

Cisco Smart Cameras

A Tour of Vision Portal

Vision Portal is a dedicated dashboard designed for quickly locating and reviewing Cisco® security camera footage. Access powerful tools for managing and resolving critical incidents, all within an interface accessible from the Cisco Meraki® Dashboard.

Critical incident management step-by-step

- Access Vision portal
- Quick walls
- Rapid review
- Attribute search
- Cross-camera tracking

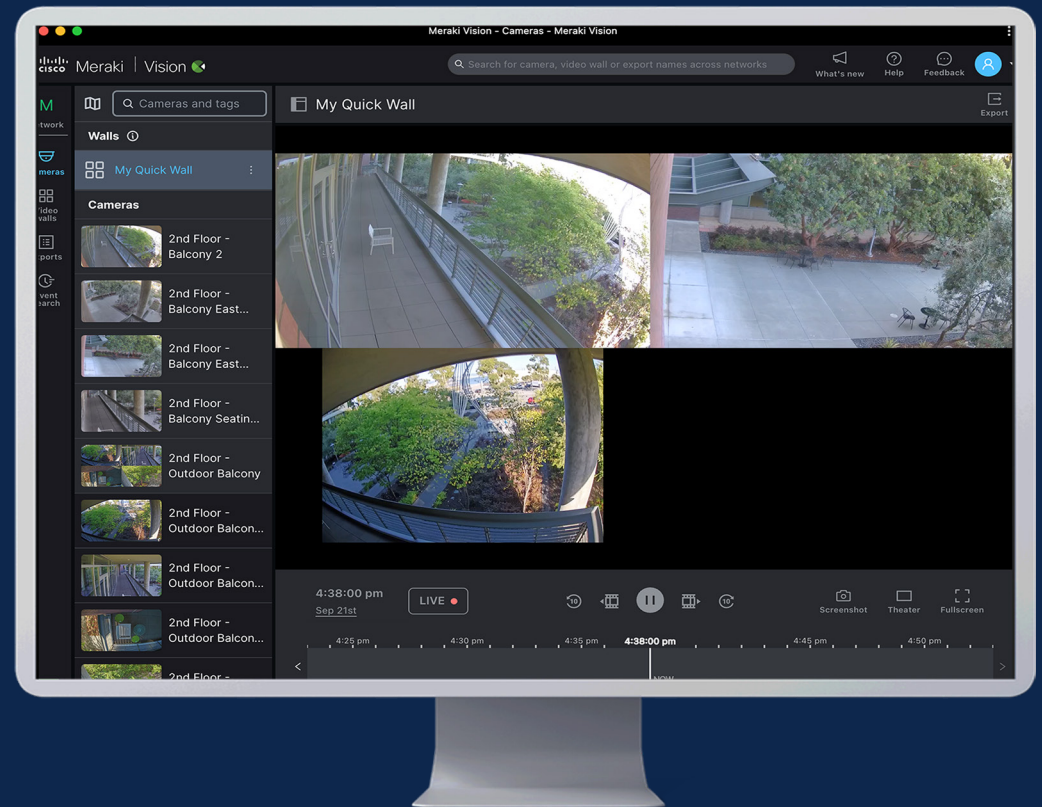

Figure 1. Image shows Vision portal which can be accessed through the Meraki Dashboard

A critical incident has just occurred...

Locate physical security footage specific to your critical incident quickly with dedicated physical security features on Vision Portal.

1. Quick walls

Choose the cameras that may involve your person of interest and create personalized video walls to begin the initial search process.

2. Rapid review

Quickly scrub and review hours of footage across the cameras initially chosen and locate what the person of interest may look like.

3. Attribute search

Using context clues begin filtering footage by what the person of interest is wearing. You may filter footage to only show people wearing a “green top” and “blue bottoms”

4. Cross-camera tracking

Lastly, once you have selected your person of interest, easily locate them across your entire camera deployment and view other instances of where they appear. Begin critical incident management with all your evidence in one place.
