Cybersecurity is our top priority. Every day at Cisco, we protect our enterprise and customers by securing:

- In 170 Countries around the globe
- Every day, this massive complex data system produces:
  - 47TB of Traffic
  - 15B Netflow Records
  - 4.8B DNS Queries
  - 75M Web Transactions

Cisco is committed to ongoing investment in innovation that enhances the security and resilience of our products and helps to mitigate today's advanced persistent threats.

Policies not only set the rules for protecting the organization, but also protect investments across people, processes, and technology.

People are the backbone of pervasive security. Embedding processes into the business helps us identify vulnerabilities and remediate issues quickly. Here are our favorites:

- Secure Development Lifecycle (SDLC)
- Product Security Incident Response Team (PSIRT)
- Data Protection Program

Processes are the backbone of pervasive security. Embedding processes into the business helps us identify vulnerabilities and remediate issues quickly. Here are our favorites:

- Secure Development Lifecycle (SDLC)
- Product Security Incident Response Team (PSIRT)
- Data Protection Program
