Managing Business Transactions in Cisco AppDynamics (APM222)

Description

The **Managing Business Transactions in Cisco AppDynamics (APM222)** training shows you that planning and mapping Cisco AppDynamics to your application is a critical step to successfully monitoring your applications. In this training, you will learn about prioritizing Business Transactions, using Service Endpoints and configuring for Backend Detection. This training is the SECOND in a learning series for APM Advanced configurations.

This training also earns you 5 Continuing Education (CE) credits toward recertification.

Outline

- Determine a Business Transaction Strategy
- Using Service Endpoints
- Using Live Preview for Custom Match Rules
- Configuring Backend Detection
