Network transformation: If not now, when?

Connect, protect, and consume with the help of trusted advisors.

"If not now, when?" That's the reality of cloud migration. And the more you rely on the cloud, the more a strategic cloud network plan is a necessity. That's why Cisco and Microsoft are showing up together—to meet you wherever you are in your cloud journey. We're partnering to help you create the right plan for cloud migration, and to make sure the transition is easy.

By reducing complexities and taking the risk out of decision making, you can confidently build your networking plan, discover and transact seamlessly, and secure your hybrid cloud environment.

Cloud at Scale
Put advanced solutions to work, and extend the private network to multi-cloud.

Anywhere Access
From the data center, enterprise sites, and devices, deploy and accelerate user adoption.
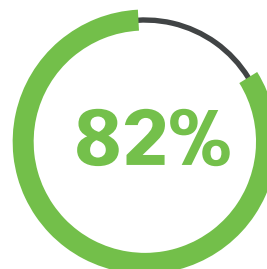

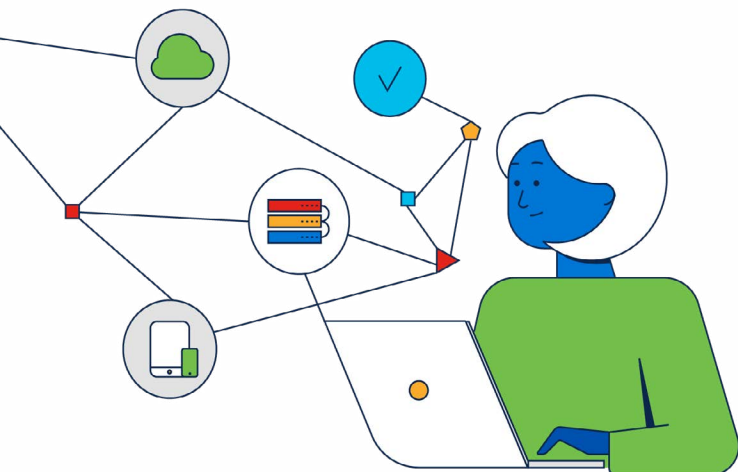

Top-tier Connectivity
More network speed, security, and reliability across your network.

One Way to Manage
A centralized way to review and implement all cloud services, and get to multi-cloud faster.

**82%** of large enterprises have a hybrid cloud infrastructure.

Cisco SD-WAN FAQ, 2022

Networking

The cloud is an extension of your business's network. Cisco provides seamless connectivity, consistent policy, and security in Microsoft Azure Cloud (previously applicable to the branch and data center).

Security

As more applications are accessed by more employees in more locations, security risks increase. Cisco provides security beyond the network perimeter, and integrates into all parts of Azure Cloud.

Observability

Oversight of essential enterprise applications is critical for success. Cisco and Microsoft deliver consistent application performance, and quickly roll out new features and capabilities across apps for a competitive advantage.
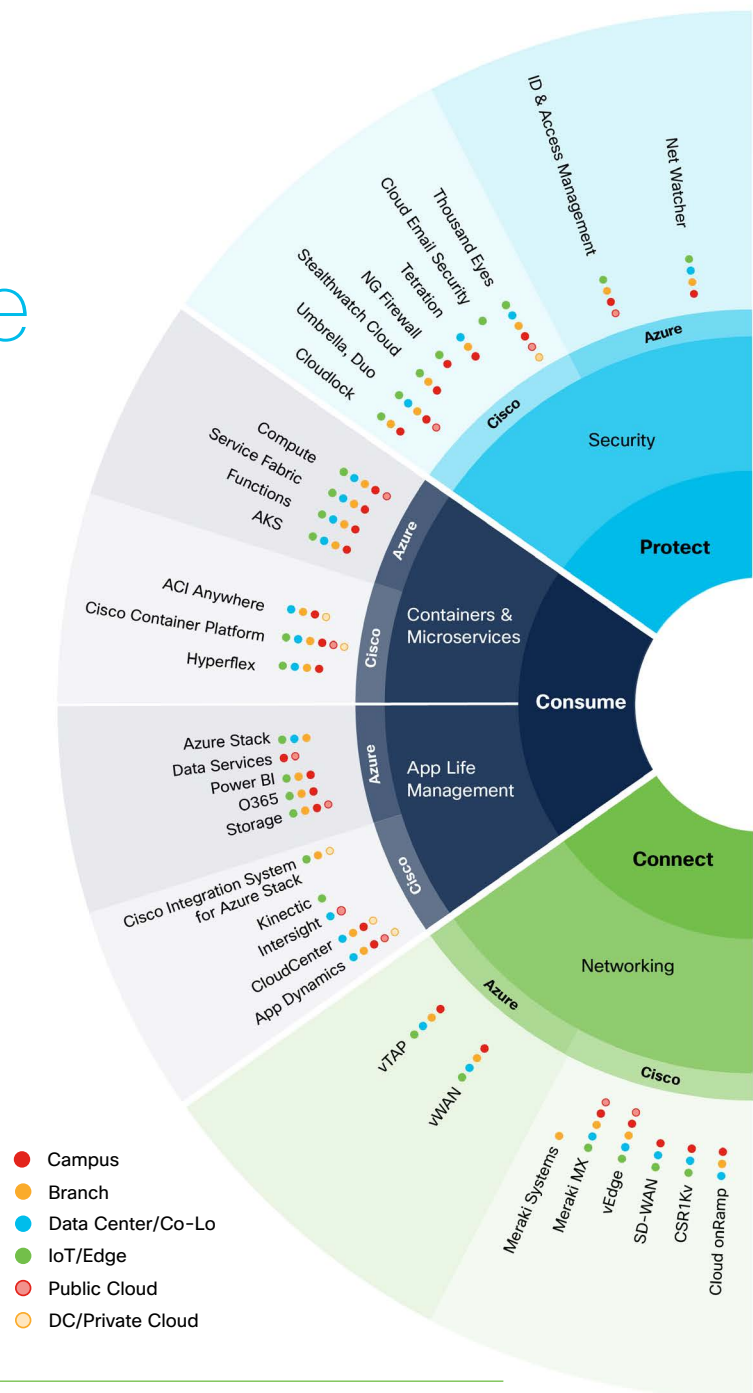

