OSS: FCAPS

Functional View based on TMN reference model

	Fault Management	Configuration Management	Accounting Management	Performance Management	Security Management
BML	Alarm policy, Repair processes, Test policy, Trouble reporting policy.	Order Management, Provisioning policy, Procurement policy.	Usage process, Pricing policy, Billing Policy.	Service Level Mgt, Exception threshold policy.	Revenue change control, access policy, fraud management.
SML	Service test, Trouble reporting, Trouble ticket query & notification.	Installation, deployment, customer/subscriber service definition.	Feature pricing, Usage charge, correlation, validation & aggregation.	Customer performance reporting, traffic reporting.	Customer profiling, usage pattern analysis, customer security administration, service intrusion detection/recovery.
NML	Network fault event correlation & filtering, Network fault isolation, Circuit testing, trouble ticket administration.	Network connection management, network installation management.	Network usage correlation, usage data storage.	Traffic management, network capacity analysis, network performance characterization, network data aggregation & trending.	Traffic pattern analysis, network security alarm, Network security breach detection & recovery.
EML	NE alarm management, NE fault localization and correction, Element log control.	NE loading, installation, administration & status generation.	NE usage data collection, usage data validation.	NE trend analysis, NE capacity planning, performance collection and analysis.	NE security alarm management, NE audit trail management.
NEL	Failure event detection, reporting.	Configuration enforcement, Parameter validation, reporting and enforcement.	Element Probe, Usage data generation and storage.	Element probe, Detection and reporting of state change.	Element access control, intrusion detection, reporting and auto-recovery.

CSM Configuration Management

CW2000 Configuration Management Suite

The screenshot displays the CW2000 Configuration Management Suite interface. It features a tree view on the left with categories such as 'Change Manager', 'Inventory Manager', 'Syslog Analyzer', and 'Availability Manager'. The main pane shows details for the selected item. Overlaid on the bottom right are three colored boxes: a teal box labeled 'Copy', a light blue box labeled 'JavaScript', and a darker blue box labeled 'Enabled'.

- Device Configuration** - Archive, search, compare, and export Config files for routers and switches
- Change Audit Services** - audit logging and reporting of network changes
- Inventory Manager** - Capacity planning tools and inventory details
- Software Image Manager** - Distribution, archiving and defect assessment of image software
- Availability Manager** - reachability, reloads, response time and Stack decoder
- Syslog Analyzer** - Filtered, flexible syslog error reporting

Done

CSM Configuration Management Software Image Management

- Download IOS image from CCO into software library
- Checks image against device to determine if prerequisites are met
- Distributes software images to groups of **routers** and **switches** using wizards
- Reporting of download status and job details

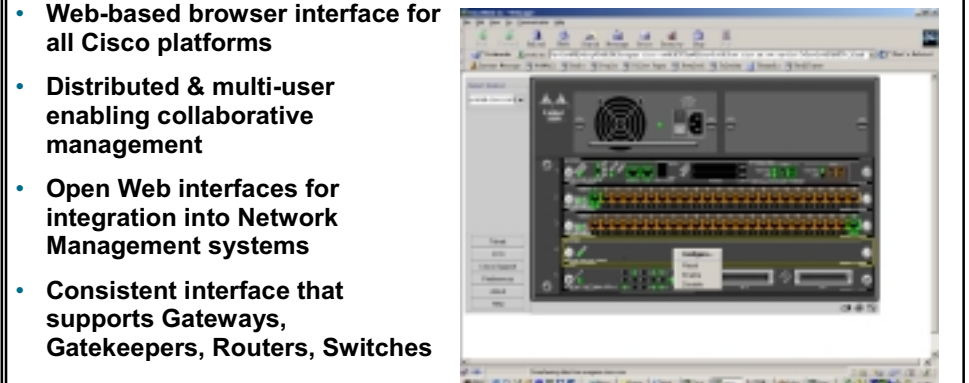

13

CSM Configuration Management

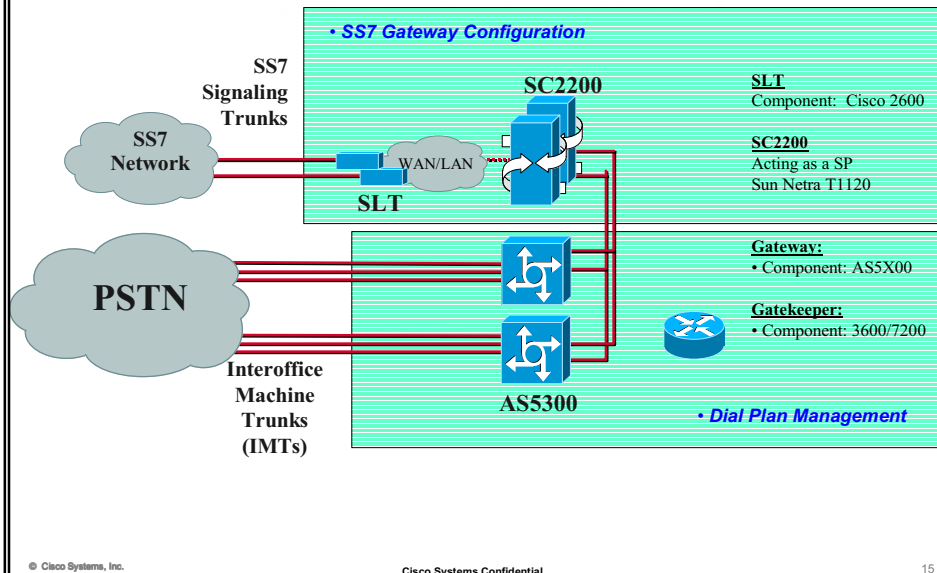

Web-based Element Configuration Management

- **Web-based browser interface for all Cisco platforms**
- **Distributed & multi-user enabling collaborative management**
- **Open Web interfaces for integration into Network Management systems**
- **Consistent interface that supports Gateways, Gatekeepers, Routers, Switches**

CSM Configuration Management Solution Components

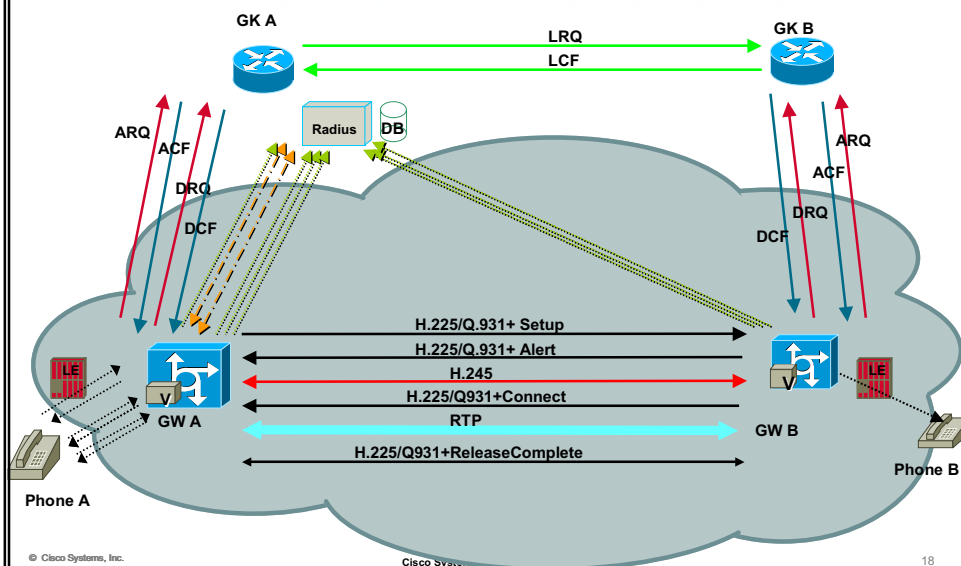

Cisco Service Management – Voice Accounting Management

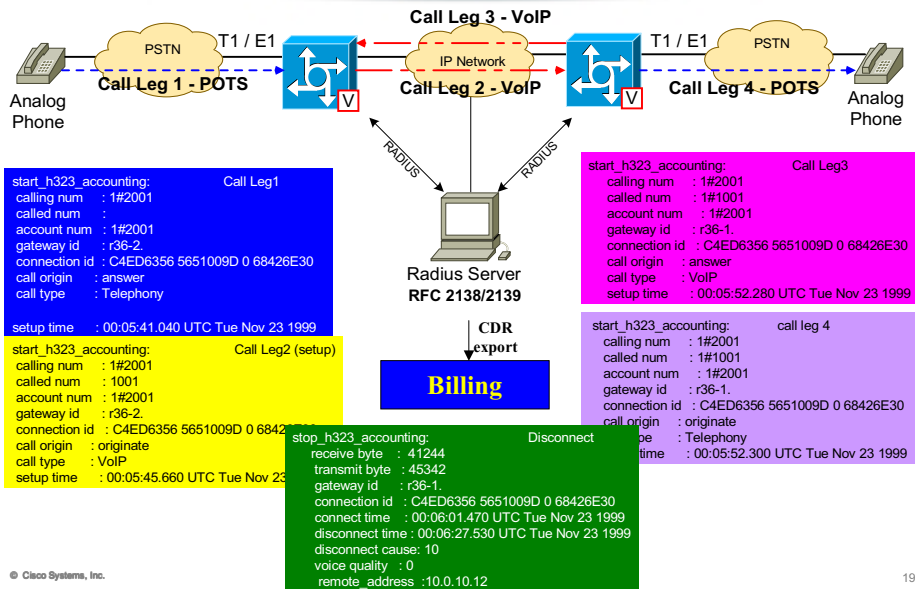

Components of Cisco's Billing Architecture

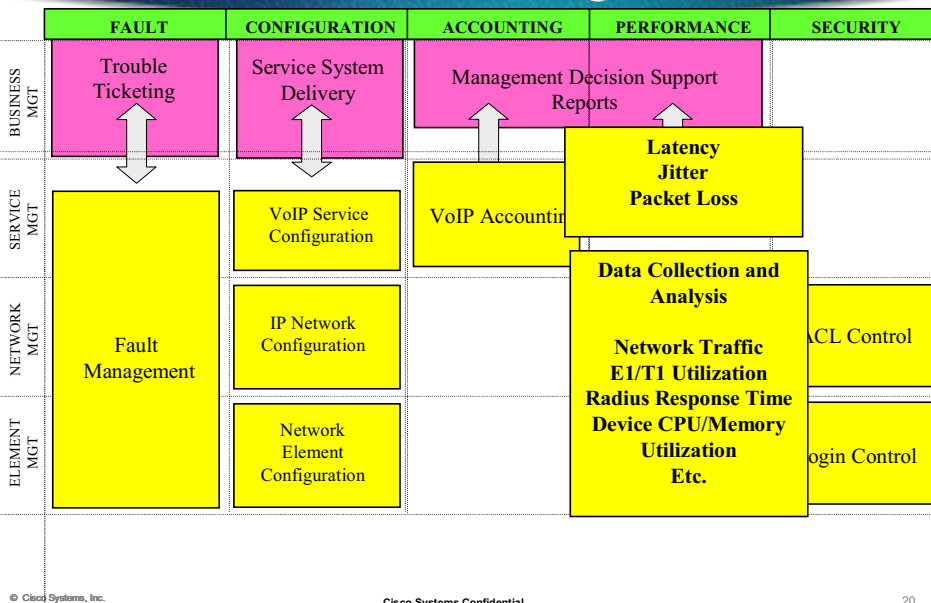

H.323 Call Flow & VoIP Accounting

VoIP Accounting & Billing Architecture

Cisco Service Management – Voice Performance Management

CSM End-to-End Performance Management

Cisco Service Assurance Agent

- SA Agent's source and responder are embedded in all IOS-based Cisco devices
- Synthetic test packets are sent using real VoIP UDP packets
- Cost effective SLA monitoring to ensure upper limit on round-trip delay
- Effectively monitor Jitter (variations in interpacket arrival time)
- Track service affecting packet errors and loss

23

Distributed Performance Reporting Management

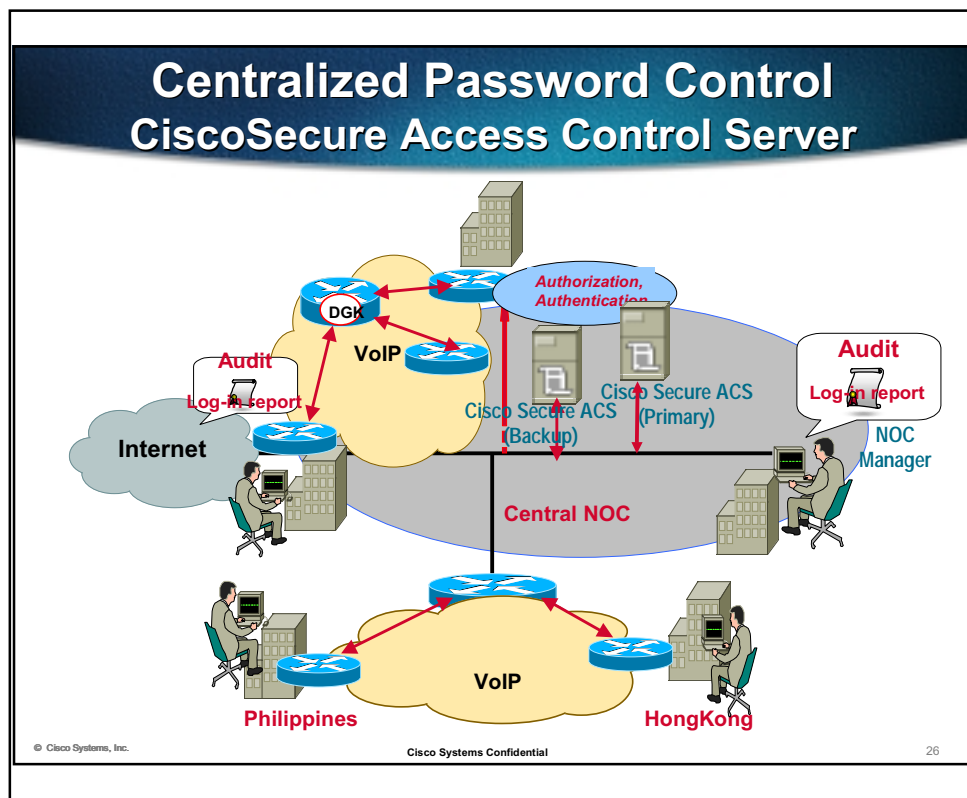

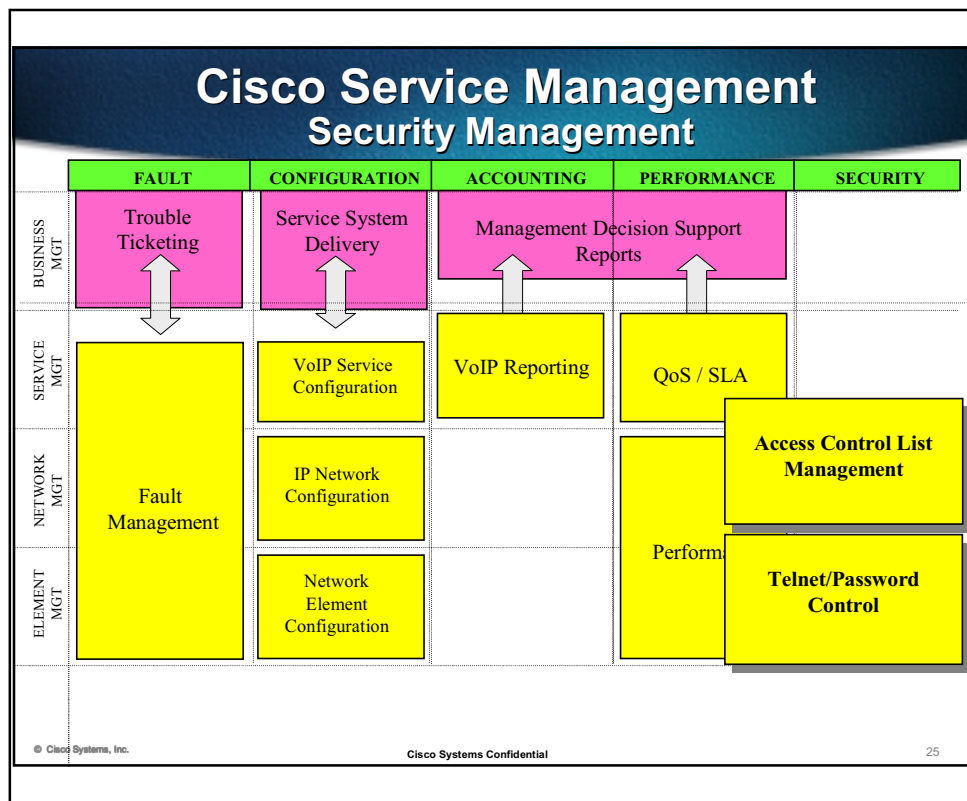

- CVM extracts and exports GW data
- SP Proven reporting partner customizes VoIP Reports
- VoIP reports:
 - Call Success Rate (CSR),
 - Answer Seizure Rate (ASR),
 - Success Call Volume,
 - Failure Call Volume
 - Domestic and international call volume,
 - Minutes Of Use (MOU)
- Centralized and regional reporting

24

Summary

- **Cisco Service Management for Voice provides**
 - End-to-end Fault management
 - End-to-end Configuration management
 - End-to-End Accounting management
 - End-to-End Performance management
 - End-to-End Security management
- **Cisco's network, accounting/billing and management solutions delivers revenue generating and innovative applications and services**
