kyndryl

Managed solutions that fuel digital transformation

Cisco and Kyndryl offer co-developed solutions that encompass private cloud services, network and edge computing, software-defined networking, multi-network WAN, and advanced security. The Kyndryl managed services capabilities enhance Cisco-based technology solutions. Together, we help customers evolve to the next stage of cloud, establishing private 5G, edge solutions, and multicloud integration. Our solutions encompass strategy, migration, ongoing operations, and management of the end-to-end IT environment.

- **Network and Edge**: We work with you to enhance and optimize your network infrastructure, using best-of-breed services and technology for your enterprise and hybrid multicloud environments. Our software-defined approach for your network provides a "core-to-edge" environment that helps accelerate your business transformation and improves hybrid work and cloud-based services.

- **Security and Resiliency**: You can improve security and cyber resilience to meet your data and connectivity requirements with our Zero Trust framework, which works across on-premises and cloud to better secure your infrastructure. Zero Trust establishes ongoing, consistent security for your applications and environment, for any user, device, or location.

- **Data and AI**: By applying AI to 30+ years of mission-critical IT patterns, we can generate predictive insights that help you enhance end-to-end automation, accelerate the quality of your digital transformation journey, and reduce operational risk with intelligent automation. You can manage the complexity of your data, transform existing systems, and implement AI at scale for smoother data operations.

- **Digital Workplace**: Our digital innovation services help empower your people while transforming workspaces. Collaboration and communication tools work across and beyond physical spaces to improve performance and elevate customer satisfaction. We can help you deliver enhanced digital experiences for your workers, to enable an inclusive hybrid workplace culture.

- **Cloud**: You can support one or more clouds and manage workloads across on-premises, private, or public clouds, delivering resiliency and a high level of service availability. We provide tools to improve the security and reliability of your clouds and help you manage work across them.

The Cisco and Kyndryl Joint Innovation Lab (JIL) supports innovations in API development, architecture validation, SD-WAN, and software-defined networks (SDN).

Customer case studies

Redesign of IT operations positions this North American food manufacturer for business growth

This organization's IT team was struggling to manage and maintain a network that had grown by 66 percent over three years with a static budget. The strategic plan for the next three years included network transformation and modernization, improved operational efficiencies and uptime, and measurable cost savings. The client turned to Kyndryl to migrate its IT infrastructure to an enterprise agreement model, keeping Cisco as the technology vendor of choice. Improvements were delivered across multiple aspects of the IT environment, including 25 percent savings on licensing costs, more efficient license management, financial predictability, and reduced administrative overhead.

Cisco and Kyndryl enable service innovation for multinational media company

This client needed to revamp its network because of aging equipment, reliability issues, and inability to use digital tools to develop new products and services. The client required the network upgrade be completed with zero disruption in essential services such as phone, voice over IP, email servers, and scheduling and archiving systems. Kyndryl worked with Cisco to assess the situation and upgrade the network, creating a high-performance, future-ready platform for the client. With the new environment, the client received a 60 Gbit boost in network bandwidth, a 40 percent reduction in network latency, a 32 percent enhancement of network availability, and other operational improvements.
