

Course Agenda

- **Module 1—Introduction to WLAN networking trends and Market Drivers and Cisco's Wireless Vision**
- **Module 2—Key WLAN Technologies**
- **Module 3—WLAN Products**
- **Module 4—WLAN Network Design**

© 1999, Cisco Systems, Inc. www.cisco.com Technical Track 202-2

Course Objectives

- **Upon completion of this course, you will be able to:**
 - List the emerging WLAN market trends and requirements and describe Cisco's wireless vision.**
 - Describe the major WLAN technologies.**
 - Define the functions and features of the Cisco WLAN products.**
 - Describe WLAN network design issues, WLAN configurations and sample applications using Cisco WLAN products.**

4

Historical Market Inhibitors

- Positioning of wireless as a separate solution**
- Immature technology**
 - Low throughput speeds**
 - Security concerns**
 - Vertical marginalization of technology**
 - Lack of standards**
- Vertical applications solving specific problems**
 - Manufacturing**
 - Healthcare**
 - Retail**
 - Education**

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-5

Market Materialization

- **Standardization**
 - IEEE 802.11b standards**
- **Technological maturity**
 - Better security – 128-bit encryption**
 - Longer range access points**
 - 11-Mbps throughput speeds**
- **Horizontal applications**
 - Extension of wired solutions**
 - Connecting mobile workers**

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-6

Key Market Drivers

- **Speed**
11-Mbps throughput meets enterprise performance standards
- **Positioning**
Wireless completes the networking solution
- **Value**
Lower costs with acceptable performance
- **Ease of Implementation**
“Instant” solutions, excellent manageability, easy implementation

Technical Track 202-8

Diverse and Attractive Markets

- **Enterprise & Small/Medium Businesses**
- **Consumer/Home**
- **Education**
 - K–12 cost-effective network infrastructure
 - Dynamic class sizes in universities
- **Health Care**
 - Access and update patient data directly at the point of care

Technical Track 202-11

Review Quiz - Market Trends

- 1) List the three of the four market drivers fueling the growth of the wireless LAN market.
- 2) Name the industry standard that has enabled the development of wireless LANs for horizontal applications.
- 3) Name the two primary ways in which wireless LANs can be used.

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-12

Module Objectives

- **Upon the completion of this module, you will be able to:**

Describe radio frequency (RF) spread spectrum technology.

Understand the basic fundamentals of RF technology.

Describe wireless LAN (WLAN) topology solutions that will work with WLAN technology.

Overview of Wireless Data Network Offerings

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-17

WLAN Evolution: 2000

- Small and Medium Sized Businesses
- Small Office / Home Office
- Healthcare
- Education
- Warehousing
- Retail

- Home Networking

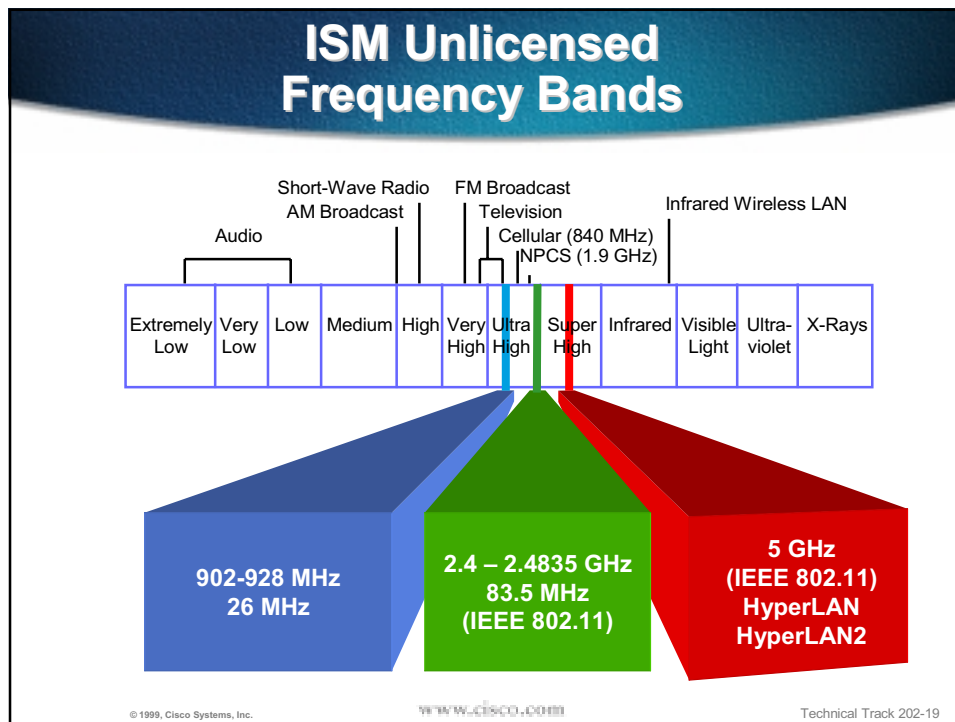

Speed	860 Kbps	1 & 2 Mbps	11 Mbps
Network	Proprietary	Standards-based	
Radio	900 MHz	2.4 GHz	

