- Whether monitoring is enabled for the Spot instance.
- The RAM disk ID.
- The ID of the network interface.
- The ID of the subnet for the instance.
- A description of the network interface.
- Indicates whether the network interface is deleted when the instance is terminated.
- The primary private IP address of the network interface.
- The ID of the subnet.
- The index of the device for the network interface attachment on the instance.
- The ID of the security group associated with the network interface.
- The name of the security group associated with the network interface.
- Indicates whether the IP address is the primary private IP address.
- The maximum hourly price for any Spot instance launched to fulfill the request.
- The state of the Spot instance request (open, active, closed, cancelled, failed). Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see Spot Bid Status in the Amazon Elastic Compute Cloud User Guide.
- The short code describing the most recent evaluation of your Spot instance request.
- The key or value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value. You get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only sources where Purpose is X, see the <code>tag:Purpose</code> filter.
- The value of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.
- The type of Spot instance request (one-time, persistent).
- The Availability Zone in which the bid is launched.
- The start date of the request.

```
public SpotInstanceSummaryResp withFilters(SpotInstanceRequestFilters filters)
{
    return new SpotInstanceSummaryResp
    {
        filters_of_SpotInstanceRequestFilters = filters,
        ...,
    };
}
```

</table>
<code>launch.block-device-mapping.delete-on-termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.

<code>launch.block-device-mapping.device-name</code> - The device name for the Amazon EBS volume (for example, <code>/dev/sdh</code>).<p></p>

<code>launch.block-device-mapping.snapshot-id</code> - The ID of the snapshot used for the Amazon EBS volume.<p></p>

<code>launch.block-device-mapping.volume-size</code> - The size of the Amazon EBS volume, in GiB.<p></p>

<code>launch.block-device-mapping.volume-type</code> - The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>sst1</code> for Throughput Optimized HDD, <code>scl1</code> for Cold HDD, or <code>standard</code> for Magnetic.<p></p>

<code>launch.group-id</code> - The security group for the instance.<p></p>

<code>launch.image-id</code> - The ID of the AMI.<p></p>

<code>launch.instance-type</code> - The type of instance (for example, <code>m3.medium</code>).<p></p>

<code>launch.kernel-id</code> - The kernel ID.<p></p>

<code>launch.monitoring-enabled</code> - Whether monitoring is enabled for the Spot instance.<p></p>

<code>launch.ramdisk-id</code> - The RAM disk ID.<p></p>

<code>network-interface.device-index</code> - The index of the device for the network interface attachment on the instance.<p></p>

<code>network-interface.subnet-id</code> - The ID of the subnet for the instance.<p></p>

<code>network-interface.description</code> - A description of the network interface.<p></p>

<code>network-interface.private-ip-address</code> - The primary private IP address of the network interface.<p></p>

<code>network-interface.delete-on-termination</code> - Indicates whether the network interface is deleted when the instance is terminated.<p></p>

<code>network-interface.group-id</code> - The ID of the security group associated with the network interface.<p></p>

<code>network-interface.group-name</code> - The name of the security group associated with the network interface.<p></p>

<code>network-interface.addresses.primary</code> - Indicates whether the IP address is the primary private IP address.<p></p>

<code>spot-instance-request-id</code> - The Spot instance request ID.<p></p>

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.<p></p>

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=XX\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.<p></p>

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=XX\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. To get all resources, you can filter for either the tag's key or its value, but not both.<p></p>

<code>type</code> - The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).<p></p>

<code>valid-from</code> - The start date of the request.<p></p>

<code>valid-until</code> - The end date of the request.

This filter is independent of the `<code>tag-key</code> filter.</p> 
</li> 

### <code>type</code>
- The type of Spot instance request (<code>one-time</code> | <code>persistent</code>). For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i></code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i></code> filter. The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code> filter.</p> 
</li> 

### <code>valid-from</code>
- The start date of the request.</p> 
</li> 

### <code>valid-until</code>
- The end date of the request.</p> 
</li> 

### <code>create-time</code>
- The time stamp when the Spot instance request was created.</p> 
</li> 

### <code>launch-group</code>
- The Spot instance launch group.</p> 
</li> 

### <code>launch</code>:<i>block-device-mapping</i>:<i>delete-on-termination</i>
- Indicates whether the Amazon EBS volume is deleted on instance termination.</p> 
</li> 

### <code>launch</code>:<i>block-device-mapping</i>:<i>device-name</i>
- The device name for the Amazon EBS volume (for example, `<code>/dev/sdh</code>`).</p> 
</li> 

### <code>launch</code>:<i>block-device-mapping</i>:<i>snapshot-id</i>
- The ID of the snapshot used for the Amazon EBS volume.</p> 
</li> 

### <code>launch</code>:<i>block-device-mapping</i>:<i>volume-size</i>
- The size of the Amazon EBS volume, in GiB.</p> 
</li> 

### <code>launch</code>:<i>block-device-mapping</i>:<i>volume-type</i>
- The type of the Amazon EBS volume: `<code>gp2</code>` for General Purpose SSD, `<code>io1</code>` for Provisioned IOPS SSD, `<code>st1</code>` for Throughput Optimized HDD, `<code>sc1</code>` for Cold HDD, or `<code>standard</code>` for Magnetic.</p> 
</li> 

