## How to get and keep a specialization

- Locate the requirements for the <u>Business</u>, <u>Architecture</u>, <u>Solution</u>, or <u>Cisco Powered Services</u> specialization you are interested in.
- Review the requirements to ensure that you qualify before applying.
- Note that some specializations require an audit in which you showcase your capabilities to Cisco or a third party. Cisco Powered Services specializations also require that you first create a service.
- After applying and achieving approval, maintain the requirements and renew your specialization annually.
- The Apply and Renew steps must be done by a partner admin.
