"description": "API endpoint for the VPC Peering service.

This API allows you to manage your VPC peering connections.

Required

- action: The action to perform (e.g., DescribeVpcPeeringConnections).
- requestUri: The URI path (e.g., "/").

Optional

- locationName: The name of the location.
- target: The target of the API call.
- verb: The HTTP verb (e.g., "POST").
- xmlNameSpaceUri: The XML namespace URI.

Parameters

- VpcPeeringConnectionIds: A list of VPC peering connection IDs. (Optional)
  Default: Describes all your VPC peering connections.

Response

- VpcPeeringConnectionIds: A list of VPC peering connection IDs.
  Default: Describes all your VPC peering connections.

Usage

This API is used to manage your VPC peering connections. You can use it to describe your VPC peering connections, describe a specific VPC peering connection, or update the status of a VPC peering connection.

Important:

- The API is idempotent, meaning that it can be called multiple times without affecting the result.

Example

Describing VPC peering connections:

```javascript
const params = { action: 'DescribeVpcPeeringConnections', requestUri: '/' }
const response = ec2.describeVpcPeeringConnections(params)
```

Describing a specific VPC peering connection:

```javascript
const vpcPeeringConnectionId = 'vpc-peering-connection-123'
const params = { action: 'DescribeVpcPeeringConnections', requestUri: '/', VpcPeeringConnectionIds: [vpcPeeringConnectionId] }
const response = ec2.describeVpcPeeringConnections(params)
```

Updating the status of a VPC peering connection:

```javascript
const status = 'active'
const params = { action: 'UpdateVpcPeeringConnectionStatus', requestUri: '/', VpcPeeringConnectionIds: [vpcPeeringConnectionId], Status: status }
const response = ec2.updateVpcPeeringConnectionStatus(params)
```

The IPv4 CIDR block of the requester's VPC.

The AWS account ID of the owner of the requester VPC.

The ID of the peer VPC.

The ID of the VPC peering connection.

One or more filters.

The IPv4 CIDR block of the peer VPC.

The AWS account ID of the owner of the peer VPC.

The ID of the peer VPC.

The expiration date and time for the VPC peering connection.

The IPv4 CIDR block of the requester's VPC.

The AWS account ID of the owner of the requester VPC.

The ID of the requester VPC.

The status of the VPC peering connection (<code>pending-acceptance</code> | <code>failed</code> | <code>expired</code> | <code>provisioning</code> | <code>active</code> | <code>deleted</code> | <code>rejected</code> ).

A message that provides more information about the status of the VPC peering connection, if applicable.

The key/value combination of a tag assigned to the resource. Specify the key of the tag in the filter name and the value of the tag in the filter value. For example, for the tag Purpose=X, specify <code>tag:Purpose</code> for the filter name and <code>X</code> for the filter value.

```
The container format used to combine disk images with metadata (such as OVF). If absent, only the disk image is exported.

The S3 bucket for the destination image. The destination bucket must exist and grant WRITE and READ_ACP permissions to the AWS account <code>vm-import-export@amazon.com</code>.

A reference to this object so that method calls can be chained together.

```java
public String getContainerFormat() {
    return containerFormat;
}

public ImportExportRequest withContainerFormat(String containerFormat) {
    this.containerFormat = containerFormat;
    return this;
}
```

```java
public String getS3Bucket() {
    return s3Bucket;
}

public ImportExportRequest withS3Bucket(String s3Bucket) {
    this.s3Bucket = s3Bucket;
    return this;
}

method appends the values to the existing list (if any). Use {@link #setTags(java.util.Collection)} or {@link #withTags(java.util.Collection)} if you want to override the existing values.

```java
@link #setTags(java.util.Collection)
```

Any tags assigned to the image.

```java
@link #withTags(java.util.Collection)
```

Returns a reference to this object so that method calls can be chained together.

```java
public PutImageResult withTags(java.util.Collection<Tag> tags)
```

Method setTags appends the values to the existing list (if any). Use `#setTags(java.util.Collection)` or `#withTags(java.util.Collection)` if you want to override the existing values.

```java
public PutImageResult setTags(java.util.List<Tag> tags)
```

Any tags assigned to the image.

```java
public PutImageResult withTags(java.util.List<Tag> tags)
```

The type of virtualization of the AMI.

```java
public PutImageResult withVirtualizationType(VirtualizationType virtualizationType)
