The token to use to retrieve the next page of results. This value is null when there are no more results to return.

@returns
Returns a reference to this object so that method calls can be chained together.

The token to use to retrieve the next page of results. This value is null when there are no more results to return.

  <li> <p> <code>association.association-id</code> - The ID of an association ID for the ACL.</p> </li>
  <li> <p> <code>association.network-acl-id</code> - The ID of the network ACL involved in the association.</p> </li>
  <li> <p> <code>association.subnet-id</code> - The ID of the subnet involved in the association.</p> </li>
  <li> <p> <code>default</code> - Indicates whether the ACL is the default network ACL for the VPC.</p> </li>
  <li> <p> <code>entry.cidr</code> - The IPv4 CIDR range specified in the entry.</p> </li>
  <li> <p> <code>entry.egress</code> - Indicates whether the entry applies to egress traffic.</p> </li>
  <li> <p> <code>entry.icmp.code</code> - The ICMP code specified in the entry, if any.</p> </li>
  <li> <p> <code>entry.icmp.type</code> - The ICMP type specified in the entry, if any.</p> </li>
  <li> <p> <code>entry.ipv6-cidr</code> - The IPv6 CIDR range specified in the entry.</p> </li>
  <li> <p> <code>entry.ports-range.from</code> - The start of the port range specified in the entry.</p> </li>
  <li> <p> <code>entry.ports-range.to</code> - The end of the port range specified in the entry.</p> </li>
  <li> <p> <code>entry.protocol</code> - The protocol specified in the entry (code>tcp</code> | code>udp</code> | code>icmp</code> or a protocol number).</p> </li>
  <li> <p> <code>entry.rule-action</code> - Allows or denies
the matching traffic (<code>allow</code> | <code>deny</code>). | <code>entry.rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries. | <code>entry.icmp.code</code> - The ICMP code specified in the entry, if any. | <code>entry.icmp.type</code> - The ICMP type specified in the entry, if any. | <code>entry.ipv6-cidr</code> - The IPv6 CIDR range specified in the entry. | <code>entry.port-range.from</code> - The start of the port range specified in the entry. | <code>entry.port-range.to</code> - The end of the port range specified in the entry. | <code>entry.protocol</code> - The protocol specified in the entry (IPv4 or IPv6). | <code>entry.egress</code> - Indicates whether the entry applies to egress traffic. | <code>entry.rule-action</code> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>). | <code>entry.rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries. | <code>network-acl-id</code> - The ID of the network ACL. | <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. | <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). | <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. | <code>vpc-id</code> - The ID of the VPC for the network ACL. | <ul>
<li> <p> <code>association.association-id</code> - The ID of an association ID for the ACL.</p> </li> <li> <p> <code>association.network-acl-id</code> - The ID of the network ACL involved in the association.</p> </li> <li> <p> <code>association.subnet-id</code> - The ID of the subnet involved in the association.</p> </li> <li> <p> <code>default</code> - Indicates whether the ACL is the default network ACL for the VPC.</p> </li> <li> <p> <code>entry.cidr</code> - The IPv4 CIDR range specified in the entry.</p> </li> <li> <p> <code>entry.egress</code> - Indicates whether the entry applies to egress traffic.</p> </li> <li> <p> <code>entry.icmp.code</code> - The ICMP code specified in the entry, if any.</p> </li> <li> <p> <code>entry.icmp.type</code> - The ICMP type specified in the entry, if any.</p> </li> <li> <p> <code>entry.ipv6-cidr</code> - The IPv6 CIDR range specified in the entry.</p> </li> <li> <p> <code>entry.port-range.from</code> - The start of the port range specified in the entry.</p> </li> <li> <p> <code>entry.port-range.to</code> - The end of the port range specified in the entry.</p> </li> <li> <p> <code>entry.protocol</code> - The protocol specified in the entry (IPv4 or IPv6). | <code>entry.egress</code> - Indicates whether the entry applies to egress traffic.</p> </li> <li> <p> <code>entry.rule-action</code> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>). | <code>entry.rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries. | <code>network-acl-id</code> - The ID of the network ACL. | <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. | <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). | <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. | <code>vpc-id</code> - The ID of the VPC for the network ACL. | <ul>
<code>entry.ipv6-cidr</code> - The IPv6 CIDR range specified in the entry.

- The start of the port range specified in the entry.  
  <p>  
  <li> <p> <code>entry.port-range.from</code> - The end of the port range specified in the entry.  
  </li>  
  </p>

- The protocol specified in the entry (\<code>tcp</code> | \<code>udp</code> | \<code>icmp</code> or a protocol number).  
  </li>  
  <p>  
  <li> <p> <code>entry.rule-action</code> - Allows or denies the matching traffic (\<code>allow</code> | \<code>deny</code>).  
  </li>  
  </p>

- The number of an entry (in other words, rule) in the ACL’s set of entries.

- The ID of the network ACL.

- The key/value combination of a tag assigned to the resource.  
  Specify the key of the tag in the filter name and the value of the tag in the filter value.  
  For example, for the tag Purpose=X, specify \<code>tag:Purpose</code> for the filter name and \<code>X</code> for the filter value.

- The start of the port range specified in the entry.  

- The end of the port range specified in the entry.  

- The protocol specified in the entry (\<code>tcp</code> | \<code>udp</code> | \<code>icmp</code> or a protocol number).  

- Allows or denies the matching traffic (\<code>allow</code> | \<code>deny</code>).  

- The number of an entry (in other words, rule) in the ACL’s set of entries.

- The ID of the network ACL.

- The key/value combination of a tag assigned to the resource.  
  Specify the key of the tag in the filter name and the value of the tag in the filter value.  
  For example, for the tag Purpose=X, specify \<code>tag:Purpose</code> for the filter name and \<code>X</code> for the filter value.

- The start of the port range specified in the entry.  

- The end of the port range specified in the entry.  

- The protocol specified in the entry (\<code>tcp</code> | \<code>udp</code> | \<code>icmp</code> or a protocol number).  

- Allows or denies the matching traffic (\<code>allow</code> | \<code>deny</code>).  

- The number of an entry (in other words, rule) in the ACL’s set of entries.

- The ID of the network ACL.

get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the
<code>tag</code>:::<i>key</i>=<i>value</i> filter. If you want to list only resources where the tag key is X (regardless of what the tag's value is), use the
<code>tag</code>::<i>value</i> filter. For example, to list tags where the value is "X" and the key is "Purpose", use
<code>tag</code>::<i>key</i>=<i>value</i> filter. This filter is independent of the <code>tag-key</code> filter. If you want to list only resources where the tag key is "Purpose" (regardless of what the tag's value is), use
<code>tag-key</code>::<i>value</i> filter. This filter is independent of the <code>tag-value</code> filter.

### Filters

**<code>tag-key</code>:<i>value</i>** - The ID of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. If you want to list only resources where the tag key is "Purpose" (regardless of what the tag's value is), use
<code>tag-key</code>::<i>value</i> filter. This filter is independent of the <code>tag-value</code> filter.

**<code>tag-value</code>** - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
- The ICMP type specified in the entry, if any.</p> <li> <p> The IPv6 CIDR range specified in the entry.</p> <li> <p> The start of the port range specified in the entry.</p> <li> <p> The end of the port range specified in the entry.</p> <li> <p> The protocol specified in the entry (tcp | udp | icmp or a protocol number).</p> <li> <p> Allows or denies the matching traffic (allow | deny).</p> <li> <p> The number of an entry (in other words, rule) in the ACL's set of entries.</p> <li> <p> The ID of the network ACL.</p> <li> <p> The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code> Purpose=X</code> for the filter value.</p> <li> <p> The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=VPC\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value VPC (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code> filter.</p> <li> <p> The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code> Purpose=X</code> for the filter value.</p> <li> <p> The ID of the VPC for the network ACL.</p> <li> <p> Indicates whether the ACL is the default network ACL for the VPC.</p> <li> <p> The IPv4 CIDR range specified in the entry.</p> <li> <p> Indicates whether the entry applies to egress traffic.</p> <li> <p> The ICMP type specified in the entry, if any.</p> <li> <p> The ICMP type specified in the entry, if any.</p> <li> <p> The IPv6 CIDR range specified in the entry.</p> <li> <p> The start of the port range specified in the entry.</p> <li> <p> The end of the port range specified in the entry.</p> <li> <p> The protocol specified in the entry (tcp | udp | icmp or a protocol number).</p> <li> <p> Allows or denies the matching traffic (allow | deny).</p> <li> <p> The number of an entry (in other words, rule) in the ACL's set of entries.</p> <li> <p> The ID of the network ACL.</p> <li> <p> The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. </li> <li> <p> <code>entry.port-range.from</code> - The start of the port range specified in the entry.  

</li> <li> <p> <code>entry.port-range.to</code> - The end of the port range specified in the entry.  

</li> <li> <p> <code>protocol</code> - The protocol specified in the entry (TCP | UDP | ICMP or a protocol number).  

</li> <li> <p> <code>rule-action</code> - Allows or denies the matching traffic (allow | deny).  

</li> <li> <p> <code>rule-number</code> - The number of an entry (in other words, rule) in the ACL's set of entries.  

</li> 

</ul>
<code>tag</code>:<i>key</i>=<i>value</i> filter. - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<i>vpc-id</i> - The ID of the VPC for the network ACL.

<i>association.association-id</i> - The ID of an association ID for the ACL.

<i>association.network-acl-id</i> - The ID of the network ACL involved in the association.

<i>association.subnet-id</i> - The ID of the subnet involved in the association.

<i>default</i> - Indicates whether the ACL is the default network ACL for the VPC.

<i>entry.cidr</i> - The IPv4 CIDR range specified in the entry.

<i>entry.egress</i> - Indicates whether the entry applies to egress traffic.

<i>entry.icmp</i> - The ICMP code specified in the entry, if any.

<i>entry.icmp.type</i> - The ICMP type specified in the entry, if any.

<i>entry.ipv6-cidr</i> - The IPv6 CIDR range specified in the entry.

<i>entry.port-range.from</i> - The start of the port range specified in the entry.

<i>entry.port-range.to</i> - The end of the port range specified in the entry.

<i>entry.protocol</i> - The protocol specified in the entry (<code>tcp</code> | <code>udp</code> | <code>icmp</code> or a protocol number).

<i>entry.rule-action</i> - Allows or denies the matching traffic (<code>allow</code> | <code>deny</code>).

<i>entry.rule-number</i> - The number of an entry (in other words, rule) in the ACL's set of entries.

<i>network-acl-id</i> - The ID of the network ACL.

<i>tag</i>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=Z, specify <code>tag:Purpose</code> for the filter name and <code>Z</code> for the filter value.

<i>tag-key</i> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=Z\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value Z (regardless of what the tag's key is). If you want to list only resources where Purpose is Z, see the <code>tag:tag=value</code> filter.

<i>tag-value</i> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<i>vpc-id</i> - The ID of the VPC for the network ACL.

A value of <code>true</code> means checking is enabled, and
<code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. 

- <code>status</code>: The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.

