointer needs to not only be advanced by the mask bytes, but also by the size of the struct.

commit e9df51b070377ca33e48644db842b6e3dfb2975
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu May 21 11:16:37 2009 +1000

input: allow for master pointers to not have a button class.

There's devices (e.g. some barcode readers) that have axes but no buttons.
When such a device sends a motion event, the valuator and button class is
copied into the master pointer (i.e. removing the button class).
So we need a couple of extra sanity checks for the button class to exist.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit ebe45e1a72a81ad22413e5d0514869b3e45a69b7
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed May 20 10:55:03 2009 +1000

input: introduce partial class copying depending on the event.

Copying all classes into the master device has drawbacks for hybrid devices
(devices that are both mice and keyboards). If such a device posts an event,
it's key classes are moved into the VCP. The key event itself is unaffected
by keyboard grabs and the like.
Partial class copying copies depending on the event and copies the classes into the right master device (i.e. the VCK for key events, the VCP for pointer events).

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit bc63c8a4570c989f19a036965854bceeb9800ce19
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed May 20 12:33:49 2009 +1000

dix: introduce GetMaster()

For hybrid devices (keys + buttons/axes) the attached master device is generally the wrong one. One shouldn't post a button event through a keyboard and vice versa.

GetMaster(dev) returns the right master device for the given type needed. This may be the MD paired with this device's MD.

ABI_XINPUT_VERSION 6

commit 438a4ea6a5d14ab676827f7a5d58782e02db4cdf
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed May 20 17:02:50 2009 +1000

input: remove nested union from InternalEvent.

There's no need for internal events to be a struct with a single nested union, we might as well make the union itself the InternalEvent.
isMaster is not enough as long as we differ between master pointers and keyboard. With flexible device classes, the usual checks for whether a master device is a pointer (currently check for ->button, ->valuators or ->key) do not work as an SD may post an event through a master and mess this check up.

Example, a device with valuators but no buttons would remove the button class from the VCP and thus result in the
IsPointerDevice(inputInfo.pointer) == FALSE.

This will become worse in the future when new device classes are introduced that aren't provided in the current system (e.g. a switch class).

This patch replaces isMaster with "type", one of SLAVE, MASTER_POINTER and MASTER_KEYBOARD. All checks for dev->isMaster are replaced with an IsMaster(dev).

Split the signal-handler's lastSlave out into a separate variable.

dev->u.lastSlave was not signal safe since it was accessed by the DIX and during signal handling.
Replaced with:
'dev->last.slave' for the signal handler's lastSlave (used to generate DeviceChangedEvents),
'dev->u.lastSlave' for the DIX lastSlave (currently only used in change_modmap)
In ProcXkbGetKbdByName, mrep.firstVModMapKey, .nVModMapKeys and .totalVModMapKeys were not initialized, contained random values and caused accesses to unallocated and later modified memory, causing XkbSizeVirtualModMap and XkbWriteVirtualModMap to see different number of nonzero values, resulting in writes past the end of an array in XkbSendMap.

This patch initializes those values sensibly and reverts commits 5c0a2088 and 6dd4fc46, which have been plain non-sense.

xfree86: treat other drivers as mouse drivers in the config.

Historically, if no input device was referenced in the ServerLayout, the server would pick the first "mouse" device found in the xorg.conf. This patch gives evdev, synaptics, vmmouse and void the same status. If there is a section in the config file using this driver - use it as the core pointer.

Device selection is in driver-order, not in config-order. If a "mouse" device is listed after a "synaptics" device, the "mouse" device gets preference. This replicates the original behaviour.

This code only takes effect if AllowEmptyInput is off and there is no core pointer in the server layout.

commit 42719ce5c715ac3a0c74c3c7df872d35e0449de9
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed May 20 14:38:25 2009 +1000

dix: remove superfluous loop in change_modmap.

A device can only be attached to a single master device. So instead of looping and searching for the master device, we can just use dev->u.master directly.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 22a33a7250f879b8f3eb84176a1dc57027d8cfe4

Xi: set the right length for the XIQueryPointer reply.

commit 00ab04d73c612ac85e024105015bd7c79e8874b
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu May 14 16:24:35 2009 +1000

Include full modifier + button state in XIQueryPointer.
Xi: take the paired device as modifier device only for MD pointers.

Xi: check cursor and grab_window before attempting the passive grab.

Both values need to fail the request, so we need to check them before looping through the modifier masks. Otherwise, a wrong grab_window will show up in each failed modifier return but not actually cause an error.

This fixes events that activated a grab not getting delivered to the client.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

Xi: set the correct length for XIPassiveGrab replies.

Update to new XI2 names

This function was deprecated in ef68273f5bdb27a492ec0b69548ec4fbede46c08 because it didn't take a device argument. The device argument was added in 1c7568b8a1417257fa67c7fca69aa253099b9461 though, so the deprecation is
obsolete.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 273890924b8ed6f8b7949c0322c8258b9e6f8630
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue May 12 16:09:35 2009 +1000

input: reduce the number of superfluous hierarchy events

There's only two reasons for hierarchy events:
- device is added, removed, etc. In this case we want to send the event as it happens.
- devices are added in a XIChangeDeviceHierarchy request. In this case we only want one event cumulating all changes.

commit 033a2b12fd02fa9a2c2f20a352bec0a43074512
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue May 12 14:50:57 2009 +1000

Xi: set per-device hierarchy changed flags.

Rather than have one field per hierarchy change, XI2 has two fields - one generic one and one per-device that include the device-specific flags. This requires some funky handling for removed devices, but oh well.

commit 8fb51f5ae222ff4f4aa1c440b6973ce7383bbe09
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Mon May 11 15:45:46 2009 +1000

xkb: if kbd init failed, NULL out the pointers after freeing them (#21278)

Reproducible:
Configure a server that uses the keyboard driver with an invalid ruleset, e.g. (Option "XkbRules" "foobar"). Ensure that Option "AllowEmptyInput" is "off" in the ServerFlags or ServerLayout section. Start the server.
After failing to init the keymap, the server will try to clean up after the device, double-freeing some xkb structs that have not been reset properly.

xfree86: fix xf86PostMotionEventP type checking

We only put internal events into the queue now, so let's check for ET_Motion
rather than the MotionNotify.
Xi: don't double-swap the XListDeviceProperties reply.

dix: add 'none' pointer acceleration profile with number -1

This is a shorthand for disabling acceleration, while retaining the possibility to use constant deceleration. If constant deceleration is also unused, it will optimize motion processing.

Other possibilities to deactivate acceleration were quite hidden, and didn't always work as expected. E.g. xset m 1 1 would retain adaptive deceleration, while xset m 1 0 would not (in the default profile).

Also removes the 'reserved' profile; it was unused and it's trivial to add new ones anyway.

dix: remove superfluous includes from ptrveloc.c

dix: fix warning in pointer acceleration

newer gcc's warn against how this cast is done (though it eludes me why), and lrintf() is also faster especially on insane processors like the P4 (http://www.mega-nerd.com/FPcast).

XkbSetNamedIndicator should ignore SD's without LED's

When ProcXkbSetNamedIndicator is called on a core device, and we
walk the slaves to set the LED's on each of them, ignore any slaves that do not have either a KbdFeedbackCtrl or LedCtrl structure.

(This is much more critical in xserver-1.5-branch, where we walk *all* devices, not just the slaves of the specified master, and thus return failure when setting an LED on the Core Keyboard and hit a xf86-input-mouse device with no LED's to set.)

xfree86: restore default off for DoniZap

Zapping is triggered by xkb these days, so note in the man page that it's the
Terminate_Server action. Since it's XKB, personal preferences towards or against zapping should be achieved through xkb rulesets.

If Terminate_Server is not in the xkb actions, then we can't zap anyway and we don't need a default of DontZap "on".

This patch restores the old meaning of DontZap - disallow zapping altogether, regardless of XKB's current keymap.

Ideally, this patch should be accompanied by b0f64bdab00db652e in xkeyboard-config.

Make the cursor completely optional

For embedded use, it's convenient to be able to disable the cursor completely, without having to audit and fix up all your third-party code (e.g. Mozilla Firefox).

Add -nocursor and -cursor server options to enable and disable the cursor. The default is still -cursor, but embedded users can run the server with -nocursor to hide the cursor regardless of what application developers do.

DRI2: Implement protocol for DRI2GetBuffersWithFormat

This change implements the protocol for DRI2GetBuffersWithFormat, but
the bulk of the differences are the changes to the extension / driver
interface to make this function work. The old CreateBuffers and
DeleteBuffers routines are replaced with CreateBuffer and DeleteBuffer
(both singular).

This allows drivers to allocate buffers for a drawable one at a time.
As a result, 3D drivers can now allocate the (fake) front-buffer for a
window only when it is needed. Since 3D drivers only ask for the
front-buffer on demand, the real front-buffer is always created. This
allows CopyRegion implementations of SwapBuffers to continue working.
As with previous version of this code, if the client asks for the
front-buffer for a window, we instead give it the fake front-buffer.

commit fab563bf8f6b63906ce9d5a568c467425843265b
Author: Benjamin Close <Benjamin.Close@clearchain.com>
input: propagate XTst events through virtual slave devices.

A XTest virtual slave device pair (kbd/ptr) exists for every master device pair. This is so XTest events are correctly propagated via slave devices up to Master devices and the classes are correctly changed along the way. We add the XTest slave device pair to the Virtual Core pointer and provide a simple way of creating the devices.

A XTest Slave Device is identified by the XTstDevicePrivateKey property being set in the devices devProperties

XI events are still propagated through the matching device, in the hope the client knows what it is doing.

xkb: strdup the values returned by XkbGetRulesDflts

XkbGetRulesDflts may get a copy of what will later be freed when passed into XkbSetRulesDflts.

On the second run of XkbGet/SetRulesDflts:
XkbGetRulesDflts(rmlvo)
   rmlvo->rules = current-rules

XkbSetRulesDflts(rmlvo)
   free(current-rules)
   current-rules = strdup(rmlvo->rules)

Leaving us with garbage in current-rules.

This patch requires callers of XkbGetRulesDflts to free the associated memory.

    xdmcp: Don't crash on X-query with more than 255 IP addresses. (#20675)

        You could be more clever than this, but the wire protocol says this
        really is an array of not more than 255 ARRAY8, so it's not just a
        matter of changing the types.

commit f0543ae4ec0fcb5d696e7b2983653bd779f1eddc
Author: Eric Anholt <eric@anholt.net>
Date:   Wed Apr 8 14:17:41 2009 -0700

    Fix unused var warning from pci cleanups.

commit 181cc08c8908a119fc403f970dea8cc98d3e0b9b
Author: Eric Anholt <eric@anholt.net>
Date:   Wed Apr 8 14:17:40 2009 -0700

    Add shave so that we can see the steaming piles of warnings generated.

    The old style output can be reenabled for build system debugging using
    "make V=1", or --disable-shave at configure time.

commit 4474c200a102feda72f9572a96cb588009aa0147
Author: Eric Anholt <eric@anholt.net>
Date:   Wed Apr 8 14:17:39 2009 -0700

    Move VENDOR_* defines from AC_SUBST to a header to avoid angering shave.

    This is more sane anyway, as it ensures a rebuild when changing them.

commit e72c85547b405fbd0117dc1236e5ca5a2126063c
Author: Eric Anholt <eric@anholt.net>
Date:   Wed Apr 8 14:17:38 2009 -0700

    Move contributed m4 to a subdir so we can more easily update contributions.

commit 7b6400a1b8d2f228fcbefdf17c30a7e3924e4dd2a
Author: Kristian Høgsberg <krh@redhat.com>
Date: Thu Apr 9 13:16:37 2009 -0400

glx: Fix drawable private leak on destroy

When a drawable goes away, we don't destroy the GLX drawable in full, since it may be current for a context. This means that when the drawable is destroyed in full later, the backend doesn't get a chance to destroy resources associated with the drawable (the DRI2Drawable).

With this patch, we destroy the GLX drawable in full when it goes away and then track down all contexts that reference it and NULL their pointers.

exa: implement UTS based upload through CopyArea
- Some image viewers (eog, gqview) trigger the CopyArea path of Xext/shm.c
- I'm not aware of any code path that wouldn't like UTS and trigger this code.
- miDoCopy should handle src coordinate clipping.
- Overlapping blits are obviously not an issue (both would have to be offscreen or not).

xfree86: Remove unused DEFAULT_UNRESOLVED and DEFAULT_BEST_REFRESH macros

commit e25d55ad546905c4921f0a26385bdb9f22038429
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Apr 3 22:38:00 2009 -0400

    Revert accidental Makefile change from previous commit
DPMS: Re-export the various DPMS variables.

The drivers might not need them but extmod does. Should move it to builtin though.

os: Remove the useless -x option

DPMS: Remove the defaultDPMS* variables

DPMS: Simplify command line parsing

DPMS: Remove unused DPMSGet()

DPMS: Align the default timeouts with the default screensaver timeout.

On a typical LCD, a black screensaver is actually worse for power consumption than a normal screen, because it takes more energy to turn the crystals opaque. Also, the intermediate DPMS states are essentially useless and most monitors alias them to the 'off' state, so we may as well do the same.

As a pleasant side effect, this brings the default DPMS timeouts in line with the EnergyStar Program Requirements for Computers:
http://www.energystar.gov/index.cfm?c=revisions.computer_spec

which state that products must be "shipped with the display's Sleep mode set to activate within 15 minutes of user inactivity".

commit 38576dc3ae8dddec2baedd2f7e64abdfc56bedf93
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Apr 3 11:55:41 2009 -0400

   DPMS: Simplify some macro silliness.

commit 1c01127a214731a21c4784249a429c74f17bd424
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Apr 3 11:39:18 2009 -0400

   DPMS: Unexport all the various setup variables.

   The drivers don't need to know any of this.

commit a99b0ab918998c9a1b9f8692591b8cb59a12eb9e
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Apr 3 11:32:00 2009 -0400

   DPMS: Fix cast abuse

commit 4da347adb1fcc39e8f4f2cadd98e887d7ac877a
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Apr 3 11:18:21 2009 -0400

   DPMS: Code motion.

commit 1731882341c191b4fffd78e0c1fd9297c636e0401
Author: Havoc Pennington <hp@pobox.com>
Date:   Fri Mar 27 12:30:37 2009 -0400

   Set bg pixmap of composite overlay window to None (#20912)

   Otherwise it's impossible to get the COW without a white flash on the screen, because it's on top, mapped immediately, and unaffected by composite redirection. This makes initial login ugly when it doesn't need to be.

commit d2690375dfd994817f004cda133ca2a492c0b956
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Apr 3 11:06:50 2009 -0400

   kdrive: s/KdSaveString/strdup/g
This isn't even funny anymore.

commit 91b697efdefba125348dbcaf584ec51a7f8e9bf6
Author: Kristian Høgsberg <krh@redhat.com>
Date:   Wed Apr 1 17:42:33 2009 -0400

Support setTexBuffer2 in AIGLX.

Fixes broken GLX_tfp, specifically, lets compositors ignore un-defined alpha channel for pixmaps.

commit 1c101d75d4855b2698e3fc8d2dd662f20585812f
Author: Alan Coopersmith <alan.coopersmith@sun.com>

Date:   Wed Mar 25 15:51:43 2009 +1000

Xext: set POINTER_SCREEN flag in XTestFakeInput if necessary. (RH #490984)

The POINTER_SCREEN flag must be set explicitly for XTest core events to avoid
out-of-range events when the lastSlave was an SD with an explicit axis range.
Device events sent through XTest don't need this flag, they are expected to be
in the valuator range of the device anyway.

Red Hat Bug 490984 <https://bugzilla.redhat.com/show_bug.cgi?id=490984>

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>
misprite: In SourceValidate, check that it's a Window first

It almost never is. However, you have _lots_ of input devices now, and walking them all on every Composite operation is not the cheapest thing in the world.

X.Org Bug 20756 <http://bugs.freedesktop.org/show_bug.cgi?id=20756>

Allow XI2 event selection for AllDevices and AllMasterDevices.

commit 808a158182b0a3b985385899252c1909471b4dbbd
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Mar 6 14:45:26 2009 +1000

dix: Enable XI2 delivery for events and focused events.

No support for grabbed events yet.

commit 87ff1159b497c66554a4036ae619f92d5631f00f
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed Mar 11 09:01:23 2009 +1000

dix: deliver device enter/leave events.
commit 04ed0bcb2530866f7248b412974ecd15f0fbff6ac
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Feb 23 17:07:55 2009 +1000

  xkb: remove Device/Enter leave handling - XI2 enter/leave don't have compat state.

commit 3f37923a727d5fc4b1880a53dac1145884ba7140
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Feb 23 16:12:25 2009 +1000

  Xi: send XI2 focus events.

commit daf7dd3bfecc9029bd10c7a4ea5d2c875a89c41
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Wed Mar 11 09:01:12 2009 +1000

  dix: Add GetWindowXI2Mask helper

commit 8b6a370058ad5a20e0a0e49ec9443daf03775de8
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Feb 23 15:58:07 2009 +1000

  Add XI2 masks and XISelectEvent() request handling.

  XI2 event masks are simply stored in the OtherEventMasks as a separate field.
  This replaces the XiSelectEvent code.

commit 38bba0c1b75b84e8bbdafa7975cf701a9414a3af
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Fri Feb 20 16:07:33 2009 +1000

  Xi: Change ChangeMasterDeviceClasses to new XI2 events.

  Split ChangeMasterDeviceClasses into an extra XISendDeviceChangedEvent that
  assembles the XI2 wire event for the DeviceChanged event. Re-use this when
  detaching the last SD.

  Not quite perfect yet, we still copy the device classes from the slave now
  rather than from the data we had when the event occured. But it's a start.

  (We can now unexport SizeDeviceInfo and CopySwapDevices, not needed anymore)

  Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 181e41511d5772962b8bc998a1940d2a9ba62d5e
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Feb 23 16:14:51 2009 +1000
dix: fix up device enter/leave for XI_Enter/XI_Leave.

commit 0befeb36c175b14eac8d5416851f1556af90dd86
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue Feb 24 15:27:07 2009 +1000

dix: Add device info to DeviceChangedEvent, and fill in CCCE.

