ScienceLogic Network Management Guide
The Purpose of This Guide

This guide is a concise reference on the ScienceLogic EM7 Network Management appliance.
It will introduce you to the product’s features and benefits. Then, it will guide you through the deployment process.

Appendix B: SBA for Midsize Agencies Document System .... 10
The Cisco® Smart Business Architecture (SBA) for Government is a comprehensive design for networks with up to 1000 users. This out-of-the-box design is simple, fast, affordable, scalable, and flexible.

The Cisco SBA for Midsize Agencies incorporates LAN, WAN, wireless, security, WAN optimization, and unified communication technologies tested together as a solution. This solution-level approach simplifies the system integration normally associated with multiple technologies, allowing you to select the modules that solve your agency’s problems rather than worrying about the technical details.

We have designed the Cisco SBA to be easy to configure, deploy, and manage. This architecture:

- Provides a solid network foundation
- Makes deployment fast and easy
- Accelerates ability to easily deploy additional services
- Avoids the need for re-engineering of the core network

By deploying the Cisco SBA, your agency can gain:

- A standardized design, tested and supported by Cisco
- Optimized architecture for midsize agencies with up to 1000 users and up to 20 remote sites
- Flexible architecture to help ensure easy migration as the agency grows
- Seamless support for quick deployment of wired and wireless network access for data, voice, teleworker, and wireless guest
- Security and high availability for agency information resources, servers, and Internet-facing applications
- Improved WAN performance and cost reduction through the use of WAN optimization
- Simplified deployment and operation by IT workers with CCNA® certification or equivalent experience
- Cisco enterprise-class reliability in products designed for midsize agencies

Guiding Principles

We divided the deployment process into modules according to the following principles:

- **Ease of use:** A top requirement of Cisco SBA was to develop a design that could be deployed with the minimal amount of configuration and day-two management.
- **Cost-effective:** Another critical requirement as we selected products was to meet the budget guidelines for midsize agencies.
- **Flexibility and scalability:** As the agency grows, so too must its infrastructure. Products selected must have the ability to grow or be repurposed within the architecture.
- **Reuse:** We strived, when possible, to reuse the same products throughout the various modules to minimize the number of products required for spares.

The Cisco SBA can be broken down into the following three primary, modular yet interdependent components for the midsize agency.

- **Network Foundation:** A network that supports the architecture
- **Network Services:** Features that operate in the background to improve and enable the user experience without direct user awareness
- **User Services:** Applications with which a user interacts directly
Network management systems allow you to automate configuration tasks and monitor network health, giving you the visibility you need to quickly troubleshoot issues.

Deploying the configuration modules outlined in the *Cisco SBA for Midsize Agencies—Borderless Networks Foundation Deployment Guide* in an efficient manner, while simultaneously maintaining the availability and performance of the network infrastructure, when everything is constantly changing is not an easy challenge to solve without the right tools.

Cisco offers a number of options to provide Network Management capabilities. This guide is focused on our partnership with ScienceLogic and their EM7 network management appliances. EM7 meets Cisco’s goal to deliver an affordable, easy-to-use network management solution.

**Figure 1.** ScienceLogic EM7
Figure 2. EM7 in the Cisco SBA Data Center
ScienceLogic have a unified vision: Simplify IT. ScienceLogic are technology professionals who are focused on making IT management simpler, better, and faster. EM7 network management appliances are designed to be complete IT operations management solutions that integrate fault and performance management with asset management and service desk functionality in a single simplified solution.

You’ll start to realize the benefits right away.

**Value on Day 0**

The Cisco SBA for Midsize Agencies was designed for ease of deployment. This guide provides step-by-step instructions for configuring each component. ScienceLogic shares this ease-of-deployment goal. After you have installed the SBA for Midsize Agencies—Borderless Networks Foundation architecture, you can have EM7 G2 operational within just a few hours because the appliance model eliminates the need to buy separate hardware, install and secure the operating system, configure and performance tune a database and integrate disparate tools. This saves your agency time and money.