### <code>launch</code>:<i>image-id</i>
- The ID of the AMI.</p> 
</li> 

### <code>launch</code>:<i>instance-type</i>
- The type of instance (for example, `<code>m3.medium</code>`).</p> 
</li> 

### <code>launch</code>:<i>kernel-id</i>
- The kernel ID.</p> 
</li> 

### <code>launch</code>:<i>key-name</i>
- The name of the key pair the instance launched with.</p> 
</li> 

### <code>launch</code>:<i>monitoring-enabled</i>
- Whether monitoring is enabled for the Spot instance.</p> 
</li> 

### <code>launch</code>:<i>ramdisk-id</i>
- The RAM disk ID.</p> 
</li> 

### <code>network-interface</code>:<i>network-interface-id</i>
- The ID of the network interface.</p> 
</li> 

### <code>network-interface</code>:<i>device-index</i>
- The index of the device for the network interface attachment on the instance.</p> 
</li> 

### <code>network-interface</code>:<i>subnet-id</i>
- The ID of the subnet for the instance.</p> 
</li> 

### <code>network-interface</code>:<i>description</i>
- A description of the network interface.</p> 
</li> 

### <code>network-interface</code>:<i>private-ip-address</i>
- The primary private IP address of the network interface.</p> 
</li> 

### <code>network-interface</code>:<i>delete-on-termination</i>
- Indicates whether the network interface is deleted when the instance is terminated.</p> 
</li> 

### <code>network-interface</code>:<i>group-id</i>
- The ID of the security group associated with the network interface.</p> 
</li> 

### <code>network-interface</code>:<i>group-name</i>
- The name of the security group associated with the network interface.</p> 
</li> 

### <code>network-interface</code>:<i>addresses</i>:<i>primary</i>
- Indicates whether the IP address is the primary private IP address.</p> 
</li> 

### <code>product-description</code>
- The product description associated with the instance (`.<code>Linux/UNIX</code>` | `.<code>Windows</code>`).</p> 
</li> 

### <code>spot-instance-request-id</code>
- The Spot instance request ID.</p> 
</li> 

### <code>spot-price</code>
- The maximum hourly price for any Spot instance launched to fulfill the request.</p> 
</li> 

### <code>state</code>
- The primary private IP address of the network interface.
- Indicates whether the network interface is deleted when the instance is terminated.
- The ID of the security group associated with the network interface.
- The name of the security group associated with the network interface.
- Indicates whether the IP address is the primary private IP address.
- The product description associated with the instance.
- The ID of the Spot instance request. Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see the Spot Bid Status API in the Amazon Elastic Compute Cloud User Guide.

- The short code describing the most recent evaluation of your Spot instance request.
- The message explaining the status of the Spot instance request. The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify the key tag:Purpose and the value X. You can use the query to list only resources where Purpose is X, regardless of what the tag's value is.

- The value of a tag assigned to the resource. This filter is independent of the tag key filter. If you want to list only resources where Purpose is X, see the tag:Purpose=X filter.

- The value of the Spot instance request's state. Use this filter to get the latest state of the Spot instance request.

- The start date of the request.

- The end date of the request.

- Indicates whether the Amazon EBS volume is deleted on instance termination.
- The ID of the snapshot used for the Amazon EBS volume.
- The size of the Amazon EBS volume, in GiB.
- Indicates whether the EBS volume is the primary storage for the instance.
- The device name for the Amazon EBS volume (for example, /dev/sdh).
termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.</p> </li> <li> <p> <code>launch.block-device-mapping.device-name</code> - The device name for the Amazon EBS volume (for example, <code>/dev/sdh</code>).</p> </li> <li> <p> <code>launch.block-device-mapping.snapshot-id</code> - The ID of the snapshot used for the Amazon EBS volume.</p> </li> <li> <p> <code>launch.block-device-mapping.volume-size</code> - The size of the Amazon EBS volume, in GiB.</p> </li> <li> <p> <code>launch.block-device-mapping.volume-type</code> - The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.</p> </li> <li> <p> <code>launch.group-id</code> - The security group for the instance.</p> </li> <li> <p> <code>launch.image-id</code> - The ID of the AMI.</p> </li> <li> <p> <code>launch.instance-type</code> - The type of instance (for example, <code>m3.medium</code>).</p> </li> <li> <p> <code>launch.kernel-id</code> - The kernel ID.</p> </li> <li> <p> <code>launch.key-name</code> - The name of the key pair the instance launched with.</p> </li> <li> <p> <code>launch.monitoring-enabled</code> - Whether monitoring is enabled for the Spot instance.</p> </li> <li> <p> <code>launch.ramdisk-id</code> - The RAM disk ID.</p> </li> <li> <p> <code>launch.request-id</code> - The Spot instance request ID.</p> </li> <li> <p> <code>launch.request-spot-price</code> - The maximum hourly price for any Spot instance launched to fulfill the request.</p> </li> <li> <p> <code>launch.state</code> - The state of the Spot instance request (<code>open</code> | <code>active</code> | <code>closed</code> | <code>cancelled</code> | <code>failed</code>). Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see <a href="http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html">Spot Bid Status</a> in the Amazon Elastic Compute Cloud User Guide.</p> </li> <li> <p> <code>launch.status-code</code> - The short code describing the most recent evaluation of your Spot instance request.</p> </li> <li> <p> <code>launch.status-message</code> - The message explaining the status of the Spot instance request.</p> </li> <li> <p> <code>launch.tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=نبذه, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>launch.tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=نبذه", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter. For example, the filter "tag:Purpose=نبذه" and the filter "tag-value=نبذه" will return any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code>. Optionally, specify the value in the filter value to match resources that have that value. For example, <code>tag:CostCategory=Entertainment</code> returns only resources in the Entertainment category. Any resources with a CostCategory of Development, Production, or Test are not returned. If you do not specify the value, all resources with the tag key specified in the filter name are returned. For example, <code>tag:network-interface-group-id</code> returns all network interfaces in the specified network interface group. If you want to list network interfaces in Network Interface Group X that have any tag keys, use the <code>tag-key</code> filter. For example, to list all network interfaces that have a tag with key NetworkInterfaceID, use <code>tag-key=NetworkInterfaceID</code>. If you want to list all network interfaces in Network Interface Group X that have the tag key NetworkInterfaceID, use <code>tag-key=NetworkInterfaceID</code> and a value. For example, to list all network interfaces in Group X that have a tag key NetworkInterfaceID and a value of "12345", use <code>tag-key=NetworkInterfaceID&tag-value=12345</code>. The tag-key filter is independent of the tag-value filter.

