

The Sustainable Factory Line

Yamazaki Mazak Corporation

Witness the transformation towards a Smart Factory.

Powered by IoT technology, Yamazaki Mazak successfully identified production inefficiencies and energy consumption patterns to bring data-driven solutions needed for achieving carbon neutrality and innovation in production.

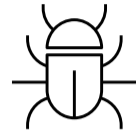

Challenges

Enabling a Smart Factory system that visualizes production data and identifies inefficiencies.

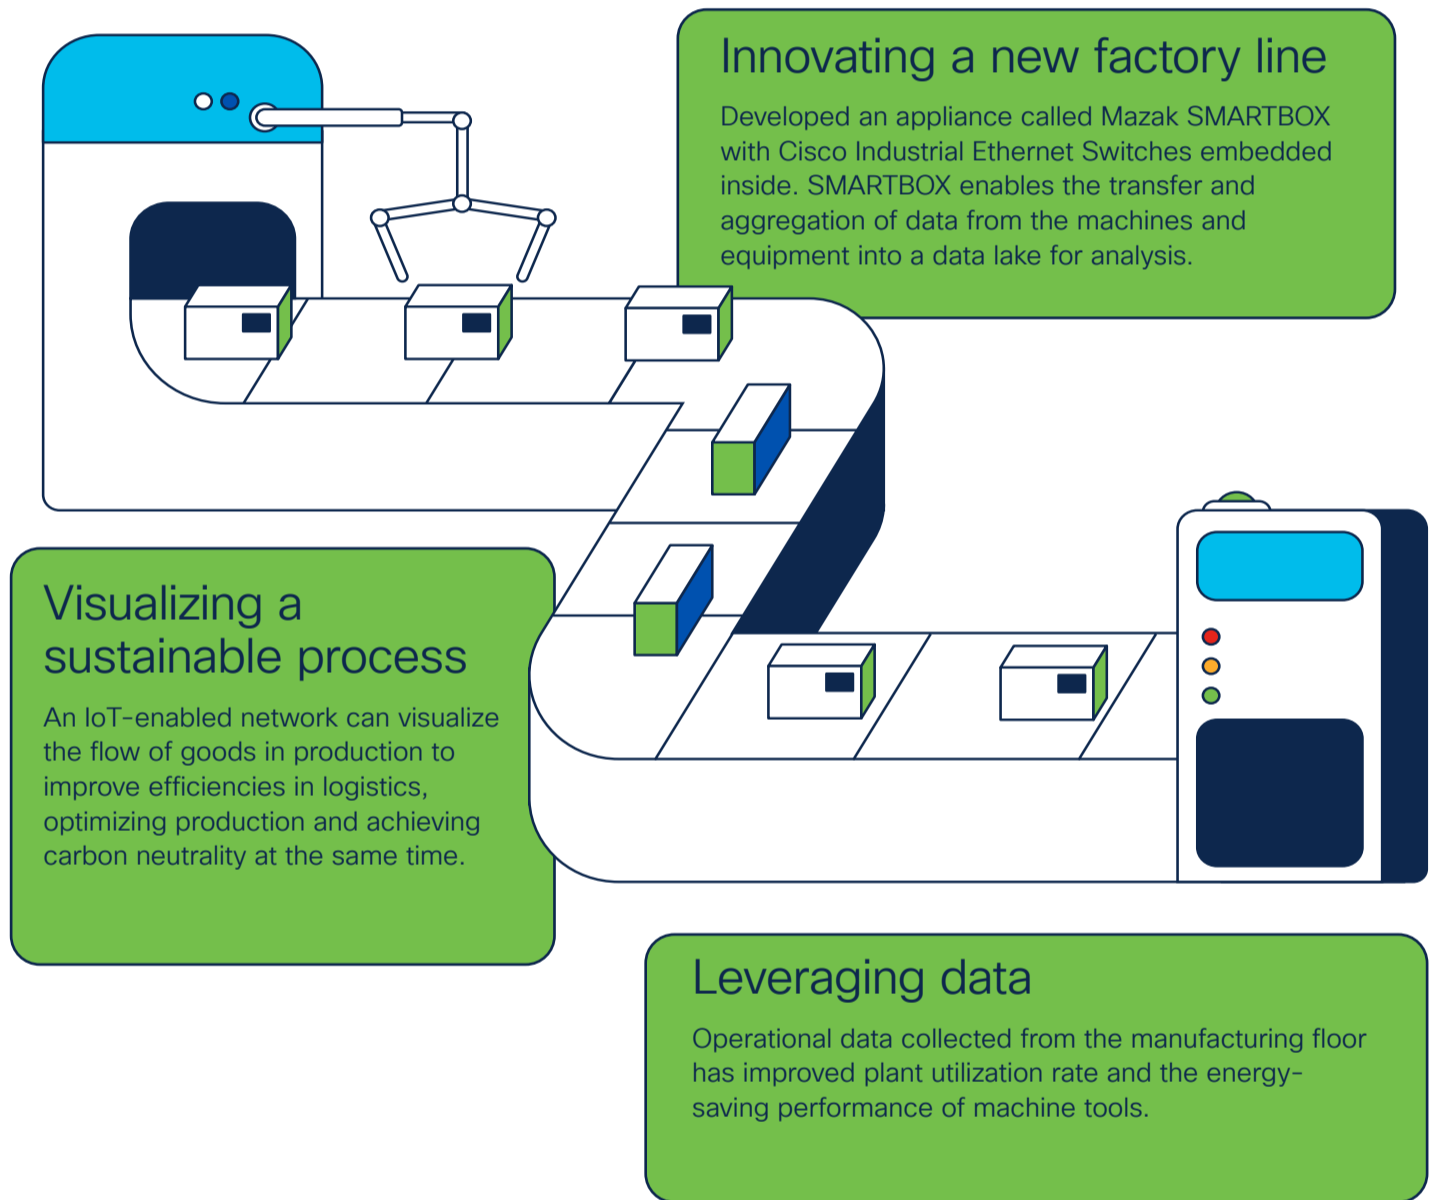

Understanding energy consumption by location, and adopting data-driven solutions.

Protecting production facilities from cyberattacks.

Solutions

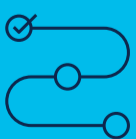

“Data-driven solutions from the Smart Factory system are essential for both environment-friendly practices and production optimization.”
