

Cisco Security Step-Up

Prevent users from accessing malicious sites.
Stop email threats. Block unauthorized access.

Cisco Security Step-Up significantly reduces incidents and the risk of breaches by delivering leading internet threat protection, email security and trusted access capabilities. Protect users while enabling secure access to resources everywhere.

Thanks to Cisco Secure, I'm quite confident that our security posture is many times better because we are leveraging more scalable, state-of-the-art security solutions."

Luigi Vassallo, Chief Operating Officer and Sara Assicurazioni, Chief Technology Officer

Benefits

- Reduce the risk of a breach and significantly lower the number of security incidents with the adoption of secure web gateway, DNS-layer security, email security and access management
- Easily prove compliance with regulatory requirements and corporate governance policies
- Safely enable hybrid work by allowing your workforce to be productive from any location without compromising on security
- Reduce the attack surface by implementing layered defenses and security controls
- Take advantage of the combined power of protection for the network, email, and trusted access in a single unified solution
- Realize greater protection and maximize your return on investment with security solutions that deploy quickly, are easy to manage and reduce total cost of ownership

Security, Compliance and Access in a Unified Solution

Whatever your business, threats such as data breaches, phishing, business email compromise (BEC), account take over (ATO), stolen credentials and ransomware can disrupt everyday operations. You may also have to contend with meeting regulatory compliance mandates or face the risk of a fine. And with hybrid work here to stay, you need to secure your remote workers and provide your distributed workforce with safe access to resources.

Achieving all this is certainly possible, however doing so can seem daunting without a consolidated approach. Relying on multiple vendors can reduce efficiencies, overwhelm the teams who deploy and manage each product, introduce unnecessary complexities and ultimately increase your total cost of ownership. Unify your security strategy to build resilience, meet compliance requirements and drive down costs.

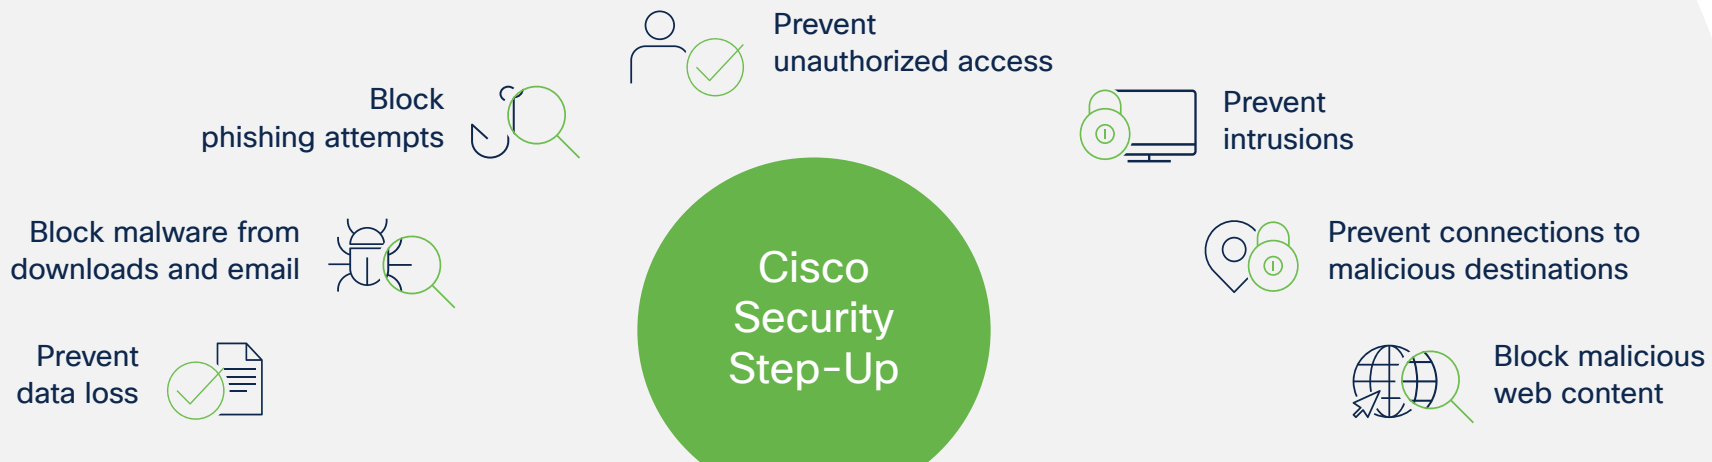

Cloud-delivered Security for Your Workforce

Delivered from the cloud for simple, fast deployment, Cisco Security Step-Up protects against phishing, ransomware, stolen credentials, malware and other threats, regardless of user location or infrastructure type, whether it's cloud-based, on-premises or hybrid.

With Cisco Security Step-Up, you can:

- **Secure Web Traffic**
Inspect web-based traffic to deliver full visibility and to block Internet-borne threats
- **Block Email Threats**
Check and analyze email to stop email-delivered threats
- **Enable Secure Access**
Implement strong authentication to allow only authorized users and devices access to authorized resources

Cisco Security Step-Up:
Protect your business with a powerful ecosystem

Malware

Phishing/BEC

Data Exfiltration

Account Takeover

Ransomware
