

Cisco Digital Signage and Show and Share ►

The Cisco® Digital Media Suite (DMS) is a comprehensive offering of webcasting and video sharing, digital signage, and business IPTV applications that can help transform how organizations learn, grow, communicate, and collaborate. Support from the broad Cisco partner ecosystem of deployment, solution-development, and content-creation partners help ensure a successful digital media implementation.

Cisco® Show and Share is a webcasting and video sharing application that helps organizations create secure video communities to share ideas and expertise, optimize global video collaboration, and personalize the connection between customers, employees, and students with user-generated content. Cisco Show and Share provides the ability to create live and on-demand video content and define who can watch specific content, it offers viewer collaboration tools such as commenting, rating, and word tagging, and it provides comprehensive access reporting.

Cisco Digital Signs is a network-based digital signage application that helps organizations enhance the customer experience, deliver information and training, and create awareness. Cisco Digital Signs is an add-on module that uses the Cisco Digital Media Manager to allow you to conveniently and quickly publish and view digital media programs interactively through the Cisco Digital Media Player (DMP), over an IP network, through your standard- and high-definition displays. It uses standard video-streaming technologies to deliver compelling live and on-demand media content for an immersive digital signage experience.

You can learn more about Cisco Digital Media solutions on Cisco's website at the following URL:
