Move at blazing speed with complete hyperconvergence

Hyperconverged infrastructure

brings the pay-as-you-go economics of cloud to your data centre. It combines compute, network, storage, virtualisation and data protection into a single appliance. One you can deploy in under an hour and manage using a widely adopted and familiar toolset.

Power your business with
## Cisco HyperFlex Systems

Integrates seamlessly with your existing data centre investments

Infrastructure flexibility – can coexist under the same Fibre Interconnects (FIs) for both converged and build-your-own infrastructures with third-party storage arrays

Pay as you grow, scale as you go with a subscription-based software model

Operational simplicity via adaptive infrastructure

Independent scaling of compute, storage performance and capacity

Ready out of the box

- Based on standard x86 architecture
- Solutions to suit small footprints, as well as to address capacity or compute heavy workloads
- Simple bundles, configured to order, with annual subscription for management software

For the agility you crave

- Fast to deploy, simple to manage, easy to scale
- Buy only what you need to match the workload – a single rack, blade, or more
- Manage many technologies with a route to software-defined everything, automation, orchestration, and cloud

With blazing fast performance

- Simplify your daily operations with a single interface
- See cache, capacity and storage as one for the performance and resilience you need
- Enjoy seamless end-to-end support owned entirely by Cisco
