The size of the symbol lookup cache can be set using LOOKUP_CACHE_SIZE. This
cache is used to resolve symbols given their name and scope. Since this can
be an expensive process and often the same symbol appear multiple times in

small doxygen will become slower. If the cache is too large, memory is wasted.

to a cache size of 2^16 = 65536

# Purpose:
# - To test and prove that a new commit in  the mbed TLS repository builds
# and integrates with mbed-os properly.
#          AND
# - To test and prove that the current development head of mbed TLS builds
# and integrates with the current mbed-os master branch.
#
# The script fetches all the prerequisites and builds the mbed TLS 'tls-client'
# example. This script is triggered by every commit and once each night and the
# exact behaviour depends on how it was triggered:
# - If it is a nightly build then it builds the mbed TLS development head with
#   mbed-os master.
# - If it was triggered by the commit, then it builds the example with mbed TLS
#   at that commit and mbed-os at the commit pointed by mbed-os.lib in the
#   example repository.

test:
  override:
     - cd ../mbed-os-example-tls/tls-client/ && mbed compile -m K64F -t GCC_ARM -c
