Continuous Teamwork Anytime, Anywhere

Cisco Webex Teams is an app that brings people together to move work forward effectively, inside or outside your organization. Secure messaging, file sharing, white boarding, video meetings, calling, and more, all in a single app, and without having to switch between multiple tools.
Overview

Never before have we seen business innovation this rapid, and competition this intense. Businesses will rise and fall by the strength of the teams that fuel their agility. Teams that include not only internal colleagues but ecosystems of external experts and partners as well. To support your teams, you need tools that bring people together easily and enable them to work together productively. At the same time, you need to meet increasing security and compliance requirements, which are key to keeping your information safe and secure. It’s time for you to look at the new team collaboration experience enabled by Cisco Webex®.

Webex Teams is an app for continuous teamwork. It lets you instantly bring people together, from inside and outside your company, in secure work spaces. Send messages and share files. Express your ideas on whiteboards that others can add to. Seamlessly use high-quality video meetings and make calls. Even keep up to date with what’s happening in other apps. Anytime, anywhere, on virtually any device.

When it is time to meet, Webex Teams gives everyone an equal seat at the table. Any member of a space can start an instant or scheduled meeting, with the ability to mute attendees when needed, add meeting guests, and record the meeting. And everything that’s shared during a meeting is kept in the connected space for easy review later.

When teamwork flows into physical rooms, bring the Webex Teams experience with you. Simply pair the app to a Webex device to join your meetings, share your screen, capture life-sized whiteboard drawings, and more. That’s Cisco Webex Teams. Moving work forward for all your teamwork. Are you in?

Trends and challenges

A new era of working in teams

Gartner’s work stream and conferencing revenue forecasts for 2021 are $4.93B and $7.06B, respectively. And 72 percent of leaders globally say “effective team communication” has become more important (1).

And teams now span ever broader ecosystems that include colleagues, partners, customers, advisors, and even competitors. 68 percent of business leaders are now looking to extend their collaboration with external parties. Within these diverse teams, many employees are working remotely from their own offices, with 67 percent of managers reporting an increase in remote employee productivity (2).

People love working together. But working together is becoming more complex.

This complexity arises as people use different products and services to collaborate, with one app for messaging and perhaps a separate service for meetings, yet others for email, calendaring, and file sharing. Siloed tools that lack interoperability hamper productivity and performance.

IT managers face the challenge of keeping track of every device and app in use, and ensuring that all shared information is secure and meets their compliance requirements.

The result: User workflows get broken up and IT faces several challenges from lowered return on investment to potential security breaches.

The solution: For teams to maximize their productivity, effective team collaboration is critical. Having the right tools available for effective teamwork is hugely important.

How it works: key features and components

- **Create spaces to keep work moving anytime**: Bring everyone together easily and quickly in Webex Teams spaces. Enable everyone to see and share all the information they need to work together productively. Send messages, share files, and create or edit whiteboards, securely, with one person or a group of people. Add people to your shared spaces easily from your company directory. Or simply enter an email address and start teaming with customers, partners, or anyone else you need to work with.

- **Enterprise-grade security**: With end-to-end encryption, messages, files, and whiteboard drawings are protected from your device to theirs, and everywhere in between. For added control, manage your own encryption keys on-premises. And we’ve taken the risk out of working with other companies. Your policies are in force even when your employees are collaborating with others outside your company.

- **Meetings built for teams**: Add rich meeting experiences to your Webex Teams app. Seamlessly use high-quality video, screen sharing, and collaborative white boarding from any device to improve creativity and decision making. Any member of a Webex Teams space can schedule a time to meet in advance or tap to start instantly. Democratized in-meeting tools, such as the ability to mute others, add guests, and turn on recording, help to improve everyone’s effectiveness in the meeting. And all of the chats, files, and whiteboards shared during meetings can be easily reviewed later by any team member—whether or not they were participating live.

- **Interoperability for speed and convenience**: In addition to the immersive experience delivered by the Webex Teams app, meeting participants can join Webex team meetings from a standards-based video device, right from their phone using a call-in number, or even from Microsoft Skype for Business. But you also have other meetings. And that’s no problem. Join or host Personal Room or standard Webex Meetings appointments right from the Webex Teams app. As well as any standards-based Session Initiation Protocol (SIP)-compliant meeting. Because doing more from one place means you can be more productive.

- **Best meeting experiences with Webex devices**: The Webex Teams app works great with Webex devices to give you the best possible video meeting and teamwork experiences in the office. Instantly pair with any cloud-registered Webex device to start meetings, share your screen, even take the call with you if you need to change locations. Further, when paired to the Webex Board you can instantly save whiteboard drawings created on the touch screen to share with others no matter where they are.

- **Calling**: Webex Teams includes native in-app VoIP capabilities, which can be enhanced with comprehensive cloud PBX features and Cisco IP phones when combined with Cisco Webex Calling or Cisco Webex Hybrid Call Service.
• **Open integration:** Take advantage of Cisco Webex within your own applications. Webex SDKs and widgets provide an easy way to embed high-quality audio-video calling and messaging into any web or native application. And anyone can visit the [Webex App Hub](https://webex.com/app-hub) to instantly connect Webex Teams spaces with popular third-party tools using a growing catalog of integrations and bots.

• **Hybrid Services:** Extend the value of existing investments and improve the user experience by adding the capabilities of your on-premises and partner-managed services to the Webex Teams app.

### Use cases