<li><code>ipv6-cidr-block-association.state</code> - The state of an IPv6 CIDR block associated with the subnet.</li>
<li><code>state</code> - The state of the subnet (<code>pending</code> | <code>available</code>).</li>
<li><code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
<li><code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li>
<li><code>vpc-id</code> - The ID of the VPC for the subnet.</li>

The availability of the subnet is specified by the <code>availability-zone</code> (or <code>availability-zone</code>) filter name. The subnet is available if the value of the <code>availability-zone</code> filter name is the same as the Availability Zone for the subnet.

The number of IPv4 addresses in the subnet that are available is specified by the <code>available-ip-address-count</code> filter name. The subnet is available if the value of the <code>available-ip-address-count</code> filter name is the same as the number of IPv4 addresses in the subnet that are available.

The IPv4 CIDR block of the subnet is specified by the <code>cidrBlock</code> (or <code>cidr</code> or <code>cidr-block</code>) filter name. The subnet is available if the value of the <code>cidrBlock</code> filter name is the same as the IPv4 CIDR block of the subnet.

The default subnet for the Availability Zone is specified by the <code>defaultForAz</code> (or <code>default-for-az</code>) filter name. The subnet is the default subnet for the Availability Zone if the value of the <code>defaultForAz</code> filter name is true.

The IPv6 CIDR block associated with the subnet is specified by the <code>ipv6-cidr-block-association.association-id</code> (or <code>ipv6-cidr-block-association.association-id</code>) filter name. The subnet is associated with the IPv6 CIDR block if the value of the <code>ipv6-cidr-block-association.association-id</code> filter name is the same as the association ID for the IPv6 CIDR block associated with the subnet.

The state of the subnet is specified by the <code>state</code> filter name. The subnet is available if the value of the <code>state</code> filter name is available.

The key/value combination of a tag assigned to the resource is specified by the <code>tag</code>:<i>key</i>=<i>value</i> (or <code>tag-key</code> or <code>tag-value</code>) filter name. The resource is assigned the tag if the value of the <code>tag</code>:<i>key</i>=<i>value</i> filter name is the same as the key/value combination of the tag assigned to the resource.

The key of a tag assigned to the resource is specified by the <code>tag-key</code> filter name. The resource is assigned the tag if the value of the <code>tag-key</code> filter name is the same as the key of the tag assigned to the resource.

The ID of the VPC for the subnet is specified by the <code>vpc-id</code> filter name. The resource is assigned the VPC if the value of the <code>vpc-id</code> filter name is the same as the ID of the VPC for the subnet.

The availability of the subnet is specified by the <code>availability-zone</code> (or <code>availability-zone</code>) filter name. The subnet is available if the value of the <code>availability-zone</code> filter name is the same as the Availability Zone for the subnet.

The number of IPv4 addresses in the subnet that are available is specified by the <code>available-ip-address-count</code> filter name. The subnet is available if the value of the <code>available-ip-address-count</code> filter name is the same as the number of IPv4 addresses in the subnet that are available.

The IPv4 CIDR block of the subnet is specified by the <code>cidrBlock</code> (or <code>cidr</code> or <code>cidr-block</code>) filter name. The subnet is available if the value of the <code>cidrBlock</code> filter name is the same as the IPv4 CIDR block of the subnet.

The default subnet for the Availability Zone is specified by the <code>defaultForAz</code> (or <code>default-for-az</code>) filter name. The subnet is the default subnet for the Availability Zone if the value of the <code>defaultForAz</code> filter name is true.

The IPv6 CIDR block associated with the subnet is specified by the <code>ipv6-cidr-block-association.association-id</code> (or <code>ipv6-cidr-block-association.association-id</code>) filter name. The subnet is associated with the IPv6 CIDR block if the value of the <code>ipv6-cidr-block-association.association-id</code> filter name is the same as the association ID for the IPv6 CIDR block associated with the subnet.

The state of the subnet is specified by the <code>state</code> filter name. The subnet is available if the value of the <code>state</code> filter name is available.

The key/value combination of a tag assigned to the resource is specified by the <code>tag</code>:<i>key</i>=<i>value</i> (or <code>tag-key</code> or <code>tag-value</code>) filter name. The resource is assigned the tag if the value of the <code>tag</code>:<i>key</i>=<i>value</i> filter name is the same as the key/value combination of the tag assigned to the resource.

The key of a tag assigned to the resource is specified by the <code>tag-key</code> filter name. The resource is assigned the tag if the value of the <code>tag-key</code> filter name is the same as the key of the tag assigned to the resource.

The ID of the VPC for the subnet is specified by the <code>vpc-id</code> filter name. The resource is assigned the VPC if the value of the <code>vpc-id</code> filter name is the same as the ID of the VPC for the subnet.

One or more filters.

- The Availability Zone for the subnet. You can also use <code>availability-zone</code> as the filter name.

- The number of IPv4 addresses in the subnet that are available.

- The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use <code>cidr</code> or <code>cidr-block</code> as the filter names.

- Indicates whether this is the default subnet for the Availability Zone. You can also use <code>default-for-az</code> as the filter name.

