Cisco Email
Security [here](#)

Why you should consider Cisco Email Security

- 1 Powerful new features
- 2 Stronger protection
- 3 Quick and easy installation

*Well ... what
are you
waiting for?*

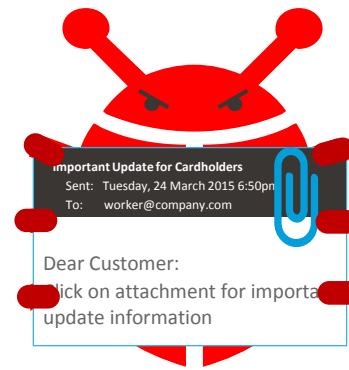

Don't let your company become a statistic

Inundated with
graymail

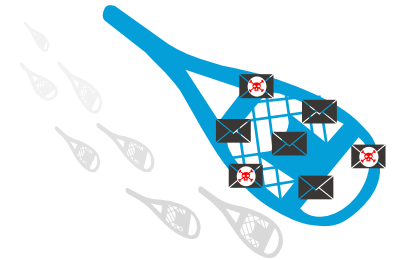

55% of orgs can't find
the cause of a breach¹

Malware
everywhere

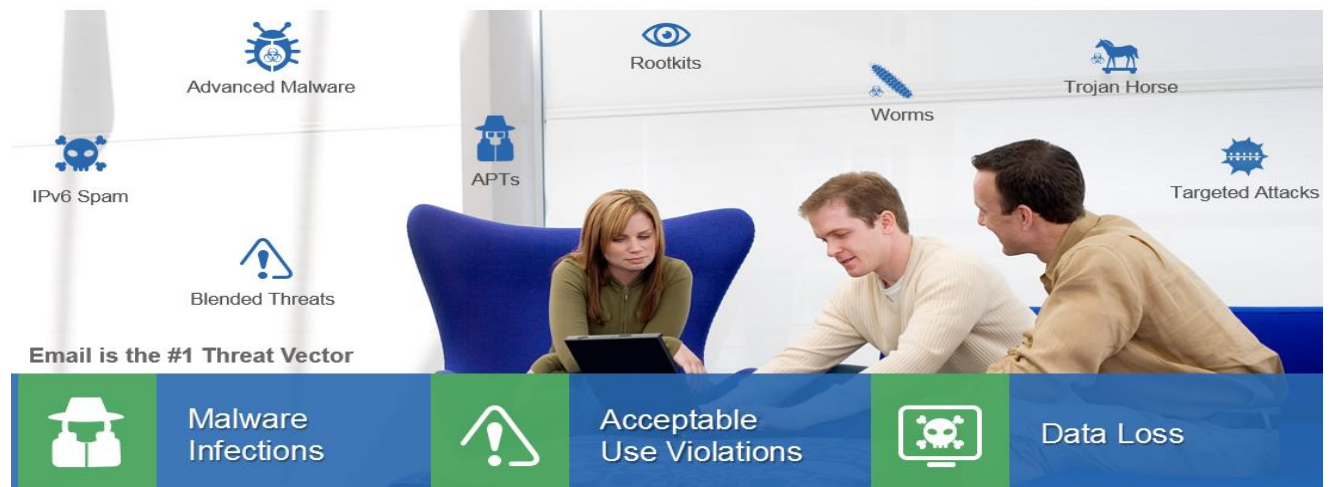

The **top 2** attack
vectors for malware are
web and email²

Snowshoe spam
evading detection

250% increase in
spam from January to
November 2014³

The Way We Use Email Is Changing Are You Vulnerable to Attacks ?

Get advanced security to fight advanced threats

Cisco Email Security Solution license delivers protection across the attack continuum - before, during, and after an attack

- Advanced Malware Protection (AMP), providing malware detection and blocking, continuous analysis, and retrospective alerting
- Spam filters and zero-day threat intelligence from the Cisco Talos Security Intelligence and Research Group help to stop threats before they enter the network
- Gain new visibility and control with continuous analysis of all files so you can identify and address a threat quickly

The capabilities described above require hardware from our x70 or x80 appliances with the necessary 8GB of RAM. Or you can leverage the virtual appliance using certain VMware or KVM hypervisor versions. For a limited time, current x60 hardware customers can take advantage of a [new promotion](#) that puts discounts on all x80 appliances. Contact your Cisco Security Account Manager or Partner with any questions.

Sign up today for 3 years and receive AMP + Graymail protection
WITHOUT ADDITIONAL COST

Email Security Package License
Subscriptions for up to
499 users & up to 999 users

Industry Leading Email Security

HIGH AVAILABILITY email protection against the dynamic, rapidly changing threats. Giving you protection against spam, viruses, and targeted attacks (Anti-spam + Anti-virus + Outbreak Filters); includes license for Email Security Virtual Appliance (ESAV)

Advanced Malware Protection (AMP) : Bolster your malware defenses

PROTECTS against advanced threats by blocking suspicious files and accelerates remediation when breaches occur. AMP now supports new file types, and integration with AMP Threat Grid offers enhanced protection.

Graymail Protection : Safely reduce the size of your inbox

PRECISELY classifies and monitors graymail giving you protection against malicious threats masquerading as unsubscribe links, a uniform interface for managing all subscriptions plus better visibility for email administrators and end users

**Address all attack vectors and to respond to threats—
before, during, or after an attack.**

Cisco's robust Email Security Solutions are a core component of a modern security strategy because it relies on real-time intelligence; provide precise access control; and are content-, context-, and threat-aware

Cisco's AMP enables you to have continuous analysis and retrospective security which are needed to identify malicious files that evade initial detection and to help defenders determine the scope of the attack so they can quickly contain and remediate the threat.

“With Cisco, a substantial reduction in total cost of ownership and the new features to battle viruses and spam [are] a reality.”
