To Whom It May Concern:

A compliance review of the Cisco Meraki MX and vMX platform with software version 26.1 ("the Product") was completed and found that the Product incorporates the following FIPS 140-3 validated cryptographic module:

- Cisco FIPS Object Module version 7.3a (Certificate [#4747](#))

Cisco confirms that the cryptographic module listed above provides cryptographic services for the following as applicable:

- TLS (Meraki Cloud, AMP, Threatgrid, cURL), Secure Client, Client VPN, and Meraki site-to-site VPN

The review/testing confirmed that:

1. The cryptographic module (mentioned above) does initialize in a manner that is compliant with its Security Policy.
2. All applicable cryptographic algorithms used for the services listed above are handled within the cryptographic module.
3. All applicable underlying cryptographic algorithms support each service's key derivation function.

This letter has been generated in accordance with guidance provided by the Cryptographic Module Validation Program ([CMVP](#)). The CMVP has not independently evaluated this compliance review.

Any questions regarding these statements may be directed via e-mail to the Cisco Global Certification Team (GCT) at certteam@cisco.com.

Sincerely,

A handwritten signature in black ink that reads "Edward D. Paradise".
