

Cisco Cybersecurity Solutions

Secure Your Reputation Quickly and Cost-Effectively

The right security strategy means faster business outcomes—because your users can innovate freely, without being constrained by technologies or data risks.

It means your organization can run effectively day and night, and is protected against financial harm from cyberattacks.

And most importantly, it means you and your most sensitive data is comprehensively protected, ensuring your reputation and user loyalty aren't at risk.

Cisco is uniquely positioned to help ensure your success with our:

- **Worldwide security team**, including threat intelligence, research, supply chain, and customer support professionals, to provide a comprehensive approach to security
- **Services professionals** to help guide you as you plan, implement, or manage your security strategy and provide support when attacks occur
- **Best-in-class solutions** that work together to stop threats quickly while reducing complexity and cost
- **On-going research and new technology development** to help keep you ahead of attackers, not behind
- **Open platform**, enabling us to team up with key technology partners so our solutions work across vendors

Our Approach

- **Visibility driven**, to provide exceptional intelligence and enable effective and accurate detection, deeper insights, and better decisions
- **Threat focused** to stop threats before, during, and after the attack through detection and analysis
- **Platform based** to detect threats more simply, with fewer platforms to manage and support, and introduce new capabilities rapidly and cost-effectively

Security Everywhere

The most effective way to confront the dynamic threat landscape is to make security pervasive—wherever employees are and data resides.

We offer industry-leading solutions for enterprise:

- Network security
- Data center security
- Advanced malware protection
- Cloud security
- Web and email security
- Security services

Cisco is rated a leader in Gartner Magic Quadrants:

- Intrusion Prevention Systems (November 2015)
- Secure Email Gateways (July 2015)
- Network Access Control (December 2014)

Cisco has been a consistent leader in multiple NSS Labs Security Value Maps and has the highest effectiveness scores in:

- Breach Detection Systems—99.2% (September 2015)
- Next Generation IPS—99.5% (April 2015)

Cisco was named the Top Cybersecurity Company by CS Magazine at RSA 2016.

Cisco® Talos Security Intelligence and Research Group

Talos is a team of leading threat researchers with sophisticated systems and unparalleled visibility to threats worldwide. They detect, analyze, and protect against both known and emerging threats by aggregating and analyzing the unrivaled telemetry data at Cisco:

- 19.7 billion total threat blocks per day
- 1.5 million incoming malware samples per day
- 16 billion web requests per day
- 600 billion email messages per day

Collective Security Intelligence, enabled by Talos: If a threat is identified by any Cisco customer, an automated response will block, drop, or quarantine it at all other customer sites worldwide within minutes.
