

Cisco Smart Cameras

License Plate Recognition

License Plate Recognition is now available on the MV53X. This allows new and existing Cisco® smart camera deployments to identify and track vehicles in real time while delivering intelligent, simplified, and automated solutions.

Smarter outdoor access control for AI-powered strategic incident resolution

Search for a license plate

Gather vehicle's license plates who have entered or exited the premise and then search for specific plates in your database for strategic incident resolution.

Single bullet camera deployment

Monitor outdoor areas and read license plates simultaneously with a single bullet camera deployment.

Export key vehicle moments

License plate recognition logs each event and sends you cropped image data via Message Queuing Telemetry Transport (MQTT) or lets you quickly export key moments for review or sharing.

Monitor slow-moving vehicles

Conduct strategic automated vehicle management of gated entries, garages, parking lots or drive-thrus to have full end-to-end visibility from indoors and out.

Improve automated access control

Limit vehicle entry by customizable license plate access, enhance after-hours security, and get real-time alerts for unauthorized vehicles.

Single managed dashboard

Unify network management and physical security, through the Meraki Dashboard for operational efficiency.