- <code>subnet-id</code>: The ID of the subnet for the network interface.

- <code>tag-key</code>: The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag-value</code> filter.

- <code>tag-key</code>:<i>key</i>=<i>value</i>: The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

- <code>tag-value</code>: The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

- <code>vpc-id</code>: The ID of the VPC for the network interface.
id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). </p> </li> <li> <p> <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). </p> </li> <li> <p> <code>source-desk-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. </p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>. </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>-purpose=X</code> for the filter value. </p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter. </p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface. </p> </li> <li> <p> <code>addresses.private-ip-address</code> - The private IPv4 addresses associated with the primary IP address associated with the network interface. </p> </li> <li> <p> <code>addresses.association.public-ip</code> - The association ID returned when the network interface was associated with the Elastic IP address (IPv4). </p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the interface attachment. </p> </li> <li> <p> <code>attachment.attach.time</code> - The time that the network interface was attached to an instance. </p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated. </p> </li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached. </p> </li> <li> <p> <code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached. </p> </li> <li> <p> <code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached. </p> </li> <li> <p> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached. </p> </li> <li> <p> <code>attachment.status</code> - The status of the attachment (attaching | attaching | attached | detached). </p> </li> <li> <p> <code>availability-zone</code> - The Availability Zone of the network interface. </p> </li> <li> <p> <code>description</code> - The description of the network interface. </p> </li> <li> <p> <code>group-id</code> - The ID of a security group associated with the network interface. </p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface. </p> </li> <li> <p> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface. </p> </li> <li> <p> <code>mac-address</code> - The MAC address of the network interface. </p> </li> <li> <p> <code>network-interface-
id</code> - The ID of the network interface. 
<li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner. 
</li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface. 
</li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4). 
</li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). 
</li> <li> <p> <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). 
</li> <li> <p> <code>source-des- check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. 
</li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>. 
</li> <li> <p> <code>tag:Key</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. 
</li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter \"tag-key=CostCenter\" and the filter \"tag-value=X\", you get any resources assigned both the tag key CostCenter (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag=tag-value</code> filter. 
</li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface. 
</li> <p> <code>addresses.private-ip-address</code> - The private IPv4 addresses associated with the network interface. 
</li> <li> <p> <code>addresses.association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface. 
</li> <li> <p> <code>association.public-dns-name</code> - The public DNS name for the network interface (IPv4). 
</li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached. 
</li> <li> <p> <code>attachment-instance-id</code> - The ID of the instance to which the network interface is attached. 
</li> <li> <p> <code>attachment-instance-owner-id</code> - The owner ID of the instance to which the network interface is attached. 
</li> <li> <p> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached. 
</li> <li> <p> <code>attachment.status</code> - The status of the attachment. 
</li> <li> <p> <code>availability-zone</code> - TheAvailability Zone of the
network interface.</p> <li> <p> <code>description</code> - The description of the network interface.</p> </li> <li> <p> <code>group-id</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface.</p> </li> <li> <p> <code>mac-address</code> - The MAC address of the network interface.</p> </li> <li> <p> <code>network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.</p> </li> <li> <p> <code>tag:<i>key</i>=<i>value</i></code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-value</code>:<i>key</i>=<i>value</i> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li> <li> <p> <code>addresses.private-ip-address</code> - The private IPv4 addresses associated with the network interface.</p> </li> <li> <p> <code>addresses.association.allocation-id</code> - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.</p> </li> <li> <p> <code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</p> </li> <li> <p> <code>association.public-dns-name</code> - The public DNS name for the network interface (IPv4).</p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the network interface attachment.</p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached.</p> </li>
attached.</li> <li> <p> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached.</p> </li> <li> <p> <code>attachment.status</code> - The status of the attachment.</p> </li> <li> <p> <code>availability-zone</code> - The Availability Zone of the network interface.</p> </li> <li> <p> <code>description</code> - The description of the network interface.</p> </li> <li> <p> <code>device-index</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>group-id</code> - The ID of the NAT gateway to which the network interface is attached.</p> </li> <li> <p> <code>network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>tags</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, to list all resources assigned tag key Purpose with value X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li>

A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. </p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>. </p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the network interface. </p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X,
specify `<code>tag:Purpose</code>` for the filter name and `<code>X</code>` for the filter value.  

- `<code>tag-key</code>` - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter `\tag-key=Purpose\` and the filter `\tag-value=X\`, you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>="<i>value</i>" filter. 

- `<code>tag-value</code>` - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. 

- `<code>vpc-id</code>` - The ID of the VPC for the network interface. 

- `<code>addresses.private-ip-address</code>` - The private IPv4 addresses associated with the network interface. 

- `<code>addresses.private-dns-name</code>` - The private DNS name of the network interface (IPv4). 

- `<code>addresses.association.public-ip</code>` - The address of the Elastic IP address (IPv4) bound to the network interface. 

- `<code>addresses.association.owner-id</code>` - The owner ID of the Elastic IP address (IPv4). 

- `<code>vpc-id</code>` - The ID of the VPC for the network interface. 

- `<code>attachment.attachment-id</code>` - The ID of the interface attachment. 

- `<code>attachment.delete-on-termination</code>` - Indicates whether the attachment is deleted when an instance is terminated. 

- `<code>attachment.device-index</code>` - The device index to which the network interface is attached. 

- `<code>attachment.instance-id</code>` - The ID of the instance to which the network interface is attached. 

- `<code>attachment.instance-owner-id</code>` - The owner ID of the instance to which the network interface is attached. 

- `<code>attachment.nat-gateway-id</code>` - The ID of the NAT gateway to which the network interface is attached. 

- `<code>availability-zone</code>` - The Availability Zone of the network interface. 

- `<code>description</code>` - The description of the network interface. 

- `<code>group-id</code>` - The ID of a security group associated with the network interface. 

- `<code>group-name</code>` - The name of a security group associated with the network interface. 

- `<code>ipv6-addresses.ipv6-address</code>` - An IPv6 address associated with the network interface. 

- `<code>mac-address</code>` - The MAC address of the network interface. 

- `<code>network-interface-id</code>` - The ID of the network interface. 

- `<code>owner-id</code>` - The AWS account ID of the network interface owner. 

- `<code>private-ip-address</code>` - The private IPv4 address or addresses of the network interface. 

- `<code>private-dns-name</code>` - The private DNS name of the network interface (IPv4). 

- `<code>requester-id</code>` - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). 

- `<code>requester-managed</code>` - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). 

- `<code>source-desk-check</code>` - Indicates whether the network interface performs source/destination checking. A value of `<code>true</code>` means checking is enabled, and `<code>false</code>` means checking is disabled. The value must be `<code>false</code>` for the network interface to perform network address translation (NAT) in your VPC.
The status of the network interface. If the network interface is not attached to an instance, the status is `<code>available</code>`; if a network interface is attached to an instance the status is `<code>in-use</code>`.

- `<code>attachment.attachment-id</code>` - The ID of the interface attachment.
- `<code>attachment.attach.time</code>` - The time that the network interface was attached to an instance.
- `<code>attachment.delete-on-termination</code>` - Indicates whether the attachment is deleted when an instance is terminated.
- `<code>attachment.device-index</code>` - The device index to which the network interface is attached.
- `<code>attachment.instance-id</code>` - The ID of the instance to which the network interface is attached.
- `<code>attachment-instance-owner-id</code>` - The owner ID of the instance to which the network interface is attached.
- `<code>attachment.nat-gateway-id</code>` - The ID of the NAT gateway to which the network interface is attached.
- `<code>attachment.status</code>` - The status of the attachment (`<code>attaching</code>` | `<code>attached</code>` | `<code>detaching</code>` | `<code>detached</code>`).
- `<code>availability-zone</code>` - The Availability Zone of the network interface.
- `<code>description</code>` - The description of the network interface.
- `<code>group-id</code>` - The ID of a security group associated with the network interface.
- `<code>group-name</code>` - The name of a security group associated with the network interface.
- `<code>ipv6-addresses.ipv6-address</code>` - An IPv6 address associated with the network interface.
- `<code>mac-address</code>` - The MAC address of the network interface.
- `<code>network-interface-id</code>` - The ID of the network interface.
- `<code>owner-id</code>` - The AWS account ID of the network interface owner.
address - The private IPv4 address or addresses of the network interface.
addresses.private-dns-name - The private DNS name of the network interface (IPv4).
The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).
addresses.requester-id - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).
addresses.requester-managed - The status of the network interface. If the network interface is not attached to an instance, the status is 'available'; if a network interface is attached to an instance the status is 'in-use'.
addresses.status - The status of the network interface. If the network interface is not attached to an instance, the status is 'available'; if a network interface is attached to an instance the status is 'in-use'.
addresses.subnet-id - The ID of the subnet for the network interface.
addresses.tag:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
addresses.tag-key - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter '\tag-key=Purpose\" and the filter '\tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>key</i>=<i>value</i></code> filter.
addresses.tag-value - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter '\tag-key=Purpose\" and the filter '\tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:<i>key</i>=<i>value</i></code> filter.
association.association-id - The ID of the association for the network interface.
association.allocation-id - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface.
association.ip-owner-id - The owner of the Elastic IP address (IPv4) associated with the network interface.
association.public-ip - The public IPv4 address assigned to the network interface.
association.public-dns-name - The public DNS name for the network interface (IPv4).
attachment.attachment-id - The ID of the interface attachment.
attachment.delete-on-termination - Indicates whether the attachment is deleted when an instance is terminated.
<code>attachment.device-index</code> - The device index to which the network interface is attached.<p>  
IPv4) bound to the network interface. The public DNS name for the network interface (IPv4). The ID of the interface attachment. The time that the network interface was attached to an instance. Indicates whether the attachment is deleted when an instance is terminated. The device index to which the network interface is attached. The ID of the instance to which the network interface is attached. The public DNS name for the network interface (IPv4). The owner ID of the instance to which the network interface is attached. The MAC address of the network interface. The ID of the network interface. The ID of the network interface. The AWS account ID of the network interface owner. The private IPv4 address or addresses of the network interface. The private DNS name of the network interface. The ID of the VPC for the network interface. The key/value combination of a tag assigned to the resource. The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=XV\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code>. The association ID returned when the network interface was associated with the Elastic IP address (IPv4). The owner ID of the addresses associated with the network interface. The association ID returned when the network interface was associated with the network interface. The VPC ID for the network interface. If the network interface is not attached to an instance, the status is available. If a network interface is attached to an instance the status is in-use. The ID of the subnet for the network interface. The ID of the instance to which the network interface is attached. The status of the attachment. The ID of the NAT gateway to which the network interface is attached. The status of the attachment. Indicates whether the network interface is performing source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. The ID of the security group associated with the network interface. The name of a security group associated with the network interface. An IPv6 address associated with the network interface. The MAC address of the network interface. The ID of the network interface. The name of the security group associated with the network interface. The private IPv4 address or addresses of the network interface. The private DNS name of the network interface (IPv4). Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). Indicates whether the network interface has source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. Any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code>. The association ID returned when the network interface was associated with the Elastic IP address (IPv4). The VPC ID for the network interface. Whether the private IPv4 address is the primary IP address associated with the network interface. The owner ID of the addresses associated with the network interface. The association ID returned when the network interface was associated with the network interface. The owner ID of the addresses associated with the network interface.
with an IPv4 address.</p> </li> <li> <p> <code>association.allocation-id</code> - The allocation ID returned when
you allocated the Elastic IP address (IPv4) for your network interface.</p> </li> <li> <p> <code>association.ipowner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</p> </li> <li>
<p> <code>association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network
interface.</p> </li> <li> <p> <code>association.public-dns-name</code> - The public DNS name for the network
interface (IPv4).</p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the interface
attachment.</p> </li> <li> <p> <code>attachment.attach.time</code> - The time that the network interface was
attached to an instance.</p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the
attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>attachment.device-index</code> The device index to which the network interface is attached.</p> </li> <li> <p> <code>attachment.instanceid</code> - The ID of the instance to which the network interface is attached.</p> </li> <li> <p>
<code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is
attached.</p> </li> <li> <p> <code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the
network interface is attached.</p> </li> <li> <p> <code>attachment.status</code> - The status of the attachment
(<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>).</p>
</li> <li> <p> <code>availability-zone</code> - The Availability Zone of the network interface.</p> </li> <li> <p>
the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or
addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of
the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the
instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p>
<code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service
(for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>source-deskcheck</code> - Indicates whether the network interface performs source/destination checking. A value of
<code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value
must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.
</p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not
attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the
status is <code>in-use</code>.</p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the network
interface.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag
assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For

