

Benefits

- Provides Smooth Deployment Experience
- Controls Deployment Costs and Risks
- Post Deployment Support
- Fixed Scope and Price Enables Immediate Product Attachment
- Correct Installation and Integration
- Heightened Staff Awareness

Firepower Solutions Security Deployment Service

Firepower Solutions Security Deployment Service provides a single solution for firewall protection by using our professional team to do the installation and implementation work for the customer. Our experts provide pre-deployment, deployment, and post-deployment activities enabling the customer to take full advantage of Cisco's Firepower solution. By taking advantage of this service, your customer can be assured the dynamic controls are properly configured to respond in real-time to the ever changing technology environment and threat landscape.

Cisco's Firepower Solutions Security Deployment Service is divided into 3 phases and can be delivered either remotely or on-site.

Pre-Deployment

During this phase Cisco and the customer will conduct a remote kick-off call to review the project plan, identify key stake holders, and create a timeline of activities. The team will also review the policies for the security solution provided by the customer. To conclude this phase, the delivery team will create and deliver the Deployment Profile Questionnaire detailing the configuration of sensors and defense centers to be implemented to the customer.

Deployment

The delivery team configures the targeted systems on the customer's premises during the deployment phase as defined in the Deployment Profile Questionnaire. The Cisco deployment team will then conduct tests on the system to ensure proper alerting, dropping, and other pre-defined objectives provided by the Customer and documented in the Questionnaire are met. As a final step, the team will provide an optimization tune based on the test results.

Post-Deployment

About 30 days post deployment, Cisco will provide a remote supplemental optimization tune to improve the security solution in accordance with customer's goal and a final, updated Deployment Summary Report.