- The number of IPv4 addresses in the subnet that are available.

- An IPv6 CIDR block associated with the subnet.

- The state of an IPv6 CIDR block associated with the subnet.

- The state of the subnet (pending, available).

- The ID of the subnet.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. Example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tag:Purpose</code> for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

- The ID of the VPC for the subnet.

- The Availability Zone for the subnet. You can also use <code>availability-zone</code> as the filter name.

- The number of IPv4 addresses in the subnet that are available.

- The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use <code>cidr</code> or <code>cidr-block</code> as the filter names.

- Indicates whether this is the default subnet for the Availability Zone. You can also use <code>default-for-az</code> as the filter name.

- An IPv6 CIDR block associated with the subnet.

- The state of an IPv6 CIDR block associated with the subnet.

- The state of the subnet (pending).

- The ID of the subnet.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value.

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

    return describeAllVolumesRequest(volumes);
}
```

### getVolumeIds

**Description:**

One or more volume IDs. Default: Describes all your volumes.

**Return:**

One or more volume IDs. Default: Describes all your volumes.

```java
public List<String> getVolumeIds()
```

```java
private List<String> volumeIds = new ArrayList<>();
```

### Member

**Description:**

String

**Return:**

String

```java
public Member withMember(String member)
```

```java
private String member;
```

### Fluent setter methods

**Description:**

Returns a reference to this object so that method calls can be chained together.

```java
public VolumeDescribesAllVolumes withVolumeIds(List<String> volumeIds)
```

```java
public VolumeDescribesAllVolumes withMember(String member)
```

<code>nextToken</code> - The <code>NextToken</code> value to include in a future <code>DescribeVolumeStatus</code> request. When the results of the request exceed <code>MaxResults</code>, the <code>NextToken</code> value is included in the response so that the next <code>DescribeVolumeStatus</code> request can include it.  

```

The code snippet above is part of the documentation for a function or method in a software library that deals with volume status. It describes how to request and process volume status information, including filtering options and pagination through API results. The description includes various parameters such as action, event type, event ID, volume status, and more, which are essential for manipulating and interpreting the data provided by the library's API.
this value can be used to retrieve the next page of results. This value is $null$ when there are no more results to return.

When this parameter is used, DescribeVolumes only returns MaxResults results in a single page along with a NextToken response element. The remaining results of the initial request can be seen by sending another DescribeVolumes request with the returned NextToken value. This value can be between 5 and 500; if MaxResults is given a value larger than 500, only 500 results are returned. If this parameter is not used, then DescribeVolumes returns all results. You cannot specify this parameter and the volume IDs parameter in the same request.

value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value. 

- The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i> filter. 

### `attachment.attrs.<i>tag</i>:<i>key</i>=<i>value</i>`

- The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i> filter.

### `attachment.device`

- The device name that is exposed to the instance (for example, `<code>/dev/sda1</code>`).

### `attachment.instance-id`

- The ID of the instance the volume is attached to.

### `attachment.status`

- The status of the attachment (attaching | attached | detaching | detached).

### `availability-zone`

- The Availability Zone in which the volume was created.

### `create-time`

- The time stamp when the volume was created.

### `encrypted`

- The encryption status of the volume.

### `size`

- The size of the volume, in GiB.

### `snapshot-id`

- The snapshot from which the volume was created.

### `status`

- The status of the volume (creating | available | in-use | deleting | deleted | error).

### `tag:<i>key</i>=<i>value</i>`

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.

### `tag-key`

- The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i> filter.

### `tag-value`

- The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. For example, if you use both the filter `<tag-key=Purpose>` and the filter `<tag-value=X>`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i> filter.

### `volume-id`

- The volume ID.

### `volume-type`

- The Amazon EBS volume type. This can be `<code>gp2</code>` for General Purpose SSD, `<code>io1</code>` for Provisioned IOPS SSD, `<code>st1</code>` for Throughput Optimized HDD, `<code>sc1</code>` for Cold HDD, or `<code>standard</code>` for Magnetic volumes.
<code>size</code> - The size of the volume, in GiB.<p> <li> <p> <code>snapshot-id</code> - The snapshot from which the volume was created.<p> <li> <p> <code>status</code> - The status of the volume (creating | available | in-use | deleting | deleted | error).<p> <li> <p> <code>tag</code>: <i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>-purpose</code> for the filter value.<p> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.<p> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.<p> <li> <p> <code>volume-id</code> - The volume ID.<p> <li> <p> <code>volume-type</code> - The Amazon EBS volume type. ---

Open Source Used In Finesse Software 12.5(1)SU2 17266
<code>attachment.attach-time</code> - The timestamp when the attachment initiated.</li> <li> <p> <code>attachment.delete-on-termination</code> - Whether the volume is deleted on instance termination.</p> </li> <li> <p> <code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).</p> </li> <li> <p> <code>attachment.instance-id</code> - The ID of the instance the volume is attached to.</p> </li> <li> <p> <code>attachment.status</code> - The attachment state (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>).</p> </li> <li> <p> <code>availability-zone</code> - The Availability Zone in which the volume was created.</p> </li> <li> <p> <code>create-time</code> - The timestamp when the volume was created.</p> </li> <li> <p> <code>encrypted</code> - The encryption status of the volume.</p> </li> <li> <p> <code>size</code> - The size of the volume, in GiB.</p> </li> <li> <p> <code>snapshot-id</code> - The snapshot from which the volume was created.</p> </li> <li> <p> <code>status</code> - The status of the volume (<code>creating</code> | <code>available</code> | <code>in-use</code> | <code>deleted</code> | <code>error</code>).</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. You can also use <code>tag-key</code> filters. For example, to get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is), you can use both the filter "tag-key=Purpose" and the filter "tag-value=X". You can also use filters on tag values with a value of NULL. For example, you can use the tag value filter to get a list of all resources that have the tag value NULL. You can also list all resources that have tags assigned with an empty string value using the filter "tag-key=value". For example, to get a list of all resources with the tag key Name containing an empty string value, specify <code>tag:Name=""</code> for the filter name and <code>""</code> for the filter value. To list only resources where Name is not set to an empty string, use the filter <code>tag:Name!=""</code>.<p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. <p> <code>volume-id</code> - The volume ID.</p> </li> <li> <p> <code>volume-type</code> - The Amazon EBS volume type. This can be <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic volumes.</p> </li>
</ul>

<p><b>NOTE:</b> This method appends the values to the existing list (if any). Use { @link #setFilters(java.util.Collection)} or { @link #withFilters(java.util.Collection)} if you want to override the existing values.</p>

A list of supported AWS services.

**NOTE:** This method appends the values to the existing list (if any). Use `@link #setServiceNames(java.util.Collection)` or `@link #withServiceNames(java.util.Collection)` if you want to override the existing values.

```java
@Param

serviceNames A list of supported AWS services.

@returns Returns a reference to this object so that method calls can be chained together.

"vpcEndpointIds": One or more endpoint IDs.

**NOTE:** This method appends the values to the existing list (if any). Use {@link #setVpcEndpointIds(java.util.Collection)} or {@link #withVpcEndpointIds(java.util.Collection)} if you want to override the existing values.

Coordinates:

- `<p>One or more endpoint IDs.</p>`
- `<ul>`
  - `<li>`
    - `<code>service-name</code>`: The name of the AWS service.
  - `<li>`
    - `<code>vpc-id</code>`: The ID of the VPC in which the endpoint resides.

```java
public void setVpcEndpointIds(String... vpcEndpointIds) {
    getVpcEndpointIds().addAll(Arrays.asList(vpcEndpointIds));
}
```

```java
public VpcEndpointIds unmarshallVpcEndpointIds(String... vpcEndpointIds) {
    return VpcEndpointIds.builder()
        .withVpcEndpointIds(vpcEndpointIds)
        .build();
}
```

the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. This filter is independent of the <code>tag-key</code> filter. If you want to list only resources where Purpose is X, see the <code>tag-value</code> filter. The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. The ID of the VPC peering connection.

### <code>tag-key</code>

The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. This filter is independent of the <code>tag-key</code> filter.

### <code>tag-value</code>

The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. If you want to list only resources where Purpose is X, see the <code>tag-value</code> filter. The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

VPCs.</p>

@<p><strong>Return</strong>: Returns a reference to this object so that method calls can be chained together.</p>

### Filters

One or more filters.

- **cidr**
  - The IPv4 CIDR block of the VPC. Must contain the slash followed by one or two digits (for example, /28).

- **dhcp-options-id**
  - The ID of a set of DHCP options.

- **ipv6-cidr-block-association.ipv6-cidr-block**
  - An IPv6 CIDR block associated with the VPC.

- **ipv6-cidr-block-association.association-id**
  - The association ID for an IPv6 CIDR block associated with the VPC.

- **ipv6-cidr-block-association.state**
  - The state of an IPv6 CIDR block associated with the VPC.

- **isDefault**
  - Indicates whether the VPC is the default VPC.

- **state**
  - The state of the VPC (pending | available).

- **tag**:<i>key</i>=<i>value</i>
  - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>value</code> for the filter value.

- **tag-key**
  - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code> filter.</p>
enumType" : null,

"fluentSetterDocumentation" : /**<p>One or more filters.</p> <ul> <li> <p> <code>cidr</code> - The IPv4 CIDR block of the VPC. The CIDR block you specify must exactly match the VPC's CIDR block for information to be returned for the VPC. Must contain the slash followed by one or two digits (for example, <code>/28</code>). </p> </li> <li> <p> <code>dhcp-options-id</code> - The ID of a set of DHCP options. </p> </li> <li> <p> <code>ipv6-cidr-block-association.ipv6-cidr-block</code> - An IPv6 CIDR block associated with the VPC. </p> </li> <li> <p> <code>ipv6-cidr-block-association.association-id</code> - The association ID for an IPv6 CIDR block associated with the VPC. </p> </li> <li> <p> <code>ipv6-cidr-block-association.state</code> - The state of an IPv6 CIDR block associated with the VPC. </p> </li> <li> <p> <code>isDefault</code> - Indicates whether the VPC is the default VPC. </p> </li> <li> <p> <code>state</code> - The state of the VPC (\code{pending} | \code{available}). </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=\textit{X}, specify \texttt{\code{tag:Purpose=\textit{X}}}. </p> </li> </ul>

with the VPC. 

- The state of an IPv6 CIDR block associated with the VPC.
- Indicates whether the VPC is the default VPC.
- The state of the VPC.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify the tag:Purpose filter for the filter name and tag-value=X filter for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose=X filter.

- The IPv4 CIDR block of the VPC. The CIDR block you specify must exactly match the VPC's CIDR block for information to be returned for the VPC. Must contain the slash followed by one or two digits (for example, /28).
- The ID of a set of DHCP options.
- An IPv6 CIDR block associated with the VPC.
- The association ID for an IPv6 CIDR block associated with the VPC.
- The state of an IPv6 CIDR block associated with the VPC.
- Indicates whether the VPC is the default VPC.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify the tag:Purpose filter for the filter name and tag-value=X filter for the filter value.

- The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose=X filter.

- The value of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag: Purpose=X filter.

This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `"tag-key=Purpose"` and the filter `"tag-value=X"`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag's value is), and the tag value `X` (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter.</p> </li> <li> <p><code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter.</p> </li> </ul>
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<code>key</code>=<code>value</code> filter.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<code>key</code>=<code>value</code> filter.