Open Source Used In Virtualized Voice Browser 12.6(1) 21575


<code>addresses.primary</code> - Whether the private IPv4 address is the primary IP address associated with the network interface. 

<code>addresses.association.association-id</code> - The association ID returned when the network interface was associated with the Elastic IP address (IPv4). 

<code>addresses.association.owner-id</code> - The owner ID of the addresses associated with the network interface. 

<code>addresses.association.allocate-only</code> - The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface. 

<code>addresses.association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface. 

<code>addresses.association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface. 

<code>addresses.association.public-dns-name</code> - The public DNS name for the network interface (IPv4). 

<code>addresses.association.public-association-id</code> - The ID of the interface attachment. 

<code>addresses.association.public-association-id</code> - The ID that the network interface was attached to an instance. 

<code>addresses.association.public-association-id</code> - Indicates whether the attachment is deleted when an instance is terminated. 

<code>addresses.association.allocation-id</code> - The ID of the Elastic IP address (IPv4) for your network interface. 

<code>addresses.association.owner-id</code> - The owner ID of the addresses associated with the network interface. 

<code>addresses.association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface. 

<code>addresses.association.public-dns-name</code> - The public DNS name for the network interface (IPv4). 

<code>addresses.association.public-association-id</code> - The ID of the interface attachment. 

<code>addresses.association.public-association-id</code> - The ID that the network interface was attached to an instance. 

<code>addresses.association.public-association-id</code> - Indicates whether the attachment is deleted when an instance is terminated. 

<code>attachment.attachment-id</code> - The ID of the interface attachment. 

<code>attachment.attach.time</code> - The time that the network interface was attached to an instance. 

<code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated. 

<code>attachment.device-index</code> - The device index to which the network interface is attached. 

<code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached. 

<code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached. 

<code>attachment.nat-gateway-id</code> - The ID of the NAT gateway to which the network interface is attached. 

<code>attachment.status</code> - The status of the attachment (attaching | attached | detaching | detached). 

<code>availability-zone</code> - The Availability Zone of the network interface. 

<code>description</code> - The description of the network interface. 

<code>group-id</code> - The ID of a security group associated with the network interface. 

<code>group-name</code> - The name of a security group associated with the network interface. 

<code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface. 

<code>mac-address</code> - The MAC address of the network interface. 

<code>network-interface-id</code> - The ID of the network interface. 

<code>owner-id</code> - The AWS account ID of the network interface owner. 

<code>private-ip-address</code> - The private IPv4 address or addresses of the network interface. 

<code>private-dns-name</code> - The private DNS name of the network interface (IPv4). 

<code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). 

<code>requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). 

<code>source-desk-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. 

<code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>. 

<code>tag-value</code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=Network, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. 

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \`tag-key=Purpose\' and the filter \`tag-value=X\', you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag-value</code> filter.
tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. 

- The ID of the VPC for the network interface. 

- The private IPv4 addresses associated with the network interface. 

- Whether the private IPv4 address is the primary IP address associated with the network interface. 

- The association ID returned when the network interface was associated with the Elastic IP address (IPv4). 

- The owner ID of the addresses associated with the network interface. 

- The association ID returned when the network interface was associated with an IPv4 address. 

- The allocation ID returned when you allocated the Elastic IP address (IPv4) for your network interface. 

- The owner of the Elastic IP address (IPv4) associated with the network interface. 

- The address of the Elastic IP address (IPv4) bound to the network interface. 

- The public DNS name for the network interface (IPv4). 

- The ID of the instance to which the network interface is attached. 

- The ID of the NAT gateway to which the network interface is attached. 

- The status of the attachment. 

- The time that the network interface was attached to an instance. 

- Indicates whether the attachment is deleted when an instance is terminated. 

- The ID of the security group associated with the network interface. 

- The ID of a security group associated with the network interface. 

- The name of a security group associated with the network interface. 

- An IPv6 address associated with the network interface. 

- The MAC address of the network interface. 

- The AWS account ID of the network interface owner. 

- The private IPv4 address or addresses of the network interface. 

- The private DNS name of the network interface (IPv4). 

- The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on). 

- Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on). 

- Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC. 

- The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>. 

- The ID of the subnet for the network interface. 

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>"X"</code> for the filter value. 

- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "\tag-key=Purpose\" and
the filter "tag-value=X" , you get any resources assigned both the tag key Purpose (regardless of what the tag's
value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose
is X, see the <code>tag</code> key=<i>value</i> filter. The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

- The ID of the VPC for the network interface.

A value of...
true means checking is enabled, and false means checking is disabled. The value must be false for the network interface to perform network address translation (NAT) in your VPC. The status of the network interface. If the network interface is not attached to an instance, the status is available; if a network interface is attached to an instance the status is in-use. The ID of the subnet for the network interface. The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value. - The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter tag-key=Purpose and the filter tag-value=X, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose filter. The value of a tag assigned to the resource. This filter is independent of the tag-key filter. The ID of the VPC for the network interface. One or more filters. The private IPv4 addresses associated with the network interface. Whether the private IPv4 address is the primary IP address associated with the network interface. The association ID returned when the network interface was associated with the Elastic IP address (IPv4). The owner ID of the addresses associated with the network interface. The association ID returned when the network interface was associated with an IPv4 address. The owner ID of the addresses associated with the network interface. The owner of the Elastic IP address (IPv4) associated with the network interface. The address of the Elastic IP address (IPv4) bound to the network interface. The public DNS name for the network interface (IPv4). The ID of the interface attachment. The time that the network interface was attached to an instance. Indicates whether the attachment is deleted when an instance is terminated. The device index to which the network interface is attached. The ID of the instance to which the network interface is attached. The owner ID of the instance to which the network interface is attached. The ID of the NAT gateway to which the network interface is attached. The status of the attachment. The Availability Zone of the network interface.
network interface.</p> </li> <li> <p> <code>description</code> - The description of the network interface.</p> </li> <li> <p> <code>group-id</code> - The ID of a security group associated with the network interface.</p> </li> <li> <p> <code>group-name</code> - The name of a security group associated with the network interface.</p> </li> <li> <p> <code>ipv6-addresses.ipv6-address</code> - An IPv6 address associated with the network interface.</p> </li> <li> <p> <code>mac-address</code> - The MAC address of the network interface.</p> </li> <li> <p> <code>network-interface-id</code> - The ID of the network interface.</p> </li> <li> <p> <code>owner-id</code> - The AWS account ID of the network interface owner.</p> </li> <li> <p> <code>private-ip-address</code> - The private IPv4 address or addresses of the network interface.</p> </li> <li> <p> <code>private-dns-name</code> - The private DNS name of the network interface (IPv4).</p> </li> <li> <p> <code>requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</p> </li> <li> <p> <code>source-desk-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.</p> </li> <li> <p> <code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.</p> </li> <li> <p> <code>subnet-id</code> - The ID of the subnet for the network interface.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-value</code>:<i>key</i>=<i>value</i> filter.</p> </li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-key</code>:<i>key</i>=<i>value</i> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the network interface.</p> </li> <li> <p> <code>addresses.private-ip-address</code> - The private IPv4 addresses associated with the network interface.</p> </li> <li> <p> <code>addresses.primary</code> - Whether the private IPv4 address is the primary IP address associated with the network interface.</p> </li> <li> <p> <code>addresses.association.public-ip</code> - The association ID returned when the network interface was associated with the Elastic IP address (IPv4).</p> </li> <li> <p> <code>addresses.association.public-dns-name</code> - The public DNS name for the network interface (IPv4).</p> </li> <li> <p> <code>attachment.attachment-id</code> - The ID of the interface attachment.</p> </li> <li> <p> <code>attachment.attach.time</code> - The time that the network interface was attached to an instance.</p> </li> <li> <p> <code>attachment.delete-on-termination</code> - Indicates whether the attachment is deleted when an instance is terminated.</p> </li> <li> <p> <code>attachment.device-index</code> - The device index to which the network interface is attached.</p> </li>
<li><code>association.ip-owner-id</code> - The owner of the Elastic IP address (IPv4) associated with the network interface.</li>
<li><code>association.public-ip</code> - The address of the Elastic IP address (IPv4) bound to the network interface (IPv4).</li>
<li><code>association.public-dns-name</code> - The public DNS name for the network interface (IPv4).</li>
<li><code>attachment.attachment-id</code> - The ID of the interface attachment.</li>
<li><code>attachment.attach.time</code> - The time that the network interface was attached to an instance.</li>
<li><code>attachment.device-index</code> - The device index to which the network interface is attached.</li>
<li><code>attachment.instance-id</code> - The ID of the instance to which the network interface is attached.</li>
<li><code>attachment.instance-owner-id</code> - The owner ID of the instance to which the network interface is attached.</li>
<li><code>attachment.attachment-owner-id</code> - The ID of the NAT gateway to which the network interface is attached.</li>
<li><code>attachment.delete-on-termination</code> - The status of the attachment.</li>
<li><code>attachment.owner-id</code> - The AWS account ID of the network interface owner.</li>
<li><code>attachment.private-ip-address</code> - The private IPv4 address or addresses of the network interface.</li>
<li><code>attachment.private-dns-name</code> - The private DNS name of the network interface (IPv4).</li>
<li><code>attachment.requester-id</code> - The ID of the entity that launched the instance on your behalf (for example, AWS Management Console, Auto Scaling, and so on).</li>
<li><code>attachment.requester-managed</code> - Indicates whether the network interface is being managed by an AWS service (for example, AWS Management Console, Auto Scaling, and so on).</li>
<li><code>source-desk-check</code> - Indicates whether the network interface performs source/destination checking. A value of <code>true</code> means checking is enabled, and <code>false</code> means checking is disabled. The value must be <code>false</code> for the network interface to perform network address translation (NAT) in your VPC.</li>
<li><code>status</code> - The status of the network interface. If the network interface is not attached to an instance, the status is <code>available</code>; if a network interface is attached to an instance the status is <code>in-use</code>.</li>
<li><code>tag</code>:<i>tag</i>=<i>tag</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li>
<li><code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:-purpose</code>:<i>tag</i>=<i>tag</i> filter. This filter is independent of the <code>tag-key</code> filter.</li>
<li><code>vpc-id</code> - The ID of the VPC for the network interface.</li>

One or more filters.