We need to fill the info here, as the device may change until we get a chance
to process it.

Date:   Fri Mar 6 22:27:54 2009 +1000

dix: Force deviced ids of 2 and higher for actual devices.

0 is now reserved for the "AllDevices" virtual device.
1 is now reserved for the "AllMasterDevices" virtual device.

This also means that wherever we passed in (mskidx = 0), we now need to pass in the devcideid.

commit 708966f127e2c12c13479a027f6e67853d1f8b
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Feb 13 16:42:02 2009 +1000

dix: abstract event filters through GetEventFilters.

Don't let everyone acces the filters[] array directly. This is necessary once we start dealing with GenericEvents, where the filters are a bit more complicated.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 8a8763f1502c9ddd1961f96f2cc7c73fbc0b49b5
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Feb 12 16:07:15 2009 +1000

dix: restructure DeliverEventsToWindow, a little bit anyway.

Desperate attempt of making the code easy to read and understand. A failed desperate attempt, possibly.

commit 891cfc802028c3e008ee6c2d3e2438a31f57f39f
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Feb 12 10:12:45 2009 +1000

dix: clean up DeliverDeviceEvents.

Move mask checking into external function and streamline the code.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 6b6b6660c3633af75a94302725137549df0dbe446
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Tue Mar 10 10:15:45 2009 +1000

Xext: remove ev_fill from GEExtensions.

commit 445daa62e720fe58fa2d6c3dc26663671b2bc48
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Jan 15 17:16:22 2009 +1000

Xext: purge XGE event masks.

The masks were originally designed to generically handle event masks for extensions. Since all that is in-server anyway, it's much better writing custom event masks for those extensions that need it and not providing a unified mechanism.

XI2 needs more than the current implementation, which is already too complex for most other extensions. good riddance.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 6fe4c28bf4f3a9f7c341b9e40313470e9ded5cb3
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Feb 16 16:34:05 2009 +1000

Add agressive event type checking.

Best to FatalError if a wrong event comes in. At least that forces me to fix it really quickly.

exa: check if the pixmap is pinned for unsupported AUX indices.

commit 3992dd38caf33b343affd8d732e94880d1099dcf
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Mar 16 13:24:48 2009 -0400

selinux: Add support for avc_acquire_netlink_fd()

Requires libselinux 2.0.79 or newer. Without this, libselinux will
check for policy updates on the netlink socket on basically every policy
lookup. Statistically speaking, they never happen, and the check
translates to at least one more syscall on basically every operation.

Instead, take control of the fd from the library, and check it in
WakeupHandler if it polls readable.

randr: Nuke broken set_origin shortcut

Shortcut is impossible to implement this way, because we don't know for sure whether the crtc of an output has changed or not.
Correct access mode in call to dixLookupWindow() within RRSelectInput.

Reported by Alan Coopersmith.

Replace dixLookupResource by dixLookupResourceBy{Type,Class}.

dixLookupResource attempted to automatically detect whether the caller wanted a lookup by-type or by-class, unfortunately, it guessed wrong for RT_NONE. Instead of trying to make the guess better, this patch just reverts the unification and creates separate functions for each operation.

Xi: don't crash on a NULL property name, just return None.

strcp doesn't like NULL-pointers.

xfree86: don't try to UnInit virtual devices in DIDR. (#20087)
DeleteInputDeviceRequest function doesn't handle "virtual" devices well.
TightVNC libvnc.so module to X (which makes bare Xorg VNC capable) uses such
kind of devices.

Bare Xvnc (it is something like Xvfb) simply uses AddInputDevice &
RegisterDevice functions. Xvnc uses DeleteInputDeviceRequest from Xi/stubs.c
so everything works fine (now I see that DeleteInputDeviceRequest in
Xi/stubs.c should call RemoveDevice function, shouldn't it? : )

Situation is quite different when you use libvnc.so module. It uses same
schema as Xvnc, so it simply calls AddInputDevice & RegisterDevice. Thus
device is created correctly. When server is terminated it calls
DeleteInputDeviceRequest (now from hw/xfree86/common/xf86Xinput.c) for each
device. Here is the difference - Xvnc calls DeleteInputDeviceRequest from Xi/stubs.c as I wrote above. Thus Xorg gets sigsegv because "VNC" devices don't have real input driver.

X.Org Bug 20087 <http://bugs.freedesktop.org/show_bug.cgi?id=20087>

[This isn't really a fix (libVNC should behave correctly) but not crashing the server sounds like an improvement.]

Xi: support InternalEvents in UpdateDeviceState, parts of POE and EnqueueEvent

Note that this breaks DGA. Life is tough.

EnqueueEvent is a somewhat half-baked solution, we immediately drop back into XI and store them. But it should in theory work.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

Don't let the dce be random data.

commit 007e93c869325cafcc29d975b356dbb8e7cd2ac1
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Jan 30 14:35:22 2009 +1000

xkb: Switch the xkb event processing path over to InternalEvents.

Before dropping down into the DIX, convert back into XI events. This is a temporary solution only, until the DIX is capable of handling InternalEvents anyway.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 64ea6078105f73d1b727619fc123920bc7e4a06c
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Mon Feb 2 14:15:52 2009 +1000

dix: change eventconvert to always return an array of xEvents

Just alloc the memory on demand rather than doing things with EventListPtrs etc.

commit 4026c63e4eb16481baf1a41ad67cd2556728d40
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Jan 30 14:34:02 2009 +1000

mi: switch the EQ to contain InternalEvents only.

This gets rid of the nevents parameter. InternalEvents are always a single item per event. Also remove the special DeviceValuator handling in both enqueueing and dequeueuing.

Custom callback handlers are now broken until fixed.
For bisectability, we copy the InternalEvent back into the XI required during POE and friends. Consider this a temporary solution.

Note: Because of misc linker bonghits, Xvfb won't link in this revision.

XQuartz: quartzKeyboard compile fixes for recent XKB Changes

Seems we're less divorced from XKB than we'd like for now... hopefully not having any rules installed will still let us override things the way we want to...

commit 61abf3189f3f97ee5228d45c035dbd0c0249f844
Author: George Staplin <gstaplin@apple.com>
Date:   Sat Feb 21 22:33:10 2009 -0700

XQuartz: GL: Change from xalloc to xcalloc to potentially avoid uninitialized data in the __GLXAquaContext.
XQuartz: GL: Fix a bug with an uninitialized GLX data structure.
This was causing a crash randomly, due to random memory contents.
Use xcalloc to prevent this in the future, due to future changes or mistakes.

Set the drawableType to include GLX_PIXMAP_BIT and GLX_PBUFFER_BIT.
The new libGL supports these.

Set the max Pbuffer width/height, based on the results of a test program.
We may someday want to revisit this depending on what users need, so that
we create a CGLContextObj, make it current, and call glGetIntegerv to
gather the information at runtime.

Add Extensions section to xorg.conf man page
Extensions section was added in X11R6.8.0 and documented in the release notes:
http://www.x.org/archive/X11R6.8.0/doc/RELNOTES2.html#3
but never made it into the man page.

Also fix a bonus typo.

Signed-off-by: Alan Coopersmith <alan.coopersmith@sun.com>

XQuartz: Fix the new ProcAppleDRIDestroyPixmap code REQUEST_SIZE_MATCH.
It had a copy and paste mistake that I didn't notice. :/
It was using the CreatePixmapReq.

Also add a missing B16 to the end of the length for the DestroyPixmapReq struct.

Now the AppleDRIDestroyPixmap request seem to work.

xinerama: Put the proto version in the code instead using proto headers.

    Proto headers updating resulting in the server advertising new versions is
    broken. This should be applied to every extension.
    This fixes the build against slightly-older xineramaprotot.

commit 5394b7e66224d20888dd4020f5cb8ca930720fb4
Author: Keith Packard <keithp@keithp.com>
Date:   Fri Feb 6 06:34:35 2009 +0100

    Eliminate the shadow clear on transform change
    When the crtc transformation changes, the entire crtc must be repainted.
    This was being done by clearing the shadow and then painting the rectangle
    containing the screen image; the clear being required as the screen image
    may not fill the crtc. When changing the transform rapidly, this leads to
    flashing. Eliminate the clear by painting the entire crtc instead of just
    the screen rectangle.

Author: George Staplin <gstaplin@apple.com>
Date:   Mon Feb 16 17:22:18 2009 -0700

XQuartz: Add support for GLXPixmaps to the AppleDRI.

This involved wrapping some GCOps to get the proper behavior
when using X11 raster ops mixed with OpenGL (see driWrap.c).

This extends the AppleDRI protocol with create and destroy pixmap
functions.

The dri.c code has been extended quite a bit to enable this, and
to initialize the wrapping of CreateGC for GCOps.

This has been tested with tests/glxpixmap and proven to work with
the new libGL. Existing applications seem to work fine too. Redraws
all appear to be correct.

There may be some bugs lurking that I haven't found yet. I plan
to drive them out by extending the libGL test suite.

commit 20ac3140ce16af460992b83aa8aef4afe28c2ee
Author: Adam Jackson <ajax@redhat.com>
Date: Mon Feb 9 13:36:05 2009 -0500

EDID: Hack for 1366x768 in standard timing descriptors

All you get for standard timing descriptors is horizontal size in multiples of 8 pixels (which means you can't say 1366) and height in terms of aspect ratio (which means you can't say 768). You'd like to just fuzzy-match this by walking the DMT list for sufficiently close
modes, but you can't because DMT is useless and only defines a 1360x768 mode, because it's also specified in terms of character cells despite providing pixel exact timings. Neither can you use CVT or GTF to generate the timings, because they also believe that modes have to be a multiple of 8 pixels.

You'd also hope you could find a timing definition for this in CEA, but you can't because CEA only defines transmission formats that actually exist. So there's 480p, 720p, and 1080p, but no 768p. And why would there be, after all, the encoded signal is never 768p so obviously no one would ever make a display in that format.

So instead, make a CVT mode since that's likely to be handled well by just about everything, smash the horizontal active down by 2, and shift the sync pulse by 1. Underscanning the hard way.

Pass the suicide.

commit bcadfbbed6f1e1f901c2459f60f94a0da506bd90
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Feb 13 14:06:07 2009 -0500

  RANDR: Validate entire mode list for interlace and doublescan

  Otherwise drivers have to refuse interlace twice: once in the output
  config, and once in ->valid_mode() to catch output and config modes.
  If you can't do interlaced modes, asking nicely for it in the config
  isn't going to suddenly make it work.

Correct error message if specified config file is not found

By making the "Unable to open config file" header a warning, it was not appearing with the filename when a config file was specified and not found. Now we make it an error message again, but only issue the error if a filename was specified - if none was specified, then we don't even issue a warning, just the "Using autoconfig" info message.

XQuartz: xpr: The dri.c code for pixmaps was wrong in several ways. They weren't being exported correctly by Xplugin.

This should fix a bug with the surface for a window, when an export fails.
Before the export could fail and leave behind an invalid (f Freed) pointer in the dix privates.

I have an idea of how to fix the GLXPixmaps now without using CGLSetOffScreen.

This work is a step towards that. The Xplugin will need a small patch to fix an issue that this change brought forth.

Author: Eric Anholt <eric@anholt.net>
Date:   Sun Feb 8 12:37:50 2009 +0100

glx: Replace broken GLX visual setup with a fixed "all" mode.

With trying to match depths so that you didn't end up with a depth 24 fbconfig for the 32-bit composite visual, I broke the alpha bits on the depth 24 X visual, which angered other applications. But in fixing that, the pickFBConfigs code for "minimal" also could end up breaking GLX visuals if the same FBconfig was chosen for more than one X visual.
We have no reason to not expose as many visuals as possible, but the old "all" mode didn't match any existing X visuals to GLX visuals, so normal GL apps didn't work at all.

Instead, replace it with a simple combination of the two modes: Create GLX visuals by picking unique FBconfigs with as many features as possible for each X visual in order. Then, for all remaining FBconfigs that are appropriate for display, add a corresponding X and GLX visual.

This gets all applications (even ones that aren't smart enough to do FBconfigs)
get all the options to get the visual configuration they want. The only
potential downside is that the composite ARGB visual is unique and gets a
nearly full-featured GLX visual (except that the root visual might have taken
the tastiest FBconfig), which means that a dumb compositing manager could
waste resources. Write compositing managers using FBconfigs instead, please.

dix: die if we can't activate or init the VCP/VCK.

If we have a busted xkb setup, the XKB initialization on the core devices fails and leaves us with dev->key->xkbInfo == NULL. This in turn causes segfaults lateron.

Return BadValue when the XKB configuration for a master device failed, and if that happens for the VCP/VCK, die semi-gracefully.
The VCP init can only fail on OOM.

Reported by Aaron Plattner.

  loader: Simplify handle allocation and refcounting.

commit 0bad0552b4d410529ab51d618af8d08c5aeaa71
Author: Adam Jackson <ajax@redhat.com>
Date: Wed Feb 4 17:20:24 2009 -0500

  XKB: Remove -kb and +kb from -help text and man page.

commit 7968823c02615e1080c0d3f34dcebe14ea1771
Author: Keith Packard <keithp@keithp.com>
Date: Tue Feb 3 20:18:37 2009 -0800

  Handle the combination of panning and crtc transforms

  This patch gets the shadow scanout buffer repainted on panning area changes.
  It does not, however, track the mouse correctly.

  Signed-off-by: Keith Packard <keithp@keithp.com>

commit 763df9eecec79a867978efc5138d8635a46c1a0d17
Author: Keith Packard <keithp@keithp.com>
Date: Tue Feb 3 20:15:41 2009 -0800

  Damage re-used shadow scanout buffer using new transforms.
When the shadow scanout buffer can be re-used, the underlying framebuffer area must be damaged so that the scanout will be repainted. This patch delays the addition of that damaged area until after the transform in the crtc has been updated, otherwise the old transform would have been used and the wrong area repainted.

Signed-off-by: Keith Packard <keithp@keithp.com>

commit 62fc98cb88e4e8b636f343453fc1168a87c58972
Author: Keith Packard <keithp@keithp.com>
Date:   Tue Feb 3 20:12:42 2009 -0800

Handle matrix computation overflow in RRTransformCompute

If the computation of the composite fixed-point transform for RandR overflows at any point, take the resulting floating point transform and scale that back to fit in a fixed point matrix. This ensures that a matrix will always be available, although perhaps at reduced precision. Someday we should add floating point matrices to Render.

Disable Xnest by default.

Xnest doesn't build right now and is in the process of being removed. So
let's not build it by default.

commits:
- Convert kdrive libraries to libtool convenience libraries.
  Also correct a link failure due to unresolved symbols. This is arguably a
  libtool/ranlib/ld bug, that "may" be corrected by linking all convenience
  libraries in a single one. But in this case, it was preferred to just add a
  linker option to Xfake_LDFLAGS, to force linkage of all libraries.

  This corrects #19725.

commit bc909f71367a022897e725bb5769c2bcadab22395
Author: Daniel Stone <daniel@fooishbar.org>
Date: Tue Aug 12 00:35:56 2008 +0300

Input: Centralise pointer map changing

Replace both core and Xi functions with one function that validates the proposed map, and sends out both kinds of notification.

Signed-off-by: Daniel Stone <daniel@fooishbar.org>
Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit f06a9d2e05e13466c115fc706966a90b1fe0518e
Author: Daniel Stone <daniel@fooishbar.org>
Date: Sat Oct 18 20:59:30 2008 +0100

Input: Clean up keymap change notifications
Keyboard map notifications are always generated from within XKB code, which also takes care of copying the keysyms, etc. If you need to mangle the keymap yourself, generate a new core keymap/modmap, and pass it to XkbApplyMappingChange.

SendMappingNotify is renamed to SendPointerMappingNotify (and ditto its Device variants), which still only _sends_ the notifications, as opposed to also doing the copying a la XkbApplyMappingChange.

Also have the modmap change code traverse the device hierarchy, rather than just going off the core keyboard.

Signed-off-by: Daniel Stone <daniel@fooishbar.org>

Author: Daniel Stone <daniel@fooishbar.org>
Date:   Sat Aug 9 16:50:22 2008 +0300

XKB: Add a hell of a lot more FIXMEs

For some reason, we insist on having daft internal representations that
make no sense, that always have to be converted to be used. We should
really sort this one out.

Also, comment the hojillion members of XkbStateRec.
XKB: Explicitly decode action data

Rather than requiring a one-to-one correspondence between XKM and struct formats in action data, explicitly fill the action data, so we can break API.

XKB: Remove descriptions from maprules

We don't use them, as they're not up to the task. We'll get a better solution someday, promise.

XKB: Remove support for setting combined keymaps

We don't do full keymaps anymore. Deal.

XKB: Remove 'extra' functionality from rules parsing

When we find something weird in the rules, don't stash it as an extra freeform component, just state that the rules file is likely broken and move on with our lives.

Xephyr: Disable state inheritance hack
Prepare for the impending removal of the state field by disabling this hack for a while: it's hell of nasty and I'm amazed it ever really worked.

Basically, on focus out, it should do as current DDXes do and fake releases for all keys (not just mangle the core state) that are currently down; buttons too. When focus comes back in, we already have a KeymapNotify that lets us know what's currently down, so we can use this to fake the appropriate keypresses, and send it through the event routing layer.

Kill off --with-mesa-source completely

There were a few spots left in the source that were using the
--with-mesa-source defined headers or the now removed $(top_srcdir)/GL
directory. These aren't needed anymore as all the necessary source for
GLX is in $(top_srcdir)/glx.

Don't reuse PKG_CHECK_MODULES identifiers

Using GL for the PKG_CHECK_MODULES identifier multiple times means only
the first call will actually be used. Later calls will be skipped due to
GL_CFLAGS and GL_LIBS already being set. This changes DRI to using a
different identifier and DMX to just reusing GL_CFLAGS.

XQuartz: mieq: Wait for the server to finish initializing before letting other threads mieqEnqueue

Avoid possible race condition whereby one thread might call mieqEnqueue before InitAndStartDevices finishes
xfree86: always force RAW mode under linux.

