"beanStyleGetterMethodName" : "getEncryptionAtRestOptions"
This is a convenience that creates an instance of the EncryptionAtRestOptions.Builder avoiding the need to create one manually via EncryptionAtRestOptions#builder().

When the Consumer completes, EncryptionAtRestOptions.Builder#build() is called immediately and its result is passed to EncryptionAtRestOptions a consumer that will call methods on EncryptionAtRestOptions.Builder.

@return Returns a reference to this object so that method calls can be chained together.

IAM access policy as a JSON-formatted string.

```
@param accessPolicies
```

```java
public class SnapshotOptions {
    private String accessPolicies;

    public String getAccessPolicies() {
        return accessPolicies;
    }

    public void setAccessPolicies(String accessPolicies) {
        this.accessPolicies = accessPolicies;
    }
}
```

This is a convenience that creates an instance of the `SnapshotOptions` class, avoiding the need to create one manually. It is called immediately and its result is passed to a consumer that will call methods on the `SnapshotOptions` object. It returns a reference to this object so that method calls can be chained together.

```java
public class SnapshotOptions {
    private String accessPolicies;

    public String getAccessPolicies() {
        return accessPolicies;
    }

    public void setAccessPolicies(String accessPolicies) {
        this.accessPolicies = accessPolicies;
    }
}
```

This is a convenience that creates an instance of the `SnapshotOptions` class, avoiding the need to create one manually. It is called immediately and its result is passed to a consumer that will call methods on the `SnapshotOptions` object. It returns a reference to this object so that method calls can be chained together.

```java
public class SnapshotOptions {
    private String accessPolicies;

    public String getAccessPolicies() {
        return accessPolicies;
    }

    public void setAccessPolicies(String accessPolicies) {
        this.accessPolicies = accessPolicies;
    }
}
```

This is a convenience that creates an instance of the `SnapshotOptions` class, avoiding the need to create one manually. It is called immediately and its result is passed to a consumer that will call methods on the `SnapshotOptions` object. It returns a reference to this object so that method calls can be chained together.

```java
public class SnapshotOptions {
    private String accessPolicies;

    public String getAccessPolicies() {
        return accessPolicies;
    }

    public void setAccessPolicies(String accessPolicies) {
        this.accessPolicies = accessPolicies;
    }
}

In case if there are more results available NextToken would be present, make further request to the same API with received NextToken to paginate remaining results.

```java
@Param nextToken
```

In case if there are more results available NextToken would be present, make further request to the same API with received NextToken to paginate remaining results.

```java
public void setNextToken(String nextToken)
```

This is a convenience that creates an instance of the `List<String>.Builder` avoiding the need to create one manually via `List<String>.builder()`.

```java
@DefaultConsumerFluentSetterDocumentation()
```

List of instance types supported by Amazon Elasticsearch service for given

```java
ElasticsearchVersion
```

This is a convenience that creates an instance of the `List<String>.Builder` avoiding the need to create one manually via `List<String>.builder()`.

```java
@DefaultConsumerFluentSetterDocumentation()
```

When the `@link List<String>.Builder` completes, `List<String>.Builder#build()` is called immediately and its result is passed to `List<String>.Builder#build()`.

The result of a `ListTags` operation. Contains tags for all requested Elasticsearch domains.

This is a convenience that creates an instance of the `List<Tag>.Builder` avoiding the need to create one manually. When the `List<Tag>.Builder#build()` is called immediately and its result is passed to `List<Tag>.Builder#build()`. Returns a reference to this object so that method calls can be chained together.

