

Proactive Application Monitoring using Cisco AppDynamics (APM223)

Description

The **Proactive Application Monitoring using Cisco AppDynamics (APM223)** training shows you that planning and mapping Cisco AppDynamics to your application is a critical step to successfully monitoring your applications. In this training, you will learn to configure Baselines and set up Health Rules and triggers for actions and Runbook Automation. This training is the THIRD in a learning series for APM Advanced configurations.

This training also earns you 5 Continuing Education (CE) credits toward recertification.

Outline

- Customize Error Detection
- Configure Baselines
- Configure Health Rules
- Configure Policies, Actions, and Runbook Automation
