

MISSION IMPENETRABLE

5 things you need to know about GDPR

"Good day, security and compliance professionals.

By May 2018, new laws will extend personal data rights for all EU citizens. Your mission – and you should choose to accept it – is to get up to speed and comply with them. The penalties for failure are significant.

Good luck.

This message will not self-destruct."

🎯 GDPR: cracking the code

Pay close attention. The new General Data Protection Regulation (GDPR) will introduce major new laws that apply to all organisations that:

- are based in the European Economic Area.
- target European Union (EU) markets or consumers.

The laws give many new personal data rights to EU citizens, including the right to withdraw consent, easier access to their data, and the right to know if their data has been compromised by a cyber attack. And that's just the start.

🎯 The cost of a slip-up

Penalties for non-compliance with GDPR will be severe. For example, if your organisation fails to report a data breach within 72 hours, expect a fine.

Fines can reach 4% of your annual turnover or €20 million. Whichever is higher.

Failure is not an option.

🎯 Assemble your team

It's time to get busy. You'll need a roadmap to achieve compliance with GDPR. So line up your agents and focus.

- Task 1. Get experts in to help you help you evaluate your existing processes and policies.
- Task 2. Study the [GDPR guidelines](#) and how your current structure compares to what is required.
- Task 3. Work out the steps needed for you to become compliant.

This isn't a covert operation. Brief your employees on the important role they play in protecting customer data. There can be no leaks.

🎯 Keep calm and carry on

If this is an EU law, does Brexit mean you can dodge this mission?

In short, no.

GDPR refers to anyone transporting and collecting data on EU citizens.

Note that 'personal data' is used broadly. Bank account details, email addresses, sensitive personal information, IP addresses... Your mission scope is wide. Research is essential.

🎯 How to accomplish your mission

The core of this mission is about managing risk and setting up security policies in your business. There are no short cuts.

Among other requirements, you may need to appoint a data protection officer who:

- is distinct from a risk officer and most existing IT functions.
- sits outside the boardroom.
- answers to GDPR, not to roles.

GDPR was introduced to make businesses take the protection of data against rising cyber-crime more seriously.

The average time to detect a data breach is currently 100 days. Cisco brings that down to 7 hours. Talk to us about how you can detect more of what you can't see.

Do not compromise yourself. Comply.

Remember, by acting now you can set your organisation up to detect and neutralise breaches a whole lot better. Being secure helps you to be compliant with GDPR, but being compliant does not make you secure.

Over and out.