```
@see #tagList(List<Tag>)
```

```java
public class ListTags {

    private List<Tag> tagList;

    public ListTags(List<Tag> tagList) {
        this.tagList = tagList;
    }

    // Getters and setters...
}
```

OptionStatus.Builder} avoiding the need to create one manually via [@link OptionStatus#builder()].

When the [@link Consumer] completes, [@link OptionStatus.Builder#build()] is called immediately and its result is passed to [@link status(OptionStatus)].

@see #status(OptionStatus)

Specify the status of the node-to-node encryption options for the specified Elasticsearch domain.

<p>Specifies the status of the node-to-node encryption options for the specified Elasticsearch domain.</p>

@deprecated

Returns a reference to this object so that method calls can be chained together.

```

@link OptionStatus#builder()

When the @link Consumer completes, @link OptionStatus.Builder#build() is called immediately and its result is passed to @link status(OptionStatus).

@see #status(OptionStatus)

```

`@param status a consumer that will call methods on @link OptionStatus.Builder`

```

`@return Returns a reference to this object so that method calls can be chained together.

```

@see #status(OptionStatus)

```
Specifies the status of the node-to-node encryption options for the specified Elasticsearch domain. 

@parameter {param} status Specifies the status of the node-to-node encryption options for the specified Elasticsearch domain.

```java
public void setStatus(String status) {
  // Implementation
}
```

This is a convenience that creates an instance of the NodeToNodeEncryptionOptions.Builder class avoiding the need to create one manually.

```java
public void setOptions(NodeToNodeEncryptionOptions options) {
  // Implementation
}
```

Returns a reference to this object so that method calls can be chained together.

```java
public NodeToNodeEncryptionOptionsBuilder withOptions(NodeToNodeEncryptionOptions options) {
  // Implementation
  return this;
}
```

@see NodeToNodeEncryptionOptions

@deprecated

This method is deprecated and will be removed in a future version.

```java
public NodeToNodeEncryptionOptionsBuilder build() {
  // Implementation
  return new NodeToNodeEncryptionOptions();
}
```

Returns a reference to this object so that method calls can be chained together.

```java
public NodeToNodeEncryptionOptionsBuilder build() {
  // Implementation
  return new NodeToNodeEncryptionOptions();
}
```

@see NodeToNodeEncryptionOptions

@deprecated

This method is deprecated and will be removed in a future version.

```java
public NodeToNodeEncryptionOptionsBuilder withEncryptionOptions(NodeToNodeEncryptionOptions options) {
  // Implementation
  return this;
}
```

Returns a reference to this object so that method calls can be chained together.

```java
public NodeToNodeEncryptionOptionsBuilder withEncryptionOptions(NodeToNodeEncryptionOptions options) {
  // Implementation
  return this;
}
```

@see NodeToNodeEncryptionOptions

@deprecated

This method is deprecated and will be removed in a future version.

```java
public void setsecure(boolean secure) {
  // Implementation
}
```

This method is deprecated and will be removed in a future version.

```java
public void setsecure(boolean secure) {
  // Implementation
}
```

This method is deprecated and will be removed in a future version.

```java
public void setsecure(boolean secure) {
  // Implementation
}
```

This method is deprecated and will be removed in a future version.

```java
public void setsecure(boolean secure) {
  // Implementation
}
```