**Value on Day 1**

EM7’s patent-pending discovery technology automatically detects and applies pre-defined best practice-based monitoring policies for all of the components of the Cisco SBA for Midsize Agencies. This allows you to easily monitor availability, performance, and faults across all the components of the network foundation, network service, and user services layers in a single solution.

**Value on Day 2+**

- **Performance and Capacity Planning**—EM7 ships with hundreds of pre-defined best-practice monitoring templates for detailed data collection and reporting against key performance indicators for each of the components specified in the Cisco SBA for Midsize Agencies.
- **Fault Management**—EM7 G2 ships with hundreds of pre-defined best-practice monitoring templates for detailed data collection and reporting against key performance indicators for each of the components specified in the Cisco Midsize Networks Architecture.
- **Growth Ready**— As you add User Services, like voice and video, EM7 G2 is ready to grow with you with pre-loaded and customizable monitoring templates and event policies customized for Cisco User Services. As technologies change and evolve, we continue to innovate and provide the necessary updates to your EM7 solution that will support monitoring everything on your network today and tomorrow.
EM7 is pre-configured with a centralized data repository, integrated management applications, and best practice-based default settings, reports and automated alerts for a wide range of devices and systems from leading vendors such as Cisco. As appliances, EM7 can be installed and operational within a few hours. The result is a complete network management solution designed to work out of the box yet flexible and powerful enough to handle new Cisco gear and technologies as they are added to the network to meet growing agency demands.

Figure 3. EM7 Features

**Application Management**
Real-time and trended availability and performance data on application delivery components plus user-experience monitors for end-to-end app management

**Cloud Management**
Chargeback, multi-tenant views, web services monitoring, automation and integration with self-service portals – just a few of the features that make EM7 ideal for monitoring public, private and hybrid clouds

**Systems Management**
High-level and detailed reporting of key system metrics for all operating systems; device summary views provide at-a-glance view of system performance, availability, tickets and events

**Network Management**
Detailed analysis and reporting to maximize availability and optimize performance of converging network infrastructure, including VoIP; supports dual-stack IPv4/IPv6 networks

**Virtualization Monitoring**
Performance and availability of virtual infrastructure combined with physical infrastructure monitoring for the complete dynamic IT operations picture – all in a single tool

**Asset & Config Management**
Auto-populated asset and software inventory to manage asset lifecycles; automated hardware and configuration change detection to support IT troubleshooting

**Service Desk**
Automated ticketing workflow and tools to document and accelerate the problem resolution process and to build business-specific change management processes right into operations

**Fault Management**
Customizable alert notification, escalation and automated remediation for proactive management; open development platform for integration with third-party tools

EM7 offers two solutions for Cisco SBA for Midsize Agencies—Borderless Networks:
- EM7—A standalone, all-in-one management appliance solution
- EM7 MSP—Highly scalable multi-appliance configuration to support managed-service business of Cisco partners and customers.
Solution 1: EM7—All-in-One Management Appliance

EM7 provides integrated fault and performance management plus service desk plus asset management in a single solution for Cisco SBA for Midsize Agencies.

EM7 is a Cisco SBA for Midsize Agencies network management module based on ScienceLogic’s vision to provide a comprehensive suite of monitoring solutions in a single, easy-to-deploy and cost-effective solution. All functionality is delivered in a single appliance and already integrated to support automated workflow of daily IT operations—from performance and fault management to ticketing and service desk functions to asset management and capacity planning. Typically, our appliance-based solution replaces from 3 to 5 existing solutions, delivering immediate ROI and lowering your total cost of ownership. One solution simplifies and consolidates the tools you need to get the job done and provides a “single pane of glass” view across all Cisco network gear and applications.