<code>vpc-id</code> - The ID of the VPC.

NOTE: This method appends the values to the existing list (if any). Use <code>@link #setFilters(java.util.Collection)</code> or <code>@link #withFilters(java.util.Collection)</code> if you want to override the existing values.

@<var>param filters</var> One or more filters.

@return Returns a reference to this object so that method calls can be chained together.

"variable" : {"variableDeclarationType" : "com.amazonaws.internal.SdkInternalList<Filter>", "variableName" : "filters", "variableType" : "java.util.List<Filter>", "documentation" : "One or more filters."

<code>cdr</code> - The IPv4 CIDR block of the VPC. The CIDR block you specify must exactly match the VPC's CIDR block for information to be returned for the VPC. Must contain the slash followed by one or two digits (for example, <code>/28</code>). The ID of a set of DHCP options.

<code>ipv6-cidr-block-association.ipv6-cidr-block</code> - An IPv6 CIDR block associated with the VPC.

The ID of an IPv6 CIDR block associated with the VPC.

<code>isDefault</code> - Indicates whether the VPC is the default VPC.

<code>tag</code>:<code>key</code>=<code>value</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<code>key</code>=<code>value</code> filter.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<code>key</code>=<code>value</code> filter.

<code>vpc-id</code> - The ID of the VPC.
(regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
slash followed by one or two digits (for example, `<code>/28</code>`).

- `<code>dhcp-options-id</code>` - The ID of a set of DHCP options.
- `<code>ipv6-cidr-block-association.ipv6-cidr-block</code>` - An IPv6 CIDR block associated with the VPC.
- `<code>ipv6-cidr-block-association.association-id</code>` - The association ID for an IPv6 CIDR block associated with the VPC.
- `<code>ipv6-cidr-block-association.state</code>` - The state of an IPv6 CIDR block associated with the VPC.
- `<code>isDefault</code>` - Indicates whether the VPC is the default VPC.
- `<code>tag</code>` - The key of a tag assigned to the resource. All tags assigned to the VPC are listed by default. To limit the results to a single tag, specify `<code>tag-key</code>` and `<code>tag-value</code>` filters. For example, if you are searching for all resources where `id` is `2`, you can use the filters `tag-key=id` and `tag-value=2`.
- `<code>tag-key</code>` - The key of a tag assigned to the resource. All tags assigned to the VPC are listed by default. To limit the results to a single tag, specify `<code>tag-key</code>` and `<code>tag-value</code>` filters. For example, if you are searching for all resources where `id` is `2`, you can use the filters `tag-key=id` and `tag-value=2`.
- `<code>tag-value</code>` - The value of a tag assigned to the resource. All tags assigned to the VPC are listed by default. To limit the results to a single tag, specify `<code>tag-key</code>` and `<code>tag-value</code>` filters. For example, if you are searching for all resources where `id` is `2`, you can use the filters `tag-key=id` and `tag-value=2`.
- `<code>vpc-id</code>` - The ID of the VPC.

resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the
tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> <li> <p> <code>customer-gateway-configuration</code> - The configuration information for the customer gateway.</p> <li> <p> <code>customer-gateway-id</code> - The ID of a customer gateway associated with the VPN connection.</p> <li> <p> <code>option.static-routes-only</code> - Indicates whether the connection has static routes only. Used for devices
that do not support Border Gateway Protocol (BGP).</p> <li> <p> <code>state</code> - The state of the VPN connection (<code>pending</code>).</p> <li> <p> <code>available</code> | <code>deleting</code> | <code>deleted</code> - Indicates whether the connection has static routes only. Used for devices
that do not support Border Gateway Protocol (BGP).</p> <li> <p> <code>route.destination-cidr-block</code> - The destination CIDR block. This corresponds to the subnet used in a customer data center.</p> <li> <p> <code>bgp-asn</code> - The BGP Autonomous System Number (ASN) associated with a BGP device.</p> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the
resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the
tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> <li> <p> <code>customer-gateway-configuration</code> - The configuration information for the customer gateway.</p> <li> <p> <code>customer-gateway-id</code> - The ID of a customer gateway associated with the VPN connection.</p> <li> <p> <code>option.static-routes-only</code> - Indicates whether the connection has static routes only. Used for devices
that do not support Border Gateway Protocol (BGP).</p> <li> <p> <code>route.destination-cidr-block</code> - The destination CIDR block. This corresponds to the subnet used in a customer data center.</p> <li> <p> <code>bgp-asn</code> - The BGP Autonomous System Number (ASN) associated with a BGP device.</p> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the
resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the
tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
value="X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. - The type of VPN connection. Currently the only supported type is <code>ipsec.1</code>.

- <code>vpn-connection-id</code> - The ID of the VPN connection.
- <code>vpn-gateway-id</code> - The ID of a virtual private gateway associated with the VPN connection.

```
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<code>type</code> - The type of VPN connection. Currently the only supported type is <code>ipsec.1</code>.

<code>vpn-connection-id</code> - The ID of the VPN connection.

<code>vpn-gateway-id</code> - The ID of a virtual private gateway associated with the VPN connection.