The previous check for AEI on left us with the possibility that AEI is forced off in the config, but devices are added through evdev nonetheless. A keyboard added this way can CTRL+C the server. Even when we use kbd, we can set the mode to RAW, so it's safer around to to so.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

dix: remove XineramaCheckMotion, merge into CheckMotion.

For 5 lines difference, we don't need to duplicate the whole function. really.

dix: remove "notyet" conditional compilation.

If it's "notyet" for 3 years, then "yet" won't arrive anytime soon.

XQuartz: xpr: Cleanup some of the code and possibly fix part of the GLX Pixmap problem.

Split DRICreateSurface into 3 functions.

Make CreateSurfaceForPixmap use xp_configure_surface. I suspect this is partly why GLXPixmaps never worked.

It will require some more work and thoughts for pbuffers, unless we fake those with pixmaps and surfaces.

XQuartz: xpr: Cleanup some of the code and possibly fix part of the GLX Pixmap problem.
XQuartz: GL: Make indirect.c build and work in the 1.6 branch.

Reorder some header files and provide some types earlier on.

Remove the static __GLXextensionInfo __gliDXExtensionInfo; that isn't used in 1.4 or 1.5, and seems to have been removed from 1.6. Remove the data structures associated with that too.

Remove __gliXAquaDrawableResize. The GLX structure doesn't use it anymore, and the Apple version did nothing useful before.

__gliXAquaDrawableSwapBuffers(): base no longer contains a drawGlxc member. Now provide the the Apple/Aqua context in the __GLXAquaDrawable struct. Add the context member to the __GLXAquaDrawable struct.

Remove the fallback configs. They aren't used in 1.4 or 1.5 either.

Remove init_visuals(). It's not used in 1.4 or 1.5 either.

In the drawable constructor initialize the state properly, including the new context member.

Remove glAquaResetExtension() -- it's not used anymore.

This has been tested remotely and proven to work with glxgears, fire, various texture programs I wrote, and various Mesa demos. (cherry picked from commit d514152195452ae11ec7769c76489651620ad380)

Don't release grabs unless all buttons are up

Previously, only buttons <= 5 would count here, but the core protocol allows for 255 buttons.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>
Count the number of logically down buttons in buttonsDown

This fixes the following bug. Assuming your window manager grabs Alt+Button1 to move windows, map Button3 to 0 via XSetPointerMapping, then press the physical button 3 (this shouldn't have any effect), press Alt and then button 1. The press event is delivered to the application instead of firing the grab.

dix: fix WarpPointer calls for devices with custom valuator ranges (#19297)

If the MD's lastSlave was a devices with custom axes ranges, then a
WarpPointer would position the cursor at the wrong location. A WarpPointer
request provides screen coordinates and these coordinates were scaled to the
device range before warping.

This patch consists of two parts:
1) in the WarpPointer handling, get the lastSlave and post the event through
this device.
2) assume that WarpPointer coordinates are always in screen coordinates and
scale them to device coordinates in GPE before continuing. Note that this
breaks device-coordinate based XWarpDevicePointer calls (for which the spec
isn't nailed down yet anyway) until a better solution is found.

Say Option "XaaOffscreenPixmaps" to turn them back on.

Apropos of bugs #13795 and #15098. But this still isn't correct.

commit eb2d7b3d700952ba88c77deacf687b251300e660
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Fri Dec 19 21:05:47 2008 +1000

dix: move focus handling into enterleave.c.

This commit moves the focus handling from events.c into enterleave.c and implements a model similar to the core enter/leave model.
For a full description of the model, see:

This commit also gets rid of the focusinout array in the WindowRec, ditching it in favour of a local array that keeps the current focus window for each
device.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 673eb23aac578dcd04e2a99d1fa5c2987eb58b8
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Dec 19 21:05:09 2008 +1000

dix: add a few auxiliary functions for the updated focus model.

SetFocusIn and SetFocusOut, including the static array to keep all focus windows.

commit 38b28dcadd0990cb43f50db4300eebb8f044db96
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Dec 18 15:55:11 2008 +1000

dix: reduce FirstPointerChild complexity

Instead of keeping a flag on each window for the devices that are in this window, keep a local array that holds the current pointer window for each device. Benefit: searching for the first descendant of a pointer is a simple run through the array.

Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed Dec 17 16:14:41 2008 +1000

dix: re-implement enter/leave model.

The old model was implemented based on a misunderstanding of NotifyVirtual and NotifyNonlinearVirtual events. It became complicated and was broken in some places [1]. This patch wipes this model completely.

A much simplified implementation is provided instead. Rather than a top-down approach ("we have a tree of windows, which ones need to get which event")
this one uses a step-by-step approach. For each window W between A and B determine the pointer window P as perceived by this window and determine the event type based on this information. This is in-line with the model described by Owen Taylor [2].

Date:   Wed Jan 7 23:07:01 2009 -0200

Don't call free, use xfree macro.

There are several other direct calls to free, check
% egrep '\<free\>' `find . -name \*.c`
but they are free'ing memory from explicit malloc calls.
This one was not intended, and corrected, so that it would
both, follow the conventions everywhere (and work on some
libc that doesn't like free(0)), and make it easier to use
malloc wrappers.

commit 49b93df8a3002db7196aa3f1f9d8dca1c12a55d6
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Wed Jan 7 19:37:03 2009 -0200

Default to use standard bitmap fonts, with builtins as fallback

The builtin-fonts configure option was removed, as it at best should
have been a runtime option. Instead, now it always register all "font
path element" backends, and adds built-ins fonts at the end of the
default font path.
This should be a more reasonable solution, to "correct" the most
common Xorg FAQ (could not open default font 'fixed'), and also don't
break by default applications that use only the standard/historical
X Font rendering.

commit 4f004231871c830e16c4525cfaab183fad0aee86

Add sdksyms.sh to EXTRA_DIST to correct make distcheck

Thanks to <vehemens at verizon.net> for noticing the problem.

Update sdk headers to export new symbols.
All symbols in installed sdk headers should be explicitly tagged as exported symbols. Otherwise, to ensure it is not a mistake, one could write it as something like:
extern /* NOEXPORT */ type name ...;
but the proper procedure really should be to use a non sdk header (or a "noinst_" one).

This patch also removes prototypes to some functions that existed only temporarily.

    Improve sdksyms.c automatic generation (Fix #19245).

    Since it is already parsing cpp output, create a dependency file
    in the same process. This will cause sdksyms.c to be regenerated
    whenever a sdk header is modified.

    This also uses the gmake 'sinclude' directive (don't fail if
    included file doesn't exist). This should not cause any problems
    given that gmake only constructs are used in several other Makefiles.

xkb: ensure enough symbols for core Group1 replication.

A single-group key on a multi-group keyboard has to be replicated across all three groups (see Section 12.4 of the XKB protocol spec). Ensure that there's enough symbols available to actually do that.

e.g. a key ABCD on a 3 group keyboard needs to be replicated as ABABCDABCD, hence requiring space for 12 symbols, even if maxSymsPerKey is less than that.

    exa: A more correct fix.

commit 2db7b66863ae6055e3ce13c88b36d620de8a4d75
Author: Maarten Maathuis <madman2003@gmail.com>
Date:   Fri Dec 19 23:12:37 2008 +0100

    exa: a few cleanups

- Some warnings silenced.
Some whitespace cleanup.

commit aedd2f566df585db7a1614f302cc8d3fed54275
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Fri Dec 19 19:10:23 2008 +0100

randr/xfree86: Fix a one off error in the panning calculations.

- Example: mode 1280x1024, panned area 1281x1024
  
  panned_area.x2 = 1281
  mode.width = 1280

  If you subtract 1280 from 1281, then that leaves you with one.
  Which is the one pixel that you need to move to actually see the last pixel column.
  Subtracting 1 from this will consistently prevent you from seeing the right and bottom edge.

commit 332d65ec7a6e9475e9f5d3742f137835274de
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Fri Dec 19 18:59:27 2008 +0100

randr: Consider panned crtc's when calculating xinerama screen sizes.

- This will allow window managers and applications to actually use the panned area.

commit f2d1de6c2a3e6e50db6d9714c293eb26324fbd3d

Author: Keith Packard <keithp@keithp.com>
Date: Mon Dec 15 19:53:45 2008 -0800

Patch brown-bag fix for bug 19017 (scrn->virtualX/virtualY 0 before PreInit)

When a driver uses a crtc during device detection, the scrn has not yet been configured and virtualX/virtualY are still zero. This caused the X server to try and allocate a shadow frame buffer, which couldn't work.

Detect this by checking for zero virtualX/virtualY values.

Signed-off-by: Keith Packard <keithp@keithp.com>

commit fde2f961035609cfff87f8761ef1e0f23e6a9761be2
Author: Keith Packard <keithp@keithp.com>
Date: Mon Dec 15 11:39:24 2008 -0800

Use scrn->virtualX/virtualY in xf86CrtcFitsScreen. Fix bug 19017.

pScreen->width/height are not initialized when doing initial mode setting,
which makes this function incorrectly fail. Using scrn->virtualX should work in all cases though.

Bug 19017 reports a crash in xf86CrtcSetModeTransform when doing a modeset for output probing, long before the screen array is initialized; that was caused by a work-around to set pScreen->width/height so that xf86CrtcFitsScreen could find the right values.

Signed-off-by: Keith Packard <keithp@keithp.com>

Remove #define NEED_EVENTS and NEED_REPLIES

A grep on xorg/* revealed there's no consumer of this define.

Quote Alan Coopersmith:
"The consumer was in past versions of the headers now located
in proto/x11proto - for instance, in X11R6.0's xc/include/Xproto.h,
all the event definitions were only available if NEED_EVENTS were
defined, and all the reply definitions required NEED_REPLIES.

Looks like Xproto.h dropped them by X11R6.3, which didn't have
the #ifdef's anymore, so these are truly ancient now."

Modify sdksyms.sh to receive $top_srcdir as first argument.

If the basename of header file processed by cpp matches $top_srcdir, check for extern symbols in the output, and add to the xorg_symbols vector.

Possibly a better solution then using this script would be to somehow tell the linker to not drop any symbols from the binary being generated.

mi: Clean up CopyGetMasterEvent, re-use the memory.

Alloc an EventList once and then re-use instead of allocating a new event each
time we need a master event.
There's a trick included: because all the event processing handlers only take
an xEvent, init a size 1 EventList and squash the events into this one.

Events that have count > 1 must be squished into an xEvent array anyway before
passing into the event handlers, so we don't lose anything here.

Add dependency tracking to sdksyms.c and export composite wrapper.

   Thanks to David Miller for noticing a make problem with sdksyms.c not being regenerated when sdksyms.sh is updated. This is not yet the best solution; automake generates dependency for sdksyms.o, but the build really should also regenerate sdksyms.c when sdksyms.o needs to be regenerated.

   Export the symbols in miext/cw/cw.h. These symbols are in libxaa, and at least the nvidia driver uses them. Maybe cw.h should be installed in the sdk.

Convert libx86emu.a to a "libtool convenience library".

commit ed4a17274015ecd8040ae85bd5cd9d1dbcc9460a
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date: Sun Dec 7 14:59:25 2008 -0200

Export some symbols from libxf86config when installing it.

These are private symbols, but used by the X Server.
The newly exported symbols were not added to the sdk headers.
Optionally, libxf86config could be compiled without hidden symbols when being installed.
Thanks to Maarten Maathuis for noticing the problem.

commit bf4c29ab48a166eb158cf4be7c597982d65ef214
Correct xf86acpiDisableFlag symbol.

It is declared as
<hash>ifdef HAVE_ACPI
Bool xf86acpiDisableFlag = FALSE;
<hash>endif
in hw/xfree86/common/xf86Globals.c
but not protected by the ifdef in the sdk header xf86Priv.h, what
caused a build failure in the tinderbox, due to the address of the
symbol being taken (to ensure it is available) in sdksyms.c.

commit b1dac41fb3853ca8182048ea57b88b6e84ecceb3
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Sun Dec 7 02:22:19 2008 -0200

Use libtool convenience libraries and better "symbol" table.

All .a libraries were converted to .la, and instead of linking the
Xorg binary with a mix of .a and .la, and adding some libraries more
then once in the command line, etc, now it generates a single libxorg.la
from all the required convenience libraries, and links with a dummy
xorg.c (that should usually be the file with the main function...).
This removes the requirement of some things like libosandcommon and
libinit, that existed to circumvent problems when linking multiple
.a and .la in the final Xorg binary.

The "symbol table" is now generated dynamically, by a shell script,
with an embedded gawk parser that parses cpp output. The new file
sdksyms.sh is generated by hand by analyzing all Makefile.am's and
making it create a sdksyms.c file, that includes all sdk headers that
will add symbols for the Xorg binary. Module headers aren't read, and
a in 2 files it was required to add a "<hash>ifndef XorgLoader" around
declarations shared between the Xorg binary and libextmod. A few
other changes were added to other sdk headers, like preventing
multiple inclusion, or including other headers to satisfy dependencies.

This should be a lot more portable, and better (hopefully properly)
using libtool to generate convenience libraries.

Fixes build error in xf86-video-intel utilities

commit 466b0fc9ba5d5e7fb36e47a6d1bd60218f51c75
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Fri Dec 5 17:01:09 2008 -0200

Add back a simplified version of the loader static address tables.

If not taking the symbol addresses, linkage will break badly, as not all symbols will be present, and it also requires changing library order, and/or making some changes like the "libosandcommon".

This table should be modified to be generated automatically, as it is required to "fool" the compiler/loader into adding all required symbols to the X Server.

commit 44c8c3cf7de589fb8e987f4ab931294eaf0b405f
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Fri Dec 5 04:26:57 2008 -0200

Remove static symbol address tables in hw/xfree86/loader/*sym.{c,h}

Those tables were once used to decide what symbols are visible to modules, but they were outdated. The only real usage was that, since it was taking the address of symbols, linkage should fail if the symbols were not available.

Now the proper way to make symbols available to modules should be to use the _X_EXPORT macro, or not compile with hidden symbols,
so that all symbols would be available.

All symbols in the tables were revised to ensure they are exported, and only symbols that were not exported are ClientSleepUntil() and DuplicateModule(), that were not in the sdk for quite some time already, and should not have any users outside of the X Server (and/or builtin modules).

commit 091a50d1260c70055aba1fa6a2d1b1a36de1114e
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Thu Dec 4 18:23:25 2008 -0200

Move _X_EXPORT attribute to header file.

The attribute should be set on header files to make it easier to manage what symbols are available to modules.
_X_EXPORT should be used in sources only for special cases, like symbols that must be visible by non video/input driver/modules but should not be "advertised" in the sdk.

Update .gitignore.

Add files left by make distcheck and remove files that no longer are generated.
Correct make distcheck by removing dolt files.

Remove dummylib.

Only cvt required it, and only used XNF{,c}alloc
via xnf{,c}alloc macros.
Based on patch by Eric Anholt.

Move RELEASE_DATE closer to AC_INIT so it's more likely to be updated

Include <X11/Xfuncproto.h> if _X_EXPORT is not defined.

If AEI is on, disable 'vmmouse' in addition to 'kbd' and 'mouse'.

Randr: add swapped dispatch for RR[GS]etCrtcTransform

Fix a memory leak in ProcRRGetCrtcTransform() while I'm at it.

commit 49f77fff1495c0a2050fb18f9b1fc627839bbfc2
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date: Wed Dec 3 05:43:34 2008 -0200

Rework symbol visibility for easier maintenance

Save in a few special cases, _X_EXPORT should not be used in C source files. Instead, it should be used in headers, and the proper C source include that header. Some special cases are symbols that need to be shared between modules, but not expected to be used by external drivers, and symbols that are accessible via LoaderSymbol/dlopen.

This patch also adds conditionally some new sdk header files, depending on extensions enabled. These files were added to match pattern for other extensions/modules, that is, have the headers "deciding" symbol visibility in the sdk. These headers are:
  o Xext/panoramiXsrv.h, Xext/panoramiX.h
  o fbpict.h (unconditionally)
  o vidmodeproc.h
  o mioverlay.h (unconditionally, used only by xaa)
  o xfixes.h (unconditionally, symbols required by dri2)

  LoaderSymbol and similar functions now don't have different prototypes, in loaderProcs.h and xf86Module.h, so that both headers can be included, without the need of defining IN_LOADER.

  xf86NewInputDevice() device prototype readded to xf86Xinput.h, but not exported (and with a comment about it).

Date: Wed Dec 3 14:24:25 2008 +1000

Let the DDX decide on the XkbRulesDefaults.

Rather than assuming rules in the CoreKeyboardProc, init the default rules in InitCoreDevices, then re-use them later.

In the xfree86 DDX, set the rules to "base" or "evdev", depending on whether we'll load kbd or evdev.

If we create a new MD, use pc105,us as default and re-use the rules file used previously.

xfree86: don't render SW cursors for devices attached to VCP (#16805)

When leaving 3D games such as quake3 or sauerbraten, a cursor may stay on the
screen. This is caused by one run of SW rendering for the SD, even though the
SD was attached to the VCP and thus has HW rendering capabilities.
Check for the SD's attachment (like in all other functions) before deciding on SW or HW rendering.

Correct static symbol XkmReadTOC and first pass on compile warning fixes.

The warnings corrected were only the ones that should correct real problems. The most common one is 64 bit integers as "printf %l" arguments.

Note that there is a patch related to this at:
http://bugs.freedesktop.org/show_bug.cgi?id=18204

commit fb22d4d928bc5d1a893494a059359da2ed2ac639
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Sun Nov 30 01:33:20 2008 -0200

Remove declarations of symbols that are never defined.

These symbols were removed from the X Server, or never declared.
One symbol that may need special attention is XkbBuildCoreState(),
that doesn't have a prototype anywhere, but is called from
xkb/xkbEvents.c:XkbFilterEvents(), and also used by the macros
XkbStateFieldFromRec() and XkbGrabStateFromRec() defined in
include/xkbstr.h.

fb/wfbrename.h also may need some cleanup, as it makes several "renames" of non existing symbols.

commit d6c8d4511e35a89a0353f11834c6f88d4d2189f
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Sat Nov 29 23:56:06 2008 -0200

Export symbols defined in the sdk.

