upgradeStep Represents one of 3 steps that an Upgrade or Upgrade Eligibility Check does through: 

- PreUpgradeCheck
- Snapshot
- Upgrade

If the service returns an enum value that is not available in the current SDK version, `@link #upgradeStep` will return `@link UpgradeStep#UNKNOWN_TO_SDK_VERSION`. The raw value returned by the service is available from `@link #upgradeStepAsString`.

@return Represents one of 3 steps that an Upgrade or Upgrade Eligibility Check does through: 
- PreUpgradeCheck
- Snapshot
- Upgrade

@see UpgradeStep

@return Returns a reference to this object so that method calls can be chained together.

The status of your service software update. This field can take the following values:

- **ELIGIBLE**
- **PENDING_UPDATE**
- **IN_PROGRESS**
- **COMPLETED**
- **NOT_ELIGIBLE**

The description of the `UpdateStatus`.

This is a convenience that creates an instance of the `StringBuilder` avoiding the need to create one manually via `String.Builder().

When the `Consumer` completes, `StringBuilder.build()` is called immediately and its result is passed to `String.valueOf(StringBuilder)

Returns a reference to this object so that method calls can be chained together.
