

5 ways to simplify your network

Regardless of your business size network complexity makes it harder for your network to grow, wastes time and expends resources. You need to simplify. At the same time, your network must evolve with your business needs if you want to be at your most competitive. Instead of compounding complexity and multiplying manual updates, your network needs to foster innovation. We can help businesses of all sizes simplify your network and make it possible.

1

Easy management.

With Cisco, it is easy to manage your network. For example, use our FindIT discovery tool to monitor and manage all devices on your network from a simple dashboard.

2

Faster deployment.

Your network needs to continually evolve and grow to keep pace with your business. We offer you a range of plug-and-play and cloud-managed solutions, so that you don't have to waste time on manual set-up and configuration. And you can focus on innovating instead.

“Configuring new service set identifiers on the access points felt like I was playing. It put the fun back into IT!”

– Rob Williams, IT director, Capital FM Arena

3

Be confident of reliability.

Cisco products of all shapes and sizes are all tested to the same high standards. So, whether you need enterprise scale or a network for a small business, when you choose Cisco you can be sure of the same standards of reliability.

4

Make the best choice for you.

One size does not fit all. We know it's a cliché, but we also know it's true. That's why when you choose Cisco you are not limited to one way of deploying your network. Whether you prefer on-premise or cloud-managed, we have a range of solutions to suit you.

5

Support when you need it.

Once you have a Cisco network you are not on your own. Our support packages look after you 24/7. We can alert you to any potential problems, provide operating system upgrades, and software updates and a fast hardware replacement service if you need it.

The right solution for your network

Let's Connect. Learn more about how you can simplify your network and start innovating, with Cisco solutions for smaller sites.
