

WAN of the Future

Survey results from the FutureWAN'18* Summit

A shift in traditional WAN is needed to meet today's network requirements. With a move towards a more agile, secure and cost-effective approach and away from the classic design where branch office traffic flows within an enterprise's intranet.

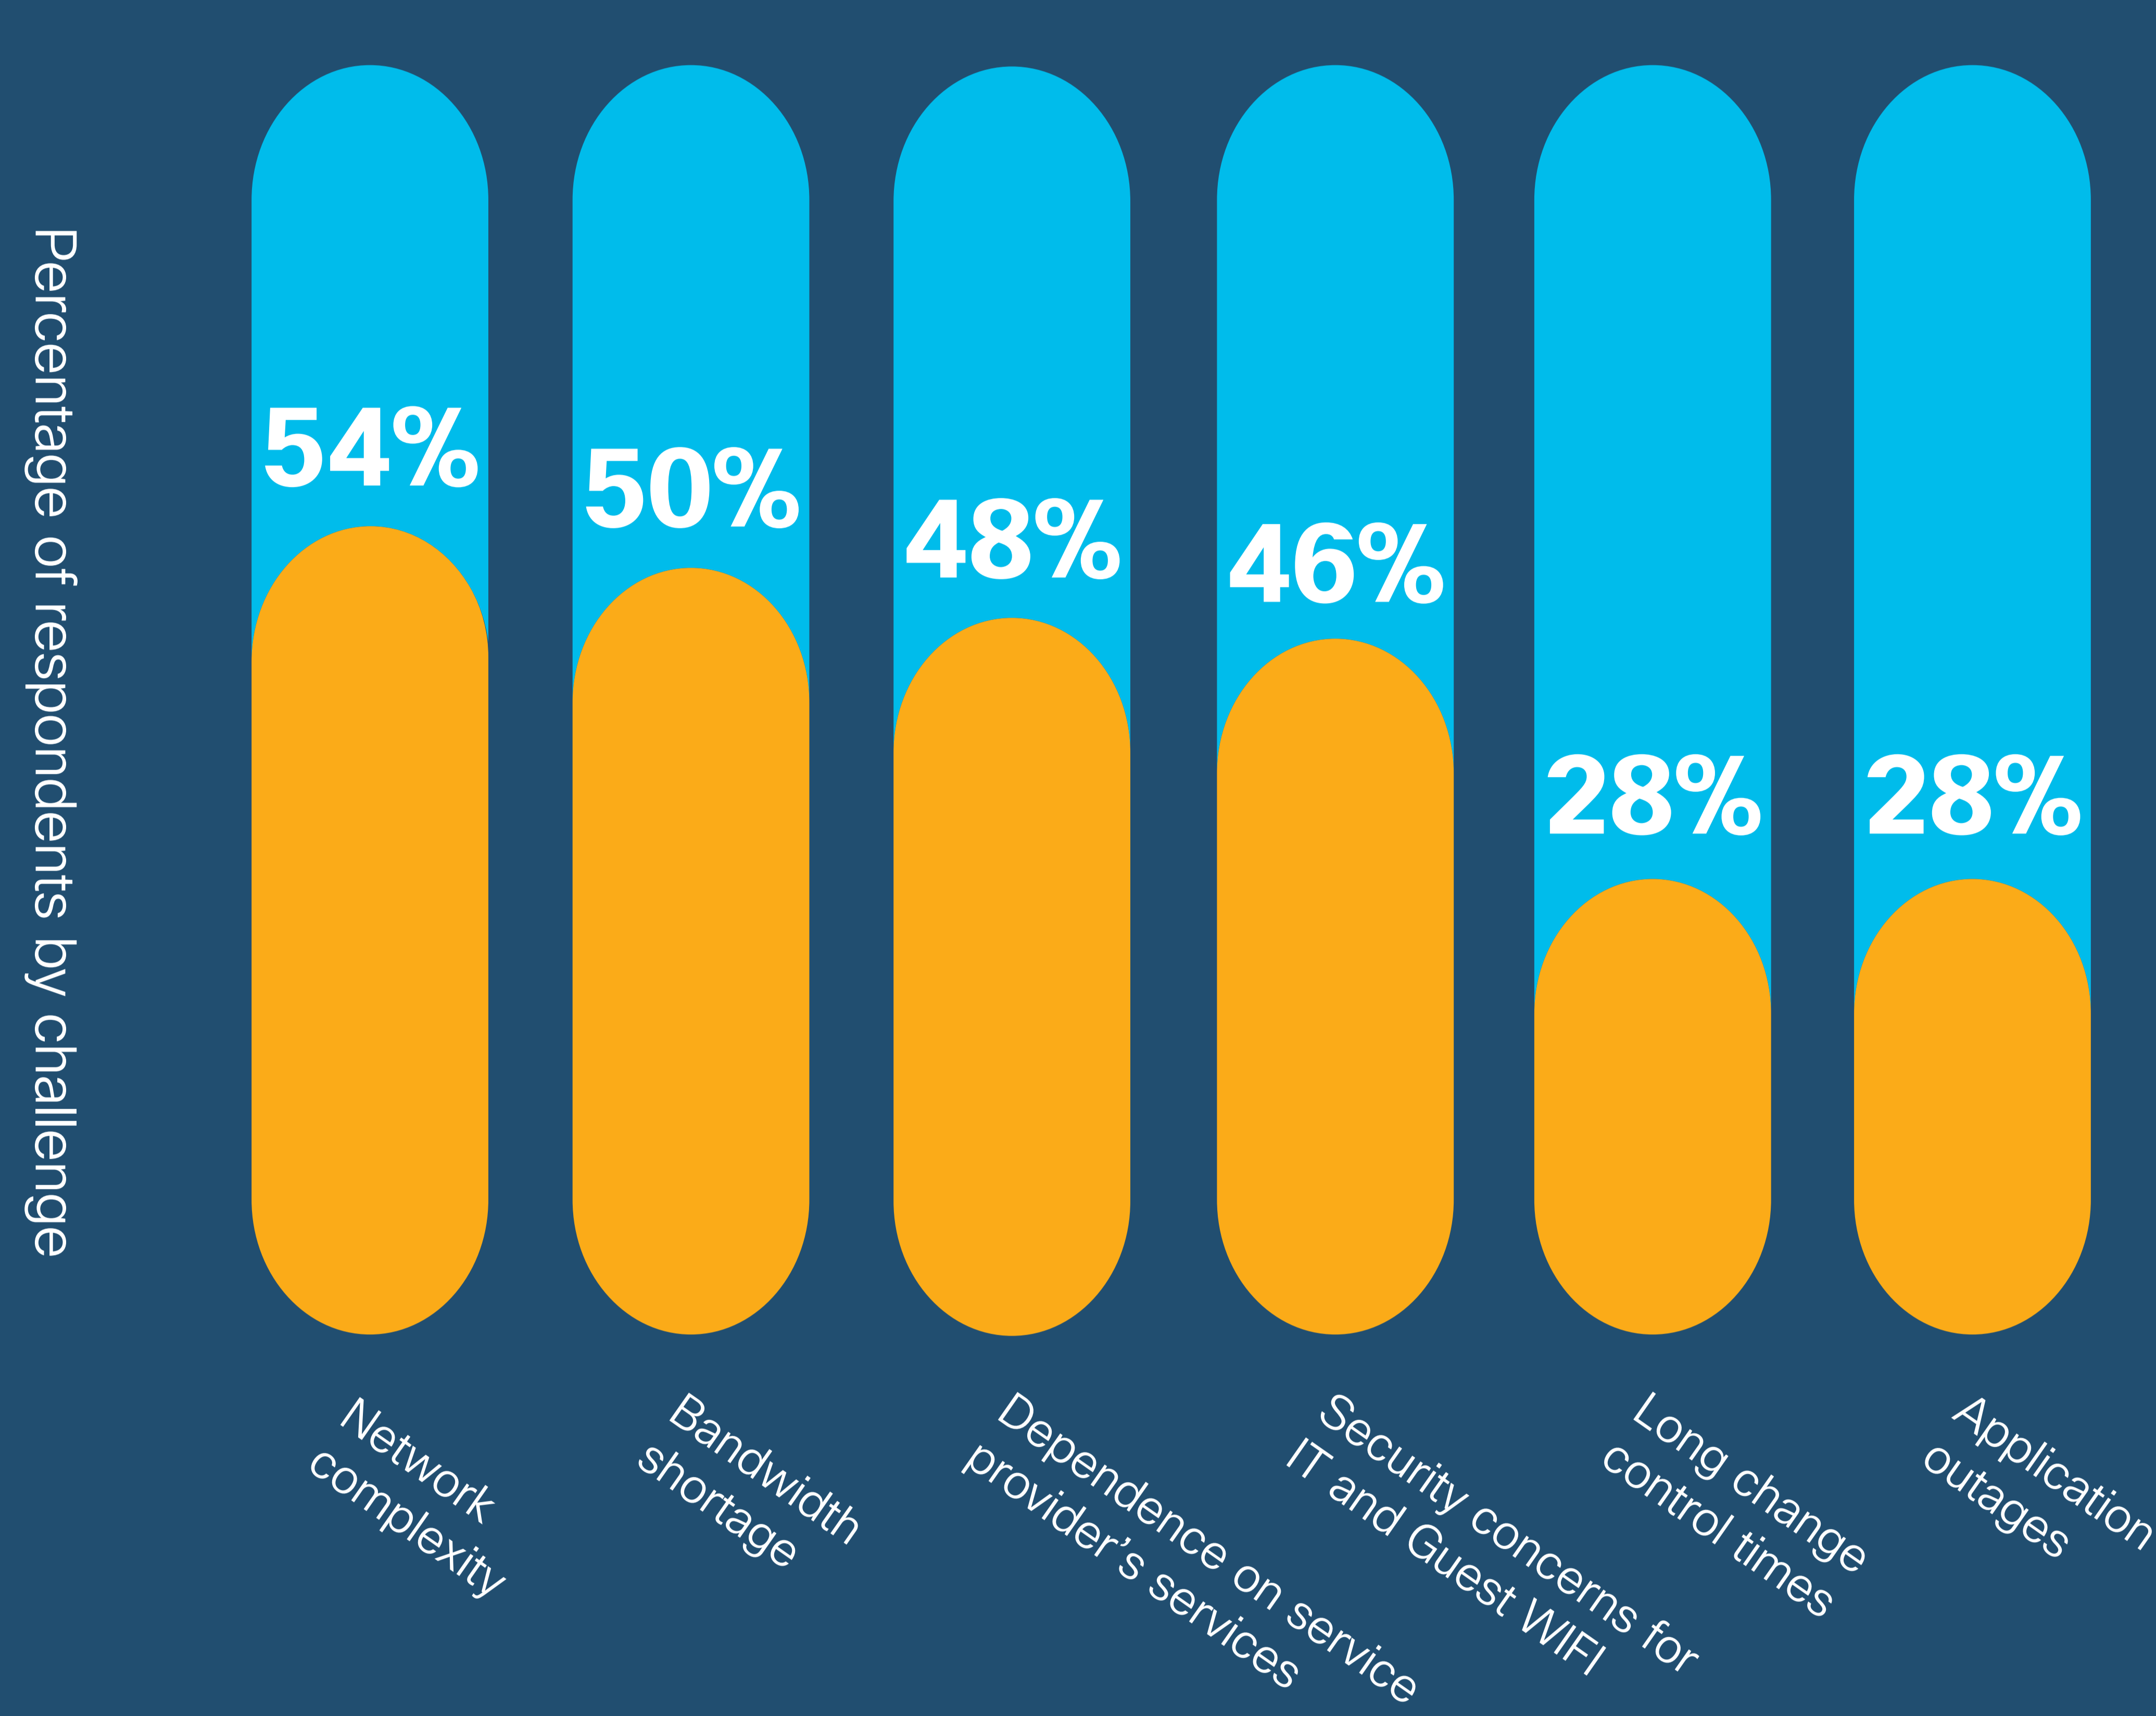

What are the top challenges of today's WAN and can SD-WAN help address them?

