Performance history

- MIPS (Million Instructions Per Second)
- Whetstone. Floating-point. Was first written in Algol 60 in 1972. Later written in Fortran.
- Dhrystone 1984. Non-floating-point
- FLOPS. Floating-point Operations Per Second
- LINPACK 1970s. Largely replaced by LAPACK. Floating-point. Often used to express performance of HPC systems
- TPC, Transaction Processing Performance Council
Business oriented transaction benchmark including a database

MIPS Million Instructions Per Second

Number of instruction retired per clock cycle, AMD = 3

Number of instruction retired per clock cycle, Intel = 4

CPU	GHz	Core / CPU	MIPS
AMD 6140	2.6	8	62.4k
AMD 6172	2.1	12	75.6k
AMD 6176 SE	2.3	12	82.8k
AMD 6180 SE	2.5	12	90.0k
Intel 5570	2.93	4	46.88k
Intel 6550	2.00	8	64.00k
Intel 5675	3.06	6	73.44k
Intel 7560	2.266	8	75.51k
Intel 5680	3.33	6	79.92k
Intel 5690	3.46	6	83.04k
Intel E7-x870	2.4	10	96.90k

Industry Benchmarks

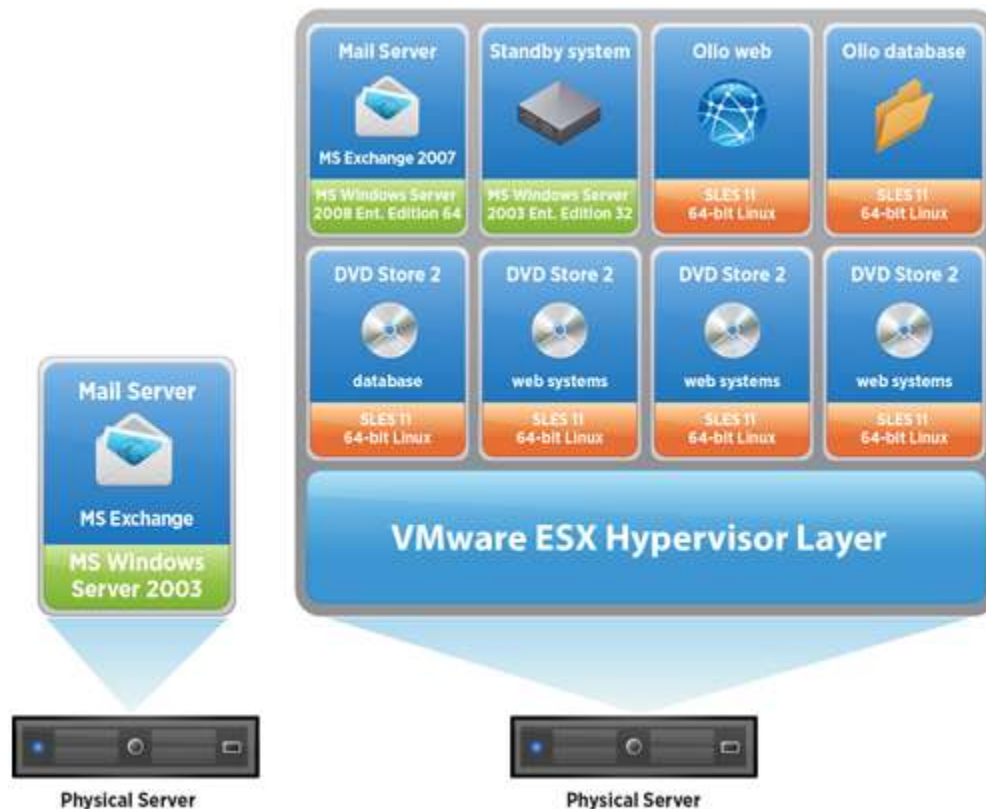

- SPEC CPU2006; CFP2006 & CINT2006. Designed to provide performance measurements that can be used to compare compute-intensive workloads on different computer systems.
- SPECjbb2005: A benchmark for evaluating the performance of servers running typical Java business applications
- SPECpower_ssj2008 : is the first industry-standard SPEC benchmark that evaluates the power and performance characteristics of volume server class and multi-node class computers.