### Filters

- **attachment.state** - The current state of the attachment between the gateway and the VPC.
- **attachment.vpc-id** - The ID of an attached VPC.
- **availability-zone** - The Availability Zone for the virtual private gateway (if applicable).
- **deleted** - The state of the virtual private gateway.
- **pending** - The ID of an attached VPC.
- **available** - The ID of an attached VPC.
- **deleting** - The ID of an attached VPC.
- **reserved** - The ID of an attached VPC.
- **state** - The state of the virtual private gateway.
- **tag**: **key** = **value** - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value.
- **tag-key** - The key of a tag assigned to the resource.
- **tag-value** - The value of a tag assigned to the resource.
- **type** - The type of virtual private gateway. Currently the only supported type is `ipsec.1`.

### Examples

**Example 1:**

```java
@awsSdkModel
public class AttachVpcGatewayRequest {
    // ...

    // The current state of the attachment between the gateway and the VPC
    @SdkField
    private String attachmentState;

    // The ID of a virtual private gateway
    @SdkField
    private String vpcId;

    // The Availability Zone for the virtual private gateway (if applicable)
    @SdkField
    private String availabilityZone;

    // The state of a virtual private gateway
    @SdkField
    private String state;

    // The key/value combination of a tag assigned to the resource
    @SdkField
    private String tagKey;

    // The value of a tag assigned to the resource
    @SdkField
    private String tagValue;

    // The type of virtual private gateway
    @SdkField
    private String type;

    // The ID of the virtual private gateway
    @SdkField
    private String vpnGatewayId;
}
```

**Example 2:**

```java
public List<Filter> getFilters() {
    return filters;
}
```
resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag `Purpose=X`, specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.

- **<code>tag-key</code>** - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter `"tag-key=Purpose"` and the filter `"tag-value=X"`, you get any resources assigned both the tag key `Purpose` (regardless of what the tag's value is), and the tag value `X` (regardless of what the tag's key is). If you want to list only resources where `Purpose` is `X`, see the <code>tag:tag</code>:<i>key</i>=<i>value</i> filter.

- **<code>tag-value</code>** - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

- **<code>tag</code>:<i>key</i>=<i>value</i>** - The type of virtual private gateway. Currently the only supported type is <code>ipsec.1</code>.

- **<code>vpn-gateway-id</code>** - The ID of the virtual private gateway.

```java
public interface VpnGatewayIds {
    @Documentation("One or more virtual private gateway IDs.
    Default: Describes all your virtual private gateways.
    
    Enumeration type: null,"
    @FluentSetter("withVpnGatewayIds", "One or more virtual private gateway IDs.
    Default: Describes all your virtual private gateways.
    @return Returns a reference to this object so that method calls can be chained together.
    
    Documentation: "One or more virtual private gateway IDs.
    
    Getter: Returns all your virtual private gateways."
    
    Getter: Describes all your virtual private gateways."
    
    Getter: Describes all your virtual private gateways.
    
    Getter: Describes all your virtual private gateways."
}
```

```java
http:
    "additionalMarshallingPath": null,
    "additionalUnmarshallingPath": null,
    "flattened": false,
    "greedy": false,

The ID of the VPC to which the instance is linked.

@returns Returns a reference to this object so that method calls can be chained together.

```java
public void withVpcId(String vpcId) {
    this.vpcId = vpcId;
}
```

The ID of the instance to unlink from the VPC.

@returns The ID of the instance to unlink from the VPC.

```java
public String getInstanceId() {
    return this.instanceId;
}
```

**Simple Representation**

```java
public void withVpcId(String vpcId) {
    this.vpcId = vpcId;
}

public String getInstanceId() {
    return this.instanceId;
}
```

Amazon EBS Volume Types

Amazon EBS Volume Types in the Amazon Elastic Compute Cloud User Guide.

Constraint: Range is 100-20000 IOPS for `io1` volumes and 100-10000 IOPS for `gp2` volumes.

Condition:
- This parameter is required for requests to create `io1` volumes; it is not used in requests to create `gp2`, `st1`, `sc1`, or `standard` volumes.

@return

A reference to this object so that method calls can be chained together.

```java
@Variable

public class Volume {
    private Integer iops;

    @SimpleType
    public Integer getIops() {
        return iops;
    }

    @Setter
    public void setIops(Integer iops) {
        this.iops = iops;
    }

    public class SnapshotId {
        private String snapshotId;

        @SimpleType
        public String getSnapshotId() {
            return snapshotId;
        }

