Cisco’s Commitment to Accessibility

- Cisco's vision is to improve the way all people work, live, play, and learn
- Cisco is making key areas more accessible to people with disabilities:
  - Products
  - Websites
  - Documentation
- Cisco is committed to creating products that meet legal requirements for Cisco and Cisco customers
- It's the right thing to do!

“IP enabled technology has the greatest potential to eliminate the barriers in the way that all people live, work, learn and play.”

John Chambers
Solutions for Individuals with Disabilities

• Blind
• Deaf
• Hard of Hearing (HoH)
• Low Vision
• Mobility
Accessibility Features for Hard of Hearing & Deaf (Cisco Unified 8861 IP Phone)

- Ring and message waiting indicator viewable 360 degrees and provide audible message waiting indicator
- Acoustic coupled TTY Support
- Hearing aid compatible (HAC) handset
- Supports for inline amplifiers
- Integrates third-party accessibility apps using XML
- Visual notification of phone state
- Programmable ring tone, pitch, and volume
Accessibility Features for Blind & Visually Impaired (Cisco Unified IP Phone 8800 Series)

• Cisco launches the first enterprise-grade desk phone with built-in text-to-speech functionality. Developed with collaborative input from the American Council of the Blind (ACB), the software update for the Cisco’s IP Phone 8800 Series is a huge step toward making the digital workplace more accessible for the blind and visually impaired.

• The text-to-speech is a new feature that allows the user to turn on a voice feedback without requiring any special configuration. This feature provides: Voice readout of caller IDs, voice readout for menu navigation, voice readout of hard keys and soft keys.

• For more information: visit https://www.cisco.com/c/en/us/about/accessibility/products.html

• http://www.ultratec.com/ttys/
Software TTY Applications

• accessaphone ipTTY by Tenacity & SimpliciTTY by NexTalk – Windows application
• Eliminates the need for physical TTY device
• Soft phone SIP client supports incoming and outgoing TTY traffic from the desktop
• No Analog Lines Required
• Multi-Lined Display
• Saves Text Conversation
• For more information, visit:
Inline Amplifiers for Cisco Phones

• All Cisco phones have 12dB of gain built-in. Users with significant hearing loss (even with the use of hearing aids) may want more volume increase beyond 12dB
• 3rd party amplifier connects easily between handset and telephone base
• Clarity HA40 has adjustable incoming volume control, and adjustable tone control (600-2400Hz)
• Boost button allows for even more amplification and eliminates background noise and feedback by muting the microphone in the handset
Live Call Captioning on Cisco Phones

- Enterprise users with hearing loss can listen and read captions directly on their Cisco phone
- Captions are displayed in real-time
- Use existing features of the Cisco Phone
- The service includes a scalable virtual server that forwards audio to a Hamilton CapTel Captioning Assistant then sends text back to the Cisco phone
- Easy to setup and maintain

Accessible Emergency Notification System

- 3rd party application works with Cisco Unified Communications Manager and Cisco IP phones
- Provides paging and visual notification on the Cisco IP phone in case of emergency
  - Forces Cisco IP Phone to speaker mode for audible notification
  - Displays message on Cisco IP Phone screen for visual notification
  - For more information, visit: http://www.singlewire.com/
This device has bright strobe light and extra loud ringer, triggered by a sound sensor attached to the back of the phone which picked up the ringing sound of the telephone.

The RingPlus is designed by a UK-based company and sells with a 230V AC wall adapter: https://www.doro.co.uk/doro-ringplus.html

Cisco Accessibility Team has detailed information on how to set up the RingPlus on Cisco IP hardware phones. Contact us for more information.
Large Button Analog Phone Solution

Clarity Amplified Big Button Phone Clarity-JV-35

Cisco ATA 190
Cisco SPA 122
Cisco VG224
Communications Manager 10.x and greater provide the following features:

- Audible Message Waiting Indicator (AMWI). This is a feature that notifies the user of a new voice mail via a stutter dial tone on the phone.
- Programmable Line Keys (PLK). This feature enables an Administrator to assign call functions to the available line keys on a Cisco IP Phone.
- Self Care Portal allows users to customize, control phone features and settings.
• Supports Speech Connect, SpeechView, Telephone User Interface (TUI), and TTY prompt set features

• Speech Connect provides a speech-enabled, speak out the name of employee and instantly be connected, without knowing the extension of the employee

• SpeechView enables users to receive voice messages in their mailbox in the form of text

• When the TTY prompt set is installed, the subscribers and outside callers that use TTY can call in to Unity Connection and use the same features that a hearing caller can use

• TTY prompt set, available in U.S. English (ENX) only, G.711 mu-law codec must be selected
Cisco Jabber for Windows

Jabber for Windows 11.5 or higher:

• Compatible with Freedom Scientific JAWS and NVDA screen readers
• Cisco provides scripting to enhance JAWS and NVDA support.
• JAWS scripting supports JAWS v16.0 or higher on Windows 7/10