Dynamic Discovery

Next-generation auto-discovery provides intelligent automation by matching known agents, devices, applications and systems with best-practice monitoring rules, thresholds, events and alerts. EM7 G2 ships with Dynamic Applications monitoring templates (data collection via SNMP, SQL queries, XML and SOAP) for Cisco and other leading manufacturers and devices or create your own custom monitoring templates that are automatically applied in the Dynamic Discovery process.

Centralized Data Repository

EM7 includes an embedded performance-tuned database, providing a single IT operations management data store - pre-loaded, pre-tested and pre-configured for optimal performance in the appliance and with all EM7 management applications. Acting as an operational CMDB, the centralized data repository stores both fault and performance data, configuration data, asset information and more - providing built-in data integration for better troubleshooting and reporting across all infrastructure. The data store is self-managed and self-healing; EM7 does not require additional DBA resources to operate.
Views, Reports, and Executive Dashboards
A customizable Web-based portal gives you access to EM7 anytime, anywhere. Views and access can be customized for an agency, department or even a user—making it easy to create executive dashboards that show application or IT process performance at a glance. In addition, hundreds of pre-set reports are included with the EM7 system along with tools that make it simple to create more of your own. Many reports can be downloaded as an Adobe PDF file or as a Microsoft Excel file for further analysis.

Solution 2: EM7 MSP—For Managed Services
EM7 MSP provides the comprehensive network management functionality of EM7 plus is available in a distributed architecture to enable and support the managed services business of Cisco partners and customers. Cost-effective scalability is built into this architecture; as new customers are added, additional monitoring capacity can also be added simply by deploying more EM7 Data Collectors. Unlike traditional monitoring solutions, there are no additional licenses to buy to add more customers, users and devices. EM7 MSP enables the efficient operations management of Cisco devices and services in bulk while at the same time providing the customer-based or even more granular control and information necessary to grow your managed services business.

The solution includes features built specifically for efficient Service Provider operations—from multitenancy to services catalog to customer portals. All information continues to flow to a centralized data repository for integrated fault, performance and asset data, supporting a single pane of glass view across all customers or all Cisco gear or targeted views of customer-specific infrastructure. Customer portal features and access controls can extend monitoring views, functions and even ticketing capabilities to customers to support their own operations.

Highlighted Service-Provider Features
- MOM—Single Pane of Glass
- Integrated Events, Notification Workflow & Ticketing
- Integrated Virtualization Management
- Multitenant Views and Access Control
- Customer Self-Service Portals for Monitoring, Ticketing and Billing (MSP-Branded)
- Products/Services Catalog (SKUs)
- Bandwidth Reports & Billing Calculation
- Service Level Management
Deploying EM7

EM7 network management appliances include all the hardware and software required to take full advantage of the integrated capabilities and is ready to manage your network out-of-the-box.

As with any management tool, access to the devices to be managed is required. EM7 uses the Simple Network Management Protocol (SNMP) to collect information from the devices on your network. Your network and the devices will need to be configured to allow EM7 to access SNMP. Most of the configuration files included in the Foundation Configuration Files Guide have SNMP enabled by default. If you wish to send asynchronous messages, like Syslog and SNMP traps, your devices will also need to be configured to send these messages to the EM7 appliance.

**Process**

Deploying EM7

1. Deploy EM7

**Procedure 1**

**Deploy EM7**

**Step 1:** Install the appliance in any server rack using the provided rails, make the power and network connections, and power on the device.

**Step 2:** After the appliance is powered up, log in and step through the Setup Wizard. The Setup Wizard will require basic network information like Hostname, Password, IP Address, Subnet Mask, Gateway, and Name Servers. After you have completed the Setup Wizard the appliance will reboot.

**Step 3:** After the appliance has rebooted, access the EM7 user interface using a Web browser to enter the software license key.

**Step 4:** From the EM7 User Interface, launch a discovery session of your network by providing the IP Address range and the SNMP community string used on your network.

**Tech Tip**

The configurations files provided in the Deployment Guide use a default SNMP read-only community string of Cisco and a default SNMP read-write community string of cisco123.