This is the biggest "visibility" patch. Instead of doing a "export" symbol on demand, export everything in the sdk, so that if some module fails due to an unresolved symbol, it is because it is using a symbol not in the sdk.

Most exported symbols shouldn't really be made visible, neither advertised in the sdk, as they are only used by a single shared object.
Symbols in the sdk (or referenced in sdk macros), but not defined anywhere include:
XkbBuildCoreState()
XkbInitialMap
XkbXIUnsupported
XkbCheckActionVMods()
XkbSendCompatNotify()
XkbDDXFakePointerButton()
XkbDDXApplyConfig()
_XkbStrCaseCmp()
_XkbErrMsges[]
_XkbErrCode
_XkbErrLocation
_XkbErrData
XkbAccessXDetaiText()
XkbNKNDetailMaskText()
XkbLookupGroupAndLevel()
XkbInitAtoms()
XkbGetOrderedDrawables()
XkbFreeOrderedDrawables()
XkbConvertXkbComponents()
XkbWriteXKBSemantics()
XkbWriteXKBLayout()
XkbWriteXKBKeymap()
XkbWriteXKBF ile()
XkbWriteCFile()
XkbWriteXKMFile()
XkbWriteToServer()
XkbMergeFile()
XkmFindTOCEntry()
XkmReadFileSection()
XkmReadFileSectionName()
InitExtInput()
xf86CheckButton()
xf86SwitchCoreDevice()
RamDacSetGamma()
RamDacRestoreDACValues()
xf86Bpp
xf86ConfigPix24
xf86MouseCflags[]

Commit 45c8bd0fe54273039fd4a1e3eaaf81b5774f2c75
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date: Fri Nov 28 02:01:57 2008 -0200

Enable compiling the X Server and modules with hidden symbols by default.

Note that it checks if support for symbol visibility is available by
the compiler, not if it is functional. It may have problems on non x86
architectures.

To disable the feature, just pass the option "--disable-visibility"
to the X Server configure script.
Unless using an alternate build schema, drivers built from a git checkout will use the same "visibility" related CFLAGS used to compile the X Server.

commit 31285d063ec4623cb0764437d6d57e244f20460d
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:    Fri Nov 28 01:55:11 2008 -0200

Make visible symbols required by xorg modules.

This patch exports all symbols required by the compilable (in a x86 linux computer) xorg/driver/* modules. Still missing symbols worth mentioning are:

sunleo
   miFindMaxBand no longer available

intel   (uxa/uxa-accel.c)
   fbShmPutImage no longer available (and should have been static)

mga
   MGAGetClientPointer (should come from matrox's libhal)

This is not a definitive "visibility" patch, as all it does is to export missing symbols, but the modules that current don't compile, may require more symbols once fixed, and third party drivers should also require more symbols exported. A "definitive" patch should export symbols defined in the sdk.

commit 6f18ea7e656b79e58f66f51067334414767b413f
Author: Julien Cristau <jcristau@debian.org>
Date:    Wed Nov 26 19:07:04 2008 +0100

Typo fix

commit efefc03f9b26738b69abb570c1af2167cc99c4d8
Author: Julien Cristau <jcristau@debian.org>
Date:    Sun Oct 26 13:19:48 2008 +0100

Add missing include

    ../../../hw/xfree86/xaas/xaasTables.c:9:14: warning: symbol 'byte_expand3' was not declared. Should it be static?
    ../../../hw/xfree86/xaas/xaasTables.c:53:14: warning: symbol 'byte_reversed_expand3' was not declared. Should it be static?

commit 74bc792e1814849b8eee9e448e36c3568b821e6c
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:    Thu Nov 27 05:34:14 2008 -0200
Export symbols required by the vesa and fbdev drivers.

This is a minimal set of patches, to have an usable X Server when compiling it with symbols hidden by default.

commit 74e2669103b59d51b24ddc48f378b1d04a3effd4
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Thu Nov 27 04:33:44 2008 -0200

Export symbols also defined in libXfont.

libXfont has stubs for these symbols, so, when compiling with hidden symbols by default, these symbols must be visible in the X Server, or the stubs in libXfont will be used.

commit 87a7fb7438b70d07efbf240c530b8548a01021d48
Author: Paulo Cesar Pereira de Andrade <pcpa@mandriva.com.br>
Date:   Thu Nov 27 00:12:59 2008 -0200

Rework code using return value of LoaderSymbol as a function pointer.

The patch removes all macros in the format
  define xf86_sym ((type (*)(argument-list))LoaderSymbol("sym"))
creates a new macro in the format
  define xf86_sym sym
and ensures "sym" is a "visible" symbol.

The patch doesn't add or remove features, and is source and binary compatible with previous shared objects (with the difference that it requires the dlloader).

These symbols are a special case, as, due to the fact that LoaderSymbol was being used to reference them, they are not easily found by "automated" tools that check for missing symbols. And now it also have the benefit that the compiler/loader "knows what is going on".

Refix Sun bug #6685465: Xephyr uses wrong or bad colortable in 8-bit mode

<http://bugs.opensolaris.org/view_bug.do?bug_id=6685465>

This is a refix of the previous fix for CR 6685465. In the first fix
I was shifting the colors to match the mask by the bits_per_rgb amount
in the visual structure. That field has nothing to do with the # of
bits to shift by. I should just instead shift the bits to match the mask.

Do not send VisibilityNotify events when MapUnmapEvents are disabled

This prevents a protocol visible side-effect (XVisibilityEvent) on
XCompositeRedirectWindow() followed by a XCompositeUnredirectWindow().

The problem shows up in gnome-screensaver with compiz and "unredirect
cfullscreen windows" enable. A VisibilityNotify event is generated (first
with obscured and than with unobscured) when the window switchtes from
redirected to unredirected.

Solaris: Make KDSETMODE failure non fatal, and retry it on interrupts

commit 3e6da1636093d7de98baae40544c0b0bf7fd8aec
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date: Fri Nov 14 15:55:57 2008 +1000

include: remove ENTER_LEAVE_SEMAPHORE macros.

commit b292a7a2d7e259177e1cc37346c2bee27a018630
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date: Fri Nov 14 15:44:29 2008 +1000

dix: updated enter/leave core event model.

As proposed by Owen Taylor [1], the enter-leave event model needs to adjust
the events sent to each window depending on the presence of pointers in a
The new model can be summarised as:
- if the pointer moves into or out of a window that has a pointer in a child
  window, the events are modified to appear as if the pointer was moved out of
  or into this child window.
- if the pointer moves into or out of a window that has a pointer in a parent
  window, the events are modified to appear as if the pointer was moved out of
  or into this parent window.

Note that this model requires CoreEnterLeaveEvent and DeviceEnterLeaveEvent to
be split and treated separately.

Signed-off-by: Peter Hutterer <peter.hutterer@redhat.com>

commit 724f83b87bb16472d4c328e35d2a477384b29f84
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Nov 14 15:29:01 2008 +1000

dix: add FirstPointerChild, FirstPointerAncestor auxiliary functions.

FirstPointerChild: Return the first child that has a pointer within its
boundaries.

FirstPointerAncestor: return the first ancestor with a child within its
boundaries.

These are required for the updated enter/leave model.

Signed-off-by: Peter Hutterer <peter.hutterer@redhat.com>

commit 7d3e595f93dcd3d334e766a9dea602c05affdbaf
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Nov 14 15:27:19 2008 +1000

dix: Add EnterWindow, LeaveWindow, HasPointer auxiliary functions.

These replace the ENTER_LEAVE_SEMAPHORE_* macros. Unused currently.

Signed-off-by: Peter Hutterer <peter.hutterer@redhat.com>

commit 6bde963cdabb4a2e77de7f00a1d062aa2b873f9b
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Nov 14 15:37:35 2008 +1000

dix: split enter/leave event handling into core and device handling.
Device events always need to be delivered, core events only in some cases. Let's keep them completely separate so we can adjust core event delivery.

Signed-off-by: Peter Hutterer <peter.hutterer@redhat.com>

commit 5e48f5e2dd2dec7cfd1fa40b61e25123dfca515e
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Nov 14 15:41:59 2008 +1000

commit c4b9ab6bf56139fdd8c7c584a6f523c6766cddd6
Author: Keith Packard <keithp@keithp.com>
Date:   Tue Apr 29 08:29:42 2008 -0700
Handle transform failure when computing shadow damage area.

PictureTransformBounds can fail, when this happens, damage the entire screen so that the shadow gets repainted correctly.

commit 9c7679240ad90367693a462e288308b3fde08f26
Author: Keith Packard <keithp@keithp.com>
Date:   Sun Mar 30 19:05:07 2008 -0700
[randr] don't try to compute crtc transform when no mode is set.

Dereferencing the NULL mode pointer would cause a crash. As these transform matrices won't be used while the CRTC is disabled, just leave their values alone.

commit 315b6d0a425d0257f226ee7032aca3ca31665e59
Author: Keith Packard <keithp@keithp.com>
Date:   Thu Mar 27 11:46:39 2008 -0700
Update RandR global transform when driver notifies of transform change.
Need to compute and save the global transform when the driver changes it.

commit 5d9282fde919c936816a85e2a9e5734dc9d57cc2
Author: Keith Packard <keithp@keithp.com>
Date: Thu Mar 27 11:45:53 2008 -0700

Export rrtransform.h as needed by randrstr.h

When the transform management was moved from randrstr.h, the associated header file became necessary to build drivers. Include it as a part of the sdk headers.

commit 7236fd9dd4e9f5c4eb5bafa5c2a18cfff12a0444c
Author: Keith Packard <keithp@keithp.com>
Date: Fri Mar 21 03:16:09 2008 -0700

Be careful about copying transforms around; they have allocated memory.

commit 7e69e364d2ef146d8ec3651d04bdd6d641017449
Author: Keith Packard <keithp@keithp.com>
Date: Fri Mar 21 03:15:00 2008 -0700

Fix rotated/reflected cursor positions.

Doing projective transforms required repositioning the cursor using the hotspot, but that requires relocating the upper left corner in terms of said hotspot.

commit 93179c214fc6ed88f72955a11ce69ae0a47316d8c
Author: Keith Packard <keithp@keithp.com>
Date: Fri Mar 21 03:14:47 2008 -0700

rrtransform needs randrstr to get RANDR_INTERFACE defines

commit 7c61db66a470a8306e346ed8bf8934f014dada42
Author: Keith Packard <keithp@keithp.com>
Date: Fri Mar 21 02:39:49 2008 -0700

Create rrtransform.[ch]. Add RRTransform argument to RRCrtcNotify.

Instead of using a separate function to notify DIX about transform changes, add the transform to RRCrtcNotify so that the whole Crtc state changes atomically.

commit fa6a1df209bd74da1d545982cca437afc2198cc1
Author: Keith Packard <keithp@keithp.com>
Date: Fri Mar 21 02:35:28 2008 -0700
Avoid overflow in PictureTransformPoint. Fix PictureTransformIsIdentity.

PictureTransformPoint computes homogeneous coordinates internally, but fails to handle intermediate values larger than 16.16. Use 64 bit intermediate values while computing the final result at 16.16 and only complain if that result is too large.

PictureTransformIsIdentity was completely wrong -- it was not checking for identity transforms at all.

commits:

Author: Keith Packard <keithp@keithp.com>
Date: Wed Mar 19 12:15:39 2008 -0700

Allow drivers to set crtc transforms.

Track curent transform down in the mode setting code so that it may be set separately from RandR.

commits:
49db14e4ac26070ed86088419483888dda1b8603
Author: Keith Packard <keithp@keithp.com>
Date: Wed Mar 19 00:46:35 2008 -0700

Handle RandR transform matrices in floating point.

RandR matrix computations lose too much precision in fixed point; computations using the inverted matrix can be as much as 10 pixels off. Convert them to double precision values and pass those around. These API changes are fairly heavyweight; the official Render interface remains fixed point, so the fixed point matrix comes along for the ride everywhere.

commits:
6f734aeacaec4f5c6152c3ebca197ef65bb4523da
Author: Keith Packard <keithp@keithp.com>
Date: Tue Mar 18 16:06:06 2008 -0700

Eliminate inverse matrix from randr transform protocol

It is easier, and potentially more precise, to compute the inverse in the server where everything can eventually be kept in floating point form.

commits:
197aa784694992f6b06fd194932309e440334e237
Author: Keith Packard <keithp@keithp.com>
Date: Tue Mar 18 15:35:44 2008 -0700

Report whether transforms are support from driver through extension to client

Add APIs to xf86RandR12 support and randr extension to record whether the
driver supports transforms, report that value in the RRGetCrtcTransform reply.

commit e86c34663ef97e946a1129450105efa89a123af6
Author: Keith Packard <keithp@keithp.com>
Date:   Tue Mar 18 15:25:31 2008 -0700

Clear shadow pixmaps before using them.

This eliminates some ugly flashing, as well as clearing the borders when the shadow will not be completely painted.

commit 97ab0c6eff870b52c0383b63a78cec49059b2545
Author: Keith Packard <keithp@keithp.com>
Date:   Tue Mar 18 15:15:40 2008 -0700

When converting from double to fixed, round carefully.

This reduces the matrix representation error after inverting a transformation matrix (although it doesn’t eliminate it entirely).

Perhaps we should extend Render to include 64-bit floating point transforms...

commit 6d3a9e40a4b9ec455af11cce31e4aa616c93db32
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 23:04:49 2008 -0700

Compute matrix inversion instead of using wire version in RRCrtcTransformSet

It doesn't make sense to have the client invert this matrix when the server can do so reasonably efficiently. This avoids weird fixed point rounding errors when testing the transform against its inverse. Now to fix the protocol.

commit 160252d94f04acc95f0a4e0f884ff565a5aa0744
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 23:03:56 2008 -0700

Add matrix inversion function (uses doubles)

The obvious matrix inversion function, coded using doubles to avoid fiddling with fixed point precision adventures.

commit 8fd82e88e3f2060fda4ba30376900ece77668c63
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 16:14:43 2008 -0700

Adjust transformed cursor position to account for hotspot

Date:   Mon Mar 17 16:14:15 2008 -0700

Actually use filter kernel size to expand transform redisplay box

commit 3f9b963f6e8287edeb4c5bc7bbadbc02eb8bb910
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 16:13:25 2008 -0700

Correct bilinear filter kernel size (should be 2x2)

commit ee6326a6b89b2d223f6e1eaf02aae8aebfa6
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 15:22:06 2008 -0700

Handle filter widths in xf86Rotate

commit ddc8466137d229fde100ce403f492c7d61a1ba89
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 15:21:26 2008 -0700

Initialize and cleanup new filter fields in xf86Crtc.

commit 16c093af4df6b30d889ca69a024f9bd83d5
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 15:20:52 2008 -0700

Pass filter kernel size through transforms

commit 1df02d7dd44f84bcaef6d583af1a9141cb3c78b
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 15:19:17 2008 -0700

Add kernel size to Render filters.

This width/height value lets filter users know how far the filter spreads
into the source image.

commit 40f3df6b350fe0be55ebf7dbca88a0ef8f6380f
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Mar 17 13:57:47 2008 -0700

Use transform when computing scanout size of modes

Report transformed crtc sizes through RandR and Xinerama. Test screen size
against transformed mode sizes when configuring the Crtc.
commit f50349e1930e620cacadf27a6f8585fcb9cb5199a
Author: Keith Packard <keithp@keithp.com>
Date:   Sat Mar 15 00:36:45 2008 -0700

[RANDR] Support filters in CRTC transforms.

Create new RRTransform datatype to hold all of the transform related
information, use that in lots of places to pass filters around.

commit acda790e430b2a18c7c35379f6e538f3d01ff221
Author: Keith Packard <keithp@keithp.com>
Date:   Fri Mar 14 13:46:30 2008 -0700

[render] Split out filter finding from filter setting.

To prepare for RandR using filters in transforms, split out
code paths so that the RandR code can validate the filter name and
parameters during the transform set operation so that use of the filter
later will not have unreportable errors.

commit e3d6f279d5c305dfb81ca109fffb665870712d2f
Author: Keith Packard <keithp@keithp.com>
Date:   Thu Mar 13 21:31:12 2008 -0700

Wire up RandR CRTC transform protocol, bump server to RandR 1.3

This involved removing a pile of matrix code from the DDX,
as well as moving a bit of transform logic from DDX to DIX.

commit ff9d1cd843a9b0aba69a3d788b21d5f6af702590
Author: Keith Packard <keithp@keithp.com>
Date:   Thu Mar 13 21:30:18 2008 -0700

Add funcs to convert between protocol and pixman matrices

commit c2f254da694731ea573aa8bbce2707ce083743f2d4
Author: Keith Packard <keithp@keithp.com>
Date:   Thu Mar 13 21:29:19 2008 -0700

Randr now depends on Render for matrices

commit f547650328287545a7a4d96df8d6a6c606dd95a9
Author: Keith Packard <keithp@keithp.com>
Date:   Thu Mar 13 14:50:13 2008 -0700

Export a bunch of matrix operations from render.
The render extension uses many matrix operations internally, this change exposes those functions to other parts of the server, drivers and extensions. The change is motivated by the 'transform' additions to the RandR extension but will likely be useful elsewhere.

commit e063162e80e51ed4368874b3af7ba690ea280d9e
Author: Keith Packard <keithp@keithp.com>
Date:   Thu Mar 13 14:26:01 2008 -0700

Add projective transforms to RandR DIX/DDX API.

New RRCrtcGetTransform function in DIX that DDX can use to get the pending transform. The DDX code should be complete; the DIX code is just a stub at this point.

commit 9c7ac47b871a71e42d2f6933749ca462f1a65b40
Author: Keith Packard <keithp@keithp.com>
Date:   Tue Nov 4 00:10:08 2008 -0800

Notify DRI when crtc regions change

Drivers that care about crtc positions on the screen to ensure that vblank works correctly need to be notified when crtcs are changed.

Provide a hook in the mode setting code that is invoked whenever any configuration is done to the screen.

Use this new hook in the DRI code so that DRI clients are notified and receive updated information.

XQuartz: Updated some code to use newer server API

commit 6eb33bc0cb2e62339d323e1f1894015d7e3142f3
Author: George Staplin <gstaplin@apple.com>
Date: Sat Nov 22 11:37:08 2008 -0700

XQuartz: GL: Remove the inclusion of glcontextmodes.h.

