

Advantages of Cloud-Based Systems Management

Managing enterprise infrastructure today is a complex job

“As the infrastructure in a firm becomes bigger, more complex, and distributed, it puts a proportionate strain on systems management functions and capabilities, which also need to scale and be highly available.” (IDC)¹

90% of organizations will adopt hybrid infrastructure management by 2020 (Gartner)²

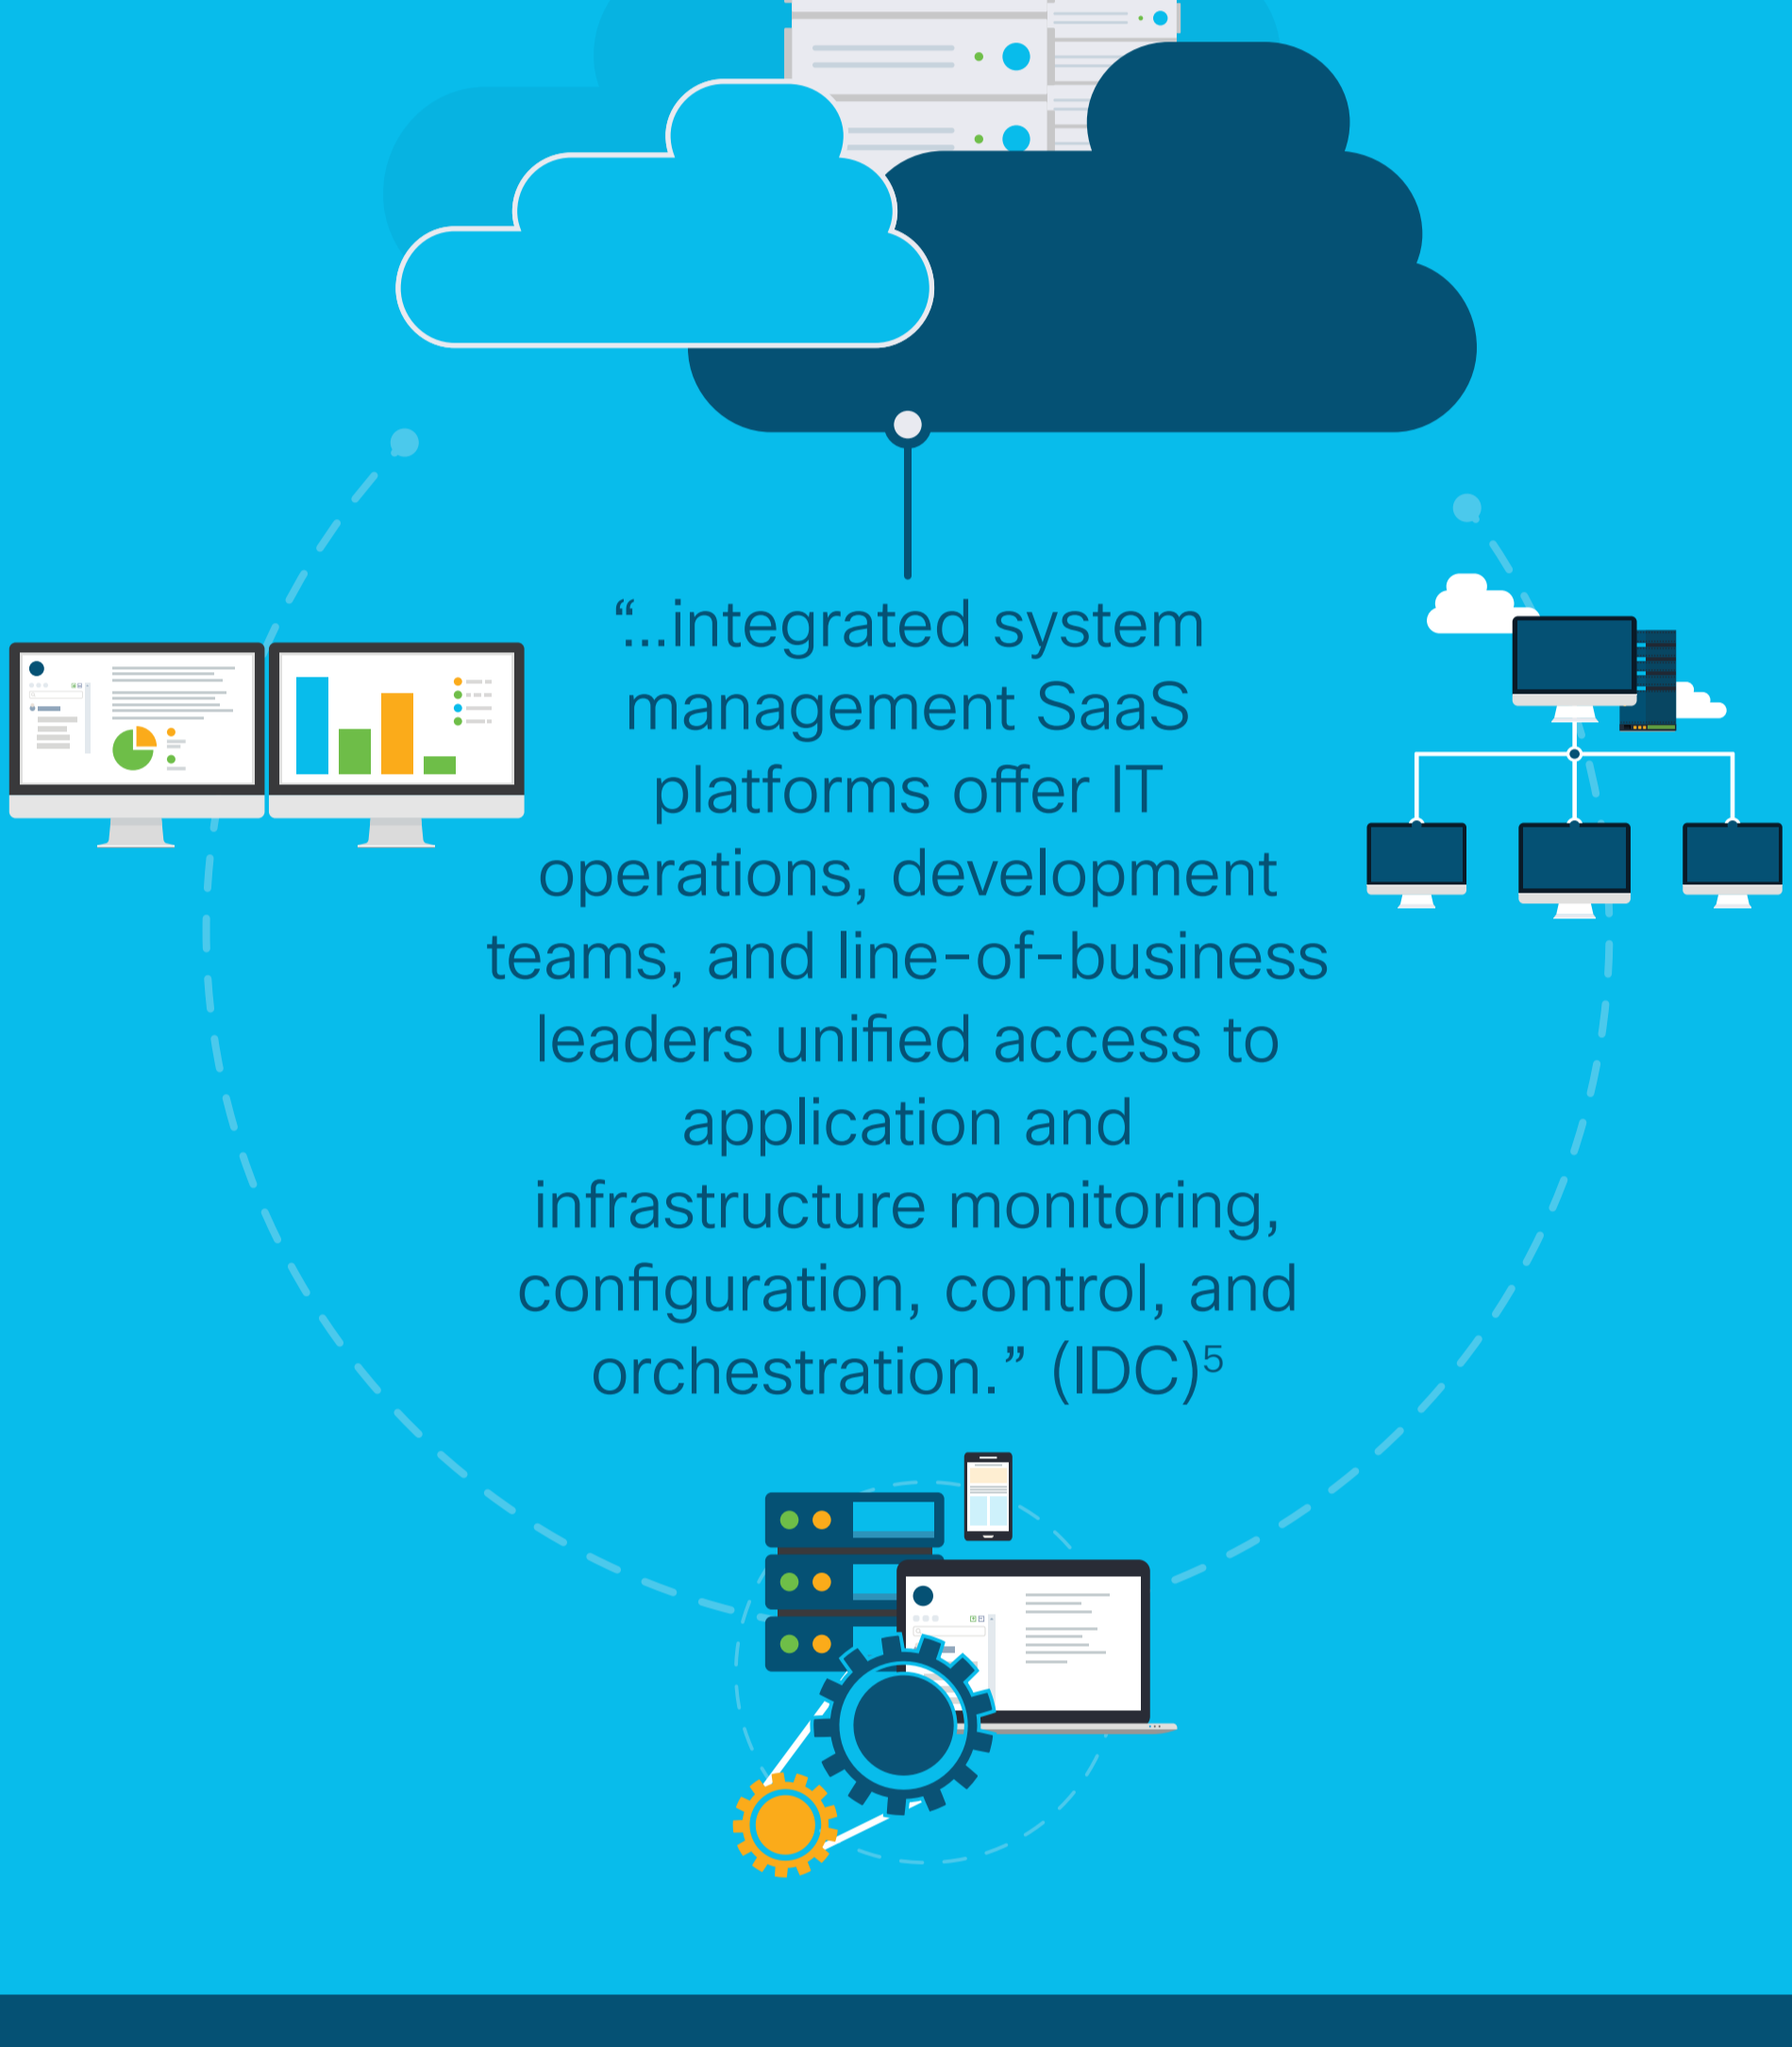

Pushing the limits

The growing large quantity of configuration data points and connections aggregated from data center deployments, edge, cloud and IoT will increase IT ops complexity, countering trends in software-defined simplicity. (Gartner)³

Through 2022, 80% of organizations implementing cloud management will need, at minimum, four tools to address hybrid and multicloud management requirements (Gartner)⁴

Organizations are adopting cloud-based management platforms

“...integrated system management SaaS platforms offer IT operations, development teams, and line-of-business leaders unified access to application and infrastructure monitoring, configuration, control, and orchestration.” (IDC)⁵

Next generation intelligent automation

The machine learning algorithms and models that bring AI to the forefront get only better with data. If these algorithms can learn from existing medical reports, and help doctors with diagnosis, the same can be used to improve IT operations. (Forbes)⁶

Meet your data center co-pilot, Cisco Intersight™

Pervasive simplicity
Easy for development and operations

Actionable intelligence
Best practices to enable faster, proactive operations

Agile delivery
Ability to respond quickly to new requests

Surround your data center with cloud-powered intelligence with Cisco Intersight

Subscription based consumption

Simplified management experience

Connected proactive support

Analytics driven actionable intelligence

End to end diagnostics with real time alerting

Continuous feature integration