VMware VMmark 2.0

VMmark 2.0 generates a realistic measure of virtualization platform performance by incorporating a variety of platform-level workloads such as [dynamic VM relocation \(vMotion\)](#) and [dynamic datastore relocation \(storage vMotion\)](#), in [addition to traditional application-level workloads](#). The benchmark system in VMmark 2.0 is comprised of a series of “sub-tests” that are derived from commonly used load-generation tools and commonly initiated virtualization administration tasks.

Industry Benchmarks

- Generally comparing SPECint, SPECjbb, VMmark and SAP SD over processors of same generation show same % change as MIPS (increase in clock speed and core)
- SPECint can be used to calculate compute power of old servers to get a good estimate of what to replace them with.

Tick-Tock Development Model

Tick **Tock** **Tick** **Tock** **Tick** **Tock** **Tick** **Tock**

65nm

Intel® Core™

45nm

Nehalem
Microarchitecture

32nm

Sandy Bridge
Microarchitecture

22nm

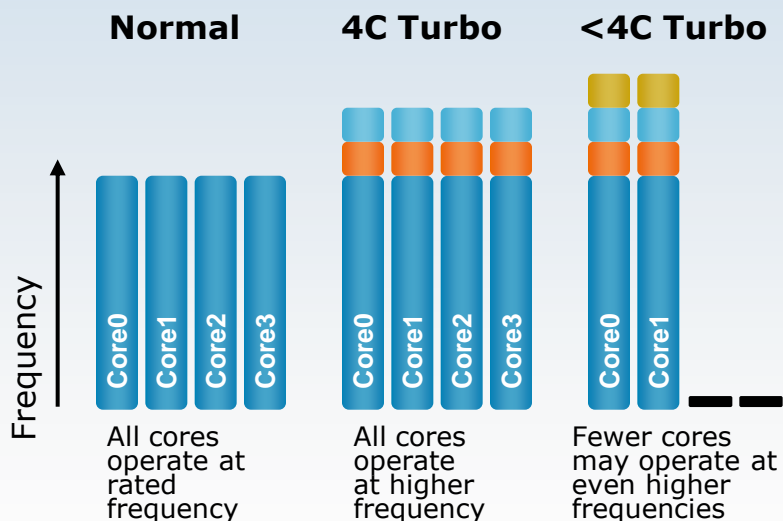

Sustained Xeon® Microprocessor Leadership

Performance Enhancements

Intel® Xeon® 5500/5560 Series Processor (Nehalem-EP)

Intel® Turbo Boost Technology

Increases performance by increasing processor frequency and enabling faster speeds when conditions allow

**Higher Performance
on Demand**

Intel® Hyper-threading Technology

Increases performance for threaded applications delivering greater throughput and responsiveness

**Higher Performance
For Threaded Workloads**

Latency of Virtualization Transitions

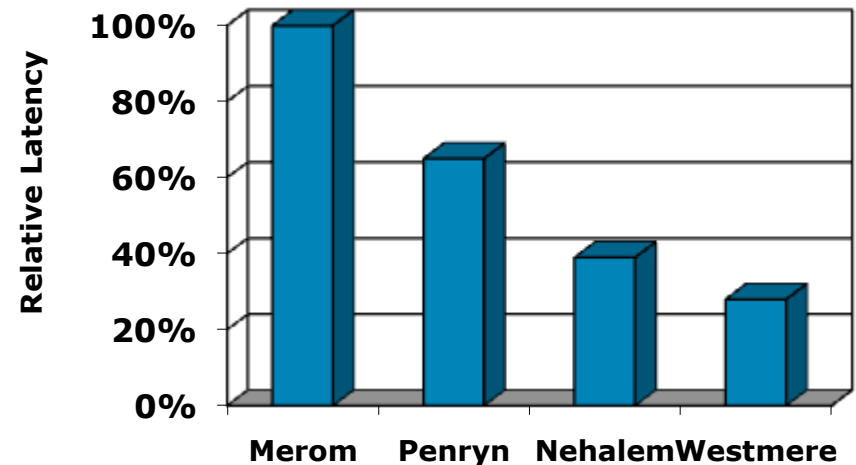

- Microarchitectural

Huge latency reduction
generation over generation
Nehalem continues the trend

- Architectural

Virtual Processor ID (VPID)
added in Intel® Core™
microarchitecture (Nehalem)
Removes need to flush TLBs
on transitions