Add some commentary about future directions needed for the GLX drawable creation and destruction code.

Match xalloc with xfree.

I made some minor formatting improvements.
(cherry picked from commit b772d64fcee31d16b498e621096e39d5203994d6e)

commit 429b4b20d5708d608fd55f91dd5bcd4ac0b51a12
Author: George Staplin <gstaplin@apple.com>
Date: Sat Nov 22 10:57:58 2008 -0700

XQuartz: GL: Add a branch to prevent a NULL DrawablePtr structure access.

In attach() check for pDraw being NULL, and also print an ErrorF message, because we eventually want to track down why this is occurring.

It's unclear how this occurs, but as I noted in the 1.4 branch, I believe that the DrawablePtr/struct _Drawable -> id is the member being accessed that causes KERN_PROTECTION_FAILURE at 0x0000000000000004

This passes my tests using: env LIBGL_ALWAYS_INDIRECT=1 ./sometest.

I fixed a warning: caused by initializing the screen->base.visuals with the configs. It is a ** not a *. It seems that some other part of GLX will initialize this for us.
commit bc0c7075e29b1719409cf7de8a4ab9ae1315aa67
Author: Matthieu Herrb <matthieu.herrb@laas.fr>
Date:   Sat Nov 22 19:10:09 2008 +0100

Remove the old libusbhid copy from os-support/bsd.

This has been replaced by in-kernel support for USB mices several
years ago and hasn't been enabled in build since X.Org 6.8.

commit 76fcfc480133726112049e5bd9c3082d46825918
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Fri Nov 21 20:25:55 2008 -0800

XQuartz: GLX: sync up indirect.c to match George's updates in the xorg-server-1.5-apple branch

commit 1a717779b67b9c1cdf734eef64135ac38829f726
Author: George Staplin <gstaplin@apple.com>
Date:   Fri Nov 21 17:28:11 2008 -0700

XQuartz: GL: remove glcontextmodes.* from the Makefile.am. It has been replaced.

The new replacement is __GLXconfig.

commit dacad9ae0bdaedf9403f6be84a5c5a4b4ef3542
Author: Alan Coopersmith <alan.coopersmith@sun.com>
Date:   Fri Nov 21 17:16:22 2008 -0800

Xephyr man page typo fixes.

Also trailing white space removal to clear git warnings.

commit ca64b5949d229a60a3c62b6d29d51873b7694bd6
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Fri Nov 21 11:20:31 2008 -0800

XQuartz: Don't use LS to find X11.app on Tiger.

commit 701f8e3a94d2b659e4bcfffd09acd1d66f9e797b8
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Fri Nov 21 11:08:00 2008 -0800

XQuartz: Update applewm deps

Open Source Used In Field Network Director for Virtual Machine Installation 4.7.1 35765
commit 393325f908f8bd6648e466183f3683a2d80b264e
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date: Fri Nov 21 10:57:31 2008 -0800

Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date: Wed Nov 19 11:42:59 2008 -0800

XQuartz: pbproxy: Push the pbproxy Xevent processing into its own thread
and just have the AppKit thread wake it up.
(cherry picked from commit 799715b8f3327c8da59ab45706e85af2d2e438e4)

commit a9e203066be3262602f21b876a52a1ef38cdf20a
Author: Egbert Eich <eich@ovid.suse.de>
Date: Fri Nov 21 18:50:01 2008 +0100

int10: Do an mprotect(...PROT_EXEC) on shmat()ed memory ranges.

When the linux kernel sets the NX bit vm86 segfaults when it tries to execute
code in memory that is not marked EXEC. Such code gets called whenever
we return from a VBIOS call to signal the calling program that the call
is actually finished and that we are not trapping for other reasons (like
IO accesses).
Use mprotect(2) to set these memory ranges PROT_EXEC.
xfree86: don't reset Auto(Add|Enable)Devices, use defaults from xf86Globals

Without this, commit ace38f0b062372dcd3d56378b5b8f86525e6241 is useless when HAL support is disabled.

Signed-off-by: Julien Cristau <jcristau@debian.org>

gitignore: ignore .patch files
commit ace38fa0b062372dcd3d56378b5b8f86525c6241
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date: Tue Nov 18 08:19:45 2008 +1000

xfree86: without CONFIG_HAL, Auto[Add|Enable]Devices and AEI is false.

There's little chance that we'll get the input devices at runtime without HAL, we might as well force the server to add mouse/kbd devices automatically - just like in the olden days.

Signed-off-by: Peter Hutterer <peter.hutterer@redhat.com>

commit 1cd894173ee7fa3d1a78d330e12453ea53e7b908
Author: Alan Coopersmith <alan.coopersmith@sun.com>
Date: Wed Nov 19 13:44:26 2008 -0800

Always use server-<display>.xkm to avoid races when multiple servers start

Previously each server starting ran xkbcomp with the output set to <keymapname>.xkm, read it, then deleted it - which led to races if two servers were starting at the same time with the same keymap.

Sun bug #6773816 Xorg uses the same xkm output file for compiled keymap file

Add missing newline when printing edid info

commit 33edd32702d963802ed4d382124ebab9d0352fa8
Author: George Staplin <gstaplin@apple.com>
Date: Sun Nov 9 18:35:10 2008 -0700

XQuartz: Disable 2 calls to miSetVisualTypesAndMasks that seem to be unnecessary, and possibly wrong (with regard to masks and bits per RGB).

Use the settings queried from the system in xprScreen.c, rather than those 2 calls.

The 2 calls increased the total number of visuals a great deal (when using GLXEXT), and not all of the visuals were usable with GLX. Some of the visuals aren't usable with GLX still, such as DirectColor, but that seems to be acceptable based on my understanding of the manual that states "a subset of visuals are made available for OpenGL rendering."

commit fc3e8bf82323477b54181c6d546c90f53f1ebd8
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Tue Nov 4 15:27:30 2008 +1030

mi: clean up mieqProcessInputEvents, copy all events before processing.

Copy the EventRec's information into local variables before processing them,
this should make it safer for upcoming threading and also makes it easier to
read.
Simplify the event allocation code from the abyss it was before.

This also fixes a potential bug where a custom handler could scramble the event before the same -now scrambled- event was then passed through the master's custom event handler.

input: Remove useless conditional.

commit 24383056d0513cc588cee5cee78f1eba2c0fbe89
Author: James Cloos <cloos@jhcloos.com>
Date: Sat Nov 8 13:04:20 2008 -0500

Don’t recommend fixing HAL if HAL support is disabled.

As reported in http://bugs.freedesktop.org/show_bug.cgi?id=18438
the server suggests reconfiguring HAL if AllowEmptyInput is enabled and no input devices are known.

Instead of that notice, if HAL is disabled at configure time, AllowEmptyInput is enabled in the config and no input devices are found report those facts and recommend disabling AllowEmptyInput.

Remove some null statements.

Remove several doubled statement-terminal semicolons.

Reported by Fernando Carrijo.

commit 21c116219ed5c6845a0955f2d88f5fab5c17cf
Author: Michel Dänzer <michel@tungstengraphics.com>
Date: Sat Nov 8 01:25:14 2008 +0100

Fix typos which caused exaCompositeRects() to use an incorrect damage region.

Fixes http://bugs.freedesktop.org/show_bug.cgi?id=18065.

Also, it can bail if either width or height of the bounding box is <= 0, not only if both of them are.
commit 59f9fb4b8c031df69b3592a26b77e744ff4a556e
Author: Luc Verhaegen <libv@skynet.be>
Date: Fri Nov 7 19:11:11 2008 +0100

XAA PixmapOps: Sync before accessing unwrapped callbacks.

When using any XAAPixmapOps, we call into unknown but freshly
unwrapped callbacks (like fb ones). Unlike the XAA*Fallback calls,
we did so without syncing first, exposing us to all kinds of
synchronisation issues.

I believe that the rendering errors appeared now because *PaintWindow
vanished (e4d11e58), and we just use miPaintWindow instead. This
takes a less direct route to the hw and ends up at
PolyFillRectPixmap, which very often left drawing artifacts.

We now sync accordingly, and no longer get the rendering artifacts i
was methodically reproducing on radeonhd, radeon, unichrome...

Also, in order to allow driver authors to remove extensive syncing
or flushing to hide this issue, create XAA_VERSION_ defines, put
them in xaa.h and bump the patchlevel.

(novell bug #435791)

commit 991c88b7542164194be73573e764416416ea90c
Author: Julien Cristau <jcristau@debian.org>
Date: Fri Nov 7 17:36:38 2008 +0100

xfree86: xf86SetDepthBpp needs to respect the driver's depth24flags

When setting the depth to 24, leave bpp unset so the logic to pick
a supported value is used instead of ignoring the driver's preference
and forcing 32 bpp.

commit d3d6be4948fa19947fd3b03e6694247109cc0ff
Author: Julien Cristau <jcristau@debian.org>
Date: Fri Nov 7 18:36:00 2008 +0100

mi: Fix infinite loop on regen when swrast_dri.so is missing

The swrast DRI provider gets pushed on the glx provider stack at every
server generation, so the stack turns into a circular list on regen.

X.Org bug#18388 <https://bugs.freedesktop.org/show_bug.cgi?id=18388>

commit 34bb06b292dc8b07d8602941aab3e69a73811314
Author: George Peter Staplin <gps@Georges-Workstation.local>
Date: Mon Nov 3 19:52:48 2008 -0700

XQuartz: GL: Work around problems with really deep visuals.

GL/capabilities.c: #if 0 (for now) any capabilities above 8 bits per channel,
because they introduce drawing problems.

GL/indirect.c: Comment out some visual setup code that shouldn't be running, and
actually seemed to cause some problems. The current visualConfigs.c code seems
to do a reasonable job of setting up visuals for XQuartz.

GL/visualConfigs.c: Make use of the proper visual .class. Eliminate depth 0.
It seems we really just want 24 for now, and 0 I think was a flaw in the original
code.

xkb: extract the correct device in XkbFilterEvents.

If the event is an XI event, we need to work on the correct device, not on
the VCK.

Adds XIGetDevice(event) function to extract the device from an event.

commit d97239956667f8181f30271759573b75bf455fbb
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Oct 31 16:40:41 2008 +1030

Purge device-based WindowAccess code.

Really, this was a bad idea. It's not security, the UI features that would
have been cool (e.g. clicking through windows) aren't implemented anyway, and
there's nothing you can't achieve just by using plain XI anyway.

Requires inputproto 1.9.99.6.

commit cbc6f983959595aa21c9dd72fac6a7070a650ef7
Author: Peter Hutterer <peter.hutterer@redhat.com>
xkb: when faking mouse button events, fake them on the correct devices.

When MouseKeys are activated, keyboard devices may generate fake mouse button events through XKB. Let's get then running through the appropriate paths, i.e. as XI events on the correct device.

To make matters more fun, ProcessOtherEvents drops events if the DIX device state cannot be updated accordingly, i.e. all button events from keyboard devices.
Hence we need to get the paired MD for the device in XkbDDXFakeDeviceButton, and post the event through the paired MD (usually the VCP).

Removes now-unused ddxFakeBtn.c.

Note: this patch only half-arsedly fixed button events, motion events are a more complicated matter.

xkb: ProcXkbSetCompatMap should do dry-runs, then normal runs.

Was doing only dry-runs, which kinda explains why changing the compat map didn't really have any effect.

commit 9007d3beea2e2d8b271f696d433cb30e32cda401
Author: George Peter Staplin <gps@Georges-Workstation.local>
Date:   Mon Oct 27 16:34:24 2008 -0600

XQuartz: pbproxy: Add code to handle PICT conversion to PNG and JPEG.

This may work, unfortunately I don't have test apps that fail.

The way it works is by using an NSImage class initWithPasteboard: method, which we then get the TIFFRepresentation of, and convert to PNG or JPEG.

The TIFFRepresentation uses NSTIFFCompressionNone; which should be lossless.

Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Thu Oct 16 11:22:29 2008 +1030

  xfree86: If AEI is on, disable "kbd" and "mouse" devices.

  This consists of two parts:
  In the implicit server layout, ignore those drivers when looking for a core device.

  And after finishing the server layout, run through the list of devices and remove any that use mouse or kbd.

  AEI is mutually exclusive with the kbd and mouse drivers, so pick either - or.

commit 6c451859552e1fc78f6589617482f9ff96d7ed8a
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Mon Oct 20 12:19:55 2008 +1030

  config: don't add duplicate devices through HAL.
If HAL is restarted, the device list is sent to the server again, leading first to duplicate devices (and thus duplicate events), and later to a FatalError "Too many input devices."

dev->config_info contains the UDI for the device. If the UDI of a new device is equal to one we already have in the device list, just ignore it.

XQuartz: pbproxy: Fix 2 bugs with the preferences.

Add dump_prefs() for introspection.

Make prefs_get_bool a little more clear.

In get_property don't assume that the Mac realloc(NULL, 0); returns non-NULL. We shouldn't depend on implementation-defined behavior too much.

Add more commentary in various spots.

Add TARGETS in the TARGETS response. I don't know why some X11 apps do this, but it could be something that some weird toolkit/app tests for.

In reload_preferences add preferences synchronization, so that xpbpbroxy reloads the preferences, and picks up any changes.

Fix a typo/misspelling of the sync_clipboard_to_pasteboard preference.

xfree86: if AllowEmptyInput is true, enable RAW mode on the console.

Usually, the console is set to RAW in the kbd driver. If we hotplug all input
devices (i.e. the evdev driver for keyboards) and the console is left as-is.
As a result, the evdev driver must put an EVIOCGGRAB on the device to avoid
characters leaking onto the console. This again breaks many things, amongst
them lirc, in-kernel mouse button emulation and HAL.

This patch sets the console to RAW if AllowEmptyInput is on.

Use-cases:
1. AEI is off
   1.1. Only kbd driver is used - behaviour as-is.
   1.2. kbd and evdev driver is used: if evdev does not grab the device,
       duplicate events are generated.
2. AEI is on
   2.1. Only evdev driver is used - behaviour as-is, but evdev does not need
to grab the device anymore.
   2.2. evdev and kbd are used: duplicate key events are generated if evdev
does not grab the device.

1.2 is a marginal use-case that can be fixed by adding a "grab" option to the
evdev driver (update of xorg.conf is needed).

2.2 is an issue. If we have no ServerLayout section, AEI is on, but devices
specified in the xorg.conf are still added [1], resulting in duplicate events.
This is a common configuration and needs sorting out.

Xi: check all handlers before applying property changes.

The current code exposes to inconsistent updates, i.e. if handler N succeeds
but handler N+1 fails in setting the property, an error is returned to the
client although parts of the server now behave as if the property change
succeeded.

This patch adds a "checkonly" parameter to the SetProperty handler. The
handlers are then called twice, once with checkonly set to TRUE.
On the checkonly run, handlers _MUST_ return error codes if the property
cannot be applied. Handlers are not permitted to actually apply the changes.
On the second run, handlers are permitted to apply property changes.
Errors codes returned on the second run are ignored.

Date: Thu Oct 9 16:23:24 2008 +1030

Xi: don't memcpy the KeyClassRec from SD to MD. #16167

Most of its component get copied during CopyKeyClass anyway.
The ones that aren't:
postdown - never changed for virtual devices anyway.
down - shouldn't change that without sending events.

memcpy'ing the struct also copied mapWidth, which means we didn't realloc
during SetKeySymsMap lateron, overwriting the memory assigned to us.

X.Org Bug 16167 <http://bugs.freedesktop.org/show_bug.cgi?id=16167>

commit 18cdd733ad3dd36fa0a23dfbf18c7d99b86c0276

Check nextEnabledOutput()'s return in bestModeForAspect()

In case no enabled outputs, we will reference wrong index of output array.

commit 278c11f01fbc6d6bd91c5a7127928e9ef5d29fca
Author: Tiago Vignatti <vignatti@c3sl.ufpr.br>
Date: Wed Oct 8 01:18:49 2008 -0300

xfree86: xf86 {Enable, Disable} InputHandler can be static.

commit 50081d2dfb79878cb931a15c265f0d60698d8d39
Author: Tiago Vignatti <vignatti@c3sl.ufpr.br>
Date: Wed Oct 8 01:11:38 2008 -0300

xfree86: remove xf86 {Enable, Disable} GeneralHandler and others unused.

commit 54294e15ecf4a8ec0f9d9fa8b6ed1a1b2d912ec7e
Author: Tiago Vignatti <vignatti@c3sl.ufpr.br>
Date: Wed Oct 8 00:43:22 2008 -0300

xfree86: fix wrong function name message errors.

commit 57dbb90f198116dca17c81117f80644d7ebe7f
Document zap/-retro interaction more.

commit 617933e8c259ad12388c0dd13421846a873975e3
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Oct 8 02:45:59 2008 +0300

XFree86: Fix DontZap interaction with -retro

- retro will now _not_ override (No)DontZap, if it's set in the config file.

commit d80bae2237e555025465d4d761a5cc537cc2bcdd
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Oct 8 02:43:27 2008 +0300

Update docs to reflect new DontZap default

commit 42e7b64bf90604e0099702f5447163be80a2efb6
Author: Adam Jackson <ajax@redhat.com>
Date:   Tue Oct 7 20:32:02 2008 -0400

-retro enables zapping

commit 9d135ac10a7374c7ccda705f1eeb02cc53076c34
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Oct 8 02:30:05 2008 +0300

Input: Make DontZap the default

If you need to bail out the server, use Ctrl-Alt-Fx, or enable zapping if it bothers you that much. If Ctrl-Alt-Fx is broken, nag me until it's permanently fixed.

commit b574365fca954a999ebaeb7203d1e0ea6d99b3ea
Author: Aaron Plattner <aplattner@nvidia.com>
Date:   Tue Oct 7 13:09:11 2008 -0700

Revert "Unexport (and unimplement) xf86SetAccessFuncs" for now.

The nvidia driver currently uses these hooks to work around problems where RAC will disable access to the hardware at unexpected times. This change restores these hooks until we can come up with a better API for working around RAC.

This reverts commit c1df4fbede8058c15ce3a5759a7758fecafbb9e7.
Revert "Remove unused server state change callbackery" for now.