- **group-name**: The name of the placement group.
- **state**: The state of the placement group.
- **strategy**: The strategy of the placement group.

The method appends the values to the existing list (if any). Use `#setFilters(java.util.Collection)` or `#withFilters(java.util.Collection)` if you want to override the existing values.

**One or more placement group names.**

**Default:** Describes all your placement groups, or only those otherwise specified.

**NOTE:** This method appends the values to the existing list (if any). Use [setGroupNames(java.util.Collection)](com.amazonaws.internal.SdkInternalList<String>) or [withGroupNames(java.util.Collection)](java.util.List<String>) if you want to override the existing values.

```java
public DescribePlacementGroupsResult withGroupNames(java.util.Collection<String> groupNames)
```

**Returns:** Returns a reference to this object so that method calls can be chained together.

```java
public DescribePlacementGroupsResult withGroupNames(java.util.Collection<String> groupNames)
```

**Description:**

Contains the output of DescribePlacementGroups.

```java
public DescribePlacementGroupsResult withGroupNames(java.util.Collection<String> groupNames)
```

**Returns:** Returns a reference to this object so that method calls can be chained together.

```java
public DescribePlacementGroupsResult withGroupNames(java.util.Collection<String> groupNames)
```

  "variableDeclarationType" : "com.amazonaws.internal.SdkInternalList<Region>",
  "variableName" : "regions"
This method appends the values to the existing list (if any). Use [link #setRegions(java.util.Collection)] or [link #withRegions(java.util.Collection)] if you want to override the existing values.

Information about one or more regions.

Returns a reference to this object so that method calls can be chained together.

</div>

### Examples

**Java**

```java
// Create and set filters
ReservedInstancesModificationRequest.ModificationFilters filters = new ReservedInstancesModificationRequest.ModificationFilters();
filters.withClientToken("my-client-token").withCreateDate(new Date()).withEffectiveDate(new Date());
```

**Python**

```python
# Create and set filters
filters = ReservedInstancesModificationRequest.ModificationFilters()
filters.client_token = "my-client-token"
filters.create_date = datetime.datetime.now()
filters.effective_date = datetime.datetime.now()
```

### Filters

- **Availability Zone**: The Availability Zone where the Reserved Instance can be used.
- **Duration**: The duration of the Reserved Instance (for example, one year or three years), in seconds (31536000 | 94608000).
- **Fixed Price**: The purchase price of the Reserved Instance (for example, 9800.0).
- **Instance Type**: The instance type that is covered by the reservation.
- **Marketplace**: Set to true to show only Reserved Instance Marketplace offerings. When this filter is not used, all offerings from both AWS and the Reserved Instance Marketplace are listed.
- **Product Description**: The Reserved Instance product description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC. (Linux/UNIX | Linux/UNIX (Amazon VPC) | SUSE Linux | SUSE Linux (Amazon VPC) | Red Hat Enterprise Linux | Red Hat Enterprise Linux (Amazon VPC) | Windows | Windows (Amazon VPC) | Windows with SQL Server Standard | Windows with SQL Server Web | Windows with SQL Server Enterprise | Windows with SQL Server Enterprise (Amazon VPC)).
- **Reserved Instances Offering ID**: The Reserved Instances offering ID.
- **Scope**: The scope of the Reserved Instance (Availability Zone or Region).
- **Usage Price**: The usage price of the Reserved Instance, per hour (for example, 0.84).

### Method Signatures

One or more filters.

- **availability-zone** - The Availability Zone where the Reserved Instance can be used.
- **duration** - The duration of the Reserved Instance (for example, one year or three years), in seconds.
- **fixed-price** - The purchase price of the Reserved Instance (for example, 9800.0).
- **instance-type** - The instance type that is covered by the reservation.
- **marketplace** - Set to true to show only Reserved Instance Marketplace offerings. When this filter is not used, which is the default behavior, all offerings from both AWS and the Reserved Instance Marketplace are listed.
- **product-description** - The Reserved Instance product platform description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC.
- **reserved-instances-offering-id** - The Reserved Instances offering ID.
- **scope** - The scope of the Reserved Instance (Availability Zone or Region).
- **usage-price** - The usage price of the Reserved Instance, per hour (for example, 0.84).

### Tenancy

- The tenancy of the instances covered by the reservation. A Reserved Instance with a tenancy of dedicated is applied to instances that run in a VPC on single-tenant hardware (i.e., Dedicated Instances).
- The tenancy of the instances covered by the reservation. A Reserved Instance with a tenancy of dedicated is applied to instances that run in a VPC on single-tenant hardware (i.e., Dedicated Instances).
- Returns a reference to this object so that method calls can be chained together.

### Instances

- The tenancy of the instances covered by the reservation. A Reserved Instance with a tenancy of dedicated is applied to instances that run in a VPC on single-tenant hardware (i.e., Dedicated Instances).
- The tenancy of the instances covered by the reservation. A Reserved Instance with a tenancy of dedicated is applied to instances that run in a VPC on single-tenant hardware (i.e., Dedicated Instances).
- Returns a reference to this object so that method calls can be chained together.

Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).

- The purchase price of the Reserved Instance (for example, 9800.0).
- The instance type that is covered by the reservation.
- The scope of the Reserved Instance (Region or Availability Zone).
- The Reserved Instance product platform description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (Linux/UNIX).
- The instance type that is covered by the reservation.
- The scope of the Reserved Instance (Region or Availability Zone).
- The Reserved Instance product platform description.
- The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- The state of the Reserved Instance (payment-pending, active, payment-failed, retired).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose=<code>&lt;/i&gt;</code>.
- The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose filter.
- The usage price of the Reserved Instance, per hour (for example, 0.84).
- A boolean that is set if more filters are included. Setting more filters is allowed. Filters include availability-zone, duration, start, end, fixed-price, instance-type, scope, reserved-instances-id, state, tag-key, tag-value, usage-price, product-description.

- The ID of the Reserved Instance. 
- The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- The state of the Reserved Instance (payment-pending | active | payment-failed | retired).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tag-value=X</code> for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
- The usage price of the Reserved Instance, per hour (for example, 0.84).
- The duration of the Reserved Instance (one year or three years), in seconds (31536000 | 94608000).
- The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
- The purchase price of the Reserved Instance (for example, 9800.0).
- The instance type that is covered by the reservation.
- The Availability Zone where the Reserved Instance can be used.
- The duration of the Reserved Instance (one year or three years), in seconds.
- The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
- The purchase price of the Reserved Instance (for example, 9800.0).
- The scope of the Reserved Instance (Region or Availability Zone).
- The product platform description. Instances that include <code>(Amazon VPC)</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (<code>Linux/UNIX</code> | <code>Linux/UNIX (Amazon VPC)</code> | <code>SUSE Linux</code> | <code>SUSE Linux (Amazon VPC)</code> | <code>Red Hat Enterprise Linux</code> | <code>Red Hat Enterprise Linux (Amazon VPC)</code> | <code>Windows</code> | <code>Windows (Amazon VPC)</code> | <code>Windows with SQL Server Standard</code> | <code>Windows with SQL Server Web</code> | <code>Windows with SQL Server Enterprise</code> | <code>Windows with SQL Server Enterprise (Amazon VPC)</code>.
- The ID of the Reserved Instance.
- The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- The state of the Reserved Instance (payment-pending | active | payment-failed | retired).
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tag-value=X</code> for the filter value.
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the
tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the
"<code>tag</code>:<i>key</i>=<i>value</i>" filter. </p>
<li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the 
<code>tag-key</code> filter. 
</p> 
</li>
</ul>

Server Enterprise</code> | <code>Windows with SQL Server Enterprise (Amazon VPC)</code>.

- Time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- The state of the Reserved Instance (payment-pending | active | payment-failed | retired).
- The key/value combination of a tag assigned to the resource.

Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

- The usage price of the Reserved Instance, per hour (for example, 0.84).

Example filters:

```java
<param filters One or more filters.>
 <ul>
  <li>
   <code>availability-zone</code> - The Availability Zone where the Reserved Instance can be used.
  </li>
  <li>
   <code>duration</code> - The duration of the Reserved Instance (one year or three years), in seconds (31536000 | 94608000).
  </li>
  <li>
   <code>end</code> - The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
  </li>
  <li>
   <code>fixed-price</code> - The purchase price of the Reserved Instance (for example, 9800.0).
  </li>
  <li>
   <code>instance-type</code> - The instance type that is covered by the reservation.
  </li>
  <li>
   <code>scope</code> - The scope of the Reserved Instance (Region or Availability Zone).
  </li>
  <li>
   <code>product-description</code> - The Reserved Instance product platform description. Instances that include <code>(Amazon VPC)</code> in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC (Linux/UNIX | Linux/UNIX (Amazon VPC) | SUSE Linux | SUSE Linux (Amazon VPC) | Red Hat Enterprise Linux | Red Hat Enterprise Linux (Amazon VPC) | Windows | Windows (Amazon VPC) | Windows with SQL Server Standard | Windows with SQL Server Standard (Amazon VPC) | Windows with SQL Server Web | Windows with SQL Server Web (Amazon VPC) | Windows with SQL Server Enterprise | Windows with SQL Server Enterprise (Amazon VPC)).
  </li>
  <li>
   <code>reserved-instances-id</code> - The ID of the Reserved Instance.
  </li>
  <li>
   <code>start</code> - The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
  </li>
  <li>
   <code>state</code> - The state of the Reserved Instance (payment-pending | active | payment-failed | retired).
  </li>
  <li>
   <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource.
  </li>
  <li>
   <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag=key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag’s value is), and the tag value X (regardless of what the tag’s key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
  </li>
  <li>
   <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
  </li>
  <li>
   <code>usage-price</code> - The usage price of the Reserved Instance, per hour (for example, 0.84).
  </li>
 </ul>
```