This method is deprecated and will be removed in a future version.

```
Specifies the <code>ARN</code> for the Elasticsearch domain from which you want to delete the specified tags.

This is a convenience that creates an instance of the <code>List<String>.Builder</code> avoiding the need to create one manually. When the <code>List</code> completes, <code>Builder#build()</code> is called immediately and its result is passed to <code>TagKeys(List<String>)</code>. The <code>tagKeys</code> parameter is a consumer that will call methods on <code>List<String>.Builder</code>.

When the consumer completes, <code>build()</code> is called immediately and its result is passed to <code>tagKeys(List<String>)</code>. Returns a reference to this object so that method calls can be chained together.

Specifies the <code>TagKey</code> list which you want to remove from the Elasticsearch domain.

Attempts to modify the collection returned by this method will result in an UnsupportedOperationException.

Returns a reference to this object so that method calls can be chained together.

Specifies the <code>TagKey</code> list which you want to remove from the Elasticsearch domain.

Attempts to modify the collection returned by this method will result in an UnsupportedOperationException.

Returns a reference to this object so that method calls can be chained together.

Specifies the <code>TagKey</code> list which you want to remove from the Elasticsearch domain.

Attempts to modify the collection returned by this method will result in an UnsupportedOperationException.

Returns a reference to this object so that method calls can be chained together.

Specifies the <code>TagKey</code> list which you want to remove from the Elasticsearch domain.

Attempts to modify the collection returned by this method will result in an UnsupportedOperationException.

empty if it is not applicable. 

- **MaximumIops**: Maximum amount of Iops that is applicable for given storage type. It can be empty if it is not applicable.
- **MinimumIops**: Minimum amount of Iops that is applicable for given storage type. It can be empty if it is not applicable.

If the storage type is ebs, the following storage options are applicable:

- **MinimumVolumeSize**: Minimum amount of volume size that is applicable for given storage type. It can be empty if it is not applicable.
- **MaximumVolumeSize**: Maximum amount of volume size that is applicable for given storage type. It can be empty if it is not applicable.
- **MaximumIops**: Maximum amount of Iops that is applicable for given storage type. It can be empty if it is not applicable.
- **MinimumIops**: Minimum amount of Iops that is applicable for given storage type. It can be empty if it is not applicable.

### `limitName` parameter

- **Name of storage limits that are applicable for given storage type.** If `StorageType` is ebs, the following storage options are applicable:

  - **MinimumVolumeSize**: Minimum amount of volume size that is applicable for given storage type. It can be empty if it is not applicable.
  - **MaximumVolumeSize**: Maximum amount of volume size that is applicable for given storage type. It can be empty if it is not applicable.
  - **MaximumIops**: Maximum amount of Iops that is applicable for given storage type. It can be empty if it is not applicable.
  - **MinimumIops**: Minimum amount of Iops that is applicable for given storage type. It can be empty if it is not applicable.

### `LimitValues` object

- **Setter Method Name**: `setLimitValues`
- **Bean Style Setter Method Name**: `setLimitValues`
- **C2J Name**: `LimitValues`
- **C2J Shape**: `LimitValueList`
- **Default Consumer Fluent Setter Documentation**: This is a convenience that creates an instance of the `LimitValues` class avoiding the need to create one manually via `List<String>.builder()`. When the `LimitValues` is called, it is immediately passed to the consumer as a `List<String>`. Returns a reference to this object so that method calls can be chained.
@see #limitValues(List<String>)

  }
}
Container for response returned by <code>UpgradeElasticsearchDomain</code> operation.

This is a convenience that creates an instance of the <code>String.Builder</code> avoiding the need to create one manually via <code>String.Builder().<a>domainName</a>()</code>. When the <code>Consumer</code> completes, <code>domainName(String)</code> is called immediately and its result is passed to <code>DomainName(String)</code>. Returns a reference to this object so that method calls can be chained together.

```
@deprecated
```

The new value for the DomainName property for this object.

```
@returun
```

The value of the DomainName property for this object.

```

/**
 * <p>Allows you to either upgrade your domain or perform an Upgrade eligibility check to a compatible
 * Elasticsearch version.</p>
 * 
 * @param upgradeElasticsearchDomainRequest
 * @return Result of the UpgradeElasticsearchDomain operation returned by the service.
 * @throws BaseException
 * @throws ResourceNotFoundException
 * @throws ResourceAlreadyExistsException
 * @throws DisabledOperationException
 */

* @throws ValidationException
*     An exception for missing / invalid input fields. Gives http status code of 400.
* @throws InternalException
*     The request processing has failed because of an unknown error, exception or failure (the failure is
*     internal to the service). Gives http status code of 500.
* @throws SdkException
*     Base class for all exceptions that can be thrown by the SDK (both service and client). Can be used for
*     catch all scenarios.
* @throws SdkClientException