The nvidia driver currently uses these callbacks to work around problems where RAC will disable access to the hardware at unexpected times. This change restores these hooks until we can come up with a better API for working around RAC.

This reverts commit d7c0ba2e9eae7044ef4c31d9c3cbb9a71ee0f9f9.

dri2: fix compilation (remove no longer existing include file)

commit a29af6465883796a6ac0f4b72ce812a0632b2186
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Fri Oct 3 23:54:10 2008 +0200

exa: remove "direct" case for exa[Trapezoids,Triangles]
- By adding a small hack to the xserver i was able to easily test the performance of the normally rare direct case (using cairo).
- It turned out to be 70% slower for me (large test on an otherwise idle computer), which seems enough of a reason
to remove it.
    - AddTraps could also use a 2nd look, but since noone is using that it's a bit hard and less useful to test.

commit 416870d8c9e7e383b87c8513c2296a0cb66e7ef4
Author: Maarten Maathuis <madman2003@gmail.com>

Partially reverts commit 505c216d030a8eb6e9fa757ecebed9597a850c88.

I don't know how the hell git-cherrypick messed that up to delete fbwindow.c

commit 7bb73a9513710f8eab6c1237998590e9f472fbcc0d
Author: George Peter Staplin <gps@Georges-Workstation.local>
Date:  Tue Sep 30 23:53:12 2008 -0600

XQuartz: pbproxy: Possibly fix a memory leak by using an [NSApp run] loop, instead of calling CFRunLoopRun() directly. The leak wasn't reproducible on this machine, but someone was able to produce a leak trace with Instruments that indicates it was leaking in the CFRunLoopRun() path.

x-input.m: dequeue and ignore events when pbproxy_active is false.

x-selection.h: add an is_active method that is used by x-input.m to ignore events.

x-selection.m: Handle nearly every preference, except for primary_on_grab, which I don't really understand yet.

    dix: fix axis scaling.

    For two axes [a, b] and [x, y] (inclusive), the formula to scale point P(ab)
to (x,y) is:
    \[(P - a)/(b - a) * (y - x) + x\]

    And the whole end result rounded of course to get the integer we need.

commit 93ef72fa26b27cf90bf5c64ec19ac295a113aaae
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Sun Sep 28 21:47:21 2008 +0930

    dix: don't lose subpixel precision when scaling.

    Only scale x/y back from screen range if we have crossed screen, otherwise
leave it as it is.

commit 5ef5e89f0e4b9b8820093e072430e295efce32fa
Author: Simon Thum <simon.thum@gmx.de>
Date:   Sun Sep 28 22:32:44 2008 +0930

    dix: fix non-initialization of pointer accel in master devices.
Init MDs always with PtrAccelNoOp.

  - Don't inherit XAUTHORITY from the environment.

It's not especially obvious, and unpleasantly overloaded for the Xnest case. Typically this gives you a server that looks for its auth data in the authority file you were using for the running X session, which generally doesn't have an entry for the display you just started.

All the major dm's, and startx, pass -auth explicitly, so this shouldn't cause too much upheaval.

commit 586fbc91df731150ff5e39170efe33f3cfac28a2
Author: George Peter Staplin <gps@Georges-Workstation.local>
XQuartz: pbproxy: Fix NSObject memory leaks by properly using the 
NSAutoreleasePool. Now the usage is consistent. In x_input_run() 
we create a pool, and release it after processing the XEvents.

Add some getpid() output to main for debugging. It needs a bit more 
testing before the next release.

Don't retain the NSPasteboard as the old code did. That may have 
contributed to the leak, and it made it so that we needed the 
NSAutoreleasePool created in main().

Remove the _known_types, and _pasteboard instance variables from 
the x_selection class. They aren't needed anymore.

The leaks program now indicates 0 leaks after some usage. I want 
to test further, but this seems much better, and my memory usage 
graph indicates it's not growing.

Require inputproto 1.9.99.5

Pull and rebuild your input drivers, while you're at it.
Push server-known properties into xserver-properties.h.

Xi: add "deletable" flag to properties, add DeleteProperty handler.

A property can only be deleted if any of the following is true:
- if a property is deletable and all handlers return Success.
- if a property is non-deleteable and the all handlers return Success AND the delete request does not come from a client (i.e. driver or the server).

A client can never delete a non-deleteable property.

Xi: allow Set/GetProperties to return a status, and honour this status code.

If a property handler now bails out, return the error code to the caller. This allows to be slightly more specific with the errors.

Xi: remove configure/query device property calls.

This removes all the meta-information about device properties (pending, fromClient, range, valid_values, immutable).

xfixes: realize the invisible cursor before displaying it.

AllocARGBCursor realizes the cursor but can only do so if we have devices there already. If we don't - then the cursor needs to be realized elsewhere. This is usually done in InitializeSprite, but since xfixes just hard-swaps the (realized) cursor to the InvisibleCursor, we need to manually realize it before trying to display it.

xkb: squash canonical types into explicit ones on core reconstruction.

If we update key types from core, and groups 2 - n have a canonical type but
the same symbols as the explicit type of group 1, assume that it was a core
sym duplication according to Section 12.4 of the XKB Protocol Spec.
Ignore the canonical types and pretend there's only one group for the key -
with the explicit key type.

The protocol spec does not cover this case, so we have to guess here.

Date:   Fri Sep 19 18:27:24 2008 +0930

xkb: fix core keyboard map generation. #14373

According to Section 12.4 of the XKB Protocol Spec, if a key only has a single
group but the keyboard has multiple groups defined, the core description of
the key is a duplication of the single group across all symbols. i.e.
G1L1 G1L2 G1L1 G1L2 G1L3 G1L4 G1L3 G1L4

The previous code generated G1L1 G1L2 G1L3 G1L4 G1L3 G1L4, leading to
"invented" groups when the process is reversed.

Note that this creates wrong key types on reconstruction from core to xkb,
i.e. any single-group key with a key type that is not one of the canonical
four (Sec 12.2.3), will get the assigned type on group 1, and a canonical type
for the other groups.

commit 8d9defe8c2a685709318c1d43379443df3d2322a
Author: Adam Jackson <ajax@redhat.com>
Date:   Wed Sep 24 10:11:00 2008 -0400

Fix un-suppressing the initial cursor.

The intended behaviour was "show as soon as someone calls
XDefineCursor". What you actually got was, uh, slightly less well
defined, since the screen's ChangeWindowAttributes hook would run after
DIX handled the cursor change. Oops.

The trivial way to turn the cursor on is:
% xsetroot -cursor_name gumby

Refer to /usr/include/X11/cursorfont.h for cursor names.

Thanks to anholt for catching this.

    Upgrade GLX Public License 1.0 to FreeB 2.0.

According to the press release:

    Previous SGI contributions to the free and open source community are now available under the new license. These contributions include the SGI® OpenGL® Sample Implementation, the GLX™ API and other GLX extensions.

    […]

    "SGI has been one of the most ardent commercial supporters of free and open source software, so it was important to us that we continue
to support the free software development community by releasing our earlier OpenGL-related contributions under this new license,” said Steve Neuner, director of Linux, SGI. “This license ensures that all existing user communities will benefit, and their work can proceed unimpeded. Both Mesa and the X.org Project can continue to utilize this code in free software distributions of GNU/Linux. Now more than ever, software previously released by SGI under earlier GLX and SGI Free Software License B is free.”

"The GLX API” is here read to include the original GLX source release from:

which includes glxext.c as included in XFree86, from which our copies in glx/ and hw/dmx/glxProxy/ are derived.

commit 722c51960dd4948b8a64f8eef115fa69da597ef9
Author: Owen W. Taylor <otaylor@redhat.com>
Date:   Mon Sep 22 11:04:26 2008 -0400

Don't remap windows for SaveSetUnmap

Since ReparentWindow() does a unmap/map pair for windows that are already mapped, for saveset windows with SaveSetUnmap, we must unmap the window before calling ReparentWindow() to avoid the generation of MapRequest events, and so forth.

XQuartz: Added a preferences UI for pbproxy options.
Open Source Used In Field Network Director for Virtual Machine Installation 4.7.1  35828

commit a928cae57b47625c9e3d136840d3e5d17fd3c51e
Author: George Peter Staplin <gps@Georges-Workstation.local>
Date:   Fri Sep 19 00:18:44 2008 -0600

XQuartz: pbproxy: Add a missing include of Xutil.h. Another header
seems to have done this before, but correctness matters.

commit 749bdf19b2a50201fddd04207c31122470f435e3
Author: George Peter Staplin <gps@Georges-Workstation.local>
Date:   Fri Sep 19 00:02:48 2008 -0600

XQuartz: pbproxy: Add COMPOUND_TEXT handling. Do misc. cleanups with testing
to verify that the behavior didn't change.

main.m: XInternAtom compound_text, and atom_pair.

pbproxy.h: Add compound_text and atom_pair to the struct atom_list.

x-selection.m: Add an #include of Xutil.h. Refactor the reply struct
initialization to be done in a common place. Add send_reply: to simplify
the code a bit more. Add send_compound_text: which handles the
COMPOUND_TEXT type. Add the beginnings of a send_multiple:. Change
handle_image:extension: to handle_image:. The extension: message isn't
needed anymore.

commit 00bfbee59fe3b0c8d1a55d1851206857ca563ece
Author: George Peter Staplin <gps@Georges-Workstation.local>
Date:   Thu Sep 18 13:10:41 2008 -0600

XQuartz: pbproxy: pbproxy now responds to selection request events.

We can now copy and paste images to and from X11. Text copying and
pasting works as well.

The NSPasteboard can contain TIFF or PICT images, and pbproxy will
translate to an image/png or image/jpeg request, and list those in the
TARGETS.

I added a description of the basic design at the top of x-selection.m.

I removed the request_data x_selection class struct. It's not needed.

commit 811e9f5e9e9c07f4b8fb1e9a4d9df91a2e359221
**Author:** George Peter Staplin <gps@Georges-Workstation.local>
**Date:** Wed Sep 17 11:59:36 2008 -0600

**XQuartz:** pbproxy: Use an NSBitmapImageRep to convert an "image/png" selection to a TIFFRepresentation for use with NSPasteboard.

This has been tested with the Gimp and works with some minor quartz-wm changes. The Finder clipboard shows the image updates after an Edit -> Copy.

Fix panoramiX request and reply swapping

Fix panoramiX request and reply swapping
Set window and screen values in panoramix replies
Prevent buffer overrun in ProcPanoramiXGetScreenSize

commit 03ab8f11d25b0ca3b37b5350bca4e1028768e
Author: Keith Packard <keithp@keithp.com>
Date: Thu Sep 18 12:17:05 2008 -0700

When resizing a window with redirected descendents, don't expose them

Bit/window gravity computations need to recompute exposures to manage the
bits which are saved by gravity during the resize computation. That's easy
for non-redirected windows where the bits are all within the parent's
 pixmap. For redirected windows, we don't need to deal with this at all, so
just skip the whole re-computation adventure.

Signed-off-by: Keith Packard <keithp@keithp.com>

commit d26083fe02658e7312a8da6a5b11652f9fe57bc8
Author: Keith Packard <keithp@keithp.com>
Date: Thu Sep 18 12:14:58 2008 -0700

Switching from Automatic to Manual redirect needs to unmap/remap

When changing a window from automatic redirection to manual redirection, the
parent clip list needs to be recomputed; the easy way to get that computed
right is to unmap/map the window, just as when redirecting the window the
first time.

Thanks to Owen Taylor for helping diagnose this.

Update to SGI FreeB 2.0.

Under the terms of version 1.1, "once Covered Code has been published
under a particular version of the License, Recipient may, for the
duration of the License, continue to use it under the terms of that
version, or choose to use such Covered Code under the terms of any
subsequent version published by SGI."

FreeB 2.0 license refers to "dates of first publication". They are here
taken to be 1991-2000, as noted in the original license text:

** Original Code. The Original Code is: OpenGL Sample Implementation,
** Version 1.2.1, released January 26, 2000, developed by Silicon Graphics,
** Inc. The Original Code is Copyright (c) 1991-2000 Silicon Graphics, Inc.
** Copyright in any portions created by third parties is as indicated
** elsewhere herein. All Rights Reserved.

Official FreeB 2.0 text:

As always, this code has not been tested for conformance with the OpenGL
specification. OpenGL conformance testing is available from
http://khronos.org/ and is required for use of the OpenGL logo in
product advertising and promotion.

Add cscope files to .gitignore

commit bf333c2f9833a178887e7bdd7fc338f1e09e387f
Author: John Tapsell <john.tapsell@john-desktop.(none)>
Date:   Wed Sep 3 12:20:17 2008 +0100

fbdevhw: Remove pixclock check.

The check can fail because the output from FBIOGET_VSCREENINFO is used to set
Clock in fbdev2xfree_timing(). Then in fbdevHWSetMode(), xfree2fbdev_timing()
is called which sets the pixclock based on Clock. The resulting circle results
in slight rounding errors, causing the comparision check in fbdev_modes_equal
to fail.

Date: Fri Aug 29 03:54:55 2008 -0700

    XQuartz: xp_is_symbolic_hotkey_event catches the input menu, but not our MainMenu, so we still need to do that the old way.
    (cherry picked from commit 25eccf12c89d73b8bce2c9be14841efb230acedc)

commit 974db58f5b730c3770ee461665a02dd4334d1dea
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Sat Aug 30 00:37:11 2008 +0200

damage: initial attempt at a damage marker mechanism
- This should allow drivers to recieve post submission events for X<->opengl synchronisation.
- Lacking a testcase, i'm open to suggestion how to do it better.
- The idea is:
  - driver recieves event
  - driver creates personal identification and inserts marker into X fifo.
  - when something wants to use an X pixmap, it checks if something is pending.
  - If so, it synchronizes the 2nd fifo using the initial identification.
  - Driver is not required to use interrupt based systems (price too high).
  - Lower latency is ofcourse better.
  - If this is somehow unusable for you, then come up with improvements.
  - For that reason i wouldn't consider the api fixed for the moment.

commit 454cb0802ee3c2c2c2cdbe17971becd868462b83
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Fri Aug 29 22:28:02 2008 +0200

damage: DamageReportRawRegion should set pDamage->damage
- I found no evidence in the protocol, that it should be differently from all the other modes.
- It seems to have been like this from day 1.
- If anyone has evidence to the contrary, please enlighten me.

commit ae6ca434104405302f30a58bde8738d9579d9dc9
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Fri Aug 29 22:21:54 2008 +0200

damage: internal functions start with a non-capital letter

commit 1861250cd7e84b05e8298b74e3c7e97da72ddfa
Author: Maarten Maathuis <madman2003@gmail.com>
Date: Fri Aug 29 22:15:23 2008 +0200

{damage,exa}: sanitise damage
- Redo damage naming for more consistency.
- Call post submission functions only where appropriate.
- EXA can now live without it's odd damage workarounds.

commit 5af77d43fe812e127d5d335527fa940ab9d95f38
Author: Kristian Høgsberg <krh@redhat.com>
Date:   Mon Aug 11 16:59:17 2008 -0400

DRI2: Drop sarea use, implement server side swap buffers.

commit 60ad8d5d05485339e89d7f1f9f1ded75de7c7ea1
Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date:   Thu Aug 28 23:45:17 2008 -0400

Attempt getpeercon() on remote sockets as well as local ones.

commit ebea78cda0ff14a397239ee1936bd254c181e1b
Author: Tomas Carnecky <tom@dbservice.com>
Date:   Thu Aug 28 18:05:40 2008 -0400

Prepare for array-index based devPrivates.

TODO: static indices can be made just an int; some indices can be combined.

commit ec7907f8fa04dcff2649ce4846975844314f737e
Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date:   Wed Aug 27 19:27:13 2008 -0400

Add an array of integers for use as per-screen cursor private keys.

Replaces the use of the screen pointer itself as the key, which was nice but won't work now that an array index is being stored.

commit 86898491497a43814caf42013651086e62fe6162
Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date:   Wed Aug 27 19:17:15 2008 -0400

Remove unused GetGlyphPrivatesForScreen.

commit 90b178cc7eda1f9c4995b98364739e71233ff3
Author: Eamon Walsh <ewalsh@tycho.nsa.gov>
Date:   Thu Aug 28 19:36:22 2008 -0400

Don't need to request space for Xnest pixmap private.

Author: Adam Jackson <ajax@redhat.com>
Date: Thu Aug 28 13:49:35 2008 -0400

MIT-SHM pixmaps, if they exist, are ZPixmap.

commit ee7c684f21d220d5e046bab31ae617a7d64d60f6
Author: Adam Jackson <ajax@redhat.com>
Date: Wed Aug 27 16:05:47 2008 -0400

Reimplement ShmPutImage.

There's no reason to not just dispatch this straight into the GC. As a
bonus, if you do so, damage wraps correctly, and thus swcursor works.
The side effect is it's no longer possible to override ShmPutImage with
ShmRegisterFuncs().

Also remove the (broken) damage tracking for same from EXA, since it didn't
work right, and is now superfluous.

commit 2db1aafb2e56d8743c701d81a5797001ce9e5c52
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date: Tue Aug 26 23:09:20 2008 -0700

XQuartz: Always use TIS for the keyboard layout seed since KB* aren't thread safe.

exa: remove useless cache{X,Y}off from UploadToScreen() arguments.

commit 38bdc34d555f956a1ff1e1bb8eef95e3ba2bac64
Author: Adam Jackson <ajax@redhat.com>
Date: Tue Aug 19 15:12:39 2008 -0400

Remove redundant check.

commit 47b31233c26f710be70ffcca17e5402d03d5733f
Author: Adam Jackson <ajax@redhat.com>
Date: Tue Aug 19 15:10:12 2008 -0400

Simplify driver setup.