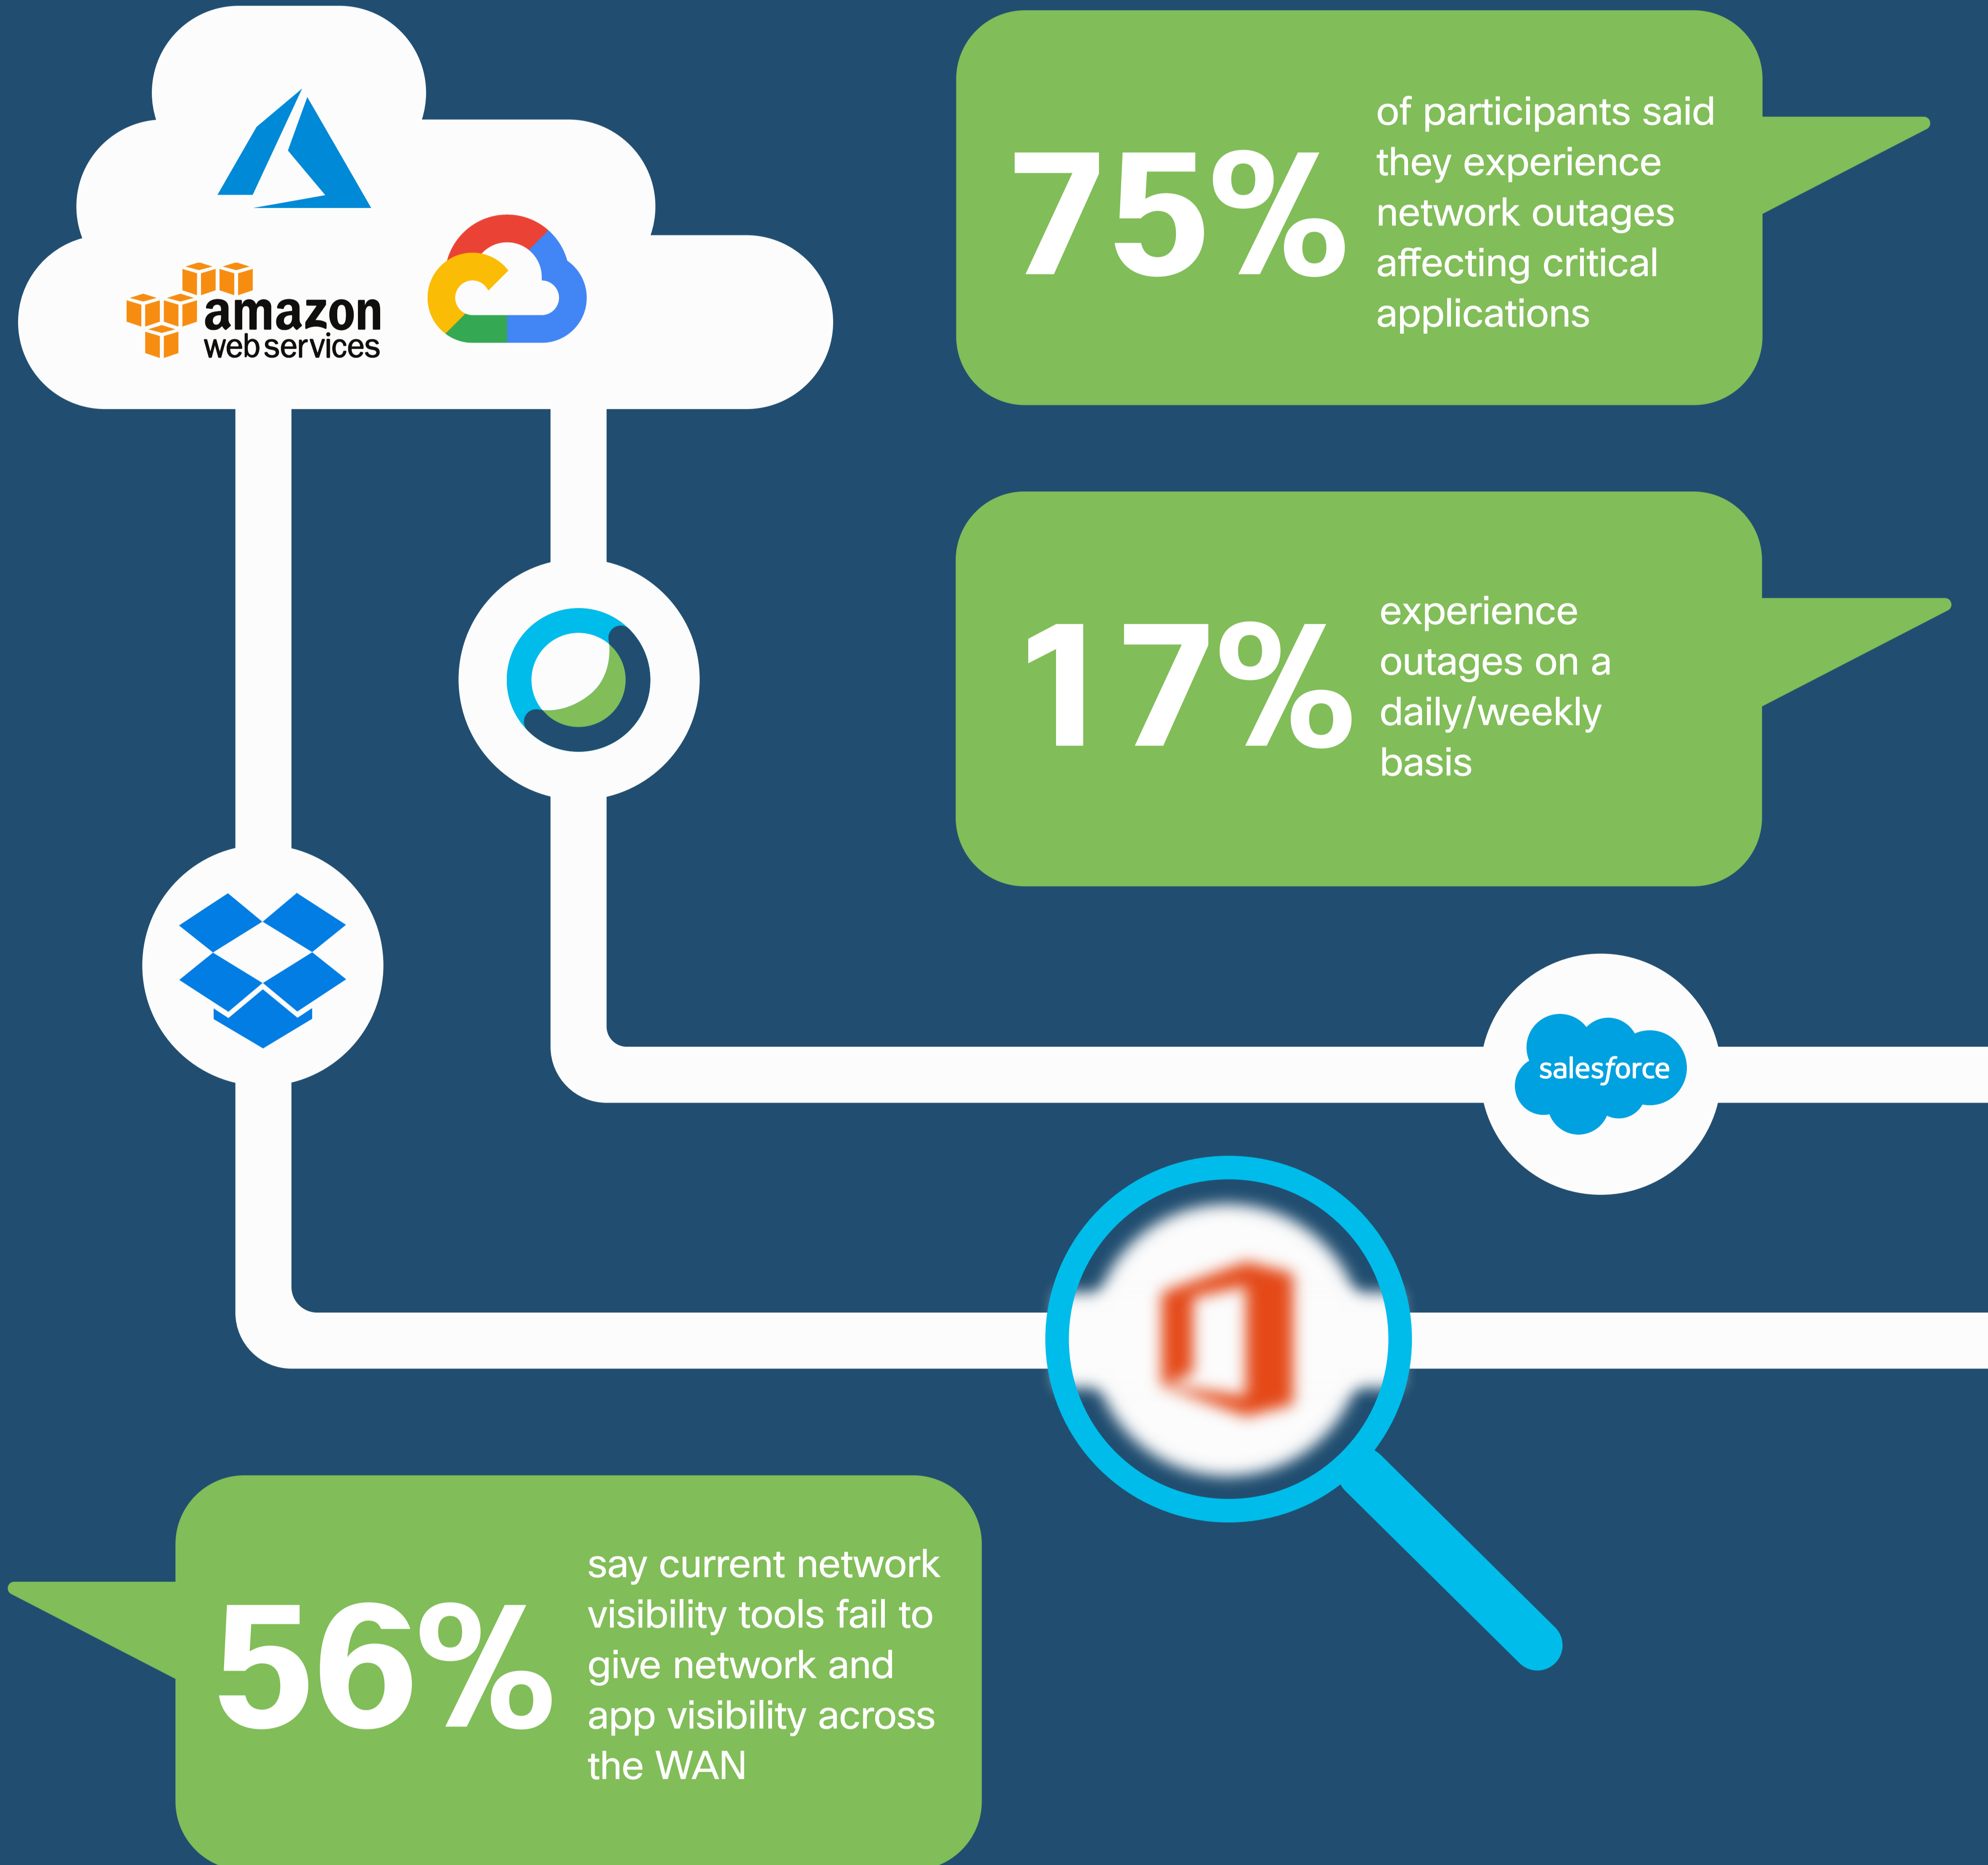

To find out we asked 785 IT professionals who attended the FutureWAN'18 Summit

