To Whom It May Concern

A compliance review of Cisco IOS XE version 26.1 (“the Product”) deployed on the following platforms:

- C8130-G2
- C8130-VAI-G2
- C8130-VAP-G2
- C8140-G2
- C8151-G2
- C8151-CVAI-G2
- C8151-CVAP-G2
- C8161-G2

was completed and found that the Product incorporates the following FIPS 140-3 validated cryptographic modules:

- Cisco IOS Common Cryptographic Module (IC2M) Rel5b (CMVP Cert. #4752)
- CiscoSSL FIPS Provider 8.0 (CMVP Cert. #4891)

Cisco confirms that the cryptographic modules listed above provide cryptographic services for the following as applicable:

- IPsec
- SSHv2
- SNMPv3
- TLSv1.2/TLSv1.3

The review/testing confirmed that:

1. The cryptographic modules (mentioned above) initialize in a way compliant with its Security Policy.
2. All applicable cryptographic algorithms used for session establishment are handled within the cryptographic module.
3. All applicable underlying cryptographic algorithms support each service’s key derivation function.

This letter has been generated in accordance with guidance provided by the Cryptographic Module Validation Program (CMVP). The CMVP has not independently reviewed this analysis, testing, or the results.

Any questions regarding these statements may be directed via e-mail to the Cisco Global Certification Team (GCT) at certteam@cisco.com.

Sincerely,

Edward D Paradise