Round Trip Virtualization Latency

***Higher Virtualization Performance Through
Lower Transition Latencies***

Optimized for Different Usages

Best for *the most demanding* workloads

Xeon 7000 Processor Series

- Largest workloads
- Highly variable workloads
- Maximum consolidation
- Highest availability

Best for general enterprise workloads

Xeon 5000 Processor Series

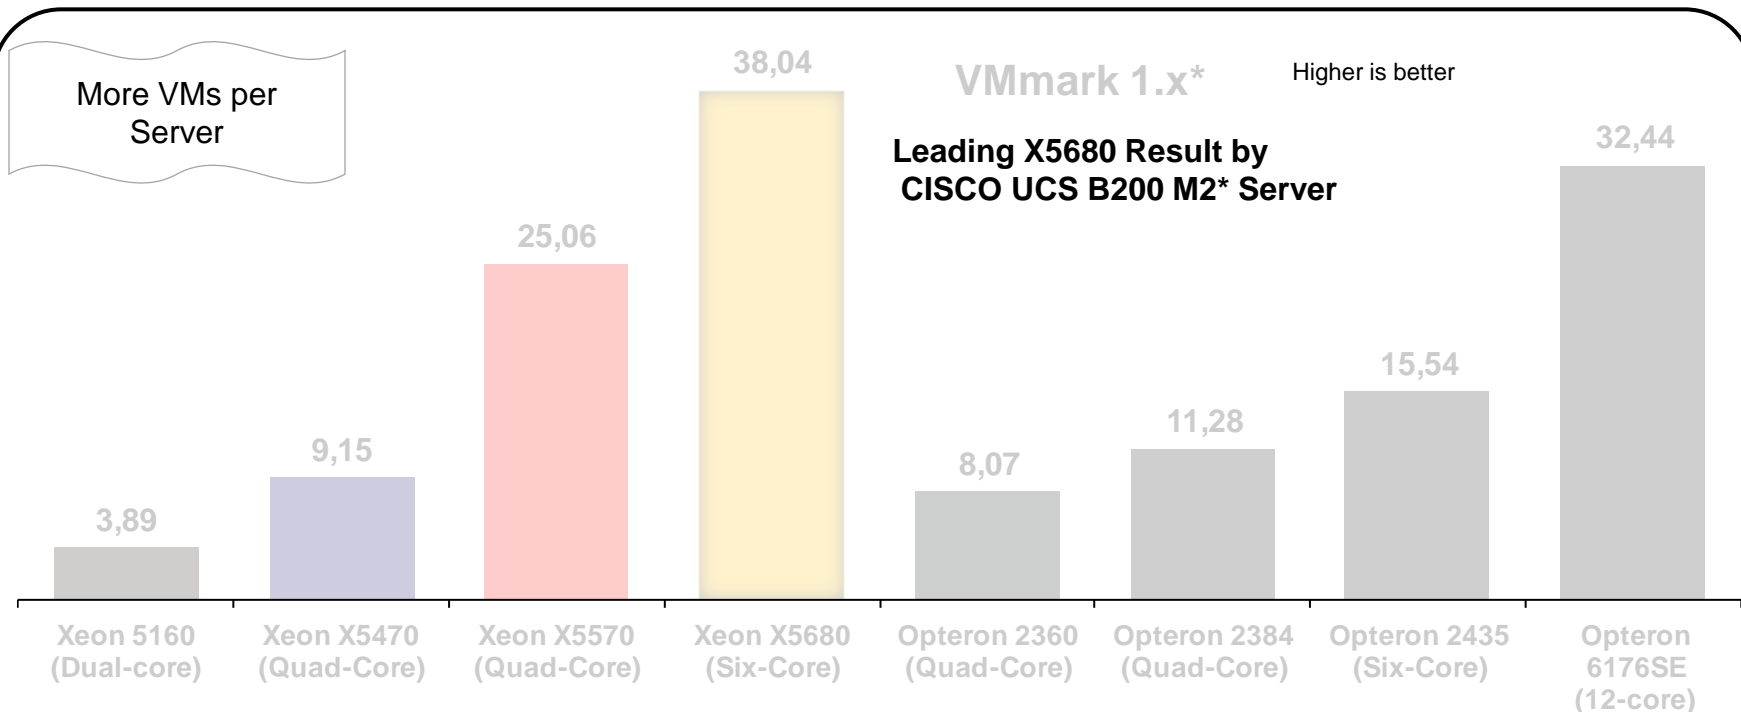

- Scale-out workloads
- Infrastructure virtualization
- General purpose workloads
(e.g. e-mail, web, file/print)