Key challenges of traditional WAN

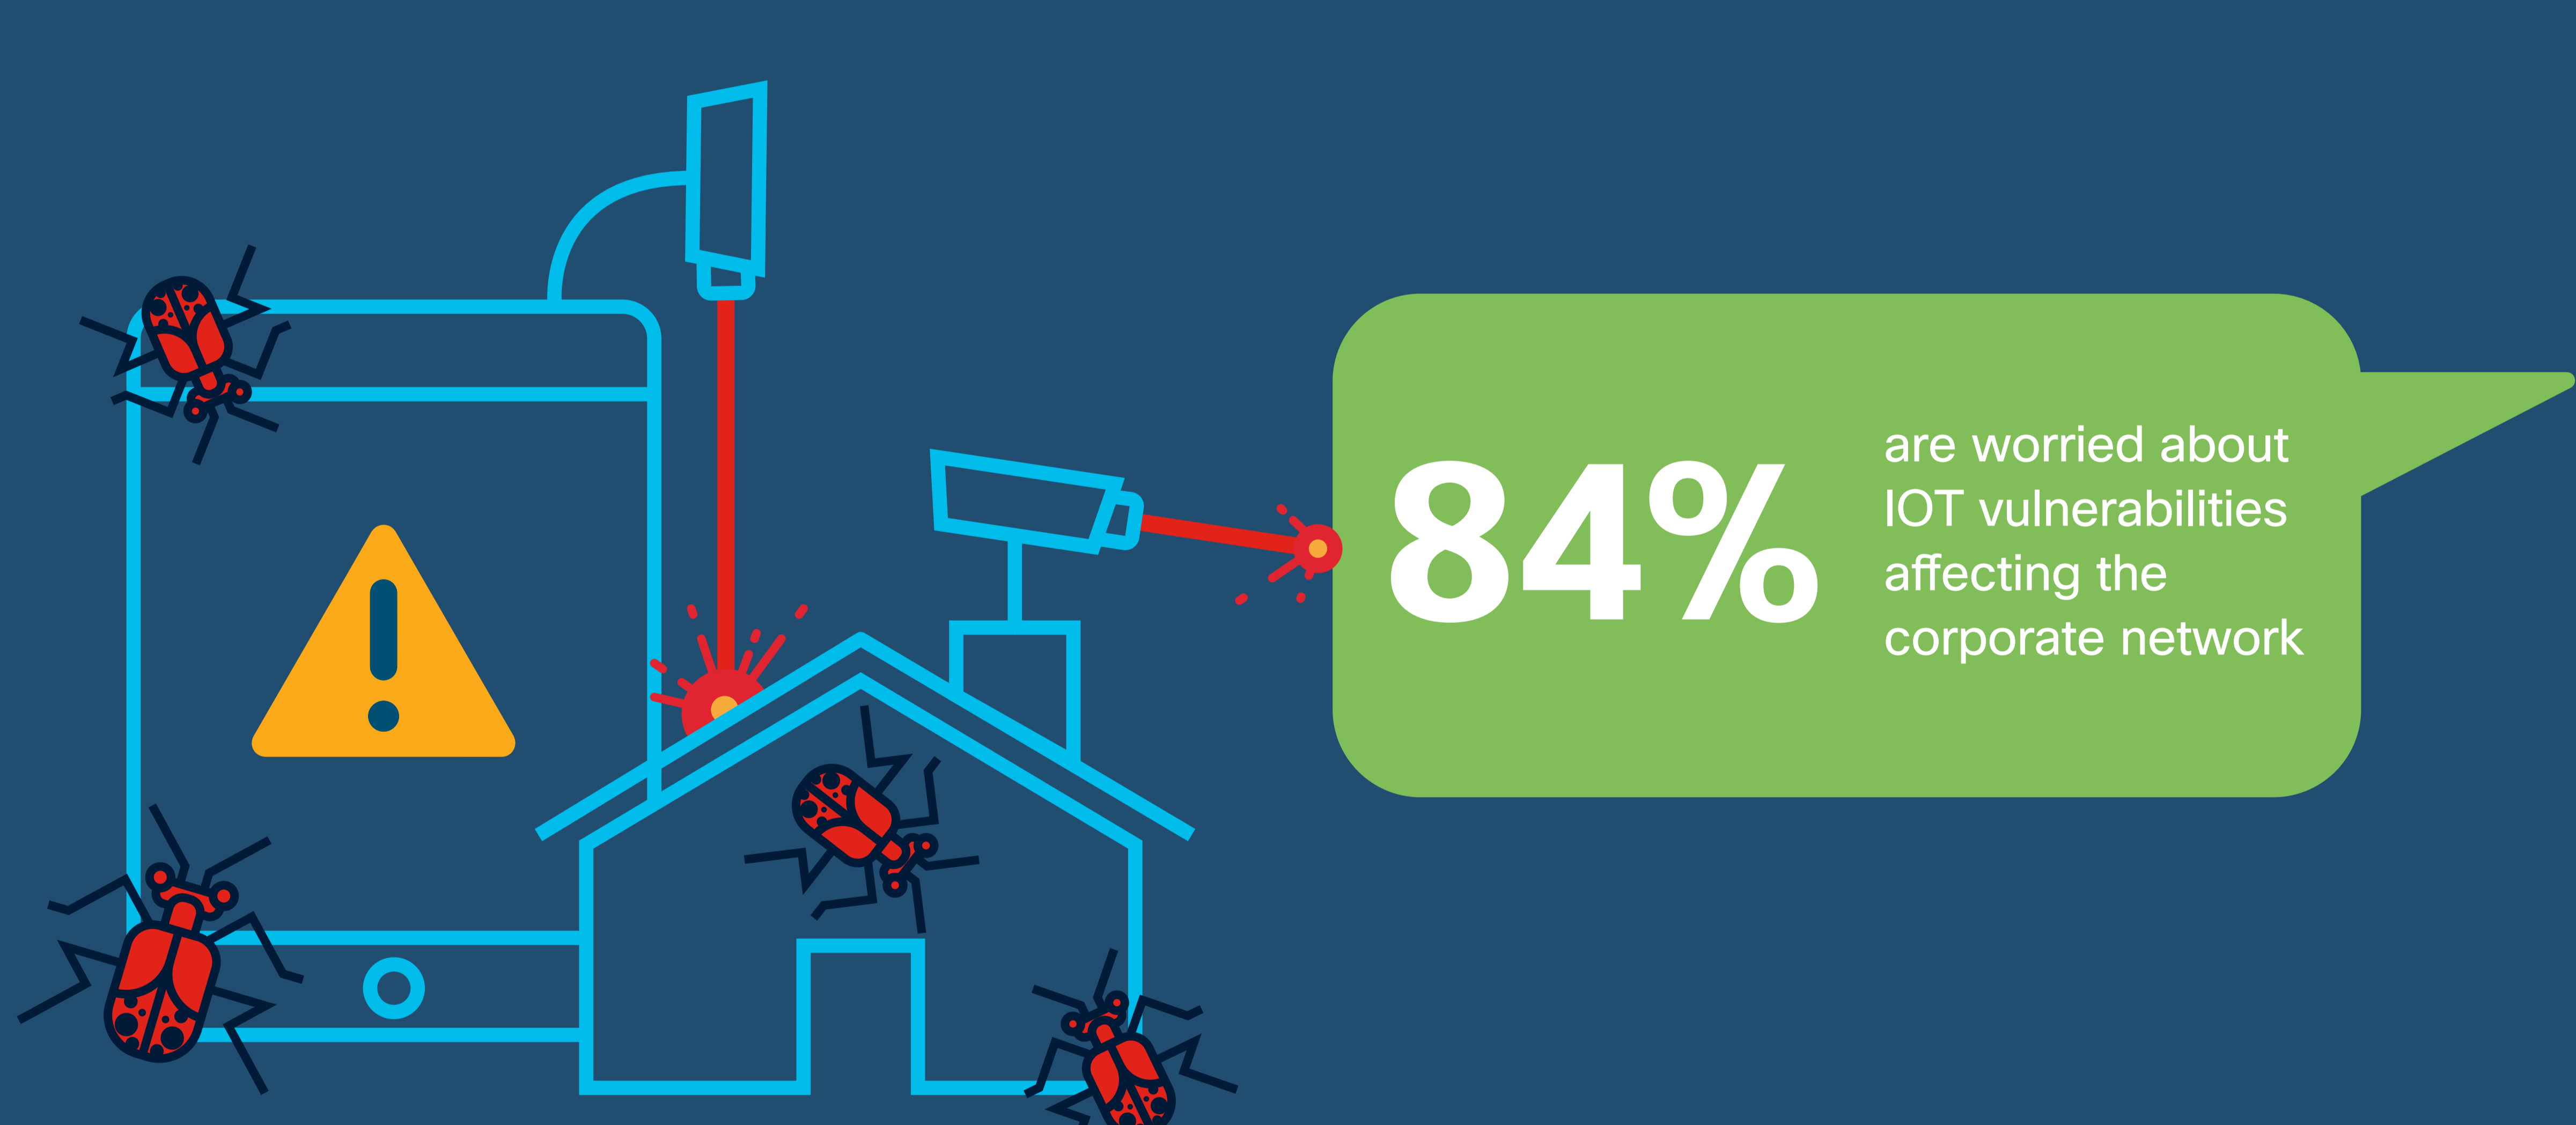

Additional concerns highlighted

Network outages

IoT vulnerabilities

Agree that SD-WAN can help to address current WAN management issues.

SD-WAN enables the WAN to provide the application reliability, availability, performance, and security required by business, irrespective of the location of the apps - the cloud or the corporate datacenter.**