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-18

900 MHz vs. 2.4 GHz vs. 5GHz

	900 MHz	2.4 GHz	5 GHz
Pros	Greater range than 2.4 GHz (for inbuilding LANs)	Global Market IEEE 802.11 Higher data rates (10+ Mbps)	Global Market IEEE 802.11 Higher data rates (20+ Mbps)
Cons	Maximum data rate 1 Mbps Limited bandwidth Crowded band	Less range than 900 MHz (for In-building LANs)	Much less range than 900 or 2.4 GHz Higher-cost RF components Large antenna required

© 1999, Cisco Systems, Inc. www.cisco.com Technical Track 202-20

Frequency Hopping vs. Direct Sequence

- **Frequency Hopping**
 - Older technology
 - Designed for easy interference avoidance
 - Has been slower
- **Direct Sequence**
 - Throughput
 - Range
 - Reliable

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-21

Cisco WLAN Radio Technology

- **Spread Spectrum Radio**
 - **Direct Sequence Spread Spectrum (DSSS)**
 - **2.4GHz- ISM 11Mbps**

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-22

RF Technology Overview

23

Radio Modulation

- **More Information = More Frequency Spectrum Used**

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-24

Modulation

- **Complex modulation requires better signal strength, therefore less coverage is available**
- High speed modem compress the data to use the same line as an old 300 baud modem. This means the same bandwidth is available.
- 56Kmodems require a better (quieter) phone line to communicate at the higher speed
- If there is noise on the line, the modem will drop down in speed to connect.
- More noise, less speed

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-25

IEEE 802.11 Standard—Development

- IEEE 802.11 became a standard in July 1997.
- Two technologies are defined:
 - DSSS - 2 and 11Mb
 - FHSS - 1 and 2 Mbps
- IEEE 802.11B became a standard in September 1999.
 - Only one RF technology was defined—DSSS @ 11-Mbps
- 802.11 defines a high-performance radio.
- 802.11 promises true vendor interoperability (over the air).

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-26

Cisco Radio Technology

Direct Sequence Spread Spectrum (DSSS)

- 2.4GHz
- One piece PCMCIA radio product
- 1, 2, 5.5 and 11Mb
- 25 Mile bridge links
- Fully 802.11 Compliant at all speeds

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-28

Direct Sequence

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-29

Direct Sequence Modulation

- Each data bit becomes a string of chips (chipping sequence) transmitted in parallel across a wide frequency range
- Minimum chip rate per the FCC is 10 chips for 1 and 2MB (BPSK/QPSK) and 8 chips for 11Mb (CCK) datarates.

If the data bit was: 1001

Chipping code is : 1=00110011011 0=11001100100

Transmitted data would be:

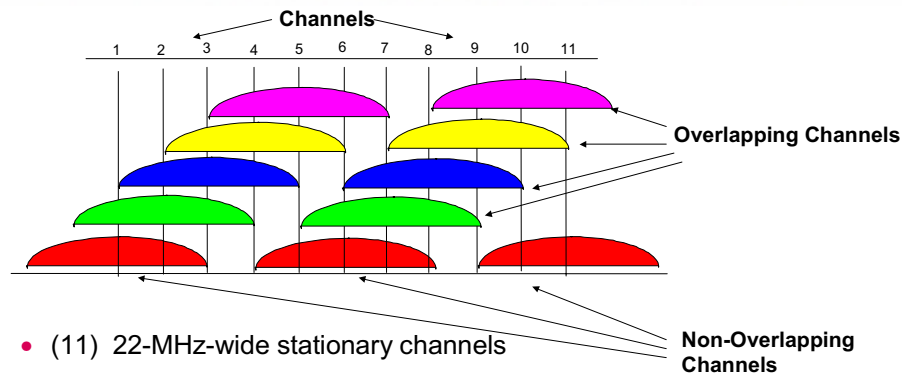

00110011011	11001100100	11001100100	00110011011
1	0	0	1

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-30

Channels—802.11 DS

- (11) 22-MHz-wide stationary channels
- x “chips per bit”, means each bit is sent redundantly
- 11-Mbps datarate
- 3 nonoverlapping channels (1, 6, and 11)
- 3 APs can occupy same area - set at different frequencies

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-31

Frequency Hopping

- **79 Channels, 1 MHz Each**
- **Changes frequency (Hops) at least every 0.4 seconds**
- **Synchronized hopping required**

© 1999, Cisco Systems, Inc.