Example usage:

```java
var filters = { availabilityZone: 'us-east-1a', duration: '1', end: '2015-08-07T11:54:42.000Z', fixedPrice: 9800.0, instanceType: 'm3.large', scope: 'Region', productDescription: 'Windows (Amazon VPC)', reservedInstancesId: 'i-1234567890abcdef', start: '2014-08-07T11:54:42.000Z', state: 'active', tagKey: 'Purpose', tagValue: 'X', usagePrice: 0.84 };`
The Availability Zone where the Reserved Instance can be used.</p> <li><code>duration</code>- The duration of the Reserved Instance (one year or three years), in seconds (for example, 2015-08-07T11:54:42.000Z).</li> <li><code>fixed-price</code>- The purchase price of the Reserved Instance (for example, 9800.0).</li> <li><code>instance-type</code>- The instance type that is covered by the reservation.</li> <li><code>scope</code>- The scope of the Reserved Instance (Region or Availability Zone).</li> <li><code>reserved-instances-id</code>- The ID of the Reserved Instance.</li> <li><code>start</code>- The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).</li> <li><code>state</code>- The state of the Reserved Instance (payment-pending | active | payment-failed | retired).</li> <li><code>tag</code>:<i>key</i>=<i>value</i>- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li> <li><code>tag-key</code>- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li> <li><code>tag-value</code>- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li> <li><code>usage-price</code>- The usage price of the Reserved Instance, per hour (for example, 0.84).</li> <li><code>un@return</code> One or more filters.</li> <li><code>availability-zone</code>- The Availability Zone where the Reserved Instance can be used.</li> <li><code>duration</code>- The duration of the Reserved Instance (one year or three years), in seconds (for example, 2015-08-07T11:54:42.000Z).</li> <li><code>fixed-price</code>- The purchase price of the Reserved Instance (for example, 9800.0).</li> <li><code>instance-type</code>- The instance type that is covered by the reservation.</li> <li><code>scope</code>- The scope of the Reserved Instance (Region or Availability Zone).</li> <li><code>reserved-instances-id</code>- The ID of the Reserved Instance.
<code>start</code> - The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).

<code>state</code> - The state of the Reserved Instance (<code>payment-pending</code> | <code>active</code> | <code>payment-failed</code> | <code>retired</code>).

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<code>usage-price</code> - The usage price of the Reserved Instance, per hour (for example, 0.84).

One or more filters.

- **availability-zone**: The Availability Zone where the Reserved Instance can be used.
- **duration**: The duration of the Reserved Instance (one year or three years), in seconds (31536000 | 94608000).
- **end**: The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).
- **fixed-price**: The purchase price of the Reserved Instance (for example, 9800.0).
- **instance-type**: The instance type that is covered by the reservation.
- **scope**: The scope of the Reserved Instance (Region or Availability Zone).
- **product-description**: The Reserved Instance product platform description. Instances that include (Amazon VPC) in the product platform description will only be displayed to EC2-Classic account holders and are for use with Amazon VPC.
- **reserved-instances-id**: The ID of the Reserved Instance.
- **start**: The time at which the Reserved Instance purchase request was placed (for example, 2014-08-07T11:54:42.000Z).
- **state**: The state of the Reserved Instance (payment-pending | active | payment-failed | retired).
- **tag**: The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose=X for the filter name and <code>tag:Purpose</code> for the filter value.
- **tag-key**: The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the filter tag:<code>=<key>=<value></code> filter.
- **tag-value**: The value of a tag assigned to the resource. This filter is independent of the tag-key filter.
- **usage-price**: The usage price of the Reserved Instance, per hour (for example, 0.84).
- **un@param filters One or more filters.
 Duration of the Reserved Instance (one year or three years), in seconds.

 The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).

 The purchase price of the Reserved Instance (for example, 9800.0).

 The instance type that is covered by the reservation.

 The scope of the Reserved Instance (for example, Region or Availability Zone).

 The duration of the Reserved Instance (one year or three years), in seconds.

 The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).

 The purchase price of the Reserved Instance (for example, 9800.0).

 The instance type that is covered by the reservation.

 The scope of the Reserved Instance (for example, Region or Availability Zone).

 The duration of the Reserved Instance (one year or three years), in seconds.

 The time when the Reserved Instance expires (for example, 2015-08-07T11:54:42.000Z).

 The purchase price of the Reserved Instance (for example, 9800.0).

 The instance type that is covered by the reservation.

 The scope of the Reserved Instance (for example, Region or Availability Zone).

}
<code>association.subnet-id</code> - The ID of the subnet involved in the association.

<code>association.main</code> - Indicates whether the route table is the main route table for the VPC.

<code>true</code> | <code>false</code>.

<code>route-table-id</code> - The ID of the route table.

<code>route.destination-cidr-block</code> - The IPv4 CIDR range specified in a route in the table.

<code>route.destination-ipv6-cidr-block</code> - The IPv6 CIDR range specified in a route in the route table.

<code>route.destination-prefix-list-id</code> - The ID (prefix) of the AWS service specified in a route in the table.

<code>association.route-table-association-id</code> - The ID of an association ID for the route table.

<code>association.route-table-id</code> - The ID of the route table involved in the association.

<code>association.subnet-id</code> - The ID of the subnet involved in the association.

<code>association.main</code> - Indicates whether the route table is the main route table for the VPC.

<code>true</code> | <code>false</code>.

<code>route-table-id</code> - The ID of the route table.

<code>route.destination-cidr-block</code> - The IPv4 CIDR range specified in a route in the table.

<code>route.destination-ipv6-cidr-block</code> - The IPv6 CIDR range specified in a route in the route table.

<code>route.destination-prefix-list-id</code> - The ID (prefix) of the AWS service specified in a route in the table.

<code>tag:*,<i>key</i>=<i>value</i></code> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>tag:X</code> for the filter value.

<code>tag:<i>key</i></code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=V", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value V (regardless of what the tag's key is). If you want to list only resources where Purpose is V, see the <code>tag</code>:<i>key</i>=<i>value</i></code> filter.

<code>tag:<i>key</i>=<i>value</i></code> - The state of a route in the route table (<code>active</code> | <code>blackhole</code>). The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has been terminated, and so on).

<code>vpc-id</code> - The ID of the VPC for the route table.

<code>vpc-icp</code> - Indicates how the route was created. <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created; <code>CreateRoute</code> indicates that the route was manually added to the route table; <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation.

<code>vpc-peering-connection-id</code> - The ID of a VPC peering connection specified in a route in the table.

<code>egress-only-internet-gateway-id</code> - The ID of an egress-only Internet gateway specified in a route in the route table.

<code>egress-only-internet-gateway-id</code> - The ID of an egress-only Internet gateway specified in a route in the route table.

<code>egress-only-internet-gateway-id</code> - The ID of an egress-only Internet gateway specified in a route in the route table.

<code>main</code> - Indicates whether the route table is the main route table for the VPC (<code>true</code> | <code>false</code>).

<code>origin</code> - Describes how the route was created. <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created; <code>CreateRoute</code> indicates that the route was manually added to the route table; <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation.

<code>state</code> - The state of a route in the route table (<code>active</code> | <code>blackhole</code>). The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has been terminated, and so on).
<li> <p> <code>route.vpc-peering-connection-id</code> - The ID of a VPC peering connection specified in a route in the table.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, to specify tag Purpose=X, you can use the following filter <code>tag:Purpose=X</code> for the filter name and <code>X</code> for the filter value.</p> </li> <li> <p> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</p> </li> <li> <p> <code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the route table.</p> </li> <li> <p> <code>association.main</code> - Indicates whether the route table is the main route table for the VPC. (true | false). The ID of the route table involved in the association.</p> </li> <li> <p> <code>association.route-table-association-id</code> - The ID of an association ID for the route table.</p> </li> <li> <p> <code>association.route-table-id</code> - The ID of the route table involved in the association.</p> </li> <li> <p> <code>association.subnet-id</code> - The ID of the subnet involved in the association.</p> </li> <li> <p> <code>vpc-id</code> - The ID of the VPC for the route table.</p> </li> <li> <p> <code>origin</code> - Describes how the route was created. Possible values are: CreateRouteTable indicates that the route was automatically created when the route table was created; CreateRoute indicates that the route was manually added to the route table; EnableVgwRoutePropagation indicates that the route was propagated by route propagation.</p> </li> <li> <p> <code>state</code> - The state of a route in the route table. Possible values are: active and blackhole. The blackhole state indicates that the route's target isn't available (for example, the specified gateway isn't attached to the VPC, the specified NAT instance has terminated, and so on). The ID of a VPC peering connection specified in a route in the table. The IPv4 CIDR range specified in a route in the table. The IPv6 CIDR range specified in a route in the table. The ID of a gateway specified in a route in the table. The ID of an instance specified in a route in the table. The ID of a NAT gateway. Describes how the route was created. CreateRouteTable indicates that the route was automatically created when the route table was created; CreateRoute indicates that the route was manually added to the route table; EnableVgwRoutePropagation indicates that the route was propagated by route propagation.</p> </li>
The table is the main route table for the VPC. The ID of the route table is the main route table for the VPC (true | false).

- **route-table-id**: The ID of the route table.
- **route.destination-cidr-block**: The IPv4 CIDR range specified in a route in the route table.
- **route.destination-ipv6-cidr-block**: The IPv6 CIDR range specified in a route in the route table.
- **route.gateway-id**: The ID of a gateway specified in a route in the route table.
- **route.instances**: The ID of an instance specified in a route in the route table.
- **route.egress-only-internet-gateway-id**: The ID of an egress-only Internet gateway specified in a route in the route table.
- **route.instance-id**: The ID of an instance specified in a route.
- **route.nat-gateway-id**: The ID of a NAT gateway.
- **route.origin**: Describes how the route was created.
- **route.state**: The state of a route in the route table (active | blackhole).
- **route.vpc-peering-connection-id**: The ID of a VPC peering connection specified in a route in the route table.

- **tag**: The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify tag:Purpose for the filter name and X for the filter value.
- **tag-key**: The key of a tag assigned to the resource. This filter is independent of the tag-value filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose filter.
- **tag-value**: The value of a tag assigned to the resource. This filter is independent of the tag-key filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the tag:Purpose filter.

- **vpc-id**: The ID of the VPC for the route table.

This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose
is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter. The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter. - The ID of the VPC for the route table. - The ID of the route table involved in the association. - The ID of the subnet involved in the association. - Indicates whether the route table is the main route table for the VPC. - The ID of an association ID for the route table. - The ID of the VPC gateway specified in a route in the route table. - The ID of an egress-only Internet gateway specified in a route in the route table. - The ID of a VPC peering connection specified in a route in the table. - The ID of a gateway specified in a route in the table. - The ID of an instance specified in a route in the table. - The ID of a NAT gateway. - Indicates whether the route table is the main route table for the VPC. - Describes how the route was created. - Indicates that the route was automatically created when the route table was created; indicates that the route was manually added to the route table; indicates that the route was propagated by route propagation. - The state of a route in the route table. - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter. - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `<code>tag:tagKey=tagValue</code>` for the filter name and `<code>purpose=X</code>` for the filter value. - The key of a tag assigned to the resource. This filter is independent of the `<code>tag-value</code>` filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the `<code>tag</code>:<i>key</i>=<i>value</i>` filter. - The value of a tag assigned to the resource. This filter is independent of the `<code>tag-key</code>` filter.

### Example