Xeon® 4-socket servers are designed for heavy duty workloads

Intel® Xeon® Processor 5600 series based Server platforms

Virtualization performance on VMware ESX* using VMmark* benchmark 1.1

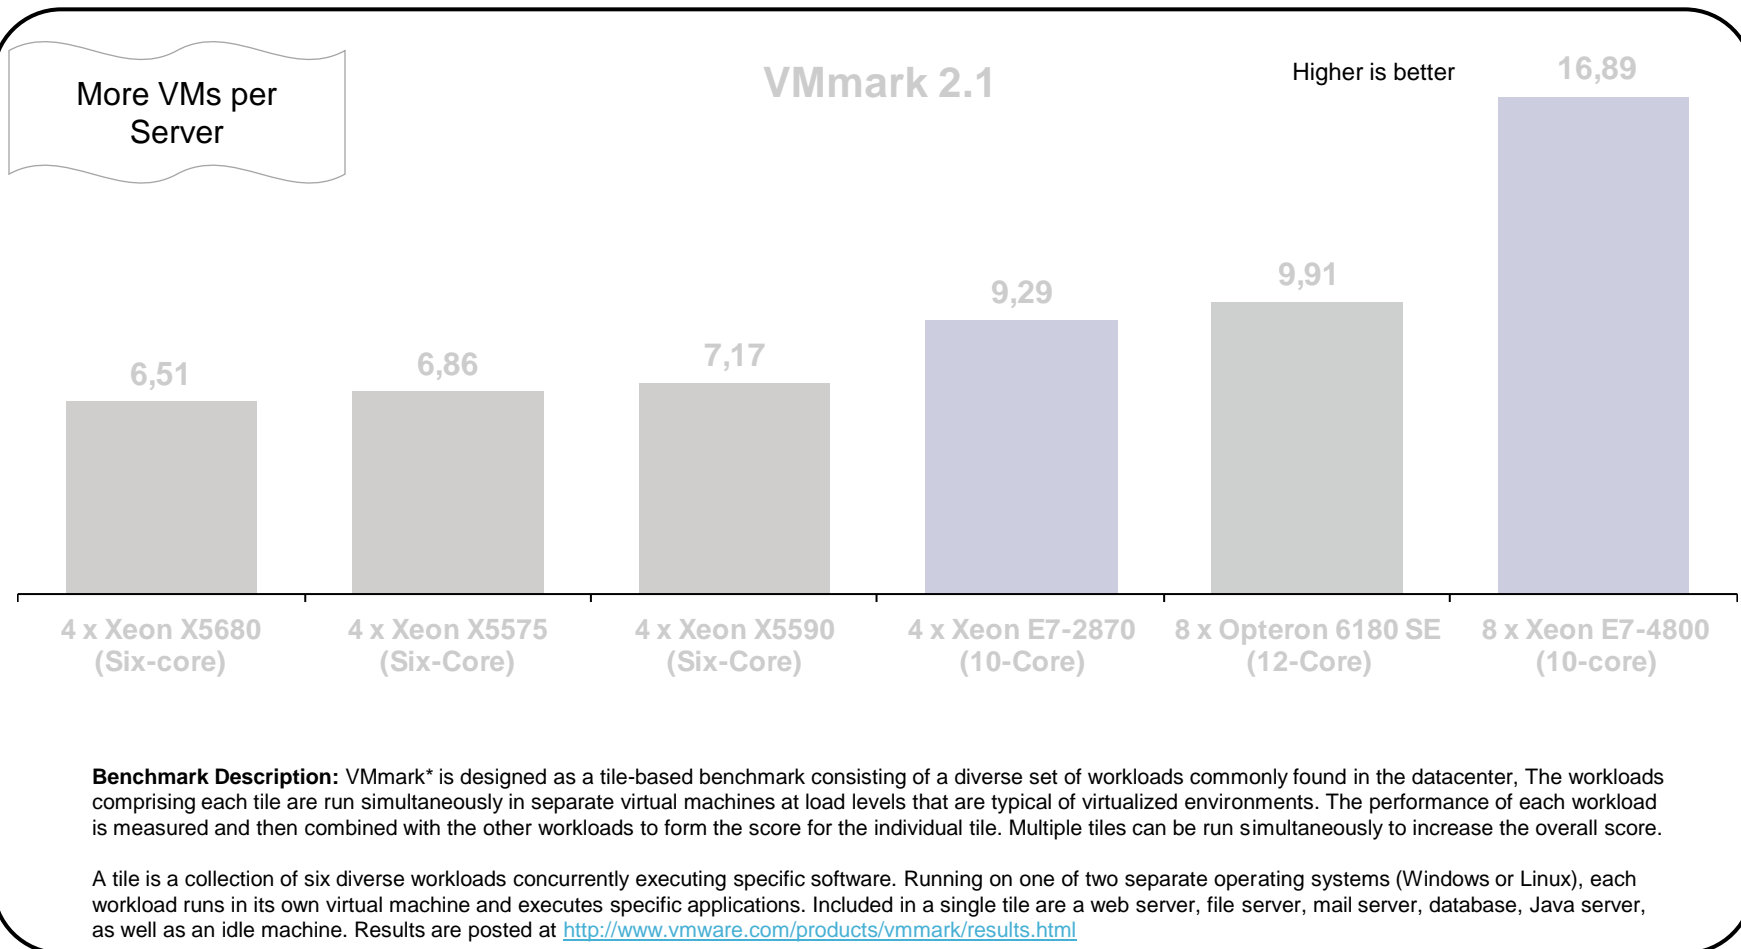

Benchmark Description: VMmark* is designed as a tile-based benchmark consisting of a diverse set of workloads commonly found in the datacenter. The workloads comprising each tile are run simultaneously in separate virtual machines at load levels that are typical of virtualized environments. The performance of each workload is measured and then combined with the other workloads to form the score for the individual tile. Multiple tiles can be run simultaneously to increase the overall score.

A tile is a collection of six diverse workloads concurrently executing specific software. Running on one of two separate operating systems (Windows or Linux), each workload runs in its own virtual machine and executes specific applications. Included in a single tile are a web server, file server, mail server, database, Java server, as well as an idle machine. Results are posted at <http://www.vmware.com/products/vmmark/results.html>