Technical Track 202-32

FH vs. DS: A Summary on Interference Handling

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-33

Data Rates DS vs. FH

- The “over-the-air” data rate at a given range and given similar implementation will favor DSSS by a factor of 2 to 1.
- A 1-Mbps DSSS system should have twice the range of a 1-Mbps FHSS.
- A 2 Mbps DSSS system will offer comparable range to 1-Mbps FHSS technology.
- For these reasons, the data-rate advantage goes to DSSS.

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-34

Range—DS vs. FH

- Range depends on a numerous implementation details, including:
 - Transmit power
 - Antenna system (including antenna gain, cable loss, and whether diversity is used)
 - Radio sensitivity
 - Processing gain (Processing gain results from the DSSS technique of redundantly transmitting bits.)
- Because of this processing gain, the DSSS technology will have more range than FHSS at a given data rate.

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-35

Access Point Coverage and Data-Rate Shifting

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-36

Scalability—DS vs. FH

- Scalability is the ability to locate more than one AP in the same area, increasing the bandwidth of that area for all local users to that AP.
- DS has a limit of 3 nonoverlapping channels, and therefore, limits the total AP number to 3.

Technical Track 202-39

IEEE 802.11 Impact

- **Enables basic interoperability over the air**
 - DS adapters from different vendors can interact
 - FH adapters from different vendors can interact
- **System level interoperability requires more...**
 - Vendor cooperation
 - Higher-level protocol agreement

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-40

IEEE 802.11 Standard

- **802.11 incorporates many Cisco features such as:**

Power management

Active scanning

Registering (association) with AP

Concept of roaming

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-41

802.11b—Higher Data Rate

- **With the need for a higher data rate, 802.11 decided to add more specifications.**
- **A 11 Mb specification was ratified in September 1999.**
- **This specification uses DS**
- **The standard uses Complementary Code Keying (CCK) modulation**

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-42

Roaming and Options

- All Cisco wireless LANs deliver superior roaming
- More 802.11 options than anyone

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-43

Cisco Aironet Association Process—Passive Scanning

Initial connection to an AP

Steps to Association:

- 1 Client sends probe
- 2 AP sends probe response
Client evaluates AP response, selects best AP
- 3 Client sends authentication request to selected AP (A)
- 4 AP A confirms authentication and registers client
- 5 Client sends association request to selected AP (A).
- 6 AP A confirms association and registers client

© 1999, Cisco Systems, Inc.

www.cisco.com

Technical Track 202-44

Cisco Aironet Reassociation Process—Passive Scanning

Roaming from AP A
to AP B

Steps to Reassociation:

- 1 → Adapter listens for beacons from APs.
Adapter evaluates AP beacons, selects best AP.
- 2 → Adapter sends association request to selected AP (B).
- 3 → AP B confirms association and registers adapter.
- 4 → AP B informs AP A of re-association with AP B.
- 5 → AP A forwards buffered packets to AP B and de-registers adapter.

Technical Track 202-45

Multipath Distortion

© 1999, Cisco Systems, Inc.

WWW.CISCO.COM

Technical Track 202-46

Diversity and Multipath

- In a multipath environment, signal null points are located throughout the area.
- Moving the antenna slightly will allow you to move out of a null point and receive the signal correctly.

Dual antennas typically mean if one antenna is in a null, the other one will not be, thus providing better performance in multipath environments.

Technical Track 202-49

What Are Wireless LANs?

They are:

- Local, not wide area
- In-building or campus area coverage for mobile users
- Up to several miles for point-to-point (LAN to LAN)
- Radio or infrared
- FCC licenses not required
- Customer owns the equipment (no usage charges)

They are not:

- Cellular phones
- Pagers
- Packet Data
 - Ardis
 - CDPD
 - RAM Mobile Data
- PCS

Some Rules for Wireless LANs

- All equipment must be on the same frequency (900 MHz or 2.4 GHz) and same type of modulation (FH or DS) to communicate.
- In order for wireless equipment from different manufacturers to work together, they must all be 802.11 compliant. Some performance issues may still arise, but as testing continues between vendors, these should be overcome in the near future. WECA will help with this.
- Performance is dependent upon many factors—
“your mileage may vary”

Review Quiz - Wireless LAN Topologies

1) Select the appropriate phrase to complete the following sentence. (More than one phrase may be correct.)

Wireless LANs...

A are local

B support the use of cell phones

C support the use of pagers

D provide in-building or campus coverage for mobile users

2) In-building LANs require bridges. True or False?

3) More Information = More Frequency Spectrum Used. True or False?