Data Center

Manage the growth of vital applications hosted in the public cloud. Cisco helps streamline and simplify inter-cloud connectivity, so you can meet any challenge with ease.

Meet your current and future network needs.

Make your current network environment work its best—with flexibility in mind.

Cisco and Microsoft's robust partner channel ecosystem and vast experience gives you access to the best solutions for your network needs. Working together, we deliver an integrated application infrastructure solution set. It's the perfect combination of network infrastructure architectures and services from Cisco, and application, software, and cloud-first tools from Microsoft—made just for you—covering everything from on-prem to the cloud.

Connect

Securely extend private networks into public clouds.

Support a rich set of network security solutions.

Provide best tools for ease of management with a single vendor.

Protect

Increase security and lower risk across identities, direct-to-cloud connectivity, data, and applications including SaaS.

Consume

Deploy, manage, and optimize applications in cloud and container environments.

Faster time-to-value with 20-30x faster application deployment.

Make real-time decisions and improve business metrics.

See the network journey brought to life.

These are solutions that fit your organizational needs—with everything in one place to seamlessly scale your Microsoft resources.

Cisco and Microsoft's range of products ensures connectivity, communication, and collaboration are possible. Explore how some of our customers are using our solutions to connect, protect, and consume.

Connect

🌐 Cisco SD-WAN

Cisco SD-WAN's software-defined WAN solution enables organizations with a way to connect users to their applications securely. Phillips 66 required a way to transform its network, and Cisco SD-WAN was a natural solution for maintaining seamless network connectivity during the process.

It delivers applications and services over standard network transport, including MPLS, broadband, and internet, energizing Phillips 66's network with optimized strength. Cisco SD-WAN's overlay network extends the organization's network to Infrastructure as a Service (IaaS) and multi-cloud environments, and helps its shift to cloud across 140+ locations.

Protect

🌐 Duo Zero Trust

A large, tech-driven organization came to Cisco with three critical pain points. Due to COVID-19 work-from-home requirements, its employees were accessing resources on new and unmanaged endpoints. As a strong Microsoft shop, the company was also in the process of rolling out Intune to manage mobile devices, but there was little visibility into the rollout. Additionally, there was a large gap in application access oversight.

These were all problems Duo Zero Trust could address with ease. Implementing secure access to applications and data for all users on any device, the organization gained insight into how users, groups, and devices typically access applications. The tool also illuminated how and when access is atypical, keeping devices—and business—secure.

Consume

🌐 AppDynamics

Alaska Airlines needed full visibility of its complex hybrid cloud environment, while deriving insights that would help minimize costly performance issues. So, it turned to AppDynamics for Application Performance Management (APM), Infrastructure Monitoring & Visibility, and End User Monitoring (EUM).

Alaska Airlines continually builds on its impeccable customer service and satisfaction record, using performance monitoring to optimize the delivery of their product and ensure seamless customer service. With its shift to cloud-first, Alaska Airlines was also faced with having to re-architect applications, build cloud-native applications, and manage different workloads across a hybrid environment.

Supported by AppDynamics, they confidently innovated with systems, applications, and platforms across on premise and cloud.