No point warning about missing driver hooks, that just means the person who gave you the driver is inept. Might as well just crash. Also, just name anonymous screens as screen%d instead of failing after the 36th screen. Bonus points if you can figure out what the failure mode would be on the 36th screen, and what the effective screen limit was.

commit b99fc65b53769400821a2bd8f691ece35a5b8847
Author: Adam Jackson <ajax@redhat.com>
Date: Tue Aug 19 15:06:53 2008 -0400

Simplify calling xf86EnableIO() a bit.

commit b1f2c7a89ace1f6e5750783f3c43e4c5a6d24374
Author: Adam Jackson <ajax@redhat.com>

Author: Adam Jackson <ajax@redhat.com>
Date: Mon Aug 18 17:40:46 2008 -0400

Remove unused EstimateSizesAggressively option.

commit faaf0046155abbd15415d5a6b62ead4f58935c28
Author: Mathieu Bérard <mathieu.berard@crans.org>
Date: Mon Aug 18 17:23:26 2008 -0400

Remove xaaTEGlyphBlt.S

Should have been removed in 593144dd977f53bcd1a115f954deeece46df4c but ajax was asleep at the wheel.

commit 562462e78dd6a5e2ed5b36aa22be52f31d55485d
Author: Mathieu Bérard <mathieu.berard@crans.org>
Date: Mon Aug 18 17:05:24 2008 -0400

Remove dead {bsd,lnx}Resource.c

commit e3e47b35e369bf4abb0fe15865acc0b34600b1f
Author: Adam Jackson <ajax@redhat.com>
Date: Mon Aug 18 17:03:22 2008 -0400

Remove MAX_PCI_[BUSES,DOMAINS] and some associated #if 0.

commit 593144dd977f53bcd1a115f954deeece46df4c
Remove some unused assembly code and assyntax.h

commit 2d3e478384ef8af2a760f39792e35e4a6174c967
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 15:09:44 2008 -0400

   int10: Fix int1A for %ax == 0xB101.

   pciNumBuses was pretty much always 1 post-pciaccess. That ain't good.

commit 539717fe1f08a000d1eeef9f345d24eb49e3663b5
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 14:50:33 2008 -0400

   Remove (unused) pciMaxBusNum.

commit 3c03d9f1efbbacec6e8be58da99bf0977a8e0fec
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 14:37:42 2008 -0400

   Remove sparcPci.c

   There is no way this code can have been building for anyone since pciaccess was merged. BSD and Linux were already using OS code on sparc, the only people who could want this are Solaris, who should be using pciaccess anyway.

commit 9a39b6cfbda306eb594e87ce828afa01cd7aa01e
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 14:26:01 2008 -0400

   Remove XF86SCANPCI_WRAPPER.

commit 470b05a610e641094d46742393684acd786d78a8
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 14:03:36 2008 -0400

   Remove vestigial MAX_PCI_DEVICES.

commit 244a635fcde9e0a7212d51b26d74f49d8e1b071f
Author: Fredrik Höglund <fredrik@kde.org>
Date:   Mon Aug 18 19:27:34 2008 +0200

   Fix the tile offset in miPaintWindow for ParentRelative windows.
commit fd7c747a8e1bc59dfb31b7f90dd5eab2687315b
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 13:13:03 2008 -0400

Remove PciProbeType and associated weirdness.

This code was effectively only used in ix86Pci.c to select PCI config access type. Nobody should be using that path anymore, in the glorious pciaccess world; kernel services should get it right for you.

commit 95bb6f53624a3e6f4d62a2f789982c5544d2fc70
Author: Mathieu Bérard <mathieu.berard@crans.org>
Date:   Mon Aug 18 11:47:19 2008 -0400

Remove ancient unused inline hack.

commit e1ae8db625b5e8c298a557592ef23656b3da4886
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Aug 18 09:53:48 2008 -0400

Drop dead PowerPC PCI code.

Also add a warning for anyone still using legacy PCI code.

commit 99583b43a9a202d047ff417d47485e4c0e0c9670
Author: Jie Luo <clotho67@gmail.com>
Date:   Sun Aug 17 23:13:22 2008 +0200

    glx: avoid possible NULLptr deref, fix #16884

commit 421b7e8f12083e9518fa7deda968a2f73c9a0006
Author: Maarten Maathuis <madman2003@gmail.com>
Date:   Sun Aug 17 19:57:02 2008 +0200

    exa: fix assert logic thinko from 361a9eb953aaa38f8ebc057185de29e50f9eeef26

    - I guess failing PrepareAccess is rare, since this a 3 year old bug.

commit 1e62e773273539352bc21b2da5262678dd3fc7df
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Aug 15 15:19:44 2008 +0930

    Require inputproto 1.9.99.4

commit 609c04b62db0e86f33860069033c7142eeef210
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Fri Aug 15 14:51:59 2008 +0930
dix: stick a warning in about loss of subpixel precision.

commit de1573172ad2e2e98c101727930a468213295783
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Wed Aug 13 13:11:44 2008 +0930

Backport device properties to XI 1.5 instead of XI 2.0

commit 8b9ed7dec2954d4890ddcc7c874fc0832b16495a
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Thu Aug 14 09:08:14 2008 -0700

XQuartz: Fixed a stuck modifier key bug.
(cherry picked from commit eeb6e5a9e98dcaf045ec230f160d5992080dceba6)

commit 1770cc85374883229ec5e9685229b2333e62705e6
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Thu Aug 14 07:32:37 2008 -0700

XQuartz: Made 3-button mouse simulation a little more consistent.
(cherry picked from commit d207b037d2ae213369e5627a17d8831e9bc16ad8)

commit f51f77d25e9b51fa3fd557ffdb5573b61759706
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Wed Aug 13 19:09:05 2008 -0700

XQuartz: Reverted "Control" text to be accurately "Command" in the input prefs.
(cherry picked from commit b287e481e1be77ff84d10a708505f148a0e8434)

commit 04956b80431169e0ae713a3e6ba4cde157ce3a66
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date:   Sat Aug 9 10:07:32 2008 -0700

Transport/Apple: Add TRANS_NOXAUTH to incoming connections when the listener is flagged as such
(cherry picked from commit ba4a7924261070ad0aff7211b7a1e9581fad4646)

commit e6813e8de65ee854bbfe6ab0f8ba158f43b10b
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Wed Aug 13 14:24:45 2008 +0930

Xi: byte-swap device property requests.

commit 0ce687634fa5e0d955e896a0d0d5f584a4cf1a4
Author: Adam Jackson <ajax@redhat.com>
Date:   Wed Aug 13 17:28:08 2008 -0400

Eviscerate save-under support.
Use a compositing manager already. Plus I really wanted to use 'eviscerate' in a commit message.

commit f456f32cd97684052cab4712e7f4e827132c554b
Author: Adam Jackson <ajax@redhat.com>

Build fix.

commit c1e9b7dc6f4600fe6c301aeccc7d67461cb884df0
Author: Adam Jackson <ajax@redhat.com>

Sledgehammer off the DRI2 build system.

commit 544bfd086663f71be5275459cf74a3557530544f
Author: Adam Jackson <ajax@redhat.com>
Date:   Wed Aug 13 11:09:54 2008 -0400

Remove xf86Version.h and related API.

We haven't meaningfully been API-compatible with xf86 modules in ages, let's stop pretending.

commit 139c3ab7b754dc425a09d57b6d2a8b2b88138a
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Tue Aug 12 17:49:49 2008 +0930

Xi: return the state from the correct keyboard in QueryDevicePointer.

commit 998375f4154b000f75b2ba4de276c0237d24dc7
Author: Peter Hutterer <peter.hutterer@redhat.com>
Date:   Tue Aug 12 17:49:16 2008 +0930

dix: remove superfluous check.

commit 9f9268821b13038556fbc029df54ab0e9b2a77f
Author: Mathieu Bérard <mathieu.berard@crans.org>
Date:   Mon Aug 11 13:52:38 2008 -0400

The smart scheduler is not optional.

commit 2e2ce817ce404a5e000c9750fa96f656fed370b8
Author: Matthieu Herrb <matthieu.herrb@laas.fr>
Date:   Sun Aug 10 23:07:46 2008 +0200

Move strcasecmp(), strcasencmp() and strcasestr() prototypes to os.h
And make sure os.h is included in files that use it.

commit 02efa78ce2da470b252289ff2af598d06bc84ece
Author: Matthieu Herrb <matthieu.herrb@laas.fr>
Date:   Sun Aug 10 18:29:35 2008 +0200

add libXinerama to the list of dependencies.

Now that panoramiXext.h is installed bt libXinerama, it becomes required to build Xext.

commit be2210b69defa225d8bc4bb90d94bdf740ef8b1f
Author: Matthieu Herrb <matthieu.herrb@laas.fr>
Date:   Sat Aug 9 23:43:50 2008 +0200

remove OpenBSD/amd64 specific mtrr API.

The old code never worked anyways and was removed from OpenBSD. OpenBSD/amd64 4.4 and later support mtrr with the same API as OpenBSD/i386.

commit 6e33e6f355f7f04e77a165eb67b1414724c1fba3
Author: Matthieu Herrb <matthieu.herrb@laas.fr>
Date:   Sat Aug 9 23:43:03 2008 +0200

Move string comparaison functions to from dix/ to os/.

commit 5968634996c086560c5e3fa35705cf7afac87e6
Author: Dave Miller <davem@davemloft.net>
Date:   Sat Aug 9 16:45:59 2008 +1000

glx: fix crash in driGetConfigAttribIndex

Don't access GLboolean via int pointers

commit 4212599e922373a224d2235c74672a3a3aa8e0b1
Author: Michel Dänzer <michel@tungstengraphics.com>
Date:   Fri Aug 8 12:17:58 2008 +0200

EXA: Make sure damage tracking code is inactive if the driver manages pixmaps.

It was always supposed to be like that... It was only recently pointed out (in a rather convoluted way) that it was not in fact the case.

commit 073116cc44859e96374cede46325df8540621d5ee
Author: Michel Dänzer <michel@tungstengraphics.com>
Date:   Fri Aug 8 12:15:27 2008 +0200
Remove commented out lines that make automake 1.9 puke.

commit 666781cd9b62207e45eebd3eb55a930f3a345f72  
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>  
Date:   Fri Aug 8 01:41:28 2008 -0700

   Removed rogue #include  
   (cherry picked from commit af238e99da45a4dd8d8cb66564bb8d0a3d79d590)

commit 4a0947bf06deacc3ae716730cfbbeda1311bae3  
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>  
Date:   Fri Aug 8 01:53:36 2008 -0700

   XQuartz: Disable the Xquartz AIGLX for now since it doesn't even compile any more...  
   (cherry picked from commit 4545ba91e91e9d6ad62b6cafde3c73a672d3ded91a2)

commit 5acce9b3ce1af539150d59b1800b66783fd5e947  
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>  
Date:   Fri Aug 8 00:19:41 2008 -0700

   XQuartz: Re-added deprecated code fallback failsafe for keyboard layout on Leopard with some debugging spew.  
   (cherry picked from commit 5854e712e96be210d2f8de6f5d4fb650944f314a)

commit 465a9bb969e8a90e53e655b3245c22910201786d7  
Author: Peter Hutterer <peter.hutterer@redhat.com>  
Date:   Fri Aug 8 17:37:06 2008 +0930

dix: don't try to create events if we don't have a screen. #16898

   A NULL screen may happen during server shutdown, when the output has been shut down but the devices still generate events.

X.Org Bug 16898 <http://bugs.freedesktop.org/show_bug.cgi?id=16898>

commit d684f5760f40b682a8b879641300abe689a263c5  
Author: Peter Hutterer <peter.hutterer@redhat.com>  
Date:   Fri Aug 8 14:18:01 2008 +0930

   xkb: actually initialise sli before using it.

commit e00cd54c1ac57ea6e7767e90592200f343d9d08a  
Author: Simon Thum <simon.thum@gmx.de>  
Date:   Thu Aug 7 11:06:21 2008 +0200

dix: remove misleading comment in ptrvelo.c

Signed-off-by: Peter Hutterer <peter.hutterer@redhat.com>
commit 6ca34549b89e73e3e0ec3cb7585686b880534ce
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Aug 7 16:27:57 2008 +0930

dix: remove obsolete FIXME comment.

Thanks to Simon Thum for pointing this out.

commit 2c3645581ee3f180d34e3268016d5e4e1af4dca4
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Aug 7 11:55:10 2008 +0930

dix: SetModifierMapping should only apply to the ClientPointer and it's SDs.

commit e1b286d95b760cf67dd1f936eca11da50fba847a
Author: Simon Thum <simon.thum@gmx.de>
Date: Wed Aug 6 09:42:32 2008 +0200

dix: simplified debugging helper for pointer acceleration

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit d95136e1510a48cc3ad066d880d6061f6a42ee
Author: Simon Thum <simon.thum@gmx.de>
Date: Thu Jul 31 00:39:03 2008 +0200

xf86: don't replicate dix defaults for pointer acceleration

the defaults from InitVelocityData() or hypothetic driver-side changes
are now respected, not overridden.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 4f333d53510b82db57caf1bea22422cbb7be79
Author: Simon Thum <simon.thum@gmx.de>
Date: Thu Jul 31 00:33:38 2008 +0200

dix: simplify velocity tracking filters

prefer fp-mul over fp-div and remove rather pointless check

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit bf084a0769ee36f779e5e5f2d1e875c1ebcc51
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date: Wed Aug 6 13:36:43 2008 -0700

glcontextmodes,[hc] were not added with the removal of the meas symlinks patch. Copied from mesa head
2008.08.06.
(cherry picked from commit 409e1dd1e9524b5c1a1ae58a759da77e587e3780)

(cherry picked from commit 4991f54a8d84a9a8df89a99dbfc09391195578f8)

commit 30851efdd4313506e92ae6b6d3e5099dea99ab99c
Author: Jeremy Huddleston <jeremyhu@freedesktop.org>
Date: Tue Aug 5 12:54:51 2008 -0700

**XQuartz: Fixed first-client-can't-connect bug**

Readded the old exec() server startup path for regression testing.
Don't use the dynamic fd addition code since it's not quite working correctly.

commit 277a74bcb7d0a93c4f2e1de11daabdb5f93ee8
Author: Tomas Carnecky <tom@dbservice.com>
Date:   Mon Aug 4 23:26:00 2008 +0300

Redefine clients as a fixed array

This removes yet another xalloc() each server generation. Also, I
couldn't find the corresponding xfree() so I guess that used to be a
memory leak there.

commit 5532d63488ec45953f7f925cfb4f87ad83b04a0
Author: Tomas Carnecky <tom@dbservice.com>
Date:   Mon Aug 4 23:06:08 2008 +0300

Redefine WindowTable as a fixed array

Instead of xalloc'ing it every server generation. The array is always
the same size (MAXSCREENS), anyway.

commit e882ee7056f370e0619d137b4ec3973eca43479
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Tue Jul 29 17:52:11 2008 +0300

EXA: Remove unnecessary #includes

There wasn't actually any font code here, so no problem.

commit 6c1bb64c6f2ed81856ca00591df37916713b142
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Mon Aug 4 15:19:45 2008 +0930

Author: Adam Jackson <ajax@redhat.com>
Date: Fri Aug 1 16:15:04 2008 -0400

Erk. Actually check all the BARs, not just the first.

commit 82d51e6df2bf677bdf24376092bca79b534f6e5
Author: Adam Jackson <ajax@redhat.com>
Date: Fri Aug 1 13:17:55 2008 -0400
Silence the "No matching Device section" warning in some harmless cases.

If the device doesn't have any BARs then it's just a stub for some lame operating systems that need one PCI device per output for multithread. No point in warning about it.

commit 9643e8d3482a35d355a243db7aa397ad47f29be0
Author: Adam Jackson <ajax@redhat.com>
Date:   Fri Aug 1 11:35:47 2008 -0400

Handle XGI cards in autoconfig.

It's all a bit wonky since both sis(4) and xgi(4) claim to support the Volari Z7 and V5/8 (0x0020 and 0x0040), so let's side with xgi(4), why not. Note that the V3 (not V3XT) identifies itself as a trident chip.

Author: Michel Dänzer <michel@tungstengraphics.com>
Date:   Mon Jul 28 09:32:54 2008 +0200

Fix Makefile.am crack.

Looks like an artifact from early modularization.

commit 3575d9584edf35ec1720bc3755b6576a56613685
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Fri Jul 25 16:46:44 2008 +0930

config: note that HAL options must be strings.

Only strings are parsed by the server, all others are ignored. Doesn't matter,
specifying int options as strings works fine anyway.

commit 54651ff5ec5f4c621e060b19f31d77d519ef158
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Jul 24 17:41:48 2008 +0930

xkb: remove superfluous inputInfo.keyboard treatment.

Really not necessary, we can just walk the list and spare us the special
treatment of the VCK.

commit 70bd82612233e66da9e9dfdbbb999691328d85f093c
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Jul 24 17:38:16 2008 +0930
xkb: use PickPointer/PickKeyboard in _XkbLookupAnyDevice.

commit 47160edec7f0d9129576d83f1593a5549879a893
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Jul 24 12:12:45 2008 +0930

xfree86: warn some more about potential missing input devices.

Put out a warning if xorg.conf has InputDevice sections, but these aren't referred in the used ServerLayout. This is only performed if AllowEmptyInput is enabled.
The reason behind this is that the server used to auto-add the first mouse/keyboard sections if none were referenced. Now, with HAL and AEI enabled by default, setups that relied on this auto-adding break and are left without input devices. The least we can do is warn them.

commit f30b0823dbfc5902e54b337b5b6b570ebf216584
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Jul 24 09:56:00 2008 +0930

xfree86: if AllowEmptyInput is on, warn the user that we rely on HAL now.

commit ad4cd2e2416914276895917769a1184c8c1c7f5
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Wed Jul 23 17:40:28 2008 +0930

xkb: don't send core events on SlowKeys.

Core events don't happen until later in the DIX, so pump device events down instead. This makes modifiers work again when SlowKeys is enabled.

commit 7d9dece74fc2bf130ce8818ced5d9e3ac526900
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Jul 21 22:12:45 2008 +0930

dix: fix up enter/leave system once again.

Two corrections
1. the "detail" field has NotifyVirtual, etc., not the "mode" field. This was a clear bug.
2. don't set/unset the flags for NotifyGrab or NotifyUngrab. Clients are expected to deal with multiple enter/leave events per window if the mode is not NotifyNormal.

Testable with TCL menu boxes (such as used in gitk):
tk_optionMenu .menu globVar Val1 Val2 Val3 ValJunk
pack .menu
Thanks to Michel Dänzer for pointing this out.

Author: Kristian Høgsberg <krh@redhat.com>
Date: Mon Jul 21 18:29:08 2008 -0400

Drop the glx resize hook and stop chaining PositionWindow.
Drop unnecessary linked list of contexts from GLXDrawable.

Remove xorgcfg

Us shipping a GUI configuration utility (especially as part of the server!) was pretty pointless. There was pretty much nothing it could configure which wasn't already runtime adjustable: if you could get a server up with functioning input and output, there wasn't much xorgcfg could do for you.

Au revoir.

Remove ioport

I don't know why we would possibly be shipping this.

Remove kbd_mode

We only built this on BSD and Solaris, and if such a tool is generally useful, ship it with the OS.

Unifdef QNX.

Again, hasn't worked since at least 7.0.

commit 331cc3f0799a54910a99484264f76569beee55a
Author: James Cloos <cloos@jhcloos.com>
Date:   Wed Jul 23 00:01:43 2008 -0400

Fix LookupColor

Using strcasecmp(3) with the length of the user-supplied colour name will result in a false positive when the db key starts out with the same string.

Eg, blue will also match BlueViolet (aka blue violet).

Since the shorter strings occur first in the database, avoid such errors by treating a 0 result from strcasecmp(3) as a positive result when the key’s length is longer than the supplied string’s.

commit bc3c03a3f3c091026310f0e8d55321cecc570a0c5
Author: Pierre-Loup A. Griffais <pgriffais@nvidia.com>
Date:   Tue Jul 22 17:34:37 2008 -0700

Don't return BadAlloc when trying to set a PictureFilter with no parameters when a filter with parameters was previously set.

Author: Adam Jackson <ajax@redhat.com>
Date:   Tue Jul 22 10:21:22 2008 -0400

    Build fix.

commit d8937ce58137ad675f1ead8f2345eaed0ca63c8a
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Tue Jul 22 16:52:50 2008 +0300

    autogen.sh: Pass --force to autoreconf

    Ensure we get all files installed when running autoreconf by passing
    --force to overwrite previously-generated ones, which fixes running it
    from tarballs.

    Also revert Peter's local changes to pass arguments to configure, all of
    which are the default now anyway, AIUI.

commit 880625eef5d8b168df3e42836fa1b763c51a91b5
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Tue Jul 22 14:34:28 2008 +0930

    xfree86: plug memory leak, free driver's private data when deleting the device.

commit 67d7821ae783d3f123b6ba7203abf847374a1e36
Author: Keith Packard <keithp@keithp.com>
Date:   Mon Jul 21 11:48:24 2008 -0700

    dix: reset potential lastSlaves when disabling an SD

    Unplug a mouse, then warp the pointer and the warp pointer code will try
    to update the position of the last slave device associated with the
    master. That pointer will be stale and the X server will crash.

    Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit 8c8c4df34bfec9d54ebea99fb0af14cad167b4a0
Author: Adam Jackson <ajax@redhat.com>
Date:   Mon Jul 21 16:39:43 2008 -0400

    EDID: Various reduced blanking fixes.

    - Use a single common function to compute reducedness.
    - Call it from both the old-school and new-school mode validation paths.
    - Define monitor reduced-blanking support in accord with EDID 1.4.
    - Attempt to filter RB DMT modes away from the "standard" EDID pool if
      the monitor doesn't claim RB support.
EDID: For standard timing blocks, prefer DMT timings if they exist.

EDID: Correct DDCEstablishedModes to conform to DMT.

Need to unref pixmaps backing pbuffers too.

Fix embarrassing GLXPixmap leak.

EDID: Add quirk to clamp max pixel clock to single DVI link speed.

On some panels you end up with all of:
- No range descriptor
- No description of physical connectivity
- Native panel size mode in standard timings list

In principle you're supposed to use the timings for that mode from the DMT spec, but in practice the DMT spec has timings for both 1920x1200 normal and 1920x1200RB, and the standard timing field gives you no way to distinguish. And, of course, the non-RB timings don't fit in a single DVI link.

Bump inputproto to 1.9.99.2 for XI_PROP_ENABLED
dix: shift the duplicate button mapping check to ProcSetPointerMapping.

XI 2 allows two buttons to have the same button code.

dix: Remove insane BC hacks

If your DDX needs a 1bpp mode and doesn't set it up, your DDX is incompetent.

Try nvidia before nv under the assumption that people who install it usually want to *use* it, too.

Drop some more configure-generated files from the tarball

Don't put xf86Build.h in the tarball (bug#9277)

This file is generated by configure, we don't need to ship a stale version in the tarball.

commit af2138bfce34a28312b26106eaf9561d96712ee0
Author: Adam Jackson <ajax@redhat.com>
Date:   Thu Jul 17 10:39:29 2008 -0400

Nuke some ancient code for commandline-challenged OSes.

This appears to have been dead code even in 6.7.

commit b9a0cee026361189dce63b87c738bd1d17e02830
Author: Adam Jackson <ajax@redhat.com>
Date:   Thu Jul 17 10:32:35 2008 -0400

Drop hw/xfree86/os-support/lynxos/

This has never worked in any modular release, clearly no one cares.

commit d87f170bd99f7908eb14272ac42c8963d089f54f
Author: Adam Jackson <ajax@redhat.com>
Date:   Thu Jul 17 10:29:52 2008 -0400

Remove XF86Misc code from xorgefg.
Remove duplicate load of freetype font renderer.

libXfont will do this for us in FontFileRegisterFpeFunctions.

Remove freetype from the list of autoloaded modules.

Fix color lookup.

OsStrCaseCmp returned inverted comparison sense from normal strcasecmp.

XFree86: Remove remnants of XFree86-Misc

HandleMessage: dear god, no.

Build fixes

Remove loadable font renderer support.

Remove font module support from xorgcfg.
Remove the numVideoScreens xprintism.

This was to account for cases where you had video and print screens in
the same server. Lunacy. Leave the slot in ScreenInfo, but rename it,
and stop looking at it.

Update the Allow*Grabs documentation for xf86misc removal.

The API to turn the grab-break keys back off is gone now, so don't
say it exists.

Make --enable-debug usable again

Enable region debugging causes assertion failures (should really look
into that, though), and I don't need four messages every time I move my
pointer.

XFrees86: Remove XFree86-Misc extension

Its last remaining purpose in life has been destroyed by input
properties. Au revoir: it's been fun, by which I mean awful.

HAL: Remove grotesque open-coded strcasestr

Not only was this pretty ugly, but it didn't even work on systems
without strcasestr anyway, due to the define not being in dix-config.h.
Lack of strcasestr is handled transparently with the version from
FreeBSD now anyway, so, huzzah.

commit ad87c72edcc0d1f56658e0c4e73af335c8d5a516
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jul 16 02:59:51 2008 +0300

DIX: Add strcasestr from FreeBSD

Add strcasestr for use on systems which don't have it.

commit c3e901cf44cf16bb33c4176494361b429099a372
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jul 16 02:54:41 2008 +0300

configure.ac: Fix SHA1 handling

Fix and marginally simplify the SHA1 handling. First, we allow people
to override it. Secondly, we try for libmd. Then, we try for OpenSSL
with pkg-config. In a last, desperate move, we try librctpy on its
own. This allows the server to, y'know, _link_ when using OpenSSL,
instead of failing because we only have -lcrypto, and not -lssl.

commit 69b57dc651e12a0d9a5a4295b185c62d5c0df63f
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jul 16 02:03:36 2008 +0300

dix: Actually build str(n)casecmp if we don't have it

Remember to add stuff to dix-config.h when you add new AC_DEFINES,
people ...

commit dcf6293030126509d7d6c61d131222037d5ed7db
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jul 16 01:57:00 2008 +0300

strncasecmp: Actually use the right license

Forgot to update the license when I committed the FreeBSD version, so it
still had an old SGI license. Sorry. Sorry.

commit 441f084bfe87a6ea1c94ec63f82888b8b3d81d89
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jul 2 19:52:58 2008 +0300

config: Don't attempt to use D-Bus when not strictly necessary

If we have D-Bus but have explicitly disabled it, don't build it.
commit 35c89f3f5b8fa222e37b799d5bb01595e8f30d0c
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jul 16 01:43:58 2008 +0300

 XFree86: Remove mysticism from Makefile.am

 The variables were always the same, so just shove them in with the rest
 of the plebs.

commit b89a59248a4a0ff06b9a0ddee45881efc6063063
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Fri Jun 27 12:20:56 2008 +0300

 XFree86: Delete OSMouse code

 This should be moved into the mouse driver, if anything.

commit d0de5ea96d084fc5da87d8f323ddfc08fe9c03ba
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jun 25 17:56:28 2008 +0300

 XFree86: Remove useless debugging code

 Also remove documentation which told you how to use a non-module-aware
 GDB, albeit only with old, non-shared, modules.

commit 4b1273c9c9c2da113f634be80caa28e81df3beae98
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jun 25 17:51:12 2008 +0300

 XFree86: Delete empty file & function

 xf86InitXkb() has been empty for as long as I can remember.

commit 3a54f3f48fa1c0d60604c3ee767c569b5ec23430
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Thu Jun 12 01:05:04 2008 +0300

 XFree86: Clean up init a tiny bit (no code changes)

 Reshuffle and delete.

commit ddecfb50dda9e398647d1c84c7153127ed26a4d2
Author: Daniel Stone <daniel@fooishbar.org>
Date:   Wed Jun 11 15:14:26 2008 +0300

 XFree86: Remove trailing whitespace
OS/KDrive/XFree86: Sanitise colour initialisation

OsInitColors always just returned TRUE, so just remove calls to it and insane special-case logic. Remove unused kcolor.c implementation, and merge oscolor.h into oscolor.c since it was the only user. Remove open-coded strncasecmp in oscolor.c.

Since we no longer need to call OsInitColors after reading the config file, just call PostConfigInit() from one place, and move PM handling to one place so we can install the signal handlers earlier.

DIX: Add strncasecmp from FreeBSD, make strncasecmp args const

Add strncasecmp (as we're now using it) in case someone doesn't have it, and also change strncasecmp args to be const, in accordance with everything else.

configure.ac: Add GLX_SYS_LIBS for Xvfb and Xnest

This fixes the linking for these two when using DRI2, which requires DLOPEN_LIBS.

Bug #7300: Move xf86RAC to hw/xfree86/common

Bug #16674: Make sure RANDR reports refresh as 0 if pixel clock is 0.
Fix the configure tests for swap16/__swap16 macros on OpenBSD.

BSD systems need <sys/types.h> included before <sys/endian.h> for macros to work.

https://bugs.freedesktop.org/show_bug.cgi?id=16531

commit 11ee0ae9390a608a232ff94abce0cbcf9ed7b70a
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Jul 14 10:20:11 2008 +0930

xfree86: append, not prepend, new input devices to xf86InputDevs.

If devices are prepended to the list, their wake-up order on resume is not the same as the original initialisation order. Hot-plugged devices, originally initied last, are re-enabled before the xorg.conf devices and in some cases may steal the device files. Result: we have different devices before and after suspend/resume.

RedHat Bug 439386

commit 5bcc45e07e8726a5442567472dd29cfb5e901f2d
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Sun Jul 13 18:40:53 2008 +0930

Add LoaderShouldIgnoreABI to allow drivers that roll their own ABI checks (i.e. nvidia) to perform the check before ScreenInit.

commit c42427f63f0e0495e56909ee99ad1e3c4321e39b
Author: Ander Conselvan de Oliveira <ander@mandriva.com.br>
Date: Wed Jul 9 10:50:21 2008 -0300

Fix incorrect test regarding keyboard map.

In the map stored in each keyboard device, the first line refers to
minimum keycode, i.e., the 0th line refers to keycode 8. When not
using XKB the wrong test caused some keys to be interpreted as
locks ('m' for instance). The had to be pressed twice to generate
both KeyPress and KeyRelease events.

Signed-off-by: Peter Hutterer <peter.hutterer@who-t.net>

commit e4054e5cb3d919dfc83021be3f2b9036d0e5a2be
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Thu Jul 10 11:03:31 2008 +0930

Xi: pack the property stuff into a struct, make handlers a linked list.

We may need more than one handler to deal with a property (e.g. one in the
driver, one in the DIX), so get the handlers into a linked list and call them
one-by-one. This is of course slightly less entertaining than the hilarious
WRAP/UNWRAP game we play in other parts of the server.

XIRegisterPropertyHandler/XIUnregisterPropertyHandler are the interface
drivers/the DIX should use to attach themselves to the device.

XIDeleteAllDeviceProperties destroys everything, including the handlers.

commit 2039c6ea43244339659323d05d96c14e41996c20
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date: Mon Jul 7 22:10:17 2008 +0930
Xi: add support for input device properties.

Basically just copied from randr properties, with minor changes only. Each device supports arbitrary properties that can be modified by clients. Modifications to the properties are passed to the driver (if applicable) and can then affect the configuration of the device.

Note that device properties are limited to a specific device. A property set on a slave device does not migrate to the master.

commit 4ab01fe5db77b330b1ec463aa49b77859527e597
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Thu Jul 10 16:27:36 2008 +0930

Revert "Xi: add support for input device properties."

Note to self: don't mix up branches with half-finished cherriespicks.

This reverts commit 666838fccc8b71fdeae160844160187f345cbf4a6.

Author: Alan Coopersmith <alan.coopersmith@sun.com>
Date:   Wed Jul 9 20:07:59 2008 -0700

Remove README.font, since it's just an old text copy of xorg-docs/sgml/fonts

commit 5e847c1d4fc30a0d263a861a76982660f11998cd
Author: Alan Coopersmith <alan.coopersmith@sun.com>
Date:   Mon Jul 7 17:08:01 2008 -0700

Improved driver selection when autoconfiguring driver without xorg.conf

- Allow returning multiple drivers to try for a given PCI id (for instance, try "geode" then "amd" for AMD Geode hardware)
- On Solaris, use VIS_GETIDENTIFIER ioctl as well as PCI id to choose drivers
- Use wsfb instead of fbdev as a fallback on non-Linux SPARC platforms

modes: fix initial xorg.conf mode selection.

This was all kinds of broken, we ignored user preferred modes for multiple monitors and also for side-by-side configurations.

commit e317943c125d7fdbe62c750324640eb30c88fa15
Author: Peter Hutterer <peter.hutterer@who-t.net>
Date:   Wed Jul 2 12:23:03 2008 +0930

xfree86: AllowEmptyInput is now enabled by default if hotplugging is enabled.

Remove AEI check from configImpliedLayout as the setting isn't actually parsed at this point anyway (written by Sasha Hlusiak).

Resurrect checkInput() and check for devices there if AEI is false (this also creates the default devices if required).

Set AllowEmptyInput to enabled by default if hotplugging is enabled.

commit fe5cf7cb00f9d926ceff933adbdbceea7353f4e2
Author: Peter Hutterer <peter.hutterer@who-t.net>
xfree86: handle missing Screen lines in the ServerLayout #16301

If no Screen is specified in the ServerLayout section, either take the first
one from the config file or autogenerate a default screen.

Sun bug #6685465: Xephyr uses wrong or bad colortable in 8-bit mode

<http://bugs.opensolaris.org/view_bug.do?bug_id=6685465>

This bug is caused by Xephyr not handling the RGB byte order correctly of the server where Xephyr is displaying on. The previous code just assumed that the order was RGB and did not take into account that Xservers may use different order (such as BGR).

The fix is to add a function to calculate the byte order and bits to shift based on the visual mask and the visual bits_per_rgb (which is usually 8, but could be server dependent). Since the shifts won't change once the display connection has been made, I can cache these values so that Xephyr doesn't have to keep recalculating them everytime it tries to translate the Xephyr colormap entries for Xephyr clients to the actual server colormap entries (i.e. calling the function hostx_set_cmap_entry() repeatedly for every colormap entry).

commit 2e8daee05343b2853b677acfe4554def0ceeada00
Author: Aaron Plattner <aplattner@nvidia.com>
Date:   Mon Jun 30 17:29:35 2008 -0700

Work around the DIX losing mmWidth/mmHeight for RandR 1.1 DDXen.

RandR 1.1 has a physical size for each mode. It used to be that the DIX would remember these modes and pass them back up to the DDX when changing the screen configuration. The DDX uses RR_GET_MODE_MM to query the driver for the physical dimensions of the screen, allowing it to preserve the DPI.

With RandR 1.2, the physical dimensions are stored as part of the output, rather than per mode. The DIX only uses the sizes passed in from the DDX to select the mode pool for the "default" output, and forgets the physical sizes. Then, when reconfiguring the screen, it makes up a new RRScreenSizeRec using the dimensions
from the output, screwing up the DPI.

This change works around this problem by ignoring the DIX and querying the real size from the driver.

Declare xf86InterpretEEDID() properly.

commit e4335e876d254e446a965259e845ad955da5b5c2
Author: root <root@samich.home.cworth.org>
Date:   Mon Jun 30 15:29:04 2008 -0700

Revert "XInput ABI is 2.1, not 3.1."

This reverts commit 76576c87b0de106e006d1cfa59d42d3a483e966c.
which was an incorrect revert of previous ABI bumps. Those responsible for the accidental ABI bumps in both directions have all been sacked.

This allows xf86-input-mouse to build again, for example.

commit 6447f80c17077f924b2d58e07b38d32429edcb9b
Author: Carl Worth <cworth@samich.home.cworth.org>
Date:   Mon Jun 30 13:16:49 2008 -0700

Use AC_CHECK_LIB before PKG_CHECK_MODULES for openssl

Previously, the code was using PKG_CHECK_EXISTS before PKG_CHECK_MODULES,
(to cater to OpenBSD systems that include openssl by default but without a .pc file). But this meant that systems that didn't have openssl installed at all would not get any error message at configure time.

Now, if the SHA1_Init function is found in -lcrypto without any additional flags, then that's used. Otherwise, pkg-config is used to find the right flags to link against libcrypto. And if that fails, a nice error message is now generated.

commit 76576c87b0de106e006d1cfa59d42d3a483e966c
Author: Adam Jackson <ajax@redhat.com>
XInput ABI is 2.1, not 3.1.