Up to 42% gain on VMmark* over Xeon 5570

Intel® Xeon® Processor 5600 / E7 series based Server platforms

Virtualization performance on VMware ESX* using VMmark* benchmark 2.1

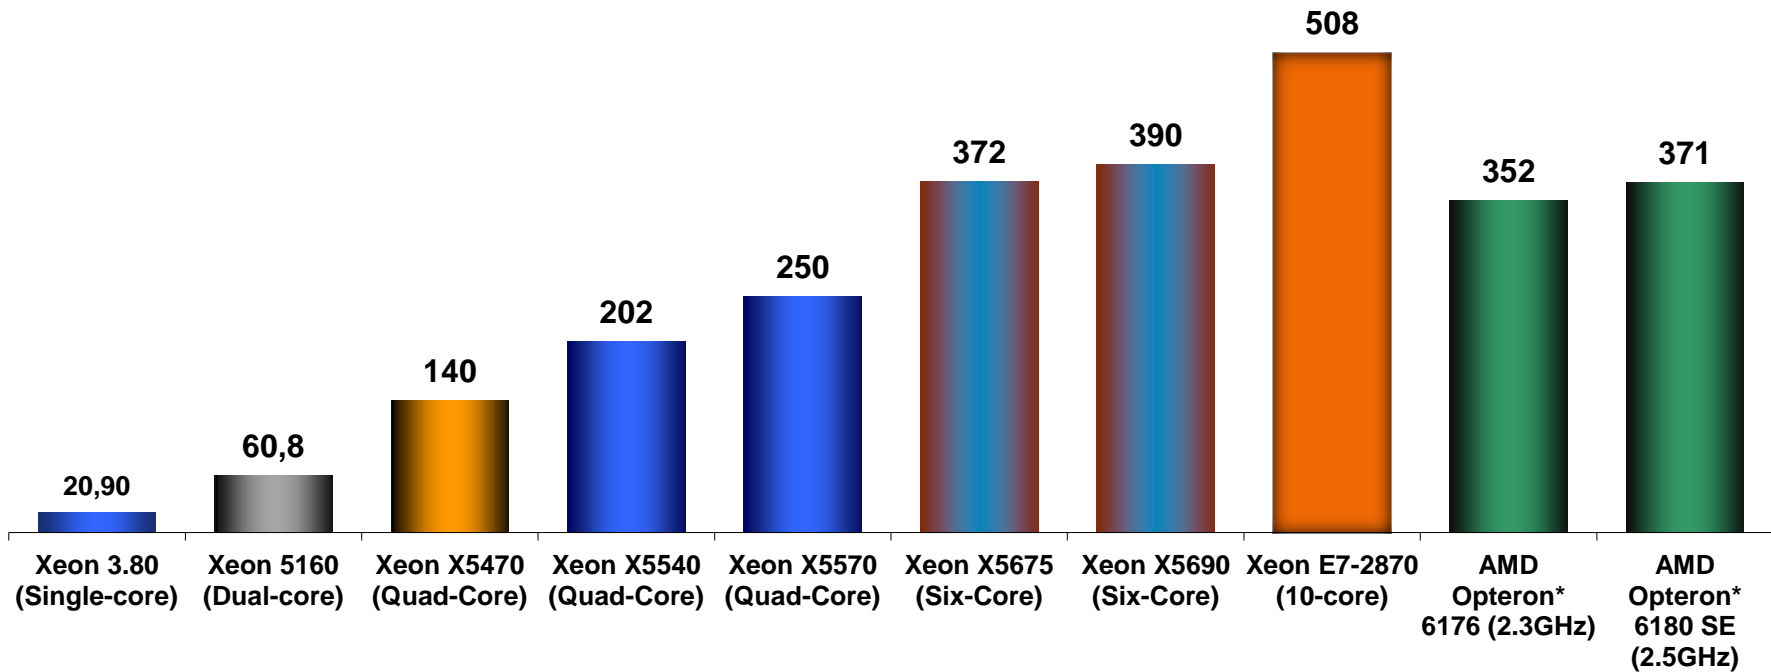

Intel® Xeon® Processor 5600 series based Server platforms

Integer Throughput performance on SPECint*_rate_base2006

SPECint*_rate_base2006

Base Score
Higher is better

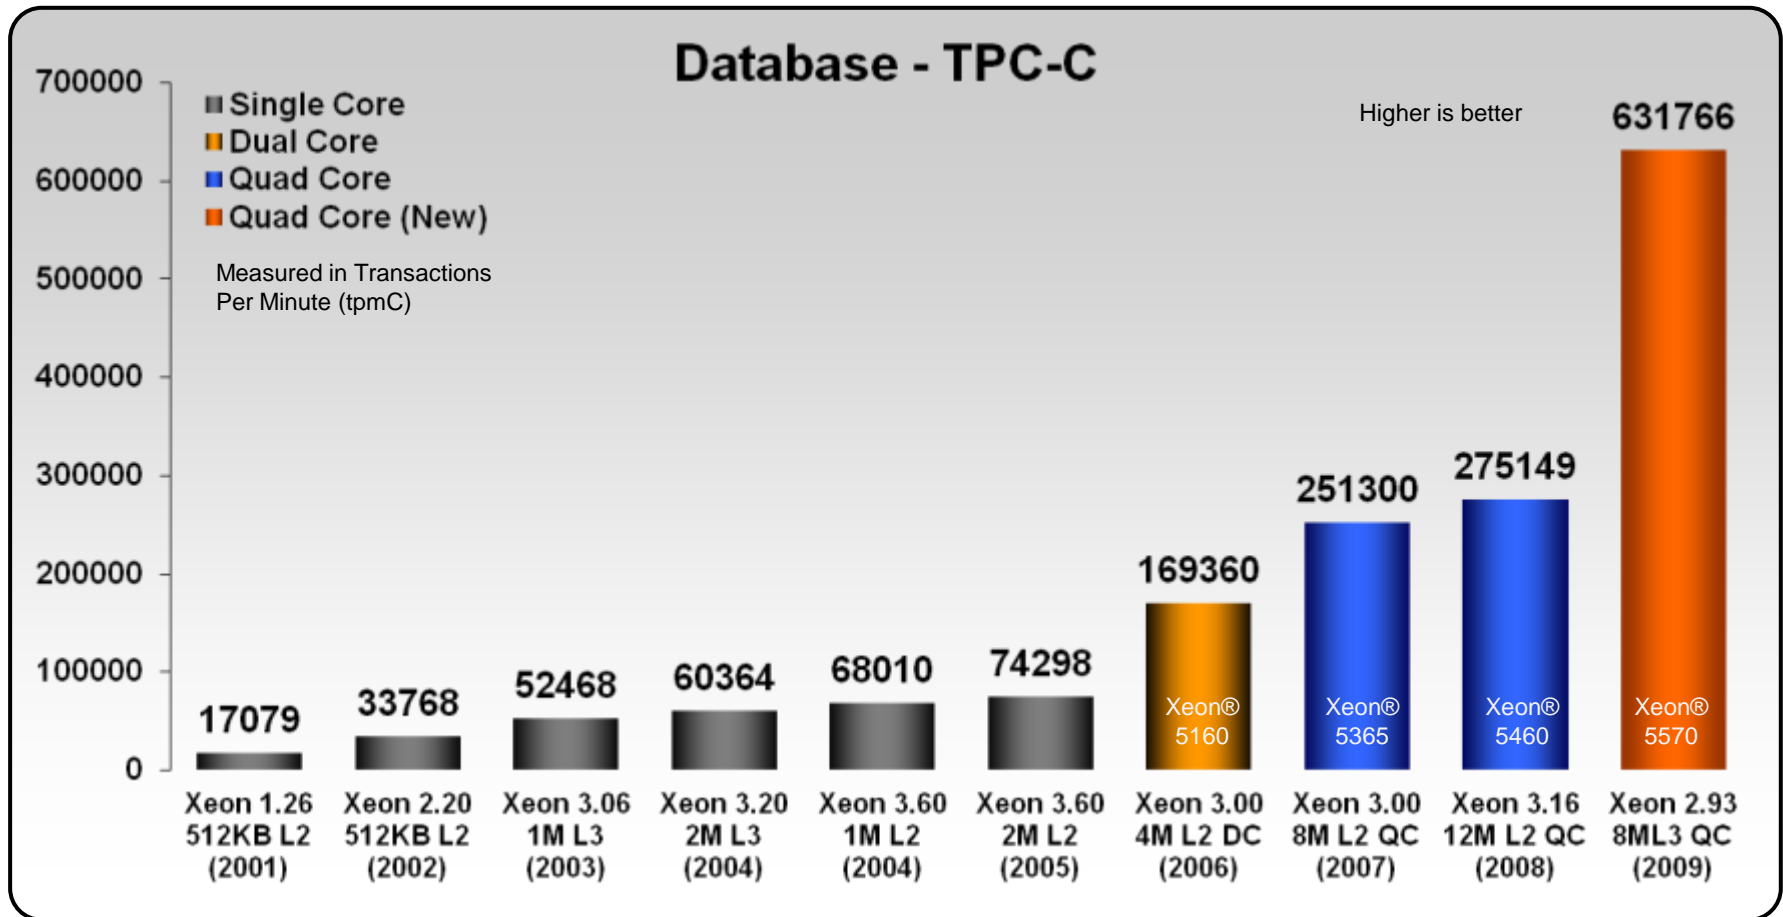

Better Performance on General Purpose Computing Applications

