

Cisco Connected Factory Accelerator Bundles

Digitizing and connecting factories has fast become a norm for manufacturers. But, the typical factory is not IoT ready. With the constant need for IoT visibility and improved safety and traceability on the rise, manufacturers need tools that are easy to configure and lead to smart manufacturing. To rightfully address such concerns, Cisco has the network management tools and technologies to make you truly 'plug and play.'

With the Cisco Connected Factory Accelerator Bundle your business impacts could be:

- ☛ 10-50% Increased Employee Productivity
- ☛ 30-50% Reduction in Unplanned Downtime
- ☛ 10-15% Reduction in Networking Costs
- ☛ 95% Reduction in cabling costs for mobile machine tools

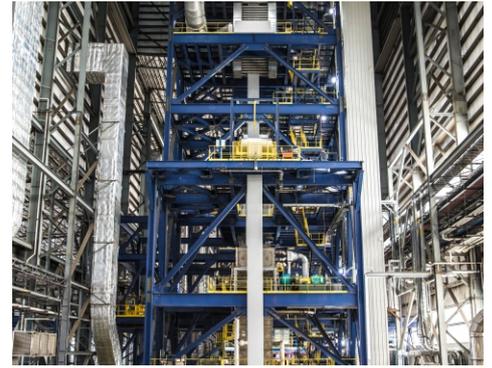

Cisco has the factory of the future ready. Its three simple and attractively priced factory infrastructure bundles make connecting and locating in a secure manner seamless.

Factory Network

The first component of Cisco's infrastructure bundle is a unified converged factory network that overcomes complex network silos that result in downtime, data isolation, and vulnerabilities. With rapid fault isolation and resiliency; a reduced number of boxes, NICs and cabling; it results in:

- ⇒ OEE improvement
- ⇒ Reduced downtime

Factory Wireless

The second element of Cisco's attractively priced infrastructure bundle addresses mobile visibility and productivity through a unified wireless structure, making it easier to access machines and tools on the factory floor. Through integrated security and management, and a validated factory design, the Factory Wireless leads to:

- ⇒ Effective communication between machines and people
- ⇒ A unified, easy-to-manage and highly secure plant wireless infrastructure

Factory Security

Factory Security is Cisco infrastructure bundle's third component. It is designed to address pervasive physical and cyber security for the factory. Managing security in the network provides for granular security monitoring, threat detection, and incident monitoring. This further results in offering a secure remote access through managed security services. The overall business benefits for a manufacturer are:

- ⇒ Reduced downtime
- ⇒ Reduced risk

With Cisco's infrastructure bundles manufacturers can leverage a full 'IoT-ready factory' that will lead to a reduced time to market and positive business outcomes.

Whether wireless, security or automation projects, with Cisco you can reap the immense business benefits available from digitizing and connecting factories.
