

Cisco Smart Cameras

Cross-Camera Tracking

Introducing Cross-Camera Tracking on the Cisco Meraki Vision portal, allowing you to track the movement of a person of interest throughout multiple cameras without using facial recognition.

Privacy-first AI-powered technology for strategic incident resolution

Faster critical incident resolution

Improve response time and intelligently condense hours of footage into sorted and filtered clips of a person of interest to send to dedicated teams.

Privacy-first search

Identify persons of interest and then, through their full-body characteristics, continue to search across your camera deployment even when faces are not clearly visible.

Export the key moments

Build a comprehensive narrative of activity and easily export the key moments you need, such as when a person of interest enters and exits a specific area.

Rapid-fire search

Search for a person of interest in your camera deployment with just one click and quickly view instances of that same person.

Take all footage into consideration

View the footage pertaining to the person of interest quickly without having to manually locate it.

Dedicated portal for surveillance

Use AI-powered features to complement your search, such as attribute search and motion search, to strategically protect your people, places, and assets.