Xeon 3.80 – Intel® Xeon® Processor 3.80 2M L2 ("Irwindale 3.80GHz", Single-Core)
Xeon 5160 – Intel® Xeon® Processor 5160 ("Woodcrest 3.0GHz", Dual-Core)
Xeon 5470 – Intel® Xeon® Processor X5470 ("Harpertown 3.33GHz", Quad-Core)

Xeon 5570 – Intel® Xeon® Processor X5570 ("Nehalem-EP 2.93GHz", Quad-Core)
Xeon 5680 – Intel® Xeon® Processor X5680 ("Westmere-EP 3.33 GHz", Six-Core)
Magny Cours – AMD Opteron 6176 SE 2.3GHz

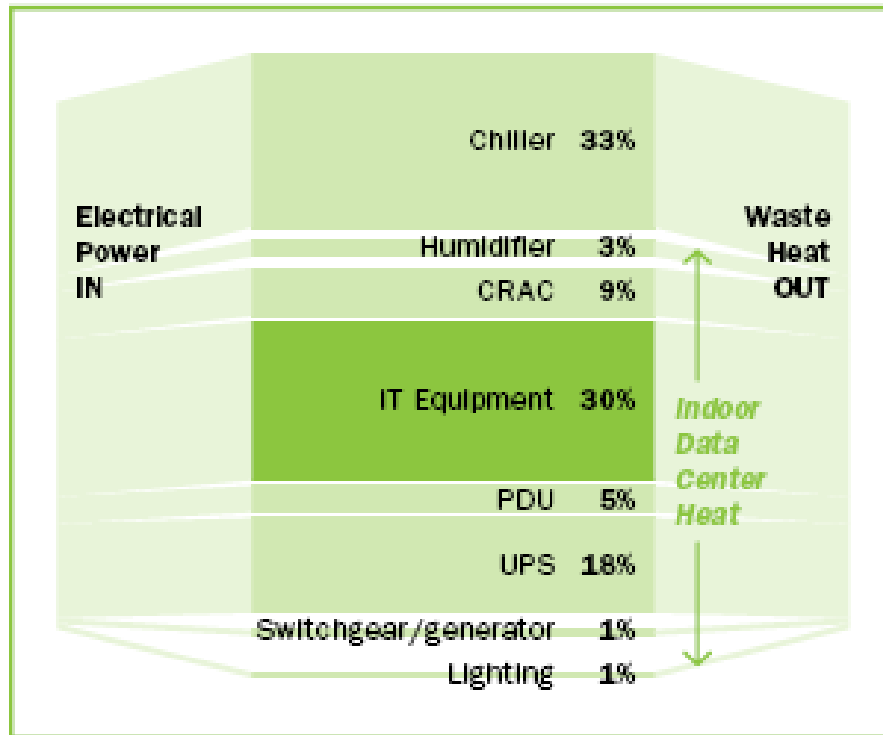

Intel® Xeon® Processor 5500 series based Server platforms

Database performance on TPC*-C

Consolidate your IT infrastructure with Xeon 5500 series

Typical power usage in an older Data Center

Picture taken from Green Grid

Picture shows typical use of electrical power in an older (5 years or older) Data Center

Green Grid defines Power Usage Effectiveness (PUE) as total power consumed in DC divided by power consumed by IT equipment

The lower PUE the less power used by non-IT equipment

PUE of picture: 3.33

MIPS Million Instructions Per Second
