

# AppDynamics for SAP®

Optimize Performance with Code-Level Visibility,  
Root Cause Analysis, & Business Impact Awareness

For most enterprises, SAP® applications are **mission-critical**. And yet, SAP performance management is still notoriously complicated and unreliable. Until now.

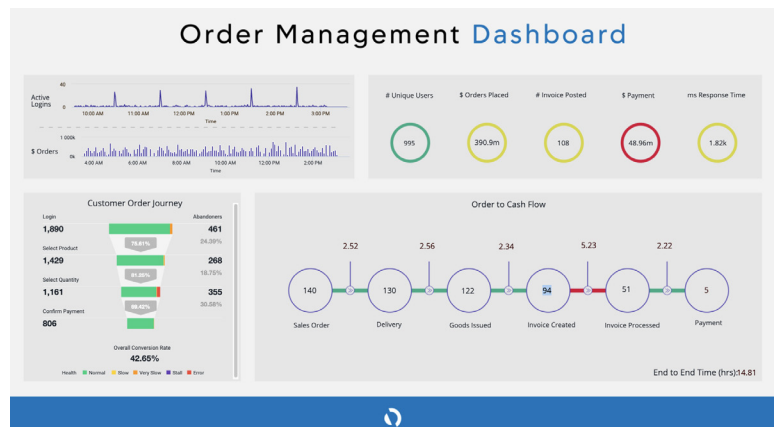

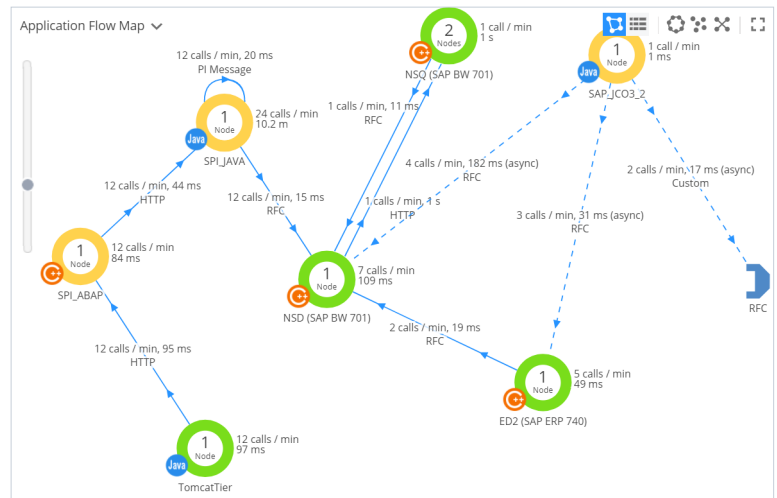

With AppDynamics monitoring for SAP, you can finally ensure the flawless performance of any SAP application using ABAP—including ERP, ECC, S4/HANA, CRM, BW, PI and more. As the **only** solution offering complete visibility into ABAP code and true root cause analysis, AppDynamics can help you get the most out of your SAP investment.

When SAP performance suffers, business suffers.

For the Fortune 1000... the average cost of a critical application failure per hour is \$500,000 to \$1 million.

IDC Opinion, DevOps and the Cost of Downtime: Fortune 1000 Best Practice Metrics Quantified, December 2014

Application Flow Map showing both SAP and Java services. Flow Maps are automatically built in real time based on live traffic.

## Maximize Uptime

Detect, isolate and troubleshoot SAP performance issues with ease.

- **Low-overhead** agent helps quickly detect performance issues—and pinpoint the root cause to a single line of ABAP code or database query.
- Code-level transaction snapshots capture diagnostic information when performance is impacted.

## Improve Visibility

Gain insights into the performance of the entire SAP ecosystem.

- Flow Maps based on **live traffic** visualize all SAP dependencies in onpremises, cloud and hybrid environments.
- End-to-end visibility across all SAP environments and upstream dependencies.
- Intelligent alerts notify IT teams when SAP performance deviates from baseline.
- Understand business impact in real time with business analytics.

## Drive Adoption

Seamlessly migrate legacy SAP applications to ensure the best user experience

- Application Flow Maps and automatically detected **Business Transactions** help ensure a smooth transition to S/4HANA®.
- Network monitoring of all connections to SAP environments reduces the risks of cloud migration.
- Give application and business owners real time views into business performance metrics.

AppDynamics can help you protect your mission-critical SAP applications —and your bottom line.
