

# The Efficient HQ

## Putting People First

An office is more than just bricks and mortar – it's a space where companies can create the best possible work environment for employees, as long as the right infrastructure is in place. That's why Larsen & Toubro chose Cisco® technology to transform its Mumbai headquarters.

Step inside  
**one million**  
square feet  
of smarts

1

### Data at the doorstep

The office is built to support ease and well-being. Smart directions guide visitors to available parking spaces, conference rooms and workspaces. Meanwhile, touchless entry, pre-entry wellness checks, voice-enabled controls and autonomous cleaning keep everyone healthy.

2

### A building with no blind spots

Data is gathered across the entire floorplan to optimise facility utilisation, resulting in reduced energy usage and operating costs, and achieving green building goals. With sensors monitoring the indoor environment, the building can adjust airflow, temperature, humidity and lighting in real-time.

3

### A workspace that does the work

L&T's working areas reduce moment-to-moment management for employees, enabling them to focus on being productive and collaborative. Workspace assignment and conference room reservations are automated, while density monitoring ensures safety throughout the office.

**1,000,000 sq ft**

### Cisco's sustainability advantage across the value chain

1

#### Procurement

Technology designed to reduce environmental impact

Cisco Catalyst® 9300 PoE switches, Cisco Catalyst 9100 Wi-Fi 6 access points, Cisco Meraki™ MX

2

#### Operations

Optimising technology for energy efficiency

Cisco DNA Center™, Cisco ISE, Cisco IP Telephony

3

#### Retirement

Responsibly managing technology at end-of-life

Cisco's commitment to a circular economy