        @Setter
        public void setSnapshotId(String snapshotId) {
            this.snapshotId = snapshotId;
        }
    }
}
```

Additional information about General Purpose SSD baseline performance, I/O credits, and bursting can be found in the Amazon Elastic Compute Cloud User Guide.

Constraint: Range is 100-20000 IOPS for `io1` volumes and 100-10000 IOPS for `gp2` volumes.

Condition:
- This parameter is required for requests to create `io1` volumes; it is not used in requests to create `gp2`, `st1`, `sc1`, or `standard` volumes.

The following are the <code>fleetRequestChange</code> events. 

<ul>

<li> <p> <code>active</code> - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances. </p> </li>

</ul>
<p>The event.</p> 

The following are the <code>error</code> events.

- <code>iamFleetRoleInvalid</code> - The Spot fleet did not have the required permissions either to launch or terminate an instance.

- <code>launchSpecTemporarilyBlacklisted</code> - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.

The following are the <code>fleetRequestChange</code> events.

- <code>active</code> - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.

- <code>cancelled</code> - The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.

- <code>cancelled_running</code> - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.

- <code>cancelled_terminating</code> - The Spot fleet is canceled and its Spot instances are terminating.

- <code>expired</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.

- <code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.

- <code>modify_successful</code> - The Spot fleet request was modified.

- <code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

The following are the <code>instanceChange</code> events.

- <code>launched</code> - A bid was fulfilled and a new instance was launched.

- <code>terminated</code> - An instance was terminated by the user.

The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.

The following are the <code>instanceChange</code> events.

- <code>launched</code> - A bid was fulfilled and a new instance was launched.

- <code>terminated</code> - An instance was terminated by the user.

The following are the <code>error</code> events.

- <code>iamFleetRoleInvalid</code> - The Spot fleet did not have the required permissions either to launch or terminate an instance.

- <code>launchSpecTemporarilyBlacklisted</code> - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.

- <code>spotFleetRequestConfigurationInvalid</code> - The configuration is not valid. For more information, see the description of the event.

- <code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

- <code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.

- <code>terminated</code> - An instance was terminated by the user.

- <code>terminated</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.

- <code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.

- <code>modify_successful</code> - The Spot fleet request was modified.

- <code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

- <code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.

- <code>terminated</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.

- <code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.

- <code>modify_successful</code> - The Spot fleet request was modified.

- <code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

- <code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.

- <code>terminated</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.

- <code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.

- <code>modify_successful</code> - The Spot fleet request was modified.

- <code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

- <code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.

- <code>terminated</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.

- <code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.
For more information, see the description of the event.

- You've reached the limit on the number of Spot instances that you can launch.
- The following are the fleetRequestChange events.
  - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.
  - The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.
  - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.
  - The Spot fleet is canceled and its Spot instances are terminating.
  - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with TerminateInstancesWithExpiration set.
- A request to modify the Spot fleet request was accepted and is in progress.
- The Spot fleet request was modified.
- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.
- The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.
- A bid was fulfilled and a new instance was launched.
- An instance was terminated by the user.

The following are the instanceChange events.

- A bid was fulfilled and a new instance was launched.
- An instance was terminated.

- The bid price for a launch configuration was adjusted because it was too high. This change is permanent.

- The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.

The following are the $<code>instanceChange</code>$ events.

- A bid was fulfilled and a new instance was launched.

- An instance was terminated by the user.
<ul>
<li><p><code>iamFleetRoleInvalid</code> - The Spot fleet did not have the required permissions either to launch or terminate an instance.</p></li>
<li><p><code>launchSpecTemporarilyBlacklisted</code> - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.</p></li>
<li><p><code>spotFleetRequestConfigurationInvalid</code> - The configuration is not valid. For more information, see the description of the event.</p></li>
</ul>

The following are the <code>fleetRequestChange</code> events.

<ul>
<li><p><code>active</code> - The Spot fleet has been validated and Amazon EC2 is attempting to maintain the target number of running Spot instances.</p></li>
<li><p><code>cancelled</code> - The Spot fleet is canceled and has no running Spot instances. The Spot fleet will be deleted two days after its instances were terminated.</p></li>
<li><p><code>cancelled_running</code> - The Spot fleet is canceled and will not launch additional Spot instances, but its existing Spot instances continue to run until they are interrupted or terminated.</p></li>
<li><p><code>cancelled_terminating</code> - The Spot fleet is canceled and its Spot instances are terminating.</p></li>
<li><p><code>expired</code> - The Spot fleet request has expired. A subsequent event indicates that the instances were terminated, if the request was created with <code>TerminateInstancesWithExpiration</code> set.</p></li>
<li><p><code>modify_in_progress</code> - A request to modify the Spot fleet request was accepted and is in progress.</p></li>
<li><p><code>modify_successful</code> - The Spot fleet request was modified.</p></li>
<li><p><code>price_update</code> - The bid price for a launch configuration was adjusted because it was too high. This change is permanent.</p></li>
<li><p><code>submitted</code> - The Spot fleet request is being evaluated and Amazon EC2 is preparing to launch the target number of Spot instances.</p></li>
<li><p>The following are the <code>instanceChange</code> events.</p></li>
</ul>

<ul>
<li><p><code>launched</code> - A bid was fulfilled and a new instance was launched.</p></li>
<li><p><code>terminated</code> - An instance was terminated by the user.</p></li>
</ul>

The following are the <code>error</code> events.

<ul>
<li><p><code>iamFleetRoleInvalid</code> - The Spot fleet did not have the required permissions either to launch or terminate an instance.</p></li>
<li><p><code>launchSpecTemporarilyBlacklisted</code> - The configuration is not valid and several attempts to launch instances have failed. For more information, see the description of the event.</p></li>
<li><p><code>spotFleetRequestConfigurationInvalid</code> - The configuration is not valid. For more information, see the description of the event.</p></li>
<li><p><code>spotInstanceCountLimitExceeded</code> - You've reached the limit on the number of Spot instances that you can launch.</p></li>
</ul>
The following are the `<code>instanceChange</code>` events. A bid was fulfilled and a new instance was launched. An instance was terminated by the user.

- A bid was fulfilled and a new instance was launched.
- An instance was terminated by the user.

@see EventType*/
The event type.

- Indicates an error with the Spot fleet request.
- Indicates a change in the status or configuration of the Spot fleet request.
- Indicates that an instance was launched or terminated.

Information about the event.

- Indicates an error with the Spot fleet request.
- Indicates a change in the status or configuration of the Spot fleet request.
- Indicates that an instance was launched or terminated.

Information about the event.

- Indicates an error with the Spot fleet request.
- Indicates a change in the status or configuration of the Spot fleet request.
- Indicates that an instance was launched or terminated.

- Indicates an error with the Spot fleet request.
- Indicates a change in the status or configuration of the Spot fleet request.
- Indicates that an instance was launched or terminated.

Information about the event.

- Indicates an error with the Spot fleet request.
- Indicates a change in the status or configuration of the Spot fleet request.
- Indicates that an instance was launched or terminated.

Information about the event.