```java
String filters = "tag:tagKey=tagValue";
```

### Method Description

The `setFilters` method appends the values to the existing list (if any). Use `[link #setFilters(java.util.Collection)]` or `[link #withFilters(java.util.Collection)]` if you want to override the existing values.
id</code> - The ID of the route table involved in the association.</p> </li> <li> <p> <code>association.subnet-id</code> - The ID of the subnet involved in the association.</p> </li> <li> <p> <code>association.main</code> - Indicates whether the route table is the main route table for the VPC (<code>true</code> | <code>false</code>).</p> </li> <li> <p> <code>route-table-id</code> - The ID of the route table.</p> </li> <li> <p> <code>route.destination-cidr-block</code> - The IPv4 CIDR range specified in a route in the route table.</p> </li> <li> <p> <code>route.destination-ipv6-cidr-block</code> - The IPv6 CIDR range specified in a route in the route table.</p> </li> <li> <p> <code>route.destination-prefix-list-id</code> - The ID (prefix) of the AWS service specified in a route in the table.</p> </li> <li> <p> <code>route.egress-only-internet-gateway-id</code> - The ID of an egress-only Internet gateway specified in a route in the route table.</p> </li> <li> <p> <code>route.gateway-id</code> - The ID of a gateway specified in a route in the table.</p> </li> <li> <p> <code>route.instance-id</code> - The ID of an instance specified in a route in the route table.</p> </li> <li> <p> <code>route.nat-gateway-id</code> - The ID of a NAT gateway.</p> </li> <li> <p> <code>route-origin</code> - Describes how the route was created. <code>CreateRouteTable</code> indicates that the route was automatically created when the route table was created; <code>CreateRoute</code> indicates that the route was manually added to the route table; <code>EnableVgwRoutePropagation</code> indicates that the route was propagated by route propagation.</p> </li> <li> <p> <code>route.state</code> - The state of a route in the route table (<code>active</code> | <code>blackhole</code>). One or more Scheduled Instance IDs.

### setScheduledInstanceIds

**Documentation**

- **Method Signature**: `setScheduledInstanceIds(SdkInternalList<String> scheduledInstanceIds)`

**Return Type**: `null`

**Parameters**

- `scheduledInstanceIds`: A list of one or more Scheduled Instance IDs.

**Example**

```java
com.amazonaws.services.ec2.model.ScheduledInstanceStatus scheduledInstanceStatus = new ScheduledInstanceStatus()
    .withScheduledInstanceIds(scheduledInstanceIds);
```

**Notes**

- This method appends the values to the existing list (if any). Use `withScheduledInstanceIds()` if you want to override the existing values.
- Method returns a reference to this object so that method calls can be chained together.

### SlotStartTimeRange

**Documentation**

- **Method Signature**: `SlotStartTimeRangeRequest`.

**Return Type**: `null`

**Parameters**

- `SlotStartTimeRange`: The time period for the first schedule to start.

**Example**

```java
com.amazonaws.services.ec2.model.ScheduledInstanceStatus scheduledInstanceStatus = new ScheduledInstanceStatus()
    .withSlotStartTimeRange(slotStartTimeRange);
```

**Notes**

- Method returns a reference to this object so that method calls can be chained together.

One or more filters. If using multiple filters for rules, the results include security groups for which any combination of rules - not necessarily a single rule - match all filters.

```java
<ul><li><p><code>description</code> - The description of the security group.</p></li><li><p><code>egress.ip-permission.prefix-list-id</code> - The ID (prefix) of the AWS service to which the security group allows access.</p></li><li><p><code>group-id</code> - The ID of the security group.</p></li><li><p><code>group-name</code> - The name of the security group.</p></li></ul>
- An IPv4 CIDR range that has been granted permission in a security group rule.
- The ID of the VPC specified when the security group was created.

### NOTE:
This method appends the values to the existing list (if any). Use @link #setFilters(java.util.Collection) or @link #withFilters(java.util.Collection) if you want to override the existing values.

```java
@override
public @return Returns a reference to this object so that method calls can be chained together.*/
```

### Filters

*One or more filters.*

- `Availability Zone group` - The Availability Zone group.
- `Create time` - The time stamp when the Spot instance request was created.
- `Fault code` - The fault code related to the request.
- `Fault message` - The fault message related to the request.
- `Instance ID` - The ID of the instance that fulfilled the request.
- `Launch group` - The Spot instance launch group.
- `Launch block device mapping delete on termination` - Indicates whether the Amazon EBS volume is deleted on instance termination.
- `Launch block device mapping device name` - The device name for the Amazon EBS volume.
- `Launch block device mapping volume size` - The size of the Amazon EBS volume, in GiB.
- `Launch block device mapping volume type` - The type of the Amazon EBS volume.
- `General Purpose SSD` - For General Purpose SSD.
- ` Provisioned IOPS SSD` - For Provisioned IOPS SSD.
- `Throughput Optimized HDD` - For Throughput Optimized HDD.
- `Cold HDD` - For Cold HDD, or `Standard` for Magnetic.
- `Launch group id` - The security group for the instance.
- `Launch image id` - The ID of the AMI.
- `Launch instance type` - The type of instance (for example, `m3.medium`).
- `Launch key name` - The name of the key pair the instance launched with.
- `Launch monitoring enabled` - Whether monitoring is enabled for the Spot instance.
- `Launch ram disk id` - The RAM disk ID.
- `Launch network interface` - The ID of the network interface.
- `Device index` - The index of the device for the network interface attachment on the instance.
- `Network interface description` - A description of the network interface.
- `Private ip address` - The primary private IP address of the network interface.
- `Delete on termination` - Indicates whether the network interface is deleted when the instance is terminated.
- `Security group id` - The ID of the security group associated with the network interface.
interface.group-name</code> - The name of the security group associated with the network interface.</li> <li> <code>network-interface.addresses.primary</code> - Indicates whether the IP address is the primary private IP address.</li> <li> <code>product-description</code> - The product description associated with the instance</li> <li> <code>spot-instance-request-id</code> - The Spot instance request ID.</li> <li> <code>spot-price</code> - The maximum hourly price for any Spot instance launched to fulfill the request.</li> <li> <code>state</code> - The state of the Spot instance request.</li> <li> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.</li> <li> <code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li> <li> <code>type</code> - The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).</li> <li> <code>launched-availability-zone</code> - The Availability Zone in which the bid is launched.</li> <li> <code>valid-from</code> - The start date of the request.</li> <li> <code>valid-until</code> - The end date of the request.</li> <ul>
  <li> <code>availability-zone-group</code> - The Availability Zone group.</li> <li> <code>create-time</code> - The time stamp when the Spot instance request was created.</li> <li> <code>fault-code</code> - The fault code related to the request.</li> <li> <code>fault-message</code> - The fault message related to the request.</li> <li> <code>instance-id</code> - The ID of the instance that fulfilled the request.</li> <li> <code>launch-group</code> - The Spot instance launch group.</li> <li> <code>launch.block-device-mapping.delete-on-termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.</li> <li> <code>launch.block-device-mapping.device-name</code> - The device name for the Amazon EBS volume (for example, <code>/dev/sdh</code>). This filter is independent of the <code>launch-block-device-mapping.volume-size</code> filter. For example, if you use both the filter "launch-block-device-mapping.device-name=<code>/dev/sdh</code>", see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li> <li> <code>launch.block-device-mapping.volume-size</code> - The size of the Amazon EBS volume, in GiB.</li> <li> <code>launch.block-device-mapping.volume-type</code> - The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.</li> <li> <code>launch.group-id</code> - The security group for the instance.</li> <li> <code>launch.image-id</code> - The ID of the AMI.</li> <li> <code>launch.instance-type</code> - The type of instance (for example, <code>m3.medium</code>). This filter is independent of the <code>launch-block-device-mapping.volume-size</code> filter. For example, if you use both the filter "launch-block-device-mapping.volume-size=10G", see the <code>tag</code>:<i>key</i>=<i>value</i> filter.</li> <li> <code>launch.key-name</code> - The name of the key pair the instance launched with.</li> <li> <code>launch.monitoring-enabled</code> - Whether monitoring is enabled for the Spot instance.</li> <li> <code>launch.ramdisk-id</code> - The RAM disk ID.</li> <li> <code>network-interface.network-interface-id</code> - The ID of the network interface."
- The index of the device for the network interface attachment on the instance.
- The ID of the subnet for the instance.
- A description of the network interface.
- The primary private IP address of the network interface.
- Indicates whether the network interface is deleted when the instance is terminated.
- The ID of the security group associated with the network interface.
- The name of the security group associated with the network interface.
- Indicates whether the IP address is the primary private IP address.
- The ID of the security group associated with the instance.
- The product description associated with the instance.
- The Spot instance request ID.
- The maximum hourly price for any Spot instance launched to fulfill the request.
- The state of the Spot instance request.
- The Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see Spot Bid Status in the Amazon Elastic Compute Cloud User Guide.
- Specifies the tag key and value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify `tag:Purpose=X` for the filter name and `X` for the filter value. This filter is independent of the `tag-key` filter. For example, if you use both the filter `tag-key=Purpose` and the filter `tag-value=X`, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, use the filter `tag:Purpose=X`.
- The type of Spot instance request. This filter is independent of the `tag-key` filter.
- The Availability Zone in which the bid is launched.
- The start date of the request.
- The end date of the request.
- The Availability Zone group.
- The time stamp when the Spot instance request was created.
- The fault code related to the request.
- The fault message related to the request.
- The ID of the instance that fulfilled the request.
- The Spot instance launch group.
- The device name for the Amazon EBS volume (for example, `/dev/sdh`).
- The ID of the snapshot used for the Amazon EBS volume.
- The size of the Amazon EBS volume, in GiB.
- The type of the Amazon EBS volume:
  - `gp2` for General Purpose SSD,
  - `io1` for Provisioned IOPS SSD,
  - `st1` for Throughput Optimized HDD,
  - `sc1` for Cold HDD, or
  - `standard` for Magnetic.
example, `<code>/dev/sdh</code>`).

- The ID of the snapshot used for the Amazon EBS volume.
- The size of the Amazon EBS volume, in GiB.
- The type of the Amazon EBS volume: `gp2` for General Purpose SSD, `io1` for Provisioned IOPS SSD, `st1` for Throughput Optimized HDD, `sc1` for Cold HDD, or `standard` for Magnetic.
- The ID of the AMI.
- The type of instance (for example, `m3.medium`).
- The ID of the subnet for the instance.
- The ID of the security group for the instance.
- The ID of the security group associated with the network interface.
- The primary private IP address of the network interface.
- The product description associated with the instance (Linux/UNIX | Windows).
- The Spot instance request ID.
- The maximum hourly price for any Spot instance launched to fulfill the request.
- The state of the Spot instance request (open | active | closed | cancelled | failed). Spot bid status information can help you track your Amazon EC2 Spot instance requests. For more information, see [Spot Bid Status](http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/spot-bid-status.html) in the Amazon Elastic Compute Cloud User Guide.
code</code> - The fault code related to the request.</p> </li> <li> <p> <code>fault-message</code> - The fault message related to the request.</p> </li> <li> <p> <code>instance-id</code> - The ID of the instance that fulfilled the request.</p> </li> <li> <p> <code>launch-group</code> - The Spot instance launch group.</p> </li> <li> <p> <code>block-device-mapping.delete-on-termination</code> - Indicates whether the Amazon EBS volume is deleted on instance termination.</p> </li> <li> <p> <code>block-device-mapping.device-name</code> - The device name for the Amazon EBS volume (for example, <code>/dev/sdh</code>). </p> </li> <li> <p> <code>block-device-mapping.snapshot-id</code> - The ID of the snapshot used for the Amazon EBS volume.</p> </li> <li> <p> <code>block-device-mapping.volume-size</code> - The size of the Amazon EBS volume, in GiB.</p> </li> <li> <p> <code>block-device-mapping.volume-type</code> - The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.</p> </li> <li> <p> <code>launch.image-id</code> - The ID of the AMI.</p> </li> <li> <p> <code>launch.instance-type</code> - The type of instance (for example, <code>m3.medium</code>).</p> </li> <li> <p> <code>launch.key-name</code> - The name of the key pair the instance launched with.</p> </li> <li> <p> <code>launch.monitoring-enabled</code> - Whether monitoring is enabled for the Spot instance.</p> </li> <li> <p> <code>launch.ramdisk-id</code> - The RAM disk ID.</p> </li> <li> <p> <code>network-interface.device-index</code> - The index of the device for the network interface attachment on the instance.</p> </li> <li> <p> <code>network-interface.private-ip-address</code> - The primary private IP address of the network interface.</p> </li> <li> <p> <code>product-description</code> - The product description associated with the instance (<code>Linux/UNIX</code> | <code>Windows</code>). </p> </li> <li> <p> <code>request-id</code> - The Spot instance request ID.</p> </li> <li> <p> <code>request-spot-price</code> - The maximum hourly price for any Spot instance launched to fulfill the request.</p> </li> <li> <p> <code>status-code</code> - The short code describing the most recent evaluation of your Spot instance request.</p> </li> <li> <p> <code>status-message</code> - The message explaining the status of the Spot instance request.</p> </li> <li> <p> <code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. The name of the security group associated with the network interface.  

- Indicates whether the IP address is the primary private IP address.
- The product description associated with the instance.  
- The Spot instance request ID.  
- The maximum hourly price for any Spot instance launched to fulfill the request.  
- The state of the Spot instance request.  
- The short code describing the most recent evaluation of your Spot instance request.  
- The state message explaining the status of the Spot instance request.  
- The value of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.  
- The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).  
- The ID of the network interface.  
- Indicates whether the IP address is the primary private IP address.  
- The product description associated with the instance.  
- The Spot instance request ID.  
- The maximum hourly price for any Spot instance launched to fulfill the request.  
- The state of the Spot instance request.  
- The short code describing the most recent evaluation of your Spot instance request.  
- The state message explaining the status of the Spot instance request.  
- The value of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.  
- The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).  
- The Availability Zone in which the bid is launched.  
- The start date of the request.  
- The end date of the request.  
- Indicates whether the Amazon EBS volume is deleted on instance termination.  
- The device name for the Amazon EBS volume (for example, <code>/dev/sdh</code>).  
- The ID of the snapshot used for the Amazon EBS volume.  
- The size of the Amazon EBS volume, in GiB.  
- The type of the Amazon EBS volume: <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.  
- The ID of the AML.  
- The type of the instance (for example, <code>m3.medium</code>).  
- The name of the key pair the instance launched with.  
- The RAM disk ID.  
- The ID of the network interface.
interface. The index of the device for the network interface attachment on the instance. - The ID of the subnet for the instance. - A description of the network interface. - The primary private IP address of the network interface. - Indicates whether the network interface is deleted when the instance is terminated.

- `network-interface.device-index` - The index of the device for the network interface attachment on the instance.
- `network-interface.subnet-id` - The ID of the subnet for the instance.
- `network-interface.private-ip-address` - The primary private IP address of the network interface.
- `network-interface.delete-on-termination` - Indicates whether the network interface is deleted when the instance is terminated.

- `network-interface-group-id` - The ID of the security group associated with the network interface.
- `network-interface.group-name` - The name of the security group associated with the network interface.
- `network-interface.addresses.primary` - Indicates whether the IP address is the primary private IP address.
- `network-description` - The product description associated with the instance.

- `spot-instance-request-id` - The Spot instance request ID.
- `spot-price` - The maximum hourly price for any Spot instance launched to fulfill the request.
- `state` - The state of the Spot instance request.
- `status-code` - The short code describing the most recent evaluation of your Spot instance request.
- `status-message` - The message explaining the status of the Spot instance request.
- `tag` - The tag associated with the resource.
- `tag-key` - The key of a tag assigned to the resource. This filter is independent of the `tag-value` filter.
- `tag-value` - The value of a tag assigned to the resource.
- `launch-block-device-mapping.delete-on-termination` - Indicates whether the Amazon EBS volume is deleted on instance termination.
- `launch-block-device-mapping.device-name` - The device name for the Amazon EBS volume (for example, `/dev/sdh`).
- `launch-block-device-mapping.snapshot-id` - The ID of the snapshot used for the Amazon EBS volume.

In summary, this API allows for detailed control over virtualized voice browser instances, including network configuration, security group management, and Spot instance behavior, enabling fine-grained control over resource allocation and management.
mapping.volume-size - The size of the Amazon EBS volume, in GiB.

launch.block-device-mapping.volume-type - The type of the Amazon EBS volume:
  <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic.

launch.group-id - The security group for the instance.

launch.image-id - The ID of the AMI.

launch.instance-type - The type of instance (for example, <code>m3.medium</code>).

launch.key-name - The name of the key pair the instance launched with.

launch.monitoring-enabled - Whether monitoring is enabled for the Spot instance.

launch.ramdisk-id - The RAM disk ID.

launch.request-id - The Spot instance request ID.

launch.status-code - The short code describing the most recent evaluation of your Spot instance request.

launch.status-message - The message explaining the status of the Spot instance request.

launch.tag:tag-key=tag-value - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

launch.tag-key - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=XML\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag-key=tag-value</code> filter.

launch.type - The type of Spot instance request (<code>one-time</code> | <code>persistent</code>).

The value must match exactly (or use wildcards; greater than or less than comparison is not supported). The Spot price. The value can use wildcards (* and ?). Greater than or less than comparison is not supported. The Availability Zone for which prices should be returned. The type of instance (for example, m3.medium). You can use wildcards (* and ?). Greater than or less than comparison is not supported. The product description for the Spot price. The Spot price. The value can use wildcards (* and ?). Greater than or less than comparison is not supported. The product description for the Spot price. The Spot price. The value can use wildcards (* and ?). Greater than or less than comparison is not supported. The product description for the Spot price. The Spot price. The value can use wildcards (* and ?). Greater than or less than comparison is not supported. The product description for the Spot price. The Spot price. The value can use wildcards (* and ?). Greater than or less than comparison is not supported. The product description for the Spot price. The Spot price. The value can use wildcards (* and ?). Greater than or less than comparison is not supported.

```
**<p>One or more filters.</p>**

- The Availability Zone for which prices should be returned.
- The type of instance (for example, m3.medium).
- The product description for the Spot price.
- The timestamp of the Spot price history, in UTC format (for example, YYYY-MM-DD\(T\)HH:MM:SSZ).
```

**Parameters**

- **Availability Zone**: The Availability Zone for which prices should be returned.
- **Instance Type**: The type of instance.
- **Product Description**: The product description for the Spot price.
- **Spot Price**: The Spot price.
- **Timestamp**: The timestamp of the Spot price history, in UTC format.

The maximum number of results to return in a single call. Specify a value between 1 and 1000. The default value is 1000. To retrieve the remaining results, make another call with the returned value.

```java
@Param maxResults The maximum number of results to return in a single call.
```

**getter**

```java
public Integer getMaxResults();
```

**setter**

```java
public void setMaxResults(Integer maxResults);
```

The maximum number of results to return in a single call. Specify a value between 1 and 1000. The default value is 1000. To retrieve the remaining results, make another call with the returned value.

```java
@Param maxResults The maximum number of results to return in a single call.
```

**getter**

```java
public Integer getMaxResults();
```

**setter**

```java
public void setMaxResults(Integer maxResults);
```
between 1 and 1000. The default value is 1000. To retrieve the remaining results, make another call with the returned <code>NextToken</code> value.

> @param maxResults The maximum number of results to return in a single call. Specify a value between 1 and 1000. The default value is 1000. To retrieve the remaining results, make another call with the returned <code>NextToken</code> value.

> @return Returns a reference to this object so that method calls can be chained together.

```java

```

```java

<ul>
<li>
<p>
<code>availabilityZone</code> - The Availability Zone for the subnet. You can also use <code>availability-zone</code> as the filter name.
</p>
</li>
<li>
<p>
<code>available-ip-address-count</code> - The number of IPv4 addresses in the subnet that are available.
</p>
</li>
<li>
<p>
<code>cidrBlock</code> - The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use <code>cidr</code> or <code>cidr-block</code> as the filter names.
</p>
</li>
<li>
<p>
<code>defaultForAz</code> - Indicates whether this is the default subnet for the Availability Zone. You can also use <code>default-for-az</code> as the filter name.
</p>
</li>
<li>
<p>
<code>ipv6-cidr-block-association.ipv6-cidr-block</code> - An IPv6 CIDR block associated with the subnet.
</p>
</li>
<li>
<p>
<code>ipv6-cidr-block-association.association-id</code> - An association ID for an IPv6 CIDR block associated with the subnet.
</p>
</li>
<li>
<p>
<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
</p>
</li>
<li>
<p>
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter \"tag-key=Purpose\" and the filter \"tag-value=X\", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
</p>
</li>
<li>
<p>
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
</p>
</li>
<li>
<p>
<code>vpc-id</code> - The ID of the VPC for the subnet.
</p>

If you want to list only resources where Purpose is X, see the <code>tag:country</code> filter.
"vpc-id" - The ID of the VPC for the subnet.
"availabilityZone" - The Availability Zone for the subnet. You can also use <code>availability-zone</code> as the filter name.
"available-ip-address-count" - The number of IPv4 addresses in the subnet that are available.
"cidr-block" - The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use <code>cidr-block</code> as the filter name.
"default-for-az" - Indicates whether this is the default subnet for the Availability Zone. You can also use <code>default-for-az</code> as the filter name.
addresses in the subnet that are available.</li> <li><p><code>cidrBlock</code> - The IPv4 CIDR block of the subnet. The CIDR block you specify must exactly match the subnet's CIDR block for information to be returned for the subnet. You can also use <code>cidr</code> or <code>cidr-block</code> as the filter names.</p> </li> <li><p><code>defaultForAz</code> - Indicates whether this is the default subnet for the Availability Zone. You can also use <code>default-for-az</code> as the filter name.</p> </li> <li><p><code>ipv6-cidr-block-association.ipv6-cidr-block</code> - An IPv6 CIDR block associated with the subnet.</p> </li> <li><p><code>ipv6-cidr-block-association.association-id</code> - An association ID for an IPv6 CIDR block associated with the subnet.</p> </li> <li><p><code>ipv6-cidr-block-association.state</code> - The state of an IPv6 CIDR block associated with the subnet.</p> </li> <li><p><code>state</code> - The state of the subnet (pending | available).</p> </li> <li><p><code>subnet-id</code> - The ID of the subnet.</p> </li> <li><p><code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

@example

```java
<code>tag-key</code>: &lt;i&gt;value&lt;/i&gt; - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter.

