Return: Returns a reference to this object so that method calls can be chained together.

One or more tags. The <code>value</code> parameter is required, but if you don't want the tag to have a value, specify the parameter with no value, and we set the value to an empty string.

This method appends the values to the existing list (if any). Use { @link #setResources(java.util.Collection) } or { @link #withResources(java.util.Collection) } if you want to override the existing values.

The type of VPN connection the customer gateway supports

```java
@Default
public void setType(String type) {
    this.type = type;
}
```

### Description

- **Type**: This field represents the type of VPN connection supported by the customer gateway, which is currently set to `IPSEC`. This interface is part of the `com.amazonaws.services.cognitoidentity.model` package, used for managing identity providers in AWS Cognito.

- **Setter Method**: The `setType` method allows setting the type of VPN connection. It accepts a `String` parameter named `type`, which specifies the desired type of connection.

### Example Usage

```java
import com.amazonaws.services.cognitoidentity.model.Type;

Type type = Type.IPSEC; // Set the type of VPN connection
```

### Parameters

- **Type**: This field is of type `String` and is used to store the type of VPN connection. It is a mandatory parameter, indicating the specific type of connection desired from the customer gateway. The `@Default` annotation suggests that this field is a default setting or property.

### Notes

- This field is part of a larger interface and package structure, reflecting a typical AWS service API design, where detailed types and methods are used to manage various aspects of identity management in AWS Cognito.

<b>NOTE:</b> This method appends the values to the existing list (if any). Use <code>{@link #setIamInstanceProfileAssociations(java.util.Collection)}</code> or <code>{@link #withIamInstanceProfileAssociations(java.util.Collection)}</code> if you want to override the existing values. Returns a reference to this object so that method calls can be chained together.

```java
public void setIamInstanceProfileAssociations(IamInstanceProfileAssociation... iamInstanceProfileAssociations) {
    getIamInstanceProfileAssociations().addAll(Arrays.asList(iamInstanceProfileAssociations));
}

```
public IamInstanceProfileAssociation withIamInstanceProfileAssociations(IamInstanceProfileAssociation... iamInstanceProfileAssociations) {
    getIamInstanceProfileAssociations().addAll(Arrays.asList(iamInstanceProfileAssociations));
    return this;
}
```

**Returns**

Returns a reference to this object so that method calls can be chained together.

```java
public List<IamInstanceProfileAssociation> getIamInstanceProfileAssociations() {
    return iamInstanceProfileAssociations;  
}
```

**Example:**

```java
public void listIamInstanceProfileAssociations() {
    try {
        IamInstanceProfileAssociationEntity iamInstanceProfileAssociation = iamInstanceProfileAssociationClient.listIamInstanceProfileAssociations(new ListIamInstanceProfileAssociationsRequest()
            .withNextToken(nextToken)
            .withMaxResults(maxResults)
            .withIamInstanceProfileAssociations(iamInstanceProfileAssociations)
        );
    } catch (IamInstanceProfileAssociationException e) {
        // handle exception
    }
}
```

**Documentation:**

**Simple Type:** List&lt;IamInstanceProfileAssociation&gt;

**Variable:**

```java
