

July 10, 2026

To Whom It May Concern:

A compliance review of IOS XR version 26.2 ("the Product") deployed in the following platforms:

- ASR 9001
- ASR 9006
- ASR 9010
- ASR 9901
- ASR 9902
- ASR 9903
- ASR 9904
- ASR 9906
- ASR 9910
- ASR 9912
- ASR 9922

was completed and found that the Product incorporates the following FIPS 140-3 validated cryptographic module:

- CiscoSSL FIPS Provider version 8.0 (CMVP Certificate [#4891](#))

Cisco confirms that the cryptographic module listed above provides cryptographic services for the following as applicable:

- SSHv2
- SNMPv3
- TLSv1.2/TLSv1.3

The review/testing confirmed that:

1. The cryptographic module (mentioned above) does initialize in a manner that is compliant with its Security Policy.
2. All applicable cryptographic algorithms used for the services listed above are handled within the cryptographic module.
3. All applicable underlying cryptographic algorithms support each service's key derivation function.

This letter has been generated in accordance with guidance provided by the Cryptographic Module Validation Program ([CMVP](#)). The CMVP has not independently evaluated this compliance review.

Any questions regarding these statements may be directed via e-mail to the Cisco Global Certification Team (GCT) at certteam@cisco.com.

Sincerely,

A handwritten signature in black ink that reads "Edward D. Paradise".