@example

```java
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

@example

```java
&lt;code>vpc-id</code> - The ID of the VPC for the subnet.

@example

```java
&lt;code>subnet-id</code> - The ID of the subnet.

@example

```java
&lt;code>tag</code>:&lt;i&gt;key&lt;/i&gt;=&lt;i&gt;value&lt;/i&gt; - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag <code>Purpose=X</code>, specify <code>tag:Purpose=X</code> for the filter name and <code>X</code> for the filter value.

@example

```java
&lt;code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>"tag-key=Purpose"</code> and the filter <code>"tag-value=X"</code>, you get any resources assigned both the tag key <code>"Purpose"</code> (regardless of what the tag's value is), and the tag value <code>X</code> (regardless of what the tag's key is). If you want to list only resources where <code>Purpose</code> is <code>X</code>, see the <code>tag-key</code> filter. This filter is independent of the <code>tag-value</code> filter.

@example

```java
&lt;code>vpc-id</code> - The ID of the VPC for the subnet.

<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter. 
<code>volume-id</code> - The volume ID. 
<code>volume-type</code> - The Amazon EBS volume type. This can be <code>gp2</code> for General Purpose SSD, <code>st1</code> for Provisioned IOPS SSD, <code>standard</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic volumes.

One or more filters.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. 
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.

<code>attachment.attach-time</code> - The time stamp when the attachment initiated.
<code>attachment.delete-on-termination</code> - Whether the volume is deleted on instance termination.
<code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).
<code>attachment.instance-id</code> - The ID of the instance the volume is attached to.
<code>attachment.status</code> - The attachment state (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>). 
<code>availability-zone</code> - The Availability Zone in which the volume was created.
<code>create-time</code> - The time stamp when the volume was created.
<code>encrypted</code> - The encryption status of the volume.
<code>size</code> - The size of the volume, in GiB.
<code>snapshot-id</code> - The snapshot from which the volume was created.
<code>status</code> - The status of the volume (<code>creating</code> | <code>available</code> | <code>in-use</code> | <code>deleting</code> | <code>deleted</code> | <code>error</code>).
<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>size</code> for the filter value. 
<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter.

This filter is independent of the <code>tag-value</code> filter.
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
<code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).
<code>attachment.instance-id</code> - The ID of the instance the volume is attached to.
<code>attachment.status</code> - The attachment state (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>). 
<code>availability-zone</code> - The Availability Zone in which the volume was created.
<code>create-time</code> - The time stamp when the volume was created.
<code>encrypted</code> - The encryption status of the volume.
<code>size</code> - The size of the volume, in GiB.
<code>snapshot-id</code> - The snapshot from which the volume was created.
<code>status</code> - The status of the volume (<code>creating</code> | <code>available</code> | <code>in-use</code> | <code>deleting</code> | <code>deleted</code> | <code>error</code>.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>size</code> for the filter value. 
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter.

This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter. 

If you use both the filter "tag-key=Name" and the filter "tag-value=First", you get any resources assigned both the tag key Name (regardless of what the tag's value is), and the tag value First (regardless of what the tag's key is). If you want to list only resources where Name is First, see the <code>tag:tag=value</code> filter. 

If you use both the filter "tag-key=Name" and the filter "tag-value=First", you get any resources assigned both the tag key Name (regardless of what the tag's value is), and the tag value First (regardless of what the tag's key is). If you want to list only resources where Name is First, see the <code>tag:tag=value</code> filter.

This filter is independent of the <code>tag-value</code> filter.
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
<code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).
<code>attachment.instance-id</code> - The ID of the instance the volume is attached to.
<code>attachment.status</code> - The attachment state (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>). 
<code>availability-zone</code> - The Availability Zone in which the volume was created.
<code>create-time</code> - The time stamp when the volume was created.
<code>encrypted</code> - The encryption status of the volume.
<code>size</code> - The size of the volume, in GiB.
<code>snapshot-id</code> - The snapshot from which the volume was created.
<code>status</code> - The status of the volume (<code>creating</code> | <code>available</code> | <code>in-use</code> | <code>deleting</code> | <code>deleted</code> | <code>error</code>.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>size</code> for the filter value. 
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter.

This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter. 

If you use both the filter "tag-key=Name" and the filter "tag-value=First", you get any resources assigned both the tag key Name (regardless of what the tag's value is), and the tag value First (regardless of what the tag's key is). If you want to list only resources where Name is First, see the <code>tag:tag=value</code> filter. 

If you use both the filter "tag-key=Name" and the filter "tag-value=First", you get any resources assigned both the tag key Name (regardless of what the tag's value is), and the tag value First (regardless of what the tag's key is). If you want to list only resources where Name is First, see the <code>tag:tag=value</code> filter.

This filter is independent of the <code>tag-value</code> filter.
<code>tag-value</code> - The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
<code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).
<code>attachment.instance-id</code> - The ID of the instance the volume is attached to.
<code>attachment.status</code> - The attachment state (<code>attaching</code> | <code>attached</code> | <code>detaching</code> | <code>detached</code>). 
<code>availability-zone</code> - The Availability Zone in which the volume was created.
<code>create-time</code> - The time stamp when the volume was created.
<code>encrypted</code> - The encryption status of the volume.
<code>size</code> - The size of the volume, in GiB.
<code>snapshot-id</code> - The snapshot from which the volume was created.
<code>status</code> - The status of the volume (<code>creating</code> | <code>available</code> | <code>in-use</code> | <code>deleting</code> | <code>deleted</code> | <code>error</code>.

- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>size</code> for the filter value. 
- The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter.

This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:tag=value</code> filter.

```java
@Nullable private @FirstNonNull FirstNonNullFilters filters;
```

 convenience constructor.

```java
public Filters(String name, String value)
```

This method creates a filter with the given name and value.

```
// Example usage.
Filters filters = new Filters("tag:Purpose", "Production");
```

For example, this creates a filter named "tag:Purpose" with the value "Production".

```java
public Filters(String name, String value)
```

This method creates a filter with the given name and value.

```
// Example usage.
Filters filters = new Filters("tag:Purpose", "Production");
```

For example, this creates a filter named "tag:Purpose" with the value "Production".

```
// Example usage.

```
<code>volume-id</code> - The volume ID.

<code>volume-type</code> - The Amazon EBS volume type. This can be <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic volumes.

<code>attachment.attach-time</code> - The time stamp when the attachment initiated.

<code>attachment.delete-on-termination</code> - Whether the volume is deleted on instance termination.

<code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).

<code>attachment.instance-id</code> - The ID of the instance the volume is attached to.

<code>attachment.status</code> - The attachment state (attaching | attaching | detached | detached).

<code>availability-zone</code> - The Availability Zone in which the volume was created.

<code>create-time</code> - The time stamp when the volume was created.

<code>encrypted</code> - The encryption status of the volume.

<code>size</code> - The size of the volume, in GiB.

<code>snapshot-id</code> - The snapshot from which the volume was created.

<code>status</code> - The status of the volume (creating | available | in-use | deleting | deleted | error).

<code>tag</code>:<i>key</i>=<i>value</i> - The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value. If you want to list only resources where Purpose is X, see the <code>tag-value</code>:<i>value</i> filter. For example, if you use both the filter "tag:Purpose=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag:Purpose</code>:<i>value</i> filter.

<code>tag-key</code> - The key of a tag assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter "tag-key=Purpose" and the filter "tag-value=X", you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is).

<code>volume-id</code> - The volume ID.

<code>volume-type</code> - The Amazon EBS volume type. This can be <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic volumes.

<code>attachment.attach-time</code> - The time stamp when the attachment initiated.

<code>attachment.delete-on-termination</code> - Whether the volume is deleted on instance termination.

<code>attachment.device</code> - The device name that is exposed to the instance (for example, <code>/dev/sda1</code>).

volume. The size of the volume, in GiB.

- The snapshot from which the volume was created.
- The status of the volume: creating, available, in-use, deleting, deleted, error.
- The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.
- The tag key assigned to the resource. This filter is independent of the <code>tag-value</code> filter. For example, if you use both the filter <code>tag-key=Purpose</code> and the filter <code>tag-value=X</code>, you get any resources assigned both the tag key Purpose (regardless of what the tag's value is), and the tag value X (regardless of what the tag's key is). If you want to list only resources where Purpose is X, see the <code>tag</code>:<i>key</i>=<i>value</i> filter.
- The value of a tag assigned to the resource. This filter is independent of the <code>tag-key</code> filter.
- The volume ID.
- The Amazon EBS volume type. This can be <code>gp2</code> for General Purpose SSD, <code>io1</code> for Provisioned IOPS SSD, <code>st1</code> for Throughput Optimized HDD, <code>sc1</code> for Cold HDD, or <code>standard</code> for Magnetic volumes.
If this parameter is not used, then <code>DescribeVolumes</code> returns all results. You cannot specify this parameter and the volume IDs parameter in the same request.

```java
/**
 * The maximum number of volume results returned by <code>DescribeVolumes</code> in paginated output. When this parameter is used, <code>DescribeVolumes</code> only returns <code>MaxResults</code> results in a single page along with a <code>NextToken</code> response element. The remaining results of the initial request can be seen by sending another <code>DescribeVolumes</code> request with the returned <code>NextToken</code> value. This value can be between 5 and 500; if <code>MaxResults</code> is given a value larger than 500, only 500 results are returned. If this parameter is not used, then <code>DescribeVolumes</code> returns all results. You cannot specify this parameter and the volume IDs parameter in the same request.

@return The maximum number of volume results returned by <code>DescribeVolumes</code> in paginated output. When this parameter is used, <code>DescribeVolumes</code> only returns <code>MaxResults</code> results in a single page along with a <code>NextToken</code> response element. *service-name*: The name of the AWS service.

*vpc-id*: The ID of the VPC in which the endpoint resides.

*vpc-endpoint-id*: The ID of the endpoint.

*vpc-endpoint-state*: The state of the endpoint. (pending | available | deleting | deleted)

*filter*: Additional filters

Set the values for the filters.

### Notes:

- This method appends the values to the existing list (if any). Use `Array.prototype.push()` to append values.
- Use `Array.prototype.filter()` to filter out values.

### Example:

```java
Filters filters = new Filters();
filters.addFilter(serviceName, vpcId, vpcEndpointId);
```

"setterMethodName": "setFilters",
"setterModel": {
"variableDeclarationType": "com.amazonaws.internal.SdkInternalList<Filter>",
